B1: area of the alleged "Bunker 1" and its mass graves.
B2: area of the alleged "Bunker 2."
F: mass graves allegedly belonging to "Bunker 1," actually graves of registered detainees who died in 1942 which the crematorium of the Main Camp could not incinerate.[267]

As shown by the superposition, the areas of the "bunkers" fall outside of the "off-limits zone" (the area of "Bunker 1" lies even inside the shaded zone). The area of the "off-limits zone" is surrounded by a curved line which corresponds to the one appearing on the "map of the area of interest of CC Auschwitz" of October 1943, in which also the area of the Birkenau Camp is indicated in a similar way.[268] Actually, in the above document, the "off-limits zone" refers to the entire unshaded area, hence also to the Birkenau Camp. As early as 24 October 1942, Headquarters Order No. 21/42 mentioned the "off-limits zone Birkenau," and specified the following (Frei *et al.* 2000, p. 190):

> *"Effective immediately, the area around Birkenau will be off-limits for civilians. Entering this space is authorized only in connection with official matters."*

We may therefore conclude that the "off-limits zone" of the map dated 2 June 1943 has no connection with the alleged Birkenau "bunkers."

We are also dealing with a chronological problem: all the witnesses agree that the alleged activities at the "bunkers" stopped when Crematoria II, IV and V went into operation in early 1943. In my comments on Document 16 I already mentioned the related statements by F. Piper and Sz. Dragon.

Friedler, Siebert and Kilian, who have collected and examined the largest collection of testimonies of ex-members of the *Sonderkommando*, write about this as follows (Friedler *et al.* 2005, p. 104):

---

[267] In this respect cf. the appendices with documents and explanations in Mattogno 2004a and 2005c.
[268] "Plan vom Interessengebiet des K.L. Auschwitz Nr. 3203" of October 1943. APMO, negative no. 6189.

> *"In March 1943, the first of four new crematoria in Birkenau was operational. The mass destruction had thus reached a new, much more perfect dimension. The farmhouses converted to killing facilities were superfluous. The SS had Bunker 1 and the adjacent barn torn down, and the barracks erected there dismantled. Bunker 2, which admittedly constituted a primitive, yet highly effective 'small' murder factory, was probably shut down in May 1943, but not demolished."*

To this we can add the testimony of Milton Buki. During the 127th hearing of the Frankfurt Auschwitz Trial (14 January 1965) he testified that he was assigned to the *Sonderkommando* on 14 December 1942. Among other things, he was also asked about how long the "bunkers" operated (2004a, p. 116):

> *"P: How long were the two little houses used for gassing?*
> *B: Until the crematoria were built."*

There is also the testimony given at the Höss trial by Wilhelm Wohlfahrt, an inmate who was employed in the Central Construction Office's "melioration" section, which was connected to the surveying section. He consequently could move around the camp rather freely. With reference to the alleged "Bunker 1" he declared (*ibid*., p. 104):

> *"That cottage was demolished in 1943, when I went there at that time* [month not given], *the whole area had been plowed and the cottage was gone."*

Hence, if "Bunker 1" was demolished in May 1943 at the very latest, why would there be any reason to keep its vicinity off limits on a map of June 1943? The authors' dirty trick – that is, their extending the alleged activities of the "bunkers" beyond the extreme chronological limit of May 1943 in order to eliminate the contradictions arising from their fallacious interpretation of various documents – is therefore puerile and in vain, because the version of history bandied about by the Auschwitz Museum itself and the testimonies it relies upon contradict such an extension. Hence we are not dealing with a "new" interpretation in the light of "new documents," but with a risible interpretative sleight of hand.

It ought to be kept in mind that the whole story of the "bunkers" is based exclusively on testimonies, and that the documents adduced by the authors are more or less deliberately misrepresented by them exactly because of these testimonies, although those document don't provide even the slightest hint in favor of the existence of the legendary gassing "bunkers." It is therefore absurd to try and "correct" the testimonies on the basis of these documents.

[66] Document 74 (p. 255)

This is a letter dated 10 June 1943, attached to which the company Baugeschäft Anhalt. Hoch-, Tief-, Eisenbetonbau of Berlin sent an invoice to the

Central Construction Office seeking payment of day wages for "construction site 'special operation'" in the amount of 146.28 RM.[269]

The authors make no comment, and it is difficult to imagine what value this document might have for orthodox Holocaust historiography. It cannot have any relation to the "bunkers," because at that time the alleged conversion of these existing structures to homicidal "gas chambers" had supposedly already taken place roughly a year earlier. It is therefore unclear what kind of work a company specializing in reinforced-concrete structures could have been involved in. The document cannot even have any relationship with the Birkenau crematoria, because the company Baugeschäft Anhalt was not among those who participated in constructing the Birkenau crematoria (those that did include: Robert Koehler, Huta, Vedag, Continentale Wasserwerk-Gesellschaft, Karl Falk, Triton, Konrad Segnitz, Industrie-Bau, W. Riedel u. Sohn, Josef Kluge, and Hermann Hirt; Pressac 1994, pp. 161-163).

I have already published and discussed this document in one of my earlier books (2004b, pp. 75, 139, Document 26), although erroneously giving the year as 1944. It therefore does not fall within the context of "Special Operation Hungary," but the "special operation" inaugurated by Kammler on 7 May 1943: the program to improve the hygienic and sanitary conditions at Birkenau mentioned earlier. In particular, the document is linked to the aforementioned letter by Bischoff to Kammler of 14 May 1943, which has as its object "Carrying out of the special operation – procurement of material."

The company Baugeschäft Anhalt appears on the "List of all construction companies active in the camp. Construction Site Auschwitz" dated 9 April 1943, which comprises 29 companies, among them Koehler, Huta, Continentale, Falk, Triton, Industrie-Bau, Riedel, Kluge and Hirt.[270] Another, undated list, which includes 27 companies, relates that the company Anhalt had 60 skilled workers and 40 unskilled workers (camp inmates made available by the Central Construction Office) and also gives the company's permit number: VI/42/PB/17.[271]

The name "Construction Site Auschwitz" shows that the term "construction site" did not refer to a single structure (*Bauwerk*), but to the entire construction project (*Bauvorhaben*) Auschwitz-Birkenau Camp, as can be seen from the fact that many of the listed companies worked on many different structures precisely within the Birkenau Camp. This confirms that the "construction site 'special operation'" was not a specific structure where a "special operation" took place, but a term referring to the entire camp complex.

Chapter Two: Critical Analysis of the "Introduction"

My examination of the documents published by the authors makes it clear that their comments are characterized by superficiality and dilettantism. They start from the deep-seated prejudice, based on testimonies, that homicidal gassing facilities existed at Auschwitz and Birkenau, which they then try to substantiate with documents by systematically distorting their meaning, often quite evidently with malicious intent. Their presentation does not exhibit the slightest effort to really understand the documents. It furthermore ignores the historical and documentary context in which these documents are embedded and their mutual relations. Their *Introduction* does not add anything to the picture I have outlined; in fact, it makes it worse.

1. The Historical and Documentary Context

The authors argue that the documents submitted by them

> *"make it possible significantly to clarify the chronology of events and to confirm facts known until now only through witness accounts. It should nevertheless be noted that the documents do not usually refer directly to killings in the gas chamber,* […]" (p. 24)

Stop! This is a rather hypocritical understatement. In fact, the documents in question *never* refer, directly *or indirectly*, to killings in homicidal gas chambers! Resumed:

> *"*[…] *and interpreting the entries sometimes requires a detailed familiarity not only with other documents, but also with the reality of the camp. For instance, when analyzing a report on the inspection of Auschwitz in September 1942 by WVHA chief Oswald Pohl, it is necessary to know that the car carrying Pohl and his entourage of officers along the road from the camp would pass, in turn, the SS equipment warehouses (TWL)*[Truppenwirtschaftslager], *the building materials depot (Bauhof), the carpentry shops (DAW), the warehouses known as 'Kanada I' ('Entwesung u. Effektenkammer – Aktion Reinhard') for property plundered from Jews, the new stables, and the Birkenau camp—and that, carrying on along the same road, it would next come to gas chamber/bunker II, the so-called 'Little White House' (described in the schedule for the visit as '*Station 2 der Aktion Reinhard*')."* (p. 24)

In reality, however, this conjecture does not make much sense, because the report on Pohl's visit mentions "Birkenau Camp," "Station 2 of Operation Reinhard" and "Troop Camp Birkenau," which was the eastern part of the camp where the guards were quartered. Therefore Pohl would have entered the

camp through the main entrance, located on the east side, about 400 meters away from "Troop Camp Birkenau," would have crossed the entire camp to reach the elusive "Bunker 2," then he would have gone all the way back in the opposite direction, but without going to "Bunker 1," in order to finally enter the "Troop Camp Birkenau."

The authors' hypothesis proceeds from the assumption that a homicidal gassing facility called "Station 1 of Operation Reinhard" existed (the alleged "Bunker 1"), which does not appear in any document. Conversely, the term "Operation Reinhard[t]" appears only in relation to the "disinfestation chamber and storage of inmate belongings" and "Station 1." Yet if the first facility was a simple disinfestation facility with attached warehouses even according to the authors, why should the latter have been a homicidal gas chamber?

As I demonstrated in my comments on Document 35, SS-*Sturmbannführer* Alfred Franke-Gricksch wrote explicitly that "Special Operation 'Reinhard'" consisted of the seizure of Jewish personal effects, and that also applied whenever the word was used in the context of the Auschwitz Camp. It could not possibly mean the alleged extermination of the Jews at Auschwitz for the simple fact that the head of "Operation 'Reinhard,'" SS-*Brigadeführer* Odilo Globocnik, had no jurisdiction over this camp. It follows that at Auschwitz the name "Operation Reinhard[t]" could refer only to the seizure of Jewish possessions, not the killing of their Jewish owners. Thus "Station 2 of Operation Reinhard" could not be a term referring to the elusive "Bunker 2."

In reference to the alleged extermination of the Jews, the authors say:

> *"It must also be emphasized that the number of documents originating in the years 1941-1942 that confirm the commission of mass murder by Zyklon B in Auschwitz is significantly smaller in comparison to what the documents contain on the later period. This results—one might assume—from the fact that at first the SS men employed in the camp offices scrupulously observed orders to keep the extermination operation covert."* (p. 25)

After 1943, however, when the four crematoria of Birkenau went into operation, the SS realized according to the authors that it was impossible to continue keeping the claimed ongoing mass murder a secret:

> *"This is why the overall number of such entries rises significantly in this period, despite the continued formal use of the recommended code words (SB, Sonderbehandlung) in documents that were issued."* (p. 25)

The authors' delusion is truly staggering. What documents are they writing about? There exists *not a single document* about the perpetration of mass killings by means of Zyklon B at Auschwitz, and those documents containing alleged code words have a completely different meaning. Only with a huge effort of deception and imagination do the authors manage to efface the documents' real meaning over and over again.

2. Euthanasia at Auschwitz

Outlining the history of Auschwitz, the authors mention the alleged camp visit of a commission presided over by Dr. Horst Schumann on 28 July 1941, in consequence of which 575 detainees were "reviewed" in the hospitals and "transferred to the euthanasia center in Sonnenstein" to be murdered (p. 26).

But on the entire affair claimed to be the very beginning of the murder of inmates at Auschwitz, not a single document exists. Danuta Czech, who tells this story in her *Auschwitz Chronicle*, refers to multiple sources, all of which are anecdotal in nature (1990, p. 75). She mentions among others Volume VII, p. 474, of the collection of material from the camp's resistance movement, in which, under the heading "Transport," the following entry appears for 28 July 1941: "Dresden 575 gassings."[272] This is obviously the source for the date of the alleged visit of the Schumann Commission. The choice, however, was not very judicious, because on that one single day, 28 July, the commission is said to have arrived, supposedly carried out the "selection" of the incurably sick inmates, and allegedly sent them off to their ostensible death: the Auschwitz SS would have been amazingly efficient, indeed! There is no evidence that the transport in question had gone to Sonnenstein. It is more likely that it went to Dachau instead, because the document records two previous transports to Dachau: on 6 December 1940 (68 detainees) and on 2 May 1941 (36 detainees).

Not to mention that the above message is in direct conflict with another earlier message from the resistance movement dated 2 July 1941, which states (Marczewska/Ważniewski 1968, p. 47):

> *"The first* [pierwsze] *use of the gas chambers took place in June 1941* [*w VI. 1941*]. *It consisted of a transport of 1,700 'incurably sick' who were* [allegedly] *sent to the sanatorium in Dresden, but in reality into the building converted into a gas chamber* [do budynku przebudowageno na komorę gazową]*."*

Elsewhere I revealed that not a single document exists about this alleged historical event (2005b, pp. 70f.), and that the 2008 article by Jochen August – "The transport of 575 inmates from CC Auschwitz to Sonnenstein (28 July 1941). Reconstruction of the destroyed transport list" – quoted by the authors in support of their conjecture, confirms only that the Auschwitz Museum does not possess any documentary proof for the reality of this alleged transport to Sonnenstein.

---

[272] AGK, NTN, 155, p. 474; the actual Polish term used – *gazownia* – usually refers to a facility producing gaseous fuel, but here it apparently means "gazowanie" – gassing.

3. Injections with Phenol

This (alleged) crime – so the authors continue – "could only temporarily alleviate the problem of the overcrowding of the hospital blocks in Auschwitz," so the SS, to avoid "bothersome transports to euthanasia centers in Germany," undertook killing experiments right afterwards.

> *"Among the available poisons, the choice fell on phenol, a popular disinfectant that was injected directly into the chambers of the doomed prisoners' hearts. From the end of the summer of 1941, hundreds of prisoners were murdered this way."* (p. 26)

Because the euthanasia centers allegedly used carbon-monoxide gas chambers to kill patients, it is unclear why a similar facility was not set up in Auschwitz as well, instead of resorting to bothersome individual injections. It goes without saying that not a single document exists on these alleged killings, and the whole thing is therefore relegated to suitable testimonies, as always. From a historical point of view, the whole story is unfounded and inconsistent.[273]

4. The "First Gassing" in the Basement of Block 11 at Auschwitz

Then the authors turn to the purported first homicidal gassing with Zyklon B in the basement of Block 11, which according to the orthodox version happened in the period between 31 August and 4 September 1941 – which allegedly results from the fact that the bunker's registry does not contain any entries of newly interned prisoners in its prison cells for these days. During that gassing, 600 Soviet PoWs and 250 sick inmates were ostensibly killed. To back this up, the authors refer, among other things, to the report of the camp resistance from 24 October 1941 that "speaks of 850 POWs killed, which surely includes the sick prisoners taken from the camp hospital"; they also cite "later reports from November 15 and 17 [which] mention 600 murdered POWs." (p. 27, note 7).

The first report states (Marczewska/Ważniewski 1968, p. 11):

> *"At Oświęcim* [Auschwitz], *in early October, 850 Soviet officers and noncoms (POWs) that had been taken there were killed by gas as a test of a new type of combat gas, which is to be used on the eastern front."*

As we see, the dating, the number of victims, and the purpose of the gassing are completely at odds with the Auschwitz Museum's orthodox version. As to the authors' claim that the "850 POWs" included "sick prisoners taken from the camp hospital," this is clearly a lie. The report of 15 November speaks of "600 Soviet prisoners, among them several army 'politruks' [political com-

[273] See in this regard Mattogno 2016c, Chapter 5.3, "'Special Treatment 14 f 13' and Phenol Injections in Auschwitz," pp. 97-102.

missars]" and "about 200 Poles"; the gassing is claimed to have occurred "during the night of 5-6 September." The report of 17 November refers to "600 civilian Soviet prisoners of war" and "about 250 Poles" supposedly gassed during the night of 5 to 6 September (*ibid.*).

These are only a few examples of the countless contradictions with which the orthodox narrative of the "first gassing" is riddled. In a study dedicated to this imaginary event I demonstrated that this narrative was concocted with great malice on the basis of the resistance movement's reports and eyewitness accounts, which are all utterly contradictory on all essential points (location, date, preparations, type of victims, perpetrators, start time and duration of the gassing, the fate of the corpses; see Mattogno 2005b). There is therefore no need to dwell further on this aspect of the Auschwitz myth.

5. The "Gas Chamber" in Crematorium I at Auschwitz

Since the gas chamber in the basement of Block 11 had proved awkward to use – only a madman would have come up with the idea to carry out a homicidal gassing in the bunker cells – the murderous practice is said to have been moved to the crematorium, turning its morgue into a "gas chamber." "The extent of the remodeling" necessary for this, the authors assure us, "was relatively small, limited to mounting two solid doors and punching four drop hatches in the flat roof" (p. 27). The first gassing is said to have been carried out in that morgue in September or October 1941. The authors explain:

> *"This information is confirmed by an order from the camp metalworking shop, dated September 25, for four airtight flaps (*Luftdichte Klappen*) for the crematorium building (doc. 5), which can be interpreted in two ways: either POWs had been murdered there earlier and the order resulted from the need to stop leaks, or—more probably—the covers were ordered ahead of time to prevent the gas from leaking out. The short time for the order to be filled is also noteworthy: the metalwork was finished the same day the order was submitted. It was treated as 'urgent' because the arrival of a transport of POWs was expected."* (p. 27)

The authors' claims are really incredible. They claim that the morgue of the crematorium was equipped with two solid – presumably gas-tight – doors, but they do not provide the vaguest documentary clue for this. They assert that four holes were punched through the morgue's ceiling, but again they do not even adduce a scrap of evidence for this. They nevertheless have the nerve to present the order for "four airtight flaps" as evidence for the existence of those four openings for pouring in Zyklon B through the morgue's roof. They first talk about *pokrywy*, lids (p. 11), then *klapý*, trap doors, similar to the German term *Klappen*, hinged lids. Such speculation does not make sense, because these lids of sheet iron had to be mounted in frames set into the ceiling open-

ings, otherwise they could not have been closed hermetically. Such frames would have been manufactured by the inmate locksmith shop (what the authors call the camp metalworking shop). In other words, if the authors' hypothesis was sensible, Order No. 1714 of 25 September 1941 would have encompassed not only four (alleged) flaps, but also four frames.

That the order in question had been regarded as "urgent" is a mere whim of the authors, because nothing on the document indicates that it was. The space provided for the "degree of urgency" (*Dringl.-Grad*) at the top right is empty! And the fact that the order was completed within just one day only means that the workshop had at its disposal men and material to do this minor job right away.

This alleged urgency is a meaningless ploy even if viewed from the perspective of the orthodox narrative, because the authors do not in any way show that "the arrival of a transport of POWs was expected." In fact, after the alleged transport of 600 Soviet PoWs who were allegedly gassed in Block 11 on 3 September 1941, no other Soviet PoWs arrived at Auschwitz until 7 October, when 2,014 of them were transferred from the Lamsdorf camp (Brandhuber 1961, pp. 16-18). The authors' trick is foolish even from their own perspective because, as Czech explains lucidly, these Soviet PoWs were not intended indiscriminately for extermination. In November 1941 a special commission of the Gestapo came to Auschwitz, chaired by the head of the Gestapo in Katowice, Rudolf Mildner, who interrogated the Soviet PoWs and sorted them into four groups (Czech 1990, p. 102):

> *"1. Fanatic Communists—approximately 300* [PoWs]
> *2. Group A: politically suspect—approximately 700* [PoWs]
> *3. Group B: not politically suspect—approximately 8000* [PoWs]
> *4. Group C: suitable for habilitation—approximately 30* [PoWs]*"*

Only the PoWs of the first group were eventually killed,[274] but that could not have happened before November 1941, so it makes no sense that already on 25 September the Auschwitz SS attached a special urgency to the completion of an alleged killing device.

In reality, however, as I made clear in my comments to Document 5, the four "airtight flaps" were used for the crematorium's ventilation system, and the term reminds us of the one used by Grabner in the above-mentioned letter of 7 June 1941: "ventilation flap to the morgue," which confirms that the "flaps" were not some imaginary "lids" but in fact ventilation dampers.

The authors continue as follows:

---

[274] On 15 November 1941, Glücks passed on to all the concentration camps, including Auschwitz, Himmler's order that the execution of Soviet PoWs transferred to the camps for the sake of execution, especially political commissars, will be postponed for those who are physically robust and thus capable of working in a quarry. See Mattogno 2005b, pp. 125f. (letter by Glücks and response by Grabner of 17 November 1941).

> *"Nor can there be any doubt that the gas chamber at crematorium I was used on at least several occasions over the following months to exterminate successive groups of Soviet POWs. Eyewitnesses, however, provide varying dates and numbers of transports. According to Marian* [sic] *Kula, 300 prisoners were killed on a certain day. Stanisław Gadomski recalled a 'second or third gassing' of about 400 POWs who arrived at the end of October 1941. Kazimierz Hałgas mentioned a total of several thousand victims, and a resistance movement report from December 15 speaks of the killing of 500 POWs in 'the concrete shelter.'"* (pp. 27f.)

Here, too, the authors uncritically concoct a hodgepodge of anecdotal evidence, since there is no objective evidence supporting any of this. Quite to the contrary, the documents actually outright refute this narrative.

Michał (not Marian!) Kula stated the following:[275]

> *"In 1942, Höss became interested in the metal workshop, and particularly in the tools of the crime. Of course, he turned to us in the metal workshop. Ordered to do so by him, we fashioned various things, he supervised us personally.* [...]
>
> *First there was the small crematorium in Auschwitz, for which a ventilator was made in our metal workshop. This ventilator was worked on by Maliszewski Stefan, Szablewski Stanisław, Stecisko Mieczysław, and by me. We worked until midnight. Before midnight, Höss came to see us, accompanied by Grabner. He made a big fuss, because the job was not yet done. It was about the ventilator for the aeration of the gas chamber; an opening had been made there, into which the ventilator was set to draw out the gas. Before midnight we raced to the crematorium with the ventilator, screwed it in, and we were taken back to the camp by the SS. Along the road to the crematorium, we met some 300 persons who ran towards the crematorium. They were Russian, because they spoke Russian. On that very night they were gassed."*

Since the temporary ventilation for the crematorium's morgue, which had been request by Grabner, was installed in September-October 1941, and, as I explained earlier, because it required both an intake and an exhaust fan in order to function properly, it is a mystery what a fan supposedly built in 1942 for the "gas chamber" (the morgue, in fact) could have been used for.

Moreover, from the arrival of the first official transport of Soviet PoWs at Auschwitz on 7 October 1941 until the end of the Mildner Commission's work in November or December of that year, no gassings could have been carried out, because the commission's task was precisely to determine through interrogation which of the Soviet PoWs were to be executed eventually.

---

[275] Statement by M. Kula of 15 March 1947. Höss Trial, AGK, NTN, 107 [vol. 25], pp. 481-483 [16-18].

This essential objection also applies to Stanisław Gadomski's statement. What's more, the only transport of Soviet PoWs that arrived at Auschwitz at the end of October 1941 contained 1,908 inmates (on Oct. 25; Czech 1990, p. 99), so the authors should at least explain why only 400 of them were "gassed" according to Gadomski. Kazimierz Hałgas's statement is entirely unspecific and therefore irrelevant. Finally, the report of the resistance movement is the "Appendix to Report No. 21 for the period from 1 to 15 December 1941," dated 15 December 1941, which states (Marczewska/Ważniewski 1968, p. 16):

> *"About 500 prisoners of war were poisoned in a concrete shelter* [*w betonowym schronie*] *by means of a war gas* [*za pomocą gazu bojowego*]*."*

The term "shelter" is strange, but it may be a mistranslation of the German term "bunker," which can refer to both a shelter and a storage facility for bulk items. The building used by the SS as a crematorium used to be a storage building for munitions and at some point also for food items, and as such it was at times called a "bunker." Stranger still is the faulty reference to "war gas." The murder weapon claimed by orthodox historiography today, Zyklon B, was a disinfestant, a pest-control agent useless for battlefield applications.

The authors then say that, according to witnesses, in addition to Soviet PoWs, also transports of Jews were gassed in Crematorium I in late 1941 or early 1942, but they add:

> *"Unfortunately, this information is imprecise in relation to both the number of people murdered and the chronology of the transports. Pery Broad, a functionary in the KL Auschwitz Political Department, stated that he observed the extermination of a numerous group of Jews at the beginning of 1942.*[17] […]
>
> [17] […] *probably in January* […]*"* (p. 28, and note 17, *ibid.*),

The authors provide another proof of their superficiality and lack of a critical disposition. Broad was in fact transferred to Auschwitz only on 8 April 1942.[276] How is he supposed to have "observed" an event which allegedly took place three months earlier?

They then invoke the testimony of Hans Stark, another member of the Political Department at Auschwitz, who "testified that he was present at the killing of 150 to 200 people in this gas chamber in October 1941" (p. 28). In their Footnote 18 they provide as a source for this: "ZStL, IV 402 AR-Z37/58 Sonderband 6, p. 970," in which, as we shall see below, the page number is wrong, and inform us: "Christopher Browning feels that, because Stark spent time away from Auschwitz between December 1941 and March 1942, he

[276] Affidavit by P. Broad of 20 October 1947. NI-11984. Even the book published by the Auschwitz Museum to which the authors refer (Note 17 on p. 28, English text), clearly states in Broad's brief biography that he was sent to Auschwitz in April 1942. Bezwińska 1997, p. 222.

could have witnessed the event in October." The authors have in fact misquoted Browning, who said:

> *"Since Stark was on leave from Auschwitz from December 1941 through March 1942, he could not have been confusing events from the fall of 1941 with those of early 1942."*

Browning refers to the same source, apparently simply copied by the authors, with the same page number error: ZStL, IV 402 AR-Z 37/58, Sonderband 6, p. 970 (Browning 2004, Note 211, p. 527; the correct page number is 948).

The authors once more blithely overlook the many ways in which Stark's testimony contradicts the Auschwitz Museum's orthodox narrative. For example, he spoke of "two openings of approximately 35 cm in diameter" – thus circular, which is in contrast with the four square or rectangular openings canonized by the Museum; he also mentioned one "hermetically sealed door," but as is known, the crematorium's morgue had two doors. For a thorough examination of Stark's testimony I refer the reader to my specific study (2005a, pp. 62-65).

The next witness summoned by the authors is the former first chief of the Protective Custody Camp (*1. Schutzhaftlagerführer)* SS-*Hauptsturmführer* Hans Aumeier:

> *"Former Lagerführer Hans Aumeier testified shortly after the end of the war that he saw 50 to 80 Jews being murdered in the crematorium I gas chamber in November or December 1942, which the American researcher Christopher Browning is inclined to regard as a mistake, shifting the date of this event to 1941."* (pp. 28f.)

I have dealt with Aumeier's statements in that same study (*ibid.*, pp. 48-50), from which I draw the following observations in order to primarily highlight once again the authors' superficiality and lack of critical capacities.

In a report from 25 July 1945 prepared for the British, who had arrested him, he wrote:[277]

> *"As far as I remember, it was in November or December 1942* [sic!] *that the first gassing of about 50–80 Jewish detainees was undertaken. This took place in the morgue of the crematorium in camp I, under the direction of the camp surgeon, of Untersturmführer Grabener* [Grabner], *of the L.K.*[278] *and a number of medics. I was not present at the time and did not know beforehand that this gassing would take place either. Towards me, the LK was always very distrustful and taciturn. It was only the next day that the camp surgeon, Grabner, Untersturmführer Hessler* [Hössler] *Hauptscharführer Schwarz and I were called to the LK, who informed us that the order of the RFSS has come from RSHA-Berlin that all Jewish de-*

277 TNA, File WO.208/4661. Statement by H. Aumeier of 25 July 1945, pp. 5f.

278 L.K., *Lagerkommandant*, commandant of the camp.

> *tainees unfit for work as well as the sick judged by the doctor as not being fit for work in the future are to be gassed in order to avoid the spread of epidemics. He stated further that the night before the first detainees had been gassed, but the crematorium had turned out to be too small and could not cope with the cremations, so that in the crematorium*[279] *now under construction at Birkenau, gas chambers were being included.* […]
> *In the period that followed, some 3 or 4 gassings were still carried out in the old crematorium. This always took place in the evening hours. There were 2–3 air shafts in the morgue and 1–2 medics wearing gas masks poured bluegas through them. We ourselves were not allowed to get close, and the bunker was opened only the following day. As the doctor said, the people had died within 1/2 to 1 M.[inute].”*

Browning limited himself to writing (2004, Note 211, p. 527):

> *“Hans Aumeier testified that the gassing of small groups of Jews (50-80) occurred in November or December 1942, but presumably he meant 1941. See Expert Opinion of Robert Jan van Pelt, Irving v. Penguin Books and Deborah Lipstadt, citing PRO WO 208/4661, p. 261.”*

Van Pelt was just as laconic (1999, Note 29, p. 185):

> *“Aumeier is confused on this point. All the evidence points to the commencement of gassings in crematorium 1 a year earlier.”*

He therefore merely notes the chronological contradiction, without trying to explain it. The authors simply attribute Aumeier's date to a "mistake," although that makes no sense, because according to Aumeier's story, "the first gassing of about 50-80 Jewish detainees" was carried out while he was in Auschwitz, but he was transferred to the camp only on 16 February 1942, so he could not have committed a "mistake" by confusing 1941 (when he was not yet in Auschwitz) with 1942.

The authors themselves point out "that Aumeier arrived in Auschwitz somewhat later, on February 1 [sic], 1942," and that "he testified in a Polish court on another occasion," during the trial of the camp garrison, "that Jews were already being killed in the gas chamber in the Main Camp when he 'took up his post in Auschwitz,' and that there were at least several events, of this type" (p. 29).

This is a rather curious way of resolving this anachronism: since Aumeier stated in a later deposition that there had been gassings prior to his arrival at Auschwitz, his initial claim about the first gassing having taken place in November or December 1942, while he was stationed at Auschwitz, is no longer anachronistic but rather a simple "mistake"? In reality, in reference to this date, he spoke explicitly of the "first gassing," so that the authors have simply reported yet another internal contradiction between Aumeier's statements. Not

---

279 German: "*der Krematorium*," plural article, but singular noun.

to mention that, in his first statement to his British captors on 29 June 1945, Aumeier flatly denied that homicidal gassings had occurred at Auschwitz:[280]

> *"In the Main Camp there was a crematorium consisting of two furnaces.*[281] *Corpses were burned there. The crematorium was under the responsibility of the head of the Political Department and the camp surgeon. During my time, 2 or 3 crematoria were under construction at Birkenau. I have no knowledge of gas chambers, and during my time no detainee was gassed. At the time of my transfer, there were some 54,000 detainees at Auschwitz and Birkenau, among them about 15,000 women and children. Detainees who fell ill were moved to the infirmary, which was under the exclusive responsibility of the camp surgeon."*

One could of course claim that these were mere lies as a defensive strategy. But as I have shown in yet another study (2004a, pp. 133-136), he "confessed" the alleged gassings only when he realized that the "gassings" were deemed an unquestionable and undeniable fact by the British interrogators, and he simply adjusted his defensive tactics accordingly, since denying it would have been a useless defense strategy.

Aumeier's statements contain other contradictions and absurdities which are no less serious. I refer the reader to my studies cited above. For example, the gassings allegedly occurred by pouring gas through 2 or 3 (!) "air shafts" (rather than through the canonical four openings formed especially for this purpose); by means of "bluegas" (*Blaugas*)[282] (!), and the gassing procedure is said to have lasted only 1 to 1½ minutes (!), not to mention the anachronistic dating of the claimed gassing order by Himmler (November-December 1942!).

The authors then mention a virtually unknown witness, Karl Bara, an "SS medical orderly […] posted to the SS hospital," located right next to the crematorium, "in March 1942." He "testified that at that time he could see through the window how people were being led to their death in the gas chamber at the crematorium" (p. 29), which is a historically commonplace statement lacking any detail, thus making any critical assessment of it impossible.

Finally the authors adduce Engineer Kurt Prüfer of the Topf company:

> *"who probably visited Auschwitz at the beginning of February 1942, testified after the war that on that occasion he saw many corpses (Menschenleichen) lying in various poses on the floor of the room next to the furnace*

---

[280] TNA, File WO-208/4661, handwritten document starting "*Gefangener Oslo, den 29 Juni 45*", p. 5. These documents were discovered by David Irving, who posted it on his website http://www.fpp.co.uk/Auschwitz/Aumeier/.

[281] The third furnace was installed in April 1942.

[282] "Blaugas" was "fuel gas, a lighting gas, named after its inventor, [a man by the name of] Blau." Lenz/Gaßner 1934, p. 15. This claim is similar to homicidal-gassing claims made by other witnesses, such as Walter Petzold in his "Report about the first gassing of prisoners in German concentration camps" of 17 May 1945. See Mattogno 2005b, pp. 37-40.

> *hall in crematorium I, and that the SS man accompanying him explained that the place was a gas chamber."* (p. 29)

As their source the authors cite a book by Annegret Schüle (which they misspell as Schülle), *Industrie und Holocaust. Topf & Söhne – Die Ofenbauer von Auschwitz*. Wallstein Verlag, Göttingen, 2010, from which they have taken the German word "*Menschenleichen.*" It is apparent that they don't even know that the protocols of Kurt Prüfer's interrogation (like those of the other Topf engineers Karl Schultze, Fritz Sander and Gustav Braun), which were conducted by investigators of the Soviet SMERSH counterintelligence service between 1946 and 1948, are all written in Russian, so it makes no sense to quote a German word as ostensibly being part of the original text, as that text isn't in German to begin with!

For a full discussion of the matter, I refer the reader to my specific study (2014a), on which my subsequent elaborations are based. First of all, the document in question is Prüfer's interrogation of 4 March 1948. The Topf engineer declared there (*ibid.*, pp. 34-36):

> *"In the spring of 1942 I went to Auschwitz at the request of the SS Construction Office in order to review the construction project of a new crematorium planned in the Auschwitz camp sector, to set out my conclusions and also to inspect the site where the construction of this crematorium was planned.*
>
> *I inspected the specified construction site, accompanied by an SS man.*
>
> *When we passed the first crematorium, I saw in one of the rooms of the crematorium, through a half-open door, human corpses lying on the floor in various positions. They were more than ten. When I approached the room, someone from inside quickly slammed the door. Because I was unfamiliar with the purpose of this room in Crematorium 1, I asked the SS man accompanying me about it. He replied that a gas chamber had been set up in that room and that detainees were poisoned in it by gas."*

The authors explain their dating thusly:

> *"Dated on the basis of a letter from the Topf company to the camp construction administration on a request for the supply of a ventilation system, which indicates that Prüfer was at Auschwitz shortly before Feb. 10, 1942."* (Footnote 23 on p. 29)

In fact, however, as I have documented elsewhere (2014a, p. 31), Prüfer went to Auschwitz to discuss with Bischoff the project of the new crematorium (the future Crematorium II) between late October and late November 1941, not "in the spring of 1942," or "shortly before Feb. 10, 1942," so that the authors are not even able to properly date the visit in question.

I also revealed that the story told by Prüfer is completely invented. In fact, he claimed to have seen in a room of the crematorium – that is, the "morgue," as becomes clear from its subsequent identification with the "gas chamber" –

"through a half-open door" "more than ten" corpses. Prüfer pretended to have been "unfamiliar with the purpose of that room," which is not true, because he had gone to Auschwitz already on 19 November 1940 to discuss "on-site" the "extension of the crematorium," that is to say, the construction of the second double-muffle cremation furnace. Together with deputy head of construction, SS-*Rottenführer* Walter Urbanczyk, he had inspected the furnace room in order to establish the location of this second furnace, and on the basis of this inspection he drew Topf Blueprint No. D 57999 on 30 September 1940, showing precisely the position of the second furnace. On that occasion, Prüfer also inspected the "morgue" right next to the furnace room. He therefore could not possibly have been surprised to have seen "more than ten" corpses in the morgue of a crematorium (if he had actually seen them in the condition described). After all, seeing morgues with corpses was daily business for an engineer specializing in cremation furnaces.

To make matters worse, Prüfer couldn't possibly have seen what he claims, because the front door of Crematorium I opened into the "*Vorraum*" (vestibule), after which, on the right wall, a door led to the morgue (the alleged gas chamber). It was therefore invisible from the outside through the front door. However, according to Prüfer, exactly "that room" which he had allegedly seen from outside and where "a gas chamber had been set up," was precisely this "*Vorraum*."

After the authors have adequately "corrected" other evidence adduced by them (Tadeusz Pietrzykowski: he does not remember the exact date of the gassing alleged by him, but the authors ordain that it took place "at the end of 1941 or the beginning of 1942"; Ignacy Golik: he claims the gassing occurred in early spring of 1943, but, so the authors aver, this is "surely a mistake—it was 1942," pp. 29f.), the authors conclude:

> *"Presumably, therefore, the gas chamber at crematorium I was used only sporadically to exterminate groups of newly arrived Jews at the turn of 1942/1943, and the total number of victims—in comparison to the period when mass extermination began in Birkenau—was small."* (p. 30)

Since it is unknown who the victims of these alleged gassings were, the authors resort to the assumption that these were Jews who had become unable to work and who had been transferred to Auschwitz by the Organization Schmelt in order to be "gassed." I have demonstrated in another study (2016b, pp. 96-100) that this thesis, first developed by Robert van Pelt, is not backed up by any documents. Suffice it to note here that in the *Auschwitz Chronicle* the name Schmelt appears for the first time in a footnote under the date of 28 August 1942 in connection with Jews fit for labor being taken off a train at Cosel, precisely for the Organization Schmelt. These Jews were "exchanged for unfit or dead prisoners" (Czech 1990, p. 229). In addition, Rudolf Höss, in his remarks on the Organization Schmelt of November 1946, does not make the

slightest reference to the alleged gassing of prisoners who were unable to work.[283]

6. The "Bunkers" at Birkenau

According to the authors' conclusion, there is no evidence that any preparations were being carried out before the winter of 1941-1942 to establish an extermination center in the vicinity of the Auschwitz Camp. According to them, it is also doubtful that the SS ever had "intentions to kill large groups of deportees in the gas chamber at crematorium 1: Using it would have created numerous difficulties for the SS: a number of undesired eyewitnesses in the camp among prisoners and civilian workers […], and the limited capacity of the crematorium furnaces." Therefore, in order to carry out the alleged extermination of the Jews, a different location had to be found, and the choice fell on the village of Brzezinka (Birkenau) and a farmhouse belonging to the Harmata family, which was transformed into the "gas chamber": thus was born the legendary "Bunker 1" (p. 31).

The authors then scramble to somehow justify the date conjured up by Danuta Czech: 20 March 1942:

> *"Two different accounts of the beginning of the extermination of Jews in Auschwitz can be found in the Autobiography of commandant Rudolf Hoss: it occurred in December 1941/January 1942, or in the spring of 1942. Appearances notwithstanding, both versions are probably accurate, with the former referring to the killing in the gas chamber at the crematorium in the main camp of small groups of Jews arriving, as already mentioned, from the Organisation Schmelt camps, and the latter to the start of mass murder in bunker I in Birkenau."* (p. 31)

And they add:

> *"Höss is more specific elsewhere about the arrival dates of these transports, placing them before the creation of the women's camp (March 26, 1942)."* (p. 32)

This interpretation of Höss's statement is somewhat misleading. Here is what the Auschwitz commandant wrote about this:

> *"I am unable to recall when the destruction of the Jews began – probably in September 1941, or perhaps not until January 1942. At first we dealt with the Jews from Upper Silesia.*" (Paskuly 1992, p. 31)
>
> *"During the spring of 1942 we were still dealing with small police actions. But during the summer the transports became more numerous and we were forced to build another extermination site. The farm area west of Cremato-*

[283] Höss Trial, vol. 21, pp. 180f. The Korherr Report of 27 March 1943, subsequently edited (28 April), refers to 50,570 Jews belonging to the Organization Schmelt. NO-5194, p. 13.

> *ries IV and V,*[284] *which were built later, was chosen and prepared."* (*ibid*., p. 32; that points to "Bunker 2")
>
> *"Originally, all the Jews transported to Auschwitz by the authority of Eichmann's office were to be destroyed without exception, according to Himmler's orders. This also applied to the Jews from Upper Silesia. But during the arrival of the first transports of German Jews, the order was given that all able-bodied men and women were to be separated and put to work in the arms factories. This occurred before the construction of the women's camp, since the need for a women's camp in Auschwitz only arose as a result of this order."* (*ibid*., p. 34)

In this context, Höss also mentions the alleged first gassing in the basement of Block 11 and a gassing in the morgue of Crematorium I at Auschwitz, but both involved exclusively Soviet PoWs (*ibid.*, p. 30). He knew nothing about an extermination of Jews in the alleged gas chamber of Crematorium I, and in this context also never mentions the Jews from the Organization Schmelt. So the most consistent dating (if we credit Höss's statements) would be January 1942, and for that very reason D. Czech, in the first edition of her *Auschwitz Chronicle*, dated the start of "Bunker 1" with January 1942, asserting: "They started killing Jews from Upper Silesia with gas" (Czech 1960, p. 49). The editor of the German edition of Höss's memoirs, Martin Broszat, stated in a note:

> *"The deportation of Jews from Upper Silesia to Auschwitz occurred in early 1942. For instance, according to information sent from the Internat. Tracing Center to the Institute for Contemporary History* [in Munich] *from 27 March 1958, the Jews from Beuthen were deported on 15 February 1942.*[285]*"* (Broszat 1981, note 3, p. 127)

It therefore makes no sense to posit that the claimed activities of "Bunker 1" began in the spring of 1942, since Höss explicitly declares that the Jews of Upper Silesia were gassed in "Bunker 1" (Paskuly 1992, p. 31). Hence, according to the Auschwitz commandant's chronology, "Bunker 1" began its alleged activities no later than January 1942, while "Bunker 2" was set up in the summer due to an increase in deportations.

But this contradicts what Höss himself wrote about it (Paskuly 1992, pp. 142, 147):

> *"The original order of 1941 to annihilate all the Jews stated, 'All Jews without exception are to be destroyed.' It was later changed by Himmler so*

---

284 The original German text mentions "III and IV," which was changed by Paskuly to match the common numbering of all crematoria at Auschwitz.

285 In fact, the letter from the tracing center states that 'deportations of Jews from Beuthen could only be established from 15 May[!] 1942"; cf. Longerich 2010, Note 169, pp. 551f. Of course, this date neither jibes with Czech's earlier dating of Bunker 1's startup, which is based on Höss, nor with the currently claimed date of March 20, 1942.

> *that those able to work were to be used in the arms factories. This made Auschwitz the assembly point for the Jews to a degree never before known.* [...]
> *When the transports of Jews from Slovakia began (March 26, 1942), within a few days the women's camp was crammed full to the rafters. Washing and toilet facilities were barely able to satisfy even the smallest needs for one third of them."*

So in the summer of 1942 the intensification of Jewish transports led to overcrowding in Auschwitz, but that could be the case only if the arriving Jews were *not* murdered in masses, so what then would have been the need for the creation of "Bunker 2"?

According to Czech's *Auschwitz Chronicle*, "Bunker 2" began its operations on 30 June 1942. Until this date, 18 real, documented Jewish deportation trains arrived at Auschwitz, whose members were *all* duly registered, according to the table below as taken from Czech's *Auschwitz Chronicle*. Hence not a single soul coming off these trains was gassed on arrival, as the orthodox narrative suggests.

Date	#	*From*	*Registered men*		*Registered women*	
dd/m			*#*	*ID nos.*	*#*	*ID nos.*
26/3	999	Slovakia	/	/	999	1000-1998

22/5	1,000	KL Lublin	1,000	36132-37131	/	/
7/6	1,000	Compiègne	1,000	38177-39176	/	/
20/6	659	Slovakia	404	39923-40326	255	7678-7932
24/6	999	Drancy	933	40681-41613	66	7961-8026
27/6	1,000	Pithiviers	1,000	41773-42772	/	/
30/6	1,038	Beaune-La Rolande	1,004	42777-43780	34	8051-8084
30/6	400	KL Lublin	400	43833-44232	/	/
Total	16,767		10,332		6,435	

Absurdly, this means that "Bunker 2" is said to have been prepared for – and put into – operation while all deported Jews, without exception, were normally

registered, which means that not a single one of them had been slated to be gassed on arrival.

In addition to these real transports, Czech also lists other, purely invented deportation trains, totally devoid of any documentary confirmation,[286] which are listed in the following table:

Date	Transport from	#
5-11 May	Dombrowa [Dąbrowa Górnica], Bendsburg [Będzin], Warthanau [Zawiercie], Gleiwitz	5,200
12 May	Sosnowitz	1,500
2 June	Ilkenau	?
17 June	Sosnowitz	2,000
20 June	Sosnowitz	2,000
23 June	Kobierzyn	566

However, even from the perspective of the orthodox Holocaust narrative, this makes no sense. If the last Jewish transport murdered in "gas chambers" arrived at Auschwitz on 23 June, with which Jewish transport was "Bunker 2" inaugurated on 30 June?

Here we discover yet another of Czech's deceptions, who writes in reference to the entire month of June 1942 (1990, p. 189):

> *"2,289 Jews, 1,203 Poles, including 100 reeducation prisoners, 149 Czechs, 49 Germans, and one Gypsy die in Auschwitz-Birkenau. A total of 3,683 prisoners have lost their lives. Most of the 2,289 Jewish prisoners were killed in the gas chamber."*

These are all regularly registered detainees, as is confirmed by the alleged source: the *Stärkebuch* (register of the men's camp strength). The registered Jews allegedly gassed would have to have been "selected" by SS doctors as unfit for work, but for the entire month Czech does not record a single "selection," which means that this story is not supported by any evidence.

If we consider that the only transport allegedly gassed on arrival prior to the fictitious Jewish deportation trains of the period of May 5 to 11 is the other fictitious deportation train from Beuthen arriving at Auschwitz on 15 February 1942 but that these Jews are said to have been gassed not in "Bunker 1" but in Crematorium I (*ibid*., p. 135), one has to wonder with which Jewish transport "Bunker 1" could have been inaugurated, given that, according to Czech, no Jews arrived at Auschwitz prior to this, and that all deportees from the three deportation trains arriving in March 1942 were all duly registered, hence not gassed.

[286] As I have shown in Mattogno/Kues/Graf 2014, vol. I, Chapter 4. [48], pp. 540-543.

7. Documents on the "Bunkers" at Birkenau

After this bizarre presentation of the origins of the alleged homicidal gassings at Auschwitz, the authors finally begin to discuss the documents they present.

They claim that the date of March 1942 in relation to "Bunker 1" is confirmed by a 1944 document "that refers to the initiation in March 1942 of the construction of the extermination center" (p. 32). This is their Document 36, the "construction request for the expansion of the PoW camp of the *Waffen*-SS at Auschwitz Upper Silesia. Installation of 3 barracks for special measures" from 26 May 1944. As I have shown above, they misleadingly interpret it as a "re-erecting" of the three undressing barracks at the elusive "Bunker 2."

According to the tenets of the orthodox Holocaust narrative, "Bunker 2" was the only one of the "bunkers" put back into operation in 1944. But with a fatuous sleight of hand, the authors claim that the document in question is "indirect evidence that bunker I dates from and began operating in March 1942" (p. 152). In other words, they use a date given in a document which, in their contorted logic, deals with "Bunker 2" and apply it to "Bunker 1"! Not to mention that their Document 36 only mentions "3 barracks for special measures" without the slightest reference to the alleged modification of an existing house (the alleged "Bunker 1"). Hence their guess is doubly fallacious, and only with blatant dishonesty can they speak in this regard about an "extermination center," a term that basically refers to the alleged gassing facilities, although there is no trace about it in the document.

The authors then claim to know that "by the middle of April 1942 at the latest a Birkenau *Sonderkommando* was in existence (Doc. 52), and it would und[o]ubtedly have been employed in the operation of the bunker" (p. 32). This argument, like all those referring to the presence of the term *Sonderkommando* in a document, is based on the lie that only one type of *Sonderkommando* existed at Auschwitz, and that it was exclusively used for criminal purposes. This legend is as dear to the Auschwitz Museum and its acolytes as it is false and unfounded. As I pointed out above, the authors completely hush up the actual recipient of the supplies in question, which was "*BW*. 4 Sonderk. Bir.," which means "Structure 4 of the Birkenau *Sonderkommando*." *BW* 4 Birkenau referred to the construction of 14 barracks for logistical maintenance. I will return later to the supply of 300 kg of cement to this *Sonderkommando*.

The authors then continue by asserting:

> *"We know about the appearance of bunker I only on the basis of eyewitness accounts, above all that of Szlama Dragon. In the SS records, there are two extant documents containing the information that the two gas bunkers originated as a result of the adaptation of existing houses (doc. 17 and 18)."* (p. 32)

These are the "Explanatory report on the construction project Concentration Camp Auschwitz O/S" of 30 September 1943 and the respective "Cost estimate for extension of POW camp of the *Waffen*-SS in Auschwitz," which, among other things, mention twice the "Remodeling of an existing house for special measures" with reference to the Birkenau Construction Sectors II and III, respectively. The authors distort the meaning of these two documents, clumsily attributing projects allegedly carried out in the past (the elusive "bunkers," allegedly remodeled in the first half of 1942) to projects not yet carried out which obviously were to be implemented only in the future. This is exactly the reason why both of these houses and the related barracks appear for the first time in these two documents: they simply did not yet exist as projects for anything before 20 September 1943.

Referring to the mythical "bunkers," the authors write:

> *"It is noted that no plans for the remodeling* [of the pre-existing houses into "gas chambers"] *were drawn up, which might suggest the limited scope of the work that was carried out using bricks from the demolition of houses in nearby villages, costing 14,242 RM. Aside from financial and material savings, this might have had the additional benefit that there was no need to inform the bureaucrats who handled supply matters about the intended use of these facilities."* (p. 32)

Here, as usual, they distort the meaning of the invoked document, as I showed with my comments on their Document 18. I add that the hypothesis that the two houses in question, which were not and could not have been the imaginary "bunkers," had been remodeled using bricks from the demolition of other houses has no special significance, because the entire Birkenau Camp was built in this way, as is explicitly stated in a file memo of 22 May 1943, published by the authors themselves (Document 70):[287]

> *"In the year 1940, the Auschwitz Camp came into existence in the delta estuary between the Vistula River and the Sola River after the evacuation of 7 Polish villages, through the reconstruction of an artillery-barracks site and much construction of extensions, reconstructions and new buildings, utilizing large quantities of material from buildings that had been demolished."*

In addition, there is also no relation to the estimated cost of RM 14,242.

The claim that "there was no need to inform the bureaucrats who handled supply matters about the intended use of these facilities" is meaningless in this context, because a potential blueprint of the two houses (outlining the outer walls, partitions and height in order to calculate the volume and thus the related costs for remodeling them) would not have provided any information "about the intended use of these facilities."

---

[287] "Aktenvermerk" (file memo) of 22 May 1943. RGVA, 502-1-26, p. 85.

Next, in an attempt to somehow explain the 300 kg of cement delivered to the *Sonderkommando* of *BW* 4a (Document 52), the authors are forced to resort to a huge nonsense:

> *"Some of the work* [to remodel "Bunker 1"] *was done by prisoners from the Sonderkommando who, as bearers of secrets, were condemned in advance to death."* (p. 33)

And in a note they explain:

> *"On Apr. 23, 1942 they received an allotment of 300 kg of cement (doc. 52)"*

Given that "Bunker 1," according to Danuta Czech and the authors themselves, was completed and went into operation in March 1942, are we to believe that this "some of the work" was started on 23 April? On the other hand, the claim that the construction work was carried out by a *Sonderkommando* charged with assisting with the claimed mass murder instead of a special detail or *Sonderkommando* from the Central Construction Office is simply foolish and is also not confirmed by any testimony.

The barracks erected in Birkenau rested on concrete slabs, and the 300 kg of cement assigned to *BW* 4a served precisely for creating this slab (and for the barracks' brick-and-mortar heating stoves).

Another sleight of hand should also be noted. On the line following the entry of their Document 52 discussed here, there is an entry dated 15 July 1942. It reports another delivery of 1,000 kg of "simple concrete" (*Zement einfach*). The recipient is referred to as "Ba 4" (or "Be 4") followed by repetition marks (– " –) meant to repeat the line "Sonderk.[ommando] Bir.[kenau]" three lines above (see my DOCUMENT 28). It follows that the *Sonderkommando* received another 1,000 kg of cement on 15 July 1942. What could have been the point of that, if, as the authors claim, the Lenz company had installed "gas-tight doors" in "Bunker 2" on 8 July, so that it had been operational since?

Continuing their methodical work of distorting the sources, the authors state that in May 1942 "two wooden barracks of the stable type were erected outside bunker I to serve as temporary storage for the belongings of the people murdered" (p. 33). The reference is to Document 21, *i.e.*, the "Construction Report for the Month of May 1942," which, in the job description for the PoW camp, contains the entry:

> *"In addition, 2 barracks (horse-stable barracks) were erected outside the PoW camp"*

That these two barracks had been installed at the elusive "Bunker 1" and that they served to store personal belongings of the alleged victims is based on nothing, since this stems entirely and exclusively from the delusional rantings of the Holocaust orthodoxy.

The authors continue as follows:

> *"In May 1942 it also turned out, when the mass extermination of Jews transported from the Dąbrowa Basin began, that the bunker I gas chamber was sometimes too small to hold all the deportees. For this reason, according to extant accounts by former prisoners, some transports continued to be sent to the gas chamber next to* [the furnace room of] *crematorium I in the main camp."* (p. 33)

This refers to the invented deportation trains during May-June 1942 as listed above, including 6,700 fictitious deportees between 5 and 12 May, and 4,566 between 17 and 23 June (I will address the invented train of 2 June later).

Here the authors mock their readers in three different ways, first because these transports are invented, next because their star witness Szlama Dragon had declared that "Bunker 1" could hold "fewer than 2,000 naked persons,"[288] while the capacity of its claimed incineration trenches was 7,000-8,000 per day.[289] Consequently all the invented deportees from the Dąbrowa Basin could have been processed by "Bunker 1" in less than two days, if one is inclined to believe Dragon, as the authors obviously are.

In addition, not even the minimum requirements were given to keep the "gassings" a secret which are supposed to have been carried out inside Crematorium I at the Main Camp. On 13 May the head of the Garrison Administration asked the Central Construction Office to "repair the crematorium's chimney and the motor housing."[290] The work was carried out on 14 and 15 May. The first repair covered the flue duct connecting the three furnaces to the chimney. Fifty refractory bricks were replaced with the use of 50 kg of refractory mortar.[291]

During the second half of the month, various external works were carried out at the crematorium: the courtyard in front of the crematorium was fenced in and closed with two wooden entry gates (*Einfahrttore*) 4 meters wide and 3.20 high, and the old pavement was replaced.[292]

On 30 May SS-*Oberscharführer* Josef Pollock informed Bischoff that the chimney's steel bands had become loose and that the masonry had cracked.[293] The next day the chimney was indubitably inspected and tested.

[292] Zentralbauleitung, "Auftrag Nr. 436, Arbeitskarte Nr. 20" for the "Tischlerei" (joinery) of 13 May 1942: construction of two entry gates ("Einfahrttore") of 4m × 3.20m; work done from 21 to 25 May. RGVA, 502-2-1, p. 24. Work description: "Tätigkeitsbericht für den Monat Mai 1942," RGVA, 502-1-24, p. 299, and "Baubericht für Monat Mai 1942," RGVA, 502-1-24, p. 261.

[293] RGVA, 502-1-314, p. 12 & 502-1-312, p. 64.

Between 12 June and 8 August 1942, Crematorium I was a big construction site swarming with people – 688 inmates and 123 civilian workers, who demolished the old chimney, built the new chimney and replaced the smoke ducts – accompanied with a great to and fro of trucks hauling away tons of debris of the old chimney and ducts, and delivering tons of materials – 31 tons of refractory bricks alone.[294]

The authors, with their typical deceitfulness, hide this context and all the work carried out at Crematorium I at this time, and cite only what suits their thesis, with reference to their Document 6:

> *"It was probably for this reason that the wooden fence around the yard outside the crematorium (where these Jews had to undress) was replaced at this time by a more solid one made of concrete panels (doc. 6)."*

To top it off, the claim that the alleged victims had to undress in the yard of Crematorium I is itself a convenient interpretation, because Höss, for example, in his description of the alleged gassing of 900 Soviet PoWs, says that they "had to undress in the vestibule and proceeded quietly into the morgue, as they had been told that they would all be deloused there." (Broszat 1981, p. 126).

In light of the massive construction activities carried out at Crematorium I during that time, the claim of the authors and their "eyewitnesses" about alleged "gassings" in Crematorium I during May and June 1942 exposes the true, fictitious nature of their stories.

Before proceeding any farther, allow me to come back to the invented deportation train of 2 June from Ilkenau. Danuta Czech describes it as follows:

> *"In Bunker 1 in Birkenau, men, women, and children sent from Ilkenau are killed with Zyklon B gas."*

In a note she gives as her source: "Szternfinkiel, *Jews of Sosnowitz*, p. 35." (1990, p. 173).

In this novelistic work, which contains simple chit chat without the slightest documentary evidence, we read in this regard (Szternfinkiel 1946, p. 35):

> *"In early June, a 'resettlement' took place in Olkusz* [Ilkenau]. *All local Jews were brought to Auschwitz; only a handful of privileged survivors were taken to Sosnowiec."*

Czech has therefore not only invented the date of this fake transport, but also the alleged gassing of its deportees in "Bunker 1."

Continuing their imaginary reconstruction, the authors state:

> *"Furthermore, it would seem, Höss had already been informed that he should expect the arrival in the near future of numerous new transports from Western Europe. This is probably why the decision was made at the*

---

[294] Handwritten note "Schornstein-Krematorium. BW 11" of 7 December 1942. RGVA, 502-1-318, pp. 4f.

> *beginning of June 1942 to convert another house at the edge of the woods in Brzezinka into a gas chamber."* (p. 33)

This comment highlights the authors' historiographic ineptitude and lack of familiarity with the documents. First of all, they do not explain at all why the 18 Jewish transports which arrived at Auschwitz until 30 June 1942 – 16,767 people – were all duly registered, but why then, starting on 4 July 1942, all of a sudden the "selection" of the deportees would have been introduced resulting in the "gassing" of those unable to work (while those allegedly deported from the Dąbrowa Basin would have been gassed indiscriminately, including those fit for labor). Secondly, the justification for the creation of "Bunker 2" is a holocaustic fable, because it is known that the decision to deport to Auschwitz "numerous new transports from Western Europe" was made on 22 June 1942, when Adolf Eichmann wrote a letter to Franz Rademacher, an official at the German Foreign Office, with the subject "Labor deployment of Jews from France, Belgium and the Netherlands," which states:[295]

> *"Starting in mid-July or rather at the beginning of August of the current year, it is planned to initially deport, in daily scheduled special trains to the Auschwitz Camp for labor deployment, about 40,000 Jews from the occupied French territory, 40,000 Jews from the Netherlands, and 10,000 Jews from Belgium.*
>
> *The group of people to be apprehended comprises Jews able to work, as long as they are not living in mixed marriage and are not citizens of the British Empire, the USA, of Mexico, of the enemy countries of Central and South America, as well as of the neutral and allied countries."*

As we see, the plan was to send to Auschwitz Jews capable of work, which cannot be reconciled at all with the authors' exterminationist crazes, and even less with their fictitious chronology "at the beginning of June 1942," because at that time Höss could not possibly have known anything about this plan yet, which was only drawn up three weeks later. Hence he consequently could not make any decision on setting up the elusive "Bunker 2," a decision all the more anachronistic since the plan called for the deportation of precisely those Jews who were fit for work, hence who were *not* to be exterminated even according to the orthodox point of view: whom then would Höss have "gassed" in his "Bunker 2"?

The authors then carry on unfolding their mythical Holocaust narrative:

> *"Three wooden barracks to hold the belongings of the murdered were to be erected next to it (doc. 23). Bunker II was presumably put into operation after July 8, the day when the Lenz firm installed gas-proof doors there (doc. 8)."* (p. 33)

---

[295] NG-183; reproduced in Kempner 1961, p. 199.

In my comments on Document 8, I have already explained that associating this document with "Bunker 2" is based on a blatant misinterpretation (unless it is a deliberate deception): The authors in fact mistranslated "*in d.[er] Gaskammer*" ("in the gas chamber") as "*in 2 Gaskammer*" ("in 2 gas chamber"), then they turned the non-existent "2" into "second," so that the phrase "the gas chamber" obtained the invented meaning "in the second gas chamber" by adding *ex catedra* an ordinal, *et voila!*, with this sleight of hand they created "Bunker 2" out of thin air!

Even the claim about the erection of three barracks is a simple feint, resulting from a flawed interpretation of their Document 22 (not 23), which says:

> *"For the special treatment of the Jews, the camp commandant of the concentration camp, SS Stubaf. Höss, has applied orally for the erection of 4 horse-stable barracks for the accommodation of personal effects."*

Here, the authors commit an additional error, because the letter in question is dated 9 June 1942, so even according to their twisted logic it could refer only to "Bunker 2," which at that time was not yet operational. If Höss was planning ahead, it would have been more logical to provide undressing barracks for the victims near the allegedly planned additional gassing facility.

The authors then report on Himmler's visit to Auschwitz on 17 and 18 July 1942, which they obviously interpret in a criminal way, since the *Reichsführer*-SS is claimed to have ordered the intensification of the alleged extermination, By so doing, he allegedly turned Auschwitz from a "regional center for the extermination of the Silesian Jews" into a European extermination center (p. 33). But Höss had to be aware of these plans already, "because the decision to build bunker II and introduce systematic selection was surely made before Himmler's July 17-18, 1942 visit" (note 37, p. 33). Indeed, as I have shown above, even before the decision had been made to deport European Jews in masses to Auschwitz. A beautiful timeline! Höss no doubt possessed a holocaustic crystal ball enabling him to predict the future.

The content of the talks between Himmler and Höss is known only based on the Auschwitz commandant's post-war account, which is known to contain such huge blunders that it must lead the critical researcher to doubt his entire narrative. In particular, he stated that Himmler witnessed a gassing in one of the two "bunkers," but based on what is documented, this is simply impossible (see Mattogno 2004b, pp. 17-25). Moreover, Höss claims that Himmler visited "the Gypsy camp" at Birkenau (Paskuly 1992, p. 287), which was only created in February 1943, as is well-known, and he declared (*ibid.*, p. 290):

> *"The Gypsies are to be exterminated. With the same relentlessness you will exterminate those Jews who are unable to work."*

But, thanks to his proverbial "clairvoyance," Höss had begun to "select" the Jews unable to work already a fortnight earlier, on 4 July (according to Czech 1990, pp. 191f.).

8. "*Sonderkommando*", "Cremation Pits" and Barracks Near the "Bunkers"

Next the authors claim:

> *"Soon after Himmler's visit, an order arrived from Berlin to exhume the bodies from the mass graves and burn them on wooden pyres."* (p. 34)

If that was indeed Himmler's order, then the question arises, from an orthodox point of view, why Höss visited the "field furnaces Operation Reinhard" on 16 September, hence almost two months later: is the advice of the layman Blobel supposed to have been indispensable for the erection of wooden pyres, even though one of Germany's leading experts in cremation technology, the Engineer Kurt Prüfer, was present at Auschwitz on 19 and 20 August precisely to discuss cremation and crematoria?

The mass graves are said to have been excavated by men of the *Sonderkommando*, and that is allegedly proven by authors' Document 9, which states that on 17 August 500 men were assigned to a *Sonderkommando* (p. 34). Here emerges the authors' superstitious craze about the term *Sonderkommando*, or if you will, the malicious fiction according to which only one *Sonderkommando* existed at Auschwitz, which of course was in charge of "gassing," mass graves, exhumations and open-air cremations.

According to the authors, this assignment of 500 prisoners to the *Sonderkommando* "was probably connected with the need to prepare the pits in which the corpses recovered from the mass graves were to be burned" (p. 34). This is yet another anachronism which presupposes that Höss knew ahead of time what the cremation method was going to be before he had even visited the "field furnaces Operation Reinhard."

The authors emphasize:

> *"It is not known how long this work went on, but the employment of such a large group of prisoners suggests that it took only a few days to complete the assigned tasks. This would explain Arnošt Rosin's testimony that he worked 'in the Sonderkommando' but later managed to obtain a transfer to a different labor detail."* (p. 34)

The source adduced by them is "Höss Trial Collection, vol. 6, p. 114," although Rosin did not testify during that trial, but rather during the trial against the personnel of the Auschwitz camp garrison. Regarding the subject of interest here, he declared:[296]

> *"In 1942 I was taken to the Auschwitz Concentration Camp, where I stayed three days, after which I was transferred to Birkenau. A week later I was assigned to the so-called '*Sonderkommando*.' At the beginning, our work consisted in the excavation of mass graves. In this period our* Kom-

[296] Trial of the Auschwitz camp garrison, Vol. VII, pp. 6f.

> mandoführer *was the defendant Plagge. Initially we did not know for what purpose these pits were excavated, until the day when the first gassing took place in the small gas chamber at Birkenau* [*pierwsze gazowanie w małej komorze gazowej w Brzezince*], *in the morning, before going to work, we found that our pits had been filled with people, but partially naked bodies could be seen."*

The witness then said that this *Sonderkommando* was exterminated on 3 December 1942. It is unclear how Rosin managed to escape death. In any case, this testimony contains an element that upsets the authors' fictitious history. As Danuta Czech informs us, Rosin had the serial number 29858, which was assigned on 17 April 1942 (1990, pp. 635, 157). If we follow his timeline, he was transferred to Birkenau on the 20th, and assigned to the *Sonderkommando* on the 27th of that month. The "first gassing" "in the small gas chamber at Birkenau" must therefore have been later than that, so not before 27 April. This dating is incompatible with both "Bunker 1" (March 1942), and "Bunker 2" (July 1942).

On another note, what was the "small gas chamber at Birkenau" supposed to have been? From this expression we can deduce two incontrovertible facts: 1) the witness (like all the others) did not know the term "bunker"; 2) he did not even know that there should have been two "bunkers."

As we see, the authors rely once more on an utterly unreliable witness.

They then continue to embroider their imaginary "historical reconstruction" with the same method of distorting the meaning of the documents:

> *"On August 20, 1942, 50 more prisoners were added to the Sonderkommando roster (doc. 12). Finally, as indicated by the contents of an August 22, 1942 report by the electricians' Kommando, they laid electrical cable that day for the purpose of providing the Sonderkommando with illumination at 'nineteen burning places,' which doubtless means the pits mentioned above (doc. 11)."* (p. 34)

I already mentioned above that the authors omit the key information that the request for 50 detainees was made by "Administration of Inmate Property" (*Gefangenen-Eigentumsverwaltung*), which means that its *Sonderkommando* dealt with sorting and storing inmate belongings, not with the excavation of mass graves. As for Document 11, I revealed the authors' fatuous deception, who want us to believe that the German term *Brennstellen*, in this context concerning electricians, refers to "cremation pits" instead of to utterly mundane lighting outlets.

Here, again, they don't just scoff at the reader, but also at the "eyewitnesses." In his deposition given to Soviet investigators, Szlama Dragon declared in fact that there were a total of 10 (not 19) cremation pits near the "gas cham-

bers" (gazokameri/газокамеры) 1 and 2.[297] These pits could allegedly burn no fewer than 17,000 to 18,000 corpses per day, with peaks of up to 27,000 to 28,000.[298] Such magical capacities raise the question why the SS wasted so much of their financial and material resources to build four crematoria which had a considerably inferior extermination and cremation capacity!

So, if their document proves that there were 19 cremation pits, where were the remaining nine cremation pits? Who testified about them?

Next there is the chronological contradiction about the beginning of the outdoor cremations, which also applies to the revised version of this story proposed by Setkiewicz, one of the three editors of the book under review, as I pointed out in my comments on Document 13:

> *"The cremation of corpses in pits or on pyres began at Birkenau probably around the turn of August to September* [1942]*, initially using firewood stock (wood waste), but later, around 7-8 September, also systematically by beginning to bring in wood from outside."*

If therefore the cremation began as soon as possible, "around the turn of August to September" (but Czech says it started on 21 September), how can it be that on 22 August there were already "nineteen burning places" at Birkenau?

But that's not all. Maurice Schellekes was deported to Auschwitz from the Dutch Westerbork camp on 11 August 1942, and soon after his arrival at the camp he was transferred to Birkenau and assigned to the *Sonderkommando*, whose task was to dig graves and bury the corpses of people who had been killed "in a white farmhouse in the woods." The witness pointed out: "All this happened during the heat of the summer" (Friedler *et al.* 2005, pp. 79f.). The story of the "nineteen burning places" is therefore a crude deception which distorts even the tenets of orthodox Holocaust historiography and its "eyewitnesses."

The authors conclude their fanciful presentation with a remark which is no less preposterous:

> *"It can be concluded from this that the Auschwitz commandant's office regarded the removal of the corpses from the graves as a priority task that had to be carried out day and night regardless of the rigorous regulations on observing the blackout. The removal of the bodies from the graves and the burning must therefore have begun around August 20, or soon after."* (p. 34)

Incredibly, on the basis of a vulgar deception (the *Brennstellen* passed off as "burning places" in the face of "eyewitnesses" saying the contrary), the authors revise the orthodox chronology of the beginning of outdoor cremations and backdate it to 20 August 1942!

---

[297] At that time the witnesses were still ignorant of the term "bunker."

[298] Interrogation of Sz. Dragon by Military Judge Levin, 26 February 1945. GARF, 7021-108-8, p. 19.

Thus they also distort Höss's story (which Czech adhered to): "shortly after Himmler's visit, […] Blobel […] arrived at Auschwitz with [Himmler's] orders to exhume all buried bodies, burn them, and scatter the ashes" (Piper 1994, p. 163; based on Höss's story, Paskuly 1992, p. 33). At the time Blobel was allegedly engaged in cremation experiments at Chelmno, and by order of Eichmann had to show his devices to Höss. They therefore went to Chelmno and saw "different auxiliary furnaces" constructed by Blobel. This alleged visit, he remembered, occurred on 16 September 1942. Cremation at Auschwitz began after Höss had returned to the camp, at the "end of the summer" (Paskuly 1922, pp. 32f.). And precisely from this statement Czech inferred the exact date of 21 September: the end of summer and beginning of autumn!

The distortion of a document thus led to a (pseudo-)historical distortion.

Even the claim that the wire installed by the electricians served to illuminate anything whatsoever is devoid of any foundation, as I have shown above. In this context one could refer to the witness Moshe Garbarz, who was deported to Auschwitz on 17 July 1942 from the French camp at Drancy. He claims to have been assigned to the electricians' detail, and at an unspecified time he was sent with his detail to install floodlights in a place that does not match either of the two imaginary "bunkers":

> *"We had seen a kind of barn, closed on three sides, of the type where the farmers store their hay, and not far from there three or four pretty buildings, like country houses, of which only the first, fairly close, was clearly visible. The convoys arrived, adult men and small children together, women, girls, and babies together. They moved, completely naked, in groups of twenty towards the cottage."*

The floodlights were used while mass graves were being dug. The cremation of corpses, as this "direct witness" reported, came much later, but not in "cremation pits" (Garbarz/Garbarz 1983, pp. 109-116; see my analysis in 2004a, pp. 114f.):

> *"When the first crematorium furnaces became operational* [early 1943], *the victims were recovered to be burned: I was part of the* Kommando *made to dig out the dead, thousands of dead."*
>
> *"Two months later I met a detainee still employed at digging out the dead. Not just mud: the ground was frozen. They had to break the ground and the dead with pick-axes."*

9. The Genesis of the Crematoria at Birkenau

The authors continue with a long discussion of the file memo of 21 August 1941 (Document 10), which the authors interpret in an utterly deceptive and misleading way, as I have shown in my commentary. Here I examine another important aspect of the matter: the decision to build four crematoria at Birke-

nau. The fundamental question is: did this decision depend on the alleged mass extermination, as the authors claim, or was it a result of the extremely high "natural" mortality caused by the camp's primitive sanitary and hygienic conditions and the subsequent epidemics?

The authors' interpretation that, during his visit on 17 and 18 July 1942, Himmler ordered the intensification of the alleged extermination by turning Auschwitz into a European extermination center, contrasts sharply with the actual genesis of the Birkenau crematoria. According to this orthodox perspective, on the one hand Höss, by virtue of his notorious "clairvoyance," established "Bunker 2" by early July 1942 so he could carry out Himmler's extermination plan announced two weeks later, and on the other hand Himmler ordered the cremation of those allegedly gassed. As a result, the allegedly intensified extermination plan needed to be matched by an equally intensified, corresponding cremation capacity. However, even as a late as 3 August 1942, only the one crematorium initially designed for the Main Camp was planned for Birkenau.[299] The "Explanatory Report on the preliminary draft for the new construction of the prisoners-of-war camp of the *Waffen*-SS Auschwitz, Upper Silesia" of 30 October 1941 stated in this regard:[300]

> *"On account of the high* [projected] *occupancy (125,000 prisoners) a crematorium is built. It contains 5 pcs. muffle furnaces with three muffles each for 2 men, so that 60 men can be incinerated in one hour. Furthermore an underground morgue and a waste incinerator will be built. The crematorium will be erected on the grounds of the CC."*

Originally this facility was to be built in the Auschwitz Main Camp, but on 27 February 1942 it was decided to build it in the Birkenau Camp.[301] This change, by the way, took place before the creation of the alleged "Bunker 1," which confirms that the decision had nothing to do with imaginary extermination plans. Not even the authors dare to explicitly state that this crematorium was designed for extermination, which would be absurd to claim after Jean-Claude Pressac's fundamental studies. Therefore the future Crematorium II initially had a purely hygienic and sanitary purpose. Hence, if as of 3 August 1942 this was the only crematorium in the pipeline, then this means that the decision to build the remaining three Birkenau crematoria had also no relation to the alleged extermination of the Jews.

The map of the Birkenau Camp of 15 August 1942 shows only the future Crematoria II and III (labeled 1 and 2; Pressac 1989, p. 203), but the first known blueprint of Crematorium IV/V was drawn the day before and shows in the furnace room an eight-muffle cremation furnace (*ibid*., p. 393), the

---

[299] Letter by Bischoff to Kammler of 3 August 1942. GARF, 7021-108-32, p. 37.

[300] "Erläuterungsbericht zum Vorentwurf für den Neubau des Konzentrationslagers der Waffen-SS, Auschwitz O/S." RGVA, 502-1-233, p. 20.

[301] Letter by Bischoff to Kammler of 30 March 1942. RGVA, 502-1-313, p. 174.

model of the Mogilev contract. Ertl's file memo of 21 August says two important things in this regard:

> *"2) Regarding the installation of 2 three-muffle furnaces each at the 'bathing facilities for special operations,' it was proposed by engineer Prüfer that the furnaces be diverted from an already completed shipment to Mogilev* [in White Russia]*, and the administrative director, who was at the SS Main Office of Economic Administration in Berlin, was immediately informed of this by telephone and asked to make further arrangements.*
> *3) Concerning the erection of a 2nd crematorium with 5 triple-muffle furnaces as well as aeration and de-aeration installations, results of the negotiations on assignment of materials, already under way with* Reichssicherheitshauptamt (RSHA)*, must first be waited for."*

The document in question contains a handwritten note by Bischoff saying:[302]

> *"24 Aug. 42 by phone notified Herr Prüfer that 2 pieces 8-muffle furnaces can be diverted from delivery Mogilev. Herr Prüfer imparted that SS-*Stubaf. *Lenzer has told him that already."*

Hence, if Prüfer had proposed to provide two 8-muffle cremation furnaces for "bathing facilities for special operations," a proposal that was accepted within a few days, and if a blueprint of Crematorium IV/V existed already on 14 August showing an 8-muffle furnace, the logical conclusion is that "bathing facilities for special operations" was a term used to describe the future Crematoria IV and V, which were indeed equipped with this kind of furnaces.

As I have shown elsewhere (2019, pp. 158-162), "water installations" were installed in these crematoria. These were undoubtedly two shower facilities operated with water heated by means of heating coils incorporated into the design of the room's heating stoves. Hence these were sanitary facilities rather than extermination facilities. In this context, "special operations" consisted of receiving and accommodating the arriving deportees, which was also called "immediate operation" or "immediate measure." The first term appears in Garrison Order No. 31/43, which states as follows:[303]

> *"As recognition for the labor performed by all SS members during the special operation of the last few days, the commandant has ordered that from 1300 hours on Saturday evening, 7 August 1943, through Sunday, 8 August 1943, inclusive, there will be a rest from every operational duty."*

Since *all* SS men of the *entire* Auschwitz Camp had participated in this "special operation" (and not just a selected few allegedly deployed during homicidal gassings), it is clear that the term referred to the entire deportation procedure with all operations involved in receiving, sorting and accommodating the deportees.

---

[302] RGVA, 502-1-313, p. 160.
[303] AGK, NTN, 94, p. 179.

It remains to explain why the "bathing facilities for special operations" had a close relationship with the crematoria. This derived from the catastrophic sanitary situation prevailing inside the camp in August 1942. After the first cases of typhus had manifested themselves among civilian workers of the Lenz and Huta companies between late June and early July,[304] a typhus epidemic quickly broke out which spread to the entire camp complex of Auschwitz-Birkenau. The mortality rate among prisoners skyrocketed to frightening heights, reaching 8,600 deaths in August.[305] Pressac himself spoke of

> *"*[…] *absolute panic that seized the SS in July/August 1942 when they were confronted with a raging typhus epidemic and were in a situation where they had to combat this by every possible means."* (Pressac 1989, p. 227)

This was precisely the reason for the decision to build three additional crematoria at Birkenau, in addition to the order issued by Himmler after his visit to Auschwitz on 17 and 18 July 1942 to increase the camp's occupancy to a dizzying 200,000 inmates (see Rudolf/Mattogno 2017 pp. 157-162). Precisely the risk of an epidemic breaking out in a camp holding 200,000 inmates led the SS authorities to agree to construct three more crematoria. From October 1941 (the month in which the first draft of the PoW camp was released) to August 1942, the death rate at the camp rose from 2,128 (Czech 1990, pp. 102) to 8,600 deaths per month, a fourfold increase. But the ratio of muffles to detainees was increased less than twofold compared to that for the originally planned camp for 125,000 PoWs (from 1:4,350 to 1:8,350). Seen this way, the camp surely was *not* over-equipped with cremation capacity in relation to the expected or rather feared mortality rates.

In conclusion, Ertl's file memo of 21 August 1941 referred to crematoria planned for registered inmates who were dying at the camp in large quantities, particularly as a result of the catastrophic typhus epidemic. It had nothing to do with corpses of anyone allegedly gassed.

Not to mention the absurdity of the orthodox version's suggestion that the SS would have planned between October 1941 and the summer of 1942 to build a modern crematorium with five triple-muffle furnaces in order to tracelessly incinerate the inmates who had died a mere "natural" death, while at the same time planning to simply bury their mass-murder victims of the alleged extermination of the Jews in mass graves!

---

[304] Letter by "Staat. Gesundheitsamt für den Kreis Bielitz" to the commandant of CC Auschwitz dated 3 July 1942. RGVA, 502-1-332, pp. 148f.

[305] The *Sterbebücher* of Auschwitz (register books of deceased inmates) contain 8,507 death certificates for the month of August 1942 (Grotum/Parcer 1995, p. 249), with some gaps. The certificates' numbers range from 17789 to 26388, so the actual number of deaths was about 8,600.

10. "*Sonderaktion*," "*Aktion* Reinhard" and Open-Air Cremations

The authors then distort the meaning of other documents in order to forcibly adapt them to their holocaustic predilections, while being indifferent to – or unable to resolve – the resulting contradictions:

> *"The next problem that the SS authorities had to solve in connection with the arrival of numerous transports of Jews designated for extermination was the lack of a sufficient number of trucks to carry the selected persons from the ramp to the gas chambers. A request was therefore submitted for the allocation of five trucks required for 'special operations,' and the WVHA approved the request by the end of the month (doc. 60). At the same time, 12 SS clerks were transferred from Oranienburg to Auschwitz to administer the plundered property of the victims (Operation Reinhard) (doc. 61). Simultaneously, the supply of firewood from the Pszczyna forests (Radostowice, Kobiór and Międzyrzecze) was organized (doc. 13). On September 16, accompanied by Franz Hössler and Walter Dejaco, Höss set out on a business trip to the extermination center at Chelmno on the Ner (Kulmhof) to learn about the experiences of SS men who ran the burning pits there. (*doły spaleniskowe, *p. 20)."* (pp. 35f.)

As I have shown above, the claim that the five trucks "for special operations" served to transport the alleged victims "from the ramp to the gas chambers" has no basis. The most likely use of those trucks was for transporting the inmates' belongings from the Auschwitz railway station to the disinfestation and storage facilities inside the camp, which is confirmed by the transfer of 12 non-commissioned SS officers and soldiers to Auschwitz "for operation 'Reinhard,'" which was ordered on 25 September 1942 by the *WVHA*, eleven days after the request for the trucks. Since the term "special operations" also described the reception of trains full of deportees, it does not exclude the possibility that the trucks also served to transport some of the deportees, mainly the disabled and elderly, as attested to by a witness.

The transport which left the Netherlands on 9 October 1942 was subjected to a selection on the old ramp (*alte Rampe*) at the Auschwitz railway station, which was located halfway between Auschwitz and the Birkenau Camp. This can be gleaned from the testimony of "one of the returnees" of these transports published by the Dutch Red Cross. According to this, a group of young women was "selected" (*geselecteerd*) for work on arrival, while "the group of women and children and elderly men were loaded onto three large trucks with trailers, and they also left in the direction of Auschwitz I" (Het Nederlandsche… 1952, p. 72). This group of people unable to work was therefore also sent in the direction of Auschwitz – rather than toward Birkenau to be "gassed" in the two alleged homicidal "bunkers."

The "supply of firewood," presumably for the open-air cremation of the corpses of those allegedly gassed, began already on 7 September (Document

13), so the authors claim, hence even before Höss visited Blobel in order to learn the cremation technique. Here they also eliminate the embarrassing reference to the Feldöfen Aktion Reinhard"field furnaces Operation Reinhard," which (as far as Höss knew) could also work with coke and did not require firewood. They replace them instead with totally invented "cremation pits."

For the subsequent period, the authors claim:

> *"The sequence of events that unfolded at this point is not completely clear."*

Hence they force and manipulate it to suit their interpretative agenda:

> *"Presumably, the prisoners whose job it had been to disinter the corpses from the mass graves were murdered first, as a consequence of which the prisoners who manned the gas chambers organized several escapes out of fear for their lives. The SS then decided to murder all the remaining members of the Sonderkommando in the gas chamber at crematorium I in Auschwitz, and to form a new Sonderkommando (December 9, 1942) from transports that arrived at this time."* (p. 36)

To lend credibility to their escape stories, the authors mention in a footnote that "it is known that there were escapes by two prisoners from *Sonderkommando* II on December 7, and 6 from *Sonderkommando* I on December 9" (Note 43, p. 36), with reference to the report by the officer on duty of 9 to 10 December 1942, which I analyzed earlier (their Doc. 31). With another sleight of hand worthy of them, the authors carefully avoid explaining what the *Sonderkommando* 1 and *Sonderkommando* 2 actually were. They are explicitly mentioned in the file memo of 10 February 1943 (Document 31). From the perspective of orthodox Holocaust historiography, there are only two options:

1) *Sonderkommando* 1 was the first *Sonderkommando*, and its members were "gassed" in Crematorium 1 at the Auschwitz Main Camp, and then replaced by *Sonderkommando* 2. In this case, as I pointed out earlier, they could not co-exist. In particular, the alleged gassing of the first *Sonderkommando* took place on 3 December 1942 according to Danuta Czech, so the six detainees in question could not escape from it on the 9th, as all its members had already been "gassed" six days before. And the escape of the other two detainees from *Sonderkommando* 2 on 7 December would also have been impossible, because that *Sonderkommando* was only formed two days later on 9 December. Of course, to avoid these contradictions, the authors may change the dates as they please, but that would invalidate the testimonies these alleged events are based upon: the date of 3 December 1942 (the "gassing") was in fact declared by Arnošt Rosin,[57] that of 9 December (formation of the new *Sonderkommando*) by Szlama Dragon.[306]

---

[306] Interrogation of Sz. Dragon by investigating Judge Jan Sehn, 10 & 11 May 1945. Höss Trial, vol. 11, p. 102.

2) *Sonderkommando* 1 is said to have been deployed at "Bunker 1," while *Sonderkommando* 2 operated at "Bunker 2." In this case, leaving aside the chronological contradictions reported above, new *Sonderkommandos* 1 and 2 would have been formed on 9 December, although Dragon speak generically of a single *Sonderkommando*. Here one could certainly invoke the testimony by Milton Buki, who declared during the 127th session of the Frankfurt Auschwitz Trial (15 January 1965):[307]

> *"The 200 inmates were divided in* Sonderkommando *I and* Sonderkommando *II. 100 inmates belonged to each* Sonderkommando. *The one* Sonderkommando *was in charge for the one house in which the people were gassed, and the second* Sonderkommando *was in charge of the second house in which the people were gassed."*

It should be considered, however, that this statement, which moreover lacks the term "bunker," was made in 1965, more than 20 years after the claimed events, while Dragon spoke less than three years after the alleged events. Given that the two witnesses were supposedly assigned to the same *Sonderkommando* on the same day, 6 December 1942 (Czech 1990, p. 280), Dragon's testimony must have an obvious priority, both for chronological reasons, and because the Auschwitz Museum considers him to be the witness *par excellence* with regard to the "bunkers" of Birkenau.

Fact is, however, that a thorough analysis of the documents in question does not reveal the faintest connection between these two *Sonderkommandos* and the elusive "bunkers." On the one hand, the duty officer's report on the events of the night from 9-10 December 1942 merely tells us about prisoners having escaped from *Sonderkommandos* I and II. The file memo of 10 February 1943, on the other hand, explicitly speaks of barracks for personal effects installed at the *Sonderkommandos* 1 and 2. This contradicts Dragon's respective statements in two ways. In fact, he stated that there were only two barracks (not three) both near "Bunker 1"[308] and "Bunker 2,"[309] and that they were used as changing rooms, not for storing the belongings of the alleged victims, which were taken away on the day after the alleged gassing:[310]

> "[The gassing] *happened like this: the people were brought to the barracks with trucks. We who were assigned to assist helped the sick to come down from the truck and to undress in the barracks. In fact, all the deportees undressed in the barracks. The barracks and the space between the barracks and the chamber were surrounded by SS with dogs. Those who had undressed went naked from the barracks to the chambers.* [...]

[307] "Aussage des Zeugen Buki betreffend den Angeklagten Kaduk," 14 Jan. 1965. Fritz Bauer Institut *et al.* 2005, pp. 27936-27937.

[308] Interrogation of Sz. Dragon by investigating Judge Jan Sehn, 10 & 11 May 1945. Höss Trial, vol. 11, p. 104.

[309] *Ibid.*, p. 103.

[310] *Ibid.*, p. 105.

> *The next day a special* Kommando *took away the items left behind in the barracks by those gassed, sorted them and transported them to the* Effektenkammer *at Auschwitz."*

Was this "*Kommando*" the alleged *Sonderkommando* of the "bunker"? The authors say nothing in this regard. Milton Buki claimed to have been part of a *Sonderkommando* whose task it was to "gather, tie together and sort the clothes." It consisted of 400 detainees, and its main task was to "burn the corpses"; the witness explained that "before the construction of the crematoria the corpses were burned in corpse pits. The bodies were brought on trucks to the pits."[311] It is unclear where the collection of clothes was done.

Another witness, Simon Gotland, who arrived at Auschwitz on 30 to 31 July or 1 August 1942, claimed during the Frankfurt Auschwitz trial to also have worked in the *Sonderkommando*:[312]

> *"We had to dig graves in a size of 10 times 8 meters, in which the gassed corpses were laid. We had to scatter lime and sand on these corpses. Then I have been in various* Kommandos, *including twice in the* Kommando *Canada. When a transport had arrived at the ramp, it was my job – while I was in the* Kommando *Canada – to open the cars and chase the people out of the cars. The packages and suitcases the people had with them we had to throw onto the ramp."*

Because the members of the *Sonderkommando* were "carriers of the secret" who lived isolated from the rest of the prisoners – according to the orthodox Holocaust narrative – it would make no sense to put them in charge of bringing the belongings of those allegedly gassed to the Kanada storage area, or to deploy them at the ramp to collect the deportees' luggage. For this same reason it is also absurd to claim that they could easily switch from the doomed *Sonderkommando* working at the "bunkers" to other *Kommandos*, so they could blurt out the "terrible secret" they carried.

Gotland clearly stated, however, that a separate "*Kommando* Kanada" existed which collected the personal belongings of the deportees. Defendants and witnesses at the Auschwitz trial not only confirmed the existence of this *Kommando*, but they specified that it was actually a *Sonderkommando*.

Victor Capesius, chief of the camp pharmacy at Auschwitz, declared:[313]

> *"When a transport happened to arrive during my stay* [in Auschwitz], *the physician present at the ramp instructed the '*Sonderkommando*' working at the ramp to have physicians step out with their luggage."*

Another defendant, Franz Hofmann, gave further details:[314]

---

311 "Aussage des Zeugen Buki betreffend den Angeklagten Kaduk," 14 Jan. 1965. Fritz Bauer Institut *et al.* 2005, pp. 27839, 27842f.

313 "Richterliche Vernehmung des Angeklagten Victor Capesius," 10/11 Jan. 1962. *Ibid.*, p. 3568.

> *"The luggage left behind in the cars and on the ramp were collected by an inmate* Sonderkommando *under the supervision of the garrison administration and brought into the camp. There the items were then sorted. I have never observed that the luggage would have been sorted or pre-sorted already on the ramp; there wouldn't have been any time for this anyway."*

Robert Mulka, who had been an adjutant of Commandant Höss, stated:[315]

> *"During the arrival of transports, the supervision service was carried out by a '*Sonderkommando'*specifically assembled and sworn-in for this, which consisted of about 60 men. It was block leader personnel."*

The witness Helmut Bartsch asserted the following:[316]

> *"The suitcases and belongings of arriving inmates were hauled off the cars by a* Sonderkommando *and brought to the Kanada camp."*

Karl Hykes made the following statement:[317]

> *"Defense lawyer Gerhardt: Mr. Witness, you said that you were involved with the belongings on the ramp. Hauling them off was a different matter, you said. My question: Can you specify what your work with the belongings consisted of?*
> *Witness Karl Hykes: Yes, it consisted of the following: We stood there and had to make sure that the inmates loaded onto the wagon the luggage which the transports had brought along.* [...] *That was our task.*
> *Defense lawyer Gerhardt: Now another question. Where did those inmates come from who carried out this work?*
> *Witness Karl Hykes: That was a '*Sonderkommando'*."*

The witness added:[318]

> *"The office managing the inmates' money, where I was temporarily employed, charged us with making sure that the luggage was properly loaded up and taken to 'Kanada.' This loading was done by a* Sonderkommando *which most of the time had been brought to the ramp already beforehand, led by a block leader."*

The witness Leopold Heger made a similar deposition:[319]

> *"Presiding Judge: What do you mean by '*Sonderkommando*'?*

[318] *Ibid.*, pp. 11497f.

[319] Deposition by Leopold Heger. 88th session (11 Sept. 1964). *Ibid.*, p. 17710.

Witness Leopold Heger: A Kommando *which had to stand by for a certain purpose.*
Presiding Judge: Yes. And for what purpose was this 'Sonderkommando' *provided?*
Witness Leopold Heger: Just for the ramp."

The witness Karl Bracht also stated:[320]

"At that moment the 'Sonderkommando*' was busy cleaning up the ramp."*

This brief overview of witness statements, which the authors could have done very easily as well, confirms that their conjecture concerning barracks for inmate belongings erected near the "bunkers" is completely unfounded, and that there was yet another *Sonderkommando* whose task it was to pick up the luggage of the deportees and bring it to the disinfestation facility.

11. "*Sonderkommando*" and "Bunkers"

Continuing their shoddy work of distorting documents, the authors say:

"Much more material on the functioning of the bunkers from the subsequent months is extant, including two receipts for the delivery of coal to Sonderkommando II from December 18, 1942 and February 26, 1943. Dating from this same period are a request for the assignment of two guards to the Sonderkommando (January 19, 1943) (doc. 55), a request for dentists for 'special operations' (February 10,1943) (doc. 56), and a letter on the subject of lengthening the ramp where 'special transports' arrived (April 12, 1943) (doc. 48)." (p. 36)

The authors haphazardly bring together documents which have nothing to do with the elusive "bunkers." The only thing these documents have in common is that they refer more or less to the same period of time.

Regarding the supply of coke, the authors propose a second interpretation, in addition to that for heating of the "gas chambers," which I already examined (see their Document 54):

"It is not known what this coal was used for; perhaps attempts were made to sprinkle it on the burning pyres at times of a shortage of firewood, or it may have been used to heat the interior of the gas chambers because Zyklon B did not release poisonous gas at low temperatures." (Note 44, p. 36)

One could argue that, in this case, Zyklon B would have been completely unnecessary, because it is generally known that, if properly operated, braziers produce lethal carbon monoxide, as is tragically attested to by countless fatalities.

---

[320] "Vernehmungsprotokoll des Zeugen Karl Bracht vom 28.2.1962." 73th session (3 Aug. 1964). *Ibid.*, p. 14079.

However, even the alleged use of coke for the cremation was unknown to Dragon, who spoke exclusively of firewood:[321]

> *"At the bottom big wooden logs were laid down, then increasingly smaller wood across, and eventually dry branches."*

As for the "shortage of firewood," evidently the authors have forgotten the "Pszczyna forests."

Nothing shows that the "*Sonderkommando Nr. 2*" mentioned in Document 54 had any connection with the "bunkers," and not surprisingly, the authors avoid revealing who the recipient of the coke supply was, that is, who signed beneath the words "recipient's signature": it was SS-*Rottenführer* Goß, who is absolutely unknown as a member of the SS deployed at the "bunkers."

Because the barracks at Auschwitz-Birkenau were equipped with coke-fueled heating stoves, the most-logical explanation is that the supply in question simply was destined to heat the workplaces and lodgings of *Sonderkommando Nr. 2*.

The "Request for 2 guards for *Sonderkommando*" of their Document 55, has nothing whatsoever to do with the legendary "bunkers," as I have demonstrated in my earlier comments. The authors can sustain their argument to the contrary only by omitting that the request had been made by the "Administration of Inmate Property," as is the case for Document 12. This *Sonderkommando* was therefore involved in the sorting and storage of the inmates' personal belongings, as is confirmed by Document 31, the file memo of 10 February 1943.

With another cunning sleight of hand, the authors pretend that the "Request for dentists to the special operation" (Document 56) is clear in and of itself and does not require any explanation. What could be the holocaustic value of this document? Are they seriously suggesting that the practice of extracting gold teeth from the corpses of those "gassed" was introduced only after 10 February 1943? However, their star witness Szlama Dragon refers to it at the very beginning of his activity in the *Sonderkommando*, that is to say in December 1942:[322]

> *"Now, when corpses lay in the courtyard, a dentist, assisted by an SS* [man]*, extracted the* [gold] *teeth* […]*"*

Seen from the perspective of the orthodox Holocaust narrative, this activity of extracting teeth was different from that pursued by the Inmate Dental Center. During the Frankfurt Auschwitz trial, the witness Männe Kratz said there was a "'*Sonderkommando*' of the SS dental station" whose task it was to "melt down the teeth extracted from the dead. And the bars of gold resulting from

---

[321] Interrogation of Sz. Dragon by investigating Judge Jan Sehn, 10 & 11 May 1945. Höss Trial, vol. 11, p. 104.

[322] *Ibid.*, p. 103.

this were then sent to the SS Reich Security Main Office in Berlin, as far as I knew."[323] Here is another *Sonderkommando* ignored by the authors.

Finally, what relationship the reference to the "lengthening the ramp where 'special transports' arrived," dated 12 April 1943, may have with the "bunkers" (which were out of service at the time, according to the Auschwitz Museum's orthodox version of history) or, more generally speaking, with the alleged extermination of the Jews, it is not even specified by the authors' inscrutable imagination.

They then babble about additional documents that allegedly contain "references to the extermination of Jews in Birkenau," in particular "notes about the progress of various construction projects in the vicinity of the gas bunkers or the newly erected crematoria." Here they invoke the additional allocation of guards to "the prisoners employed in transporting materials designated for the construction of facilities to be used in carrying out 'special undertakings,'" which is mentioned in their Document 67, and "the problem of invoices for work by prisoners and civilian workers employed in the vicinity of places where 'special operations' were taking place (doc. 72)." (p. 37).

In their lackluster summary they do not add anything new to their respective comments adjacent to the documents in question, which therefore remain unexplained. As usual, the authors are satisfied by the mere presence of the magic terms "special measures" and "special operation" in those documents.

They do not explain what relationship there could possibly be between the transport to Birkenau of construction materials destined for heating stoves as part of "special measures" consisting in "accommodating the announced transports of 10 to 31 January 1943" on the one hand, and on the other hand what they call "the progress of various construction projects in the vicinity of the gas bunkers or the newly erected crematoria." Here their delusional fantasy goes rampant by interpreting housing measures for prisoners as extermination measures!

When it comes to Document 72, I emphasize that the authors, as a result of their sloppy superficiality, have committed a colossal blunder. The reference is not to work alleged performed by inmates and civilian workers near places where "special operations" were carried out. Instead, this referred to work which the civilian workers of the company Baugeschäft Anhalt were *unable* to carry out due to a "special operation." This operation consisted of the interrogation of all civilian workers employed in the camp by the camp's Political Department, which lasted four days and had been triggered by a simple workers' strike. This resulted in the loss of four working days, for which the civil companies demanded reimbursement from the Central Construction Office. The authors' interpretation is really painful nonsense.

---

[323] "Vernehmung des Zeugen Männe Kratz," 122th session (21 Dec. 1964). Fritz Bauer Institut *et al.* 2005, p. 27049.

12. When Did the Activity at the "Bunkers" Stop?

The authors, all tangled up in their false and contradictory interpretations of the documents, clearly do not address this question. After the Birkenau crematoria went into operation in the spring of 1943, they say,

> *"the two bunkers were no longer used. The office of the commandant undoubtedly intended to liquidate them at this point. As early as April, heads of camp administrative units began requesting the allocation of the now unused wooden barracks that had served until then as temporary storage for the property of the murdered (doc. 32, 33)."* (p. 37)

The *Sonderkommando* II mentioned in Document 32 is undoubtedly identical with the *Sonderkommando* 2 of Document 31, but like *Sonderkommando* 1, it is mentioned in the context of barracks and buildings which at the time were used as warehouses for inmate belongings. Only lots of malice or fantasy permits associating them with the elusive "bunkers."

Document 33 contains a passing reference to a "Special Operation 1," which the authors do not explain at all. They simply associate it with "Bunker 1" by writing "*Sonderaktion* 1 (Bunker 1)," and the readers are left to content themselves with that "authoritative" equation. But from what fact do they deduce that "*Sonderaktion* 1" was connected to the alleged "Bunker 1"?

The authors also claim that "Bunker 2" was left intact to deal with possible malfunctions of the Birkenau crematoria:

> *"In fear of further malfunctions, which could even lead to the halting of the extermination process, it was therefore decided to retain the bunkers on a temporary basis and treat them as reserve installations."* (p. 37)

This reasoning starts out with "Bunker 2," but then, tacitly and inexplicably, also includes "Bunker 1," despite testimonies that the latter was demolished in March/April 1943. This reasoning is nonsensical, however, because according to the witnesses, as interpreted by Piper, the "cremation pits" of "Bunker 1" and "Bunker 2" were leveled in the spring of 1943, after the crematoria had been started up (see my comments on their Document 16). It stands to reason that, if the SS at Auschwitz really feared that the crematoria might malfunction, they would have left the "cremation pits" at the two imaginary "bunkers" intact, but these were allegedly leveled; to what end, then, would they have kept "Bunker 2" or even both "bunkers" operable?

The argument that follows shows very obviously and once again the authors' pretentious historical and documentary ineptitude:

> *"The register of trips by truck to the Pszczyna forests and the receipts for the delivery of firewood to the Sonderkommando in the period from June to September 1943 indicate that the remains of the murdered people were then being burned not only in the crematoria, but at times also on pyres.*

> *This surely occurred when the transports of deported Jews were unusually numerous."* (pp. 37f.)

The authors refer to a page in an article by Setkiewicz saying (2011b, p. 64):

> *"Instead, in the trip register of the camp's motor pool, 29 trips to Kobiór by various vehicles (almost exclusively trucks) are logged from mid-June to mid-September (64 days). For 23 of them the task or purpose of the trip is specified, also including:*
> – Sonderkommando – *seven times*
> – *DHW (?)* Sonderkommando – *twice*
> – Sonderkommando – Holz [wood] – *twice.*
> *In addition, a few times the transport of firewood (*Tr. Holz, Holzhof, Holz fahr., Schlager Holz*) is given as the trip's reason, without actually describing in more detail what this wood was meant to be used for. It seems beyond doubt, however, that these trips – as before – were related to the supply of wood to cremate the corpses of prisoners."*

No archival reference is given for this. The purpose for the wood deliveries cited by Setkiewicz (the cremation of corpses) is purely conjectural; there is not even a clue in its favor. Seen from an orthodox point of view, cremations on pyres "when the transports of deported Jews were unusually numerous" could apply only to August 1943, the month in which about 42,500 victims were allegedly gassed. However, it would not make sense for June (less than 6,000 claimed gassing victims from the middle of the month), July (440 claimed gassing victims!) and the first fortnight of September (some 5,000 claimed gassing victims). In August 1943, the mortality among registered inmates was 2,380 inmates (1,442 men and 938 women).[324] Together with those allegedly gassed, this would have amounted to about 44,900 deaths. Even if we take these gassing allegations as fact,[325] given that Setkiewicz accepts, albeit with reservation, the fairy tale about the cremation capacity of Crematoria II/III of 1,440 corpses per day (Setkiewicz 2011b, p. 57), Crematorium III alone – the only of the four crematoria in operation in August 1943 – could have cremated 44,640 bodies, hence virtually every corpse, *i.e.* both the real and those fictitious ones, and there would have been no need for pyres. Piper even assumes a cremation capacity of 2,500 corpses per day for each of the Crematoria II and III (Piper, 1994, p. 171), so that in his opinion Crematorium III alone could have cremated 77,500 bodies in August 1943!

In addition, the authors do not provide the slightest bit of evidence that the *Sonderkommando* receiving the truckloads of wood was a *Sonderkommando* involved in cremations.

---

[324] PS-1469.

[325] The figure includes two alleged "selections" among registered inmates, one of 498 prisoners (21 Aug.), the other of 4,000 (29 Aug.), but both are purely fictitious, as I have documented in my study on health care and selections at Auschwitz (Mattogno 2016c, pp. 117-120).

Apparently they do not realize that, with their references to wood supplies, they destroy the orthodox story about open-air cremations of the corpses of alleged gassing victims. And here is why:

They state that "in the period from March 1942 to April 1943, about 250,000 people perished inside" the elusive "bunkers" (p. 38), a figure to which I shall return soon. The cremation of these bodies (as I explained in my comments on Document 13) would require (250,000 bodies × 320 kg/body =) 80,000 metric tons of firewood, equivalent to 8,000 trips of an average truck with a trailer. The documentary series *Fahrbefehl* (travel orders) should therefore contain a huge number of travel orders of this magnitude. However, the trips for firewood collection mentioned by the authors are only these:

– 7 September 1942: 1
– 8 September 1942: 1
– 9 September 1942: 1
– from mid-June to mid-September 1943: 29.

Hence a total of 32 travel orders seem to be extant, most of which, 29, from a time period when the activities of the alleged "bunkers" had ceased. As I pointed out above, the reference cited by the authors shows that the Auschwitz Museum possesses at least two volumes of these documents, and that the first of them has at least 673 pages. The explanation for such a small quantity of wood supplies to the Auschwitz Camp therefore cannot be attributed to the potentially fragmentary nature of these documents, the rest of which the authors never mention.

Now back to the claimed figure of 250,000 victims. The numbers allegedly gassed in the "bunkers" can be extrapolated to some degree from the data given in Czech's *Auschwitz Chronicle*. Most of Czech's entries state the exact number of "gassing" victims, but not all. There are a number of entries for deportation trains where only the number of inmates admitted to the camp is known, but not how many deportees were included in that particular transport. In a number of these cases Czech does not even indicate whether any of those not registered were "gassed" in the first place. If we assume, for the sake of argument, that all those deportation trains with an unknown number of deportees had 1,000 of them (the most common strength among such trains), and that all inmates not admitted/registered were "gassed," then the following numbers result (there are no gassings claimed for March and April 1942):

– May 1942:	6,800
– June 1942:	6,900
– July 1942:	4,700
– August 1942:	36,000
– September 1942:	20,500
– October 1942:	20,900
– November 1942:	20,900
– December 1942:	16,800
– January 1943:	45,800
– February 1943:	18,800
– 1-13 March 1943:	8,800
Total:	206,900

Of course, these numbers also include all the gassings that might have taken place in Crematorium I, according to orthodox historiography. Czech rarely indicates where the claimed gassings are said to have occurred. She usually only writes that the victims were killed "in the gas chambers." Only in a few cases is she more specific by pointing to the "bunkers."

One could try to resort to Höss's testimony, who declared that some 107,000 victims had been buried in the mass graves near the "bunkers" until open-air cremations began in late summer 1942. These victims, however, also included an unknown fraction of victims other than those allegedly gassed in the "bunkers," according to Höss (Paskuly 1992, p. 32). Looking at Czech's data of allegedly gassed victims until the late summer of 1942 reveals, however, that fewer than 70,000 are said to have been killed this way in Crematorium I and the "bunkers" together, so Höss's number is way too high and thus unreliable, which isn't surprising, considering that unreliability is the hallmark of Höss's various statements.

Another unclear point is when exactly gassings are supposed to have ceased in the "bunkers" in early 1943. From testimonies we can derive that the "bunkers" were taken out of commission when the new crematoria became operational, which would make perfect sense. The first gassing in those new crematoria is claimed to have occurred on 13 March 1943 (Crematorium II, 1,492 claimed victims; Czech 1990, p. 352). If we take that as the cut-off date for the operation of the "bunkers," then we arrive at a maximum of some 207,000 victims. Even if we take March 22 as the cut-off date (the day Crematorium IV went into operation; *ibid.*, p. 357), then this number would increase only by some 4,600. In any case, it doesn't seem possible to considerably exceed 210,000 gassing victims in total for the time period mentioned by the authors, and most certainly not anywhere close to this for the "bunkers," since some ten thousand of these victims are said to have been killed in the alleged "gas chamber" of Crematorium I, not in the "bunkers" (Pressac 1989, p. 132).

It is therefore unclear how the authors arrived at their figure of 250,000 "bunker" victims for 1942-1943.

Coming back to the claimed firewood deliveries, what is decisive here is that even a considerably lower "bunker" death toll still leads to incredibly high firewood requirements to cremate these corpses on pyres. Even if we assume only some 150,000 alleged "bunker" victims for the years 1942-1943, the demand for wood for their cremation would still have been (150,000 corpses × 320 kg wood/corpse =) 48,000 metric tons, equivalent to 4,800 trips of a 5-ton truck with a 5-ton trailer.

Hence, if what the authors have published about documented wood deliveries to the camp is all that is extant, then these travel order registers drastically contradict the story of the huge 1942/43 outdoor cremations of corpses allegedly gassed.

In another contradiction to the orthodox history of the Auschwitz Museum based on testimonies, the authors state:

> *"On the basis of the extant documents, it is impossible to determine with complete certainty when the demolition of bunker I began. There are many indications, however, that this occurred only in February 1944 as the construction of the nearby third part of the Birkenau camp (BIII, 'Meksyk') progressed. That was when the adjacent wooden barracks were dismantled (doc. 34) and the narrow-gauge tracks (for the carts used to transport corpses from the gas chambers to the burning pits) were removed (doc. 57, 58). The bunker building itself was completely demolished, and even the bricks from the foundation were taken away so that no trace of it would remain."* (p. 38)

As I pointed out above, if "Special Operation 1" mentioned in Document 33 referred to "Bunker 1," as the authors claim, then two of the three barracks of *Sonderkommando* I had already been dismantled and taken away as a result of the order mentioned in the file memo of 9 May 1943. In this case a single barrack would have remained at *Sonderkommando* I, but then, why did Bischoff asked for the return of three barracks on 4 February 1944? It certainly cannot be argued that Bischoff, as head of the Construction Inspectorate "Silesia," was unaware of the removal of the two barracks around 9 May 1943, because he himself had remained the head of the Auschwitz Central Construction Office until 30 September of the same year.

We should, however, back up the relationship that existed between *Sonderkommando* I and the crematoria with more documents. The opening sentence of the letter, which I repeat for clarity, says (see my comments on Document 34):

> *"For carrying out a special measure, I once made available 3 horse-stable barracks from Construction Sector III of the PoW camp on a loan basis. After the crematoria have been completed long time ago and have been*

> *handed over to your administration, the above-mentioned barracks allocated on a loan basis are no longer needed at* Sonderkommando *I."*

The completion of the crematoria thus made superfluous three barracks at *Sonderkommando* I, but why? The authors' criminal interpretation of their Document 74 no doubt has its own logic: the undressing barracks near "Bunker 1" became unnecessary following the entry into operation of the crematoria's undressing rooms *cum* "gas chambers." But this presupposes a criminal interpretation of the crematoria's morgues, which, however, is contradicted by documents showing that the SS considered the crematoria exclusively as sanitary facilities.

As I mentioned above, on 20 March 1943 the garrison physician, SS-*Hauptsturmführer* Eduard Wirths, made this request to the camp commandant:[326]

> *"Two covered push-carts must be made available for the removal of the corpses from the detainee sick-bay to the crematorium, each one allowing the transportation of 50 corpses."*

And on 4 August Bischoff wrote to Wirths:[327]

> *"SS*-Standartenführer *Mrugowski declared in the meeting of 31 July that the corpses are to be removed to the morgues of the crematoria twice a day, i.e. in the morning and in the evening, which renders unnecessary the additional installation of morgues in the various subsections."*

These provisions, which relate to the corpses of the registered prisoners who had died in the camp, are completely at odds with a logic of extermination. They categorically exclude the possibility that the morgues of the crematoria, filled with deceased inmates as they must have been, could have been used as "gas chambers."

Above I mentioned Bischoff's report of 16 May 1943 which stated (see my comments on Document 17):[328]

> *"Also planned is the insertion of heating coils into the garbage incinerator at Crematorium III for the production of* [hot] *water for a shower unit to be installed in the cellar of Crematorium III. Negotiations for the implementation of this unit have taken place with Topf & Söhne Co., Erfurt."*

Already three days earlier Bischoff had charged the civilian engineer Rudolf Jährling with the task of installing "showers in the undressing room of Crematorium III,"[329] which was a "project for heating water for some 100 show-

---

[326] Letter by the SS garrison physician to the commandant of CC Auschwitz dated 20 March 1943 with the subject "Häftlings-Krankenbau – KGL." RGVA, 502-1-261, p. 112.

[327] Letter by Bischoff to Wirths of 4 August 1943 with the subject "Hygienische Sofortmassnahmen im KGL: Erstellung von Leichenhallen in jedem Unterabschnitt." RGVA, 502-1-170, p. 262.

[328] RGVA, 502-1-83, p. 311.

[329] "Bericht über die Arbeitseinteilung beim Sofortprogramm im K.G.L. Auschwitz" by Bischoff, dated 13 May 1943. RGVA, 502-1-83, p. 338.

ers."[330] Hence, it is difficult to explain the meaning of the document under discussion without any further documentation.

Two issues still ought to be pointed out, though. First, it is not very likely that the barracks for the alleged "Bunker 1" would have been granted "on a loan basis," *i.e.* that this supposed extermination installation would not even have been provided with its own proper barracks.

Second, the three barracks came "from Construction Sector III" of the Birkenau Camp. Now, according to the logic of the authors, two of these three barracks were those which had been erected outside the Birkenau Camp in May 1942 (see their Document 21), but at the time the work in Construction Sector III had not yet begun. They were mentioned for the first time in the "Construction Report for the month of September 1942," which states:[331]

> *"Construction Sector III: Extension of the open trenches for drainage of surface water has begun."*

The "distribution list of barracks" of 8 December 1942 states that for Construction Sector III of the Birkenau Camp 36 barracks of the Type 260/9 are required, "only latrine, wash and storage barracks," of which 12 were already installed and 24 still pending.[332] If the three barracks given to the *Sonderkommando* were part of the pending 24 in Construction Sector III, then the loan was made several months after the alleged entry into operation of "Bunker 1."

The request dated 24 December 1943 for handing back over the field railway which had been given to *Sonderkommando* I does not prove anything homicidal either, because we know nothing about this railway. The only documented information on this *Sonderkommando* is that it had to do with the inmates' personal belongings.

Conclusions

The authors' comments on their documents end here. They close their introduction by stating that Auschwitz grew "in the years 1942-1943 from a medium-sized concentration camp to the largest mass-extermination center," a "radicalization" that arose not "from a single decision" but was the result of many factors (p. 38). By so doing, they openly contradict Höss's statements, according to which the alleged extermination of the Jews depended on two fateful decisions, one by Hitler in June 1941 (the alleged order to exterminate the Jews), and the other by Himmler in July 1942 (the alleged extension from a regional extermination center for Jews to one of European proportions).

As for the "bunkers," the authors claim that 250,000 people fell victim to them from March 1942 to April 1943, but the most miraculous thing is that this immense extermination is said to have occurred without leaving the slightest documentary trace.

In the present study I have shown that none of the 74 documents published by the authors has any relation to the "bunkers" in particular and to the alleged extermination of the Jews in general. I also demonstrated that, in order to create fictitious relations, the authors have systematically misrepresented and distorted documents, ignored their meaning and their context, provided totally inconsistent and fanciful interpretations, while showing a remarkable superficiality and historiographical ineptitude. But the greatest reproach that must be leveled against them, far more serious than their childish and foolish tenet about "code words," is their fundamental deception according to which there existed merely one kind of *Sonderkommando* at Auschwitz, so that every document containing this term turns into an apparent proof for the existence of the elusive "bunkers" of Birkenau, and this despite the numerous documents stating the contrary which they obviously never cite.

The authors' work, however, has also a meritorious aspect: having published a selection of documents that, taken in their context, help to shed light on still-unclear aspects of the history of Auschwitz.

This my present study can therefore be considered to be an update and completion of my book *Special Treatment in Auschwitz: Origin and Meaning of a Term*, whose theses are thus confirmed and consolidated, thanks to the documents submitted by the authors.

Anlg: 1 geprüfter Bauantrag 2-fach.

An die

Zentralbauleitung der
Waffen-SS und Polizei

A u s c h w i t z

Baubefehl Nr. 61.

Auf Grund der eingereichten Unterlagen erteile ich hiermit den Baubefehl zur Errichtung von 3 Baracken für Sondermaßnahmen im KL. Lager II Auschwitz.-

Ich bemerke hierzu folgendes:

1.) Der Antrag auf Ausnahme vom Bauverbot ist noch vorzulegen.

2.) Die eingereichten Unterlagen wurden bautechnisch und bauwirtschaftlich geprüft. Die Prüfungsvermerke sind zu beachten.

3.) Die benötigten Baumittel in Höhe von

RM. 51.000.-
(i.W.:Reichsmark Einundfünfzigtausend)

werden bei Kapitel 21/7b (Bau) 65/61 bereitgestellt. Das Bauwerk ist mit Rahmenbaubefehl Nr. 1239 v. 13.1.44 - Az: C V/1-So-2/2b/Ma/Pz.- des SS-Wirtschafts-Verwaltungshauptamtes bereits genehmigt.

Die auszahlungsanweisende Baudienststelle, die Zentralbauleitung der Waffen-SS und Polizei Auschwitz muss über den obigen Betrag eine Haushaltsüberwachungsliste führen. Der Leiter der Zentralbauleitung haftet für Auszahlungen oder Zahlungsverpflichtungen, die über den zugewiesenen Betrag hinausgehen. Vor Verwendung der restlichen lo v. H. der zugewiesenen Mittel ist dem Amt C V zu melden, dass diese zur Deckung aller anfallenden Ausgaben ausreichen; andernfalls ist ein begründeter Nachantrag zu stellen.

4.) Die Zuweisung der erforderlichen Kontingente erfolgt im Rahmen der Zuweisung durch den G.B.-Bau.

5.) Die Übergabe des Baues an die hausverwaltende Dienststelle ist mir gemäß Verfügung des SS-Wirtschafts-Verwaltungshauptamtes Amt C VI, v. 18.1.44 - Az:C VI/3-Allg./61/e (neu) Ta/Ka/Tgb.Nr. 208 - zu melden.

Der Leiter der Bauinspektion
der Waffen-SS und Polizei "Schlesien"

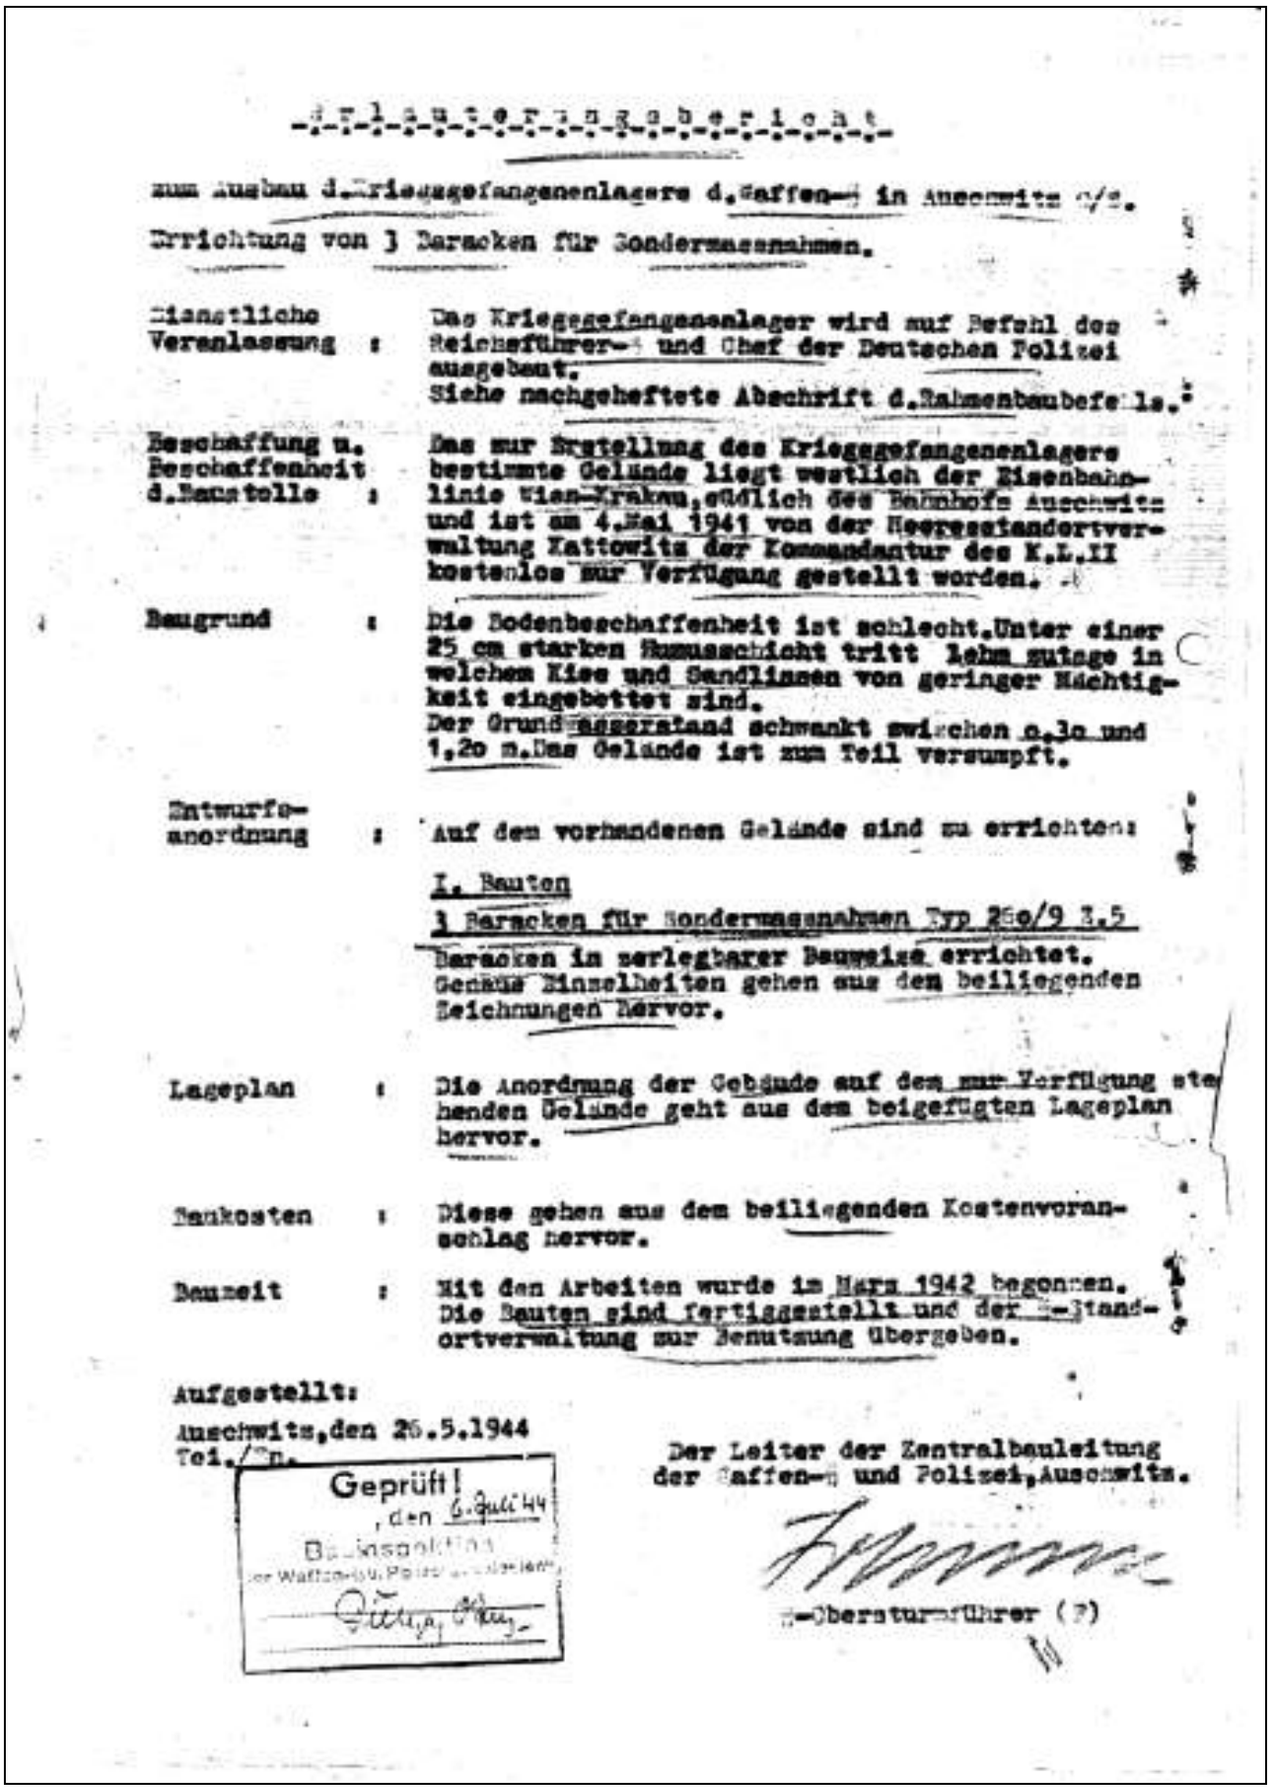
zum Ausbau d. Kriegsgefangenenlagers d.Waffen-
in Auschwitz O/S.

Errichtung von 3 Baracken für Sondermassnahmen

DOCUMENT 22: "*Bauantrag zum Ausbau d. Kriegsgefangenenlagers d. Waffen-SS in Auschwitz O/S. Errichtung von 3 Baracken für Sondermassnahmen*"; construction request for the expansion of the PoW camp of the *Waffen*-SS at Auschwitz Upper Silesia. Installation of 3 barracks for special measures; dated 26 May 1944. RGVA, 502-2-125, pp. 227-229.



Erläuterungsbericht

zum Ausbau d. Kriegsgefangenenlagers d. Waffen-[illegible] in Auschwitz O/S.

Errichtung von 3 Baracken für Sondermassnahmen.

Dienstliche Veranlassung : Das Kriegsgefangenenlager wird auf Befehl des Reichsführer-[illegible] und Chef der Deutschen Polizei ausgebaut.
Siehe nachgeheftete Abschrift d. Rahmenbaubefehls.

Beschaffung u. Beschaffenheit d. Baustelle : Das zur Erstellung des Kriegsgefangenenlagers bestimmte Gelände liegt westlich der Eisenbahnlinie Wien-Krakau, südlich des Bahnhofs Auschwitz und ist am 4. Mai 1941 von der Heeresstandortverwaltung Kattowitz der Kommandantur des K.L. II kostenlos zur Verfügung gestellt worden.

Baugrund : Die Bodenbeschaffenheit ist schlecht. Unter einer 25 cm starken Humusschicht tritt Lehm zutage in welchem Kies und Sandlinsen von geringer Mächtigkeit eingebettet sind.
Der Grundwasserstand schwankt zwischen 0,3o und 1,2o m. Das Gelände ist zum Teil versumpft.

Entwurfsanordnung : Auf dem vorhandenen Gelände sind zu errichten:

I. Bauten

3 Baracken für Sondermassnahmen Typ 28c/9 B.5

Baracken in zerlegbarer Bauweise errichtet. Genaue Einzelheiten gehen aus den beiliegenden Zeichnungen hervor.

Lageplan : Die Anordnung der Gebäude auf dem zur Verfügung stehenden Gelände geht aus dem beigefügten Lageplan hervor.

Baukosten : Diese gehen aus dem beiliegenden Kostenvoranschlag hervor.

Bauzeit : Mit den Arbeiten wurde im März 1942 begonnen. Die Bauten sind fertiggestellt und der [illegible]-Standortverwaltung zur Benutzung übergeben.

Aufgestellt:

Betr: Bauantrag zur Errichtung von 3 Pferdestallbaracken für Sondermaßnahmen.
Bezg: Dort. Schreiben vom 15.6.44, Az:Bftgb.Nr.51848/44/Te1/R.
Anlg: 1 geprüfter Bauantrag 2-fach

An die

Zentralbauleitung der
Waffen-SS und Polizei
A u s c h w i t z

Baubefehl Nr. 63.

Auf Grund der eingereichten Unterlagen erteile ich hiermit den Baubefehl zur Errichtung von 3 Pferdestallbaracken für Sondermaßnahmen im KL Lager II Auschwitz.

Ich bemerke hierzu folgendes:

1.) Für das Bauvorhaben ist noch der Antrag auf Ausnahme vom Bauverbot vorzulegen.

2.) Die eingereichten Unterlagen wurden bautechnisch und bauwirtscheftlich geprüft. Die Prüfungsvermerke sind zu beachten.

3.) Die benötigten Baumittel in Höhe von

RM 41 ooo.-

(i.W.:Reichsmark Einundvierzigtausend)
werden bei Kapitel 21/7b (Bau) 65/63 bereitgestellt.

Die auszahlungsanweisende Baudienststelle, die Zentralbauleitung der Waffen-SS und Polizei Auschwitz muss über den obigen Betrag eine Haushaltsüberwachungsliste führen. Der Leiter der Zentralbauleitung heftet für Auszahlungen oder Zahlungsverpflichtungen,die über den zugewiesenen Betrag hinausgehen. Vor Verwendung der restlichen lo v.H. der zugewiesenen Mittel ist dem Amt C V zu melden, dass diese zur Deckung aller anfallenden Ausgaben ausreichen; andernfalls ist ein begründeter Nachantrag zu stellen.

4.) Die Zuweisung der erforderlichen Kontingente erfolgt im Rahmen der Zuweisung durch den O.B.Bau

5.) Die Übergabe des Baues an die hausverwaltende Dienststelle ist mir gemäß Verfügung des SS-Wirtschafts-Verwaltungshauptamtes, Amt C VI, v.18.1.44 - Az: C VI/3 Allg.-61/e (neu) Ta/Ka/Tgb.Nr. 2o8 - zu melden.

Der Leiter der Bauinspektion
der Waffen-SS und Polizei "Schlesien"

gez:Bischoff
SS-Sturmbannführer.

Introduction

In 2011, an important article was published by Piotr Setkiewicz, director of the Research Center at the Auschwitz Museum, which is titled "The Supply of Materials to the Crematoria and Gas Chambers at Auschwitz: Coke, Wood, Zyklon." His exposition far surpasses all previous discussions on the topic by orthodox Holocaust historians (especially the rather slapdash one by van Pelt 2002), and also raises what appear to be certain significant issues. It therefore deserves to be examined more carefully.

Setkiewicz highlights the lack of documentary evidence in relation to the alleged mass extermination at Auschwitz, noting:

> *"The extensive research carried out in recent years on this important documentation has contributed to the sum of knowledge on the subject of the gas chambers and crematoria at Auschwitz, but it has not helped to resolve all contentious issues,"*

so that, regardless of the testimonies, the confessions and the few documents,

> *"our direct knowledge of the full extent of the extermination is derived mainly from the obvious conclusion that, if on any given day many more prisoners were brought into the camp than were registered, then the remaining number were undoubtedly killed."* (Setkiewicz 2011a, p. 48)

This is, however, the very same dubious method used by Danuta Czech in the preparation of her *Auschwitz Chronicle*.[1] Yet Setkiewicz wants to go beyond this by analyzing documents previously ignored by the Auschwitz Museum which should provide new evidence.

In fact, his article is an indirect response to revisionist arguments, especially with regard to supplies of coke to the crematoria of Auschwitz-Birkenau; it is an indirect response in that the revisionist arguments are never explicitly mentioned.

My present study is a *direct* response to Setkiewicz's arguments, objections and explanations, each of which I will analyze individually and then as a whole.

Carlo Mattogno, May 2015, revised in March 2021

[1] See in this regard my critical analysis in Mattogno 2021.

I. Coke

Setkiewicz states that the first Topf double-muffle furnace in Crematorium I at Auschwitz began operating on August 15, 1941, which is correct, and that its capacity "was estimated at 70 corpses per day" (p. 48).[2] He does not explain, however, just who was responsible for this estimate, which is moderately exaggerated (roughly one-and-a-half-times the device's theoretical capacity).[3]

He then calculates the number of bodies cremated until the end of 1940 as 1,500 to 1,800, based on the following data (pp. 48f.):

– On the occasion of Christmas that year, permission was given by Rudolf Höss to deliver 6,000 food parcels to the camp.
– Around that time, identification numbers 7500-7800 were assigned to new inmates of the camp.
– Up to that date, some 100 prisoners had been transferred out of Auschwitz.

Hence, the following calculation results:

(7,500 – 6,000 – 100 =) 1,400, or (7,800 – 6,000 – 100 =) 1,700.

The exact number of transferred detainees is unknown, and receiving 6,000 parcels does not necessarily prove the presence of 6,000 inmates in the camp, but it can be assumed that the above figures are quite close to reality.

With good approximation, it can be said that about 5,800 inmates died in Auschwitz between May 1940 and July 1941, on average some 14 per day, but it must be assumed that the average mortality increased progressively with the passage of time due to the steady increase in the number of registered inmates. On the basis of the above data, a maximum number of 1,900-2,000 deaths can be assumed for the period May-December 1940.

The conclusion subsequently drawn by Setkiewicz is incomprehensible, though (p. 49):

---

2 Page numbers subsequently given in parentheses refer to Setkiewicz's article.
3 See in this regard Mattogno/Deana, Part 1, pp. 251-265, 292-311.

> *"The crematorium worked for about 100 days up to around December 15-20, 1940, so we can assume that during this time between a minimum of several bodies and a maximum of several hundred bodies were cremated every day in the crematorium."*

If the first cremation was carried out on August 15 (p. 48), the crematorium was operational for 127 days until December 20, so that on average (1,700÷127=) 13 corpses would have been cremated per day; taking Setkiewicz's 100 days, which is unsubstantiated, the daily average would increase to 17 cremations, which means that the alleged cremation of several hundred bodies a day in this period of time is completely outside the realm of possibility.

It should also be noted that, until August 14, dead prisoners were obviously not cremated in the crematorium, but were first buried in a mass grave and then cremated in the crematorium of Gleiwitz (p. 48). However, the number of these deaths was rather small, because only 1,900 prisoners had been registered up to August 15, 1940.

In this context, Setkiewicz adds that "one safe measure for the number of bodies cremated during this period is also given in the register of supplies shipped to the camp on August 31, which lists the delivery of 1,000 fireclay identification markers (*Schamotte-Erkennungsmarken*), which were put in the furnace along with the dead bodies, and 500 urns (*Aschekapseln*) numbered 1 through 500" (p. 49). The corresponding document, reproduced by the author in another study, says: "1000 fireclay identification markers, 500 urns numbered 1-500" (Setkiewicz 2001a, p. 101; see Document 1).

Setkiewicz misinterprets the meaning of this delivery.

On June 3, 1940, the Topf Company offered the SS New Construction Office of Auschwitz (SS *Neubauleitung*), for the start of operation of the crematorium, "500 urns and the same number of fireclay markers."[4] In civilian crematoria, these numbered markers were placed on the coffin – in Auschwitz directly on the corpse – to identify the ashes, hence the term identification markers (*Erkennungsmarken*). The marker was in fact collected from the muffle's ash container along with the ashes of the dead, allowing identification. This means that at Auschwitz it was planned to cremate every corpse separately (one per muffle), and to make sure that the ashes put in an urn and sent to the deceased prisoner's family were indeed only the ashes of that inmate. If we hypothesize that two or more corpses were cremated simultaneously in one muffle, such a procedure would make no sense, because markers and ashes would blend indistinguishably.

---

[4] RGVA, 502-1-327, pp. 226f., see Document 2.

In 1946, many similar markers were found near Crematorium II. In 1981, Adam Żłobnicki stated the following about them:[5]

> *"In 1946, I was intrigued by the fact that in front of the entrance to Crematorium II there were ceramic disks on the ground. On each disc, there was a number. As it turns out, these disks also interested the investigating judge Jan Sehn of the District Commission for the Investigation of Hitlerite Crimes, which at that time (1946) investigated the area of the former Auschwitz camp, gathering the remaining evidence. The aforementioned Judge Jan Sehn approached me with a request to excavate the soil at that location. I did as he requested, and discovered that these disks were not only on the surface, but also buried in the ground. I dug up a large number of these disks. I must explain that the disks I unearthed were buried wrapped together forming rolls tens of centimeters long. I dug up so many of these rolls of disks that I was able to fill an entire bucket with these objects. I personally handed all these objects to Judge Sehn, who brought them to Krakow. I have no idea what those disks were."*

It would appear, then, that these identification markers were in use even in Crematorium II at Birkenau.

A Brief History of the Furnaces of Crematorium I

In this section I summarize what I wrote in depth in my specific study on the cremation furnaces of Auschwitz-Birkenau (Mattogno/Deana, Part 1, pp. 212-228)

The first crematorium at Auschwitz can be looked at from an entirely different perspective.

On November 7, 1940, the head of construction SS *Untersturmführer* August Schlachter informed the Topf Company of the following:

> *"The current utilization of the cremation device installed by you here has shown that the device is too small after all."*

The SS New Construction Office wanted to double the capacity of the facility and asked Topf to send to Auschwitz an employee of the company to discuss the matter on site.[6]

On November 22, the SS New Construction Office sent a letter to Office II C2 of the Main Office Budget and Construction (*Hauptamt Haushalt und Bauten*) requesting authorization for the purchase of the second furnace, justifying the request as follows:[7]

---

5 Deposition by A. Żłobnicki of November 18, 1981. APMO, *Oświadczenia* (Depositions), Vol. 96, pp. 63a and 70.
6 RGVA, 502-1-312, p. 146.
7 RGVA, 502-1-327, p. 173.

> *"The past operation of the crematorium has shown that already during the relatively good season the furnace with two muffles is too small; the Commandant's Office as well as the Political Department have approached the SS New Construction Office and have urgently requested to expand the facility by two muffles."*

From August 15 to December 31, 1940, as seen above, mortality at Auschwitz was at maximum 2,000 deaths, an average of 15 per day. It is evident that the mortality increased progressively with the increasing number of prisoners interned in the camp and the approach of winter. However, it could not continuously exceed Setkiewicz's estimate of the cremation capacity: 70 corpses per day. In fact, if that were the case, in November alone there would have died (70 × 30 =) 2,100 inmates, which is obviously impossible. The order of magnitude was therefore necessarily smaller, commensurate with the actual cremation capacity of this facility: one cremation in one muffle per hour, theoretically 48 in two muffles within 24 hours.

In the letter sent by the Topf Company on November 1, 1940 to the SS New Construction Office of Mauthausen Camp, to which an estimate was attached for the "delivery of one Topf coke-fired cremation furnace with compressed-air blower" as well as a "forced-draft device", we read:[8]

> *"Our Mr. Prüfer had already informed you that in the furnace offered previously, two corpses can be cremated per hour."*

To this letter was attached Topf's Drawing No. D57253 of June 10, 1940, which referred to a "coke-fired cremation furnace and foundation plan", *i.e.* the first furnace of the crematorium at Auschwitz.[9]

In a letter to the SS New Construction Office of Mauthausen dated November 23, 1940, Topf specified:[10]

> *"We also want to mention that Auschwitz CC in Upper Silesia has now ordered from us a second coke-fired double-muffle furnace of the same model as the one planned for you."*

Prüfer therefore referred to the type of double-muffle furnace installed at Auschwitz. Considering the technical specifications for the time required for shutting down the furnace and cleaning the grates of the gas generators – about four hours per day[11] – the daily cremation capacity was effectively about 40 corpses.

Setkiewicz (p. 48) mentions information originating with the Polish resistance movement (the "Report on the Situation during the Period of April 1 to August 15, 1941") which states (*Obóz…* 1968, p. 7):

---

8 Letter from Topf to SS *Neubauleitung* of Mauthausen dated November 1, 1941. BAK, NS4/Ma 54. See Mattogno/Deana, Part 2, Doc. 194, pp. 318-320.
9 Mattogno/Deana, Part 2, Doc. 202, pp. 340-344.
10 BAK, NS 4/Ma 54.
11 Mattogno/Deana, Part 1, pp. 312-314.

> *"Mortality is obviously lower than during the freezing winter, when the daily average was a few tens and the maximum* [mortality] *was 86 people on October 28, 1940."*

This is perfectly compatible with what I already said earlier, in that a figure of 86 deaths per day, if true,[12] would have been an altogether exceptional peak value.

It follows from this that the first crematorium at Auschwitz could not even support the continuous cremation of a few dozen corpses per day.

Setkiewicz, instead of openly acknowledging this, undertakes a convoluted line of reasoning. In fact, he explicitly refers to this exceptional peak mortality when writing:

> *"Since this figure was close to or even exceeded the maximum capacity of the only crematorium that existed at the beginning of November, the command of KL Auschwitz issued an order to the firm Topf und Söhne for the installation of a second identical furnace."* (p. 49)

It is true that the figure in question – 86 deaths – was above the cremation capacity attributed by Setkiewicz to the double-muffle furnace, but the average mortality, according to his own source, was well below that.

The documents mention another important fact. On January 8, 1941, Schlachter wrote the following to Topf:[13]

> *"The SS New Construction Office has already informed you by telegraph that the first furnace has already been damaged due to heavy use and, therefore, can no longer be used at full capacity."*

On January 13, 1942, Schlachter sent a telegram to Topf in which he stated:[14]

> *"Monolite grates and internal walls have burnt out."*

As a matter of fact, the grates of the cremation chambers and the internal walls of the gas generators had fused. On January 21, Schlachter informed Topf that the doors of the gas generators were also worn out:[15]

> *"Furthermore, two gas generator closures must be delivered as quickly as possible for repair work because the old ones have completely burnt through."*

And this even though, from the opening of the camp (June 1940) to January 12, 1941, merely about 2,000 prisoners had died, who were not even all cremated in the furnace, as I explained earlier.

---

[12] I could not verify this number, which may be too high. In August 1941, with an undoubtedly larger camp population, 1,277 inmates died, an average of 41 per day; the maximum mortality occurred on August 8 with 81 deaths. See Mattogno 2019a, pp. 248f.

[13] RGVA, 502-1-327, p. 180.

[14] RGVA, 502-1-312, p. 130.

[15] RGVA, 502-1-312, p. 80.

In practice, the first double-muffle furnace at the Auschwitz crematorium was seriously damaged by the "heavy use" of a few tens of cremations a day, and as a result of no more than some 2,000 cremations in total.

This data should be kept in mind when considering what Setkiewicz says regarding the Birkenau crematoria, which I will do in due course.

Setkiewicz deals next with the coke and coal supplied to Auschwitz. He summarizes the supply of coal and coke from June 1941 to October 1942 as follows (p. 50):

Table 1: Supply of Coal and Coke to Auschwitz between June 1941 and October 1942

	Coal	Coke		Coal	Coke
June 1941	389	0	March 1942	333	101
July 1941	100	260	April 1942	204	20
August 1941	800	60	May 1942	104	318
September 1941	234	358	June 1941	204	102
October 1941	361	214	July 1942	1,150	239
November 1941	79	100	August 1942	220	524
December 1941	279	121	September 1942	99	833
January 1942	88	143	October 1942	125	661
February 1942	902	0	**Total**	**5,671**	**4,054**

Setkiewicz does not know how to handle these statistics. He posits that the increase in fuel supplies in mid-1942 may be related to the fact that at that time three cremation furnaces operated simultaneously, but then he explains that coke was also used in the boiler rooms of various central-heating systems in larger buildings (commandant's office, prison, SS hospital), in garages and in the transport section, in the baths and, to a more-limited degree, in the disinfestation facilities; coal was commonly used in the camp kitchens and for heating purposes in SS quarters, offices, workplaces and even in the prisoners' blocks at the Main Camp and in the barracks at Birkenau (p. 51).

What purpose is served, then, by these statistics? We will fnd out later why Setkiewicz put them forth.

The author next deals with the supplies of coke to the crematoria. His purpose is to discredit revisionist arguments based on the coke consumption of the crematoria, yet without ever mentioning those arguments, arguing that no certain conclusion can be drawn from the documented fuel supplies.

According to individual existing work orders, he says, "it could be established that in the period from January 30, 1942 until June 2, 1943 (466 days) 643.5 tons of coke deliveries to Crematorium I were recorded for 216 days" (p. 51). He then argues that the supplies in question are incomplete. In particular, argues Setkiewicz, since

> *"there are no existing coke delivery tickets for the period of Jan. 31 – Feb. 15 (16 days), Feb. 25 – March 4 (8 days), March 27 – April 3 (8 days), April 28 – May 8 (only one ton of coke delivered over 11 days) and finally for the period July 19 – Aug. 9 (22 days), it is difficult to assume that, in the face of steadily increasing mortality in the Main Camp, no coke at all was delivered to the crematorium* [during the time periods mentioned]*"* (p. 52)

Before examining in detail Setkiewicz's arguments, it is necessary to explain the nature of the documents which we are discussing. The coke orders are recorded in a series of documents called "*Bescheinigung*" (certificate) that record the quantity of coke delivered and the delivery date (see Document 3).

On the basis of these orders, the Auschwitz Museum compiled a list of supplies of coke (and firewood) which runs from February 16, 1942 to October 19, 1943 (see Document 4). There are also three supplies not included on that list, but they partly overlap with those contained in it, as shown further below, that is:

– Jan. 29 – Feb. 3, 1943: 13 tons of coke
– March 4 – April 2, 1943: 68 tons of coke
– May 19 – June 21, 1943: 47 tons of coke (p. 53)

Returning to Setkiewicz, his statements are incomprehensible. First, the end of the time span mentioned by Setkiewicz – June 21, 1943 – should be the last day on which Crematorium I operated, but we know for certain that it continued operating until at least July 16, 1943, when the head of the Central Construction Office at Auschwitz, SS *Sturmbannführer* Karl Bischoff, contacted the head of the garrison administration (SS *Standortverwaltung*), SS *Obersturmbannführer* Karl Ernst Möckel, requesting to shut down the crematorium because it constituted a fire hazard for the two Political Department barracks that had been built recently in close proximity.[16]

Second, as of March 1943, the coke was delivered concurrently also to Crematoria II and IV of Birkenau, so it is unknown how much coke was delivered to Crematorium I alone.

Third, the figure put forward by Setkiewicz, 643.5 tons, is not reflected in the documents. According to the list compiled by the Auschwitz Museum (Document 2), the coke delivered up to June 2, 1943 amounted to 712 tons, to which must be added another 39 tons, as I will explain below, which brings the total to 751 tons, without considering the wood, which I will deal with below.

Fourth, Setkiewicz does not consider the possibility that the largest gaps in the list in question can be explained by the fact that the crematorium was out of service, and therefore, due to a lack of consumption, did not receive any

[16] RGVA, 502-1-324, p. 1. See Mattogno/Deana, Part 1, p. 228, and Part 2, Doc. 183, p. 296.

coke supplies. We will see that the largest gap, that of 22 days, but also a few others, are explained precisely by that.

But there is also a much-more banal reason why no coke was delivered to the crematorium on 56 days: as can be seen from Table I in the Appendix, no coke was ever delivered on Sundays!

With regard to coke, I have added the additional supplies indicated by Setkiewicz to the list compiled by the Auschwitz Museum. The reasoning is as follows:

1. Delivery during Jan. 29/Feb. 3. of 13 tons: this is not on the Museum's list and is simply added.
2. Delivery during March 4/April 2 of 68 t: during this period, the Museum's list registers 42 t of coke, so we must add (68 – 42 =) 26 tons. Assuming that the delivery April 2 was three tons as during the entire month, the breakdown is 62 t in March and (39 + 3 =) 42 t in April.
   In the 30 aforementioned days, the Museum's list contains coke deliveries on 12 days; since deliveries were three tons on average, the 26 tons of coke not tallied in the list correspond to deliveries made in about (26 ÷ 3 =) nine days, so that during the remaining (30 – 12 – 9 =) nine days no deliveries were made.
3. Delivery during May 19/June 21 of 47 t: during this period the Museum's list contains 38 t of coke, so we must add (47 – 38 =) 9 tons of coke.
   According to the Museum's list, during this period of 34 days, coke was delivered only on eleven of those days; since the average of each delivery was about three tons, it follows that the deliveries took place on three other days (9 ÷ 3 = 3), on 14 of a total of 34 days; this shows that during the remaining (34 –14 =) 20 days no coke was delivered.

We thus add a total of (13 + 26 + 9 =) 48 tons.

Therefore, it is certain that the list compiled by the Auschwitz Museum has gaps, and it is equally certain that coke was not delivered every day.

Setkiewicz agrees and observes the following: if we assume that, in the period from August 18 to September 30, 1942, on days when the Museum's list does not record any coke deliveries, they did not happen (*i.e.* four days in August and five days in September), and since during this period 2,494 deaths were recorded in the Morgue Registry (*Leichenhallenbuch*), and 77 tons of coke were delivered to the crematorium (78 according to the list), then the cremation of each corpse required (77,000 ÷ 2,494 =) about 30 kg of coke (p. 52).

Actually, there are 2,748 deaths recorded in the Morgue Registry for this period, but that does not change the values by much: 78,000 ÷ 2,748 = 28.4 kg of coke per corpse.

At this point, Setkiewicz begins his work of putting into doubt the definite points that exist in the material:

> *"It might also seem that, since these quantities are almost identical to the statistics coming from the crematorium at the Mauthausen-Gusen Camp, which was similar (with respect to the design and type of fuel), the above calculations concerning Crematorium I at Auschwitz are completely reliable. However, in the end, it is not so; indeed, in reality we cannot be sure that in this period only corpses from the morgue of the Main Camp had been cremated in Crematorium I, and that all receipts for coke deliveries were really preserved. Rather, we must assume that, when the furnaces in the crematorium had already been fired up, and when on a given day the number of bodies in the morgue was less than the average daily cremation capacity, then – in order to avoid wasting any coke – an attempt was made to supplement the shortage by delivering additional corpses from Birkenau."* (p. 53)

The argument makes no sense, because the coke consumption of the Gusen crematorium is a documented fact and can be related to the double-muffle furnace of the crematorium at Auschwitz. It was in fact a mobile Topf double-muffle cremation furnace with oil-fired heating system (*fahrbarer Ofen mit Ölbeheizung*) converted into a stationary coke-fired furnace by adding two lateral gas generators. Among the few documents relating to the crematorium of Gusen that have been preserved, there is a list compiled by the head of the crematorium SS *Unterscharführer* Karl Wassner which records the number of cremated corpse and coke consumption in the period from September 26 to November 12, 1941. According to this document, from October 31 to November 12, 1941 there were 677 corpses continuously cremated in the Gusen crematorium – on average 52 per day in two muffles within about 18 hours of activity per day – with a total consumption of 20,700 kg of coke and an average consumption of about 30.6 kg of coke for each corpse.[17] This, I repeat, is an indisputable matter of fact.

At this point, a basic clarification is necessary. The coke consumption of a cremation furnace was not a fixed number, but varied depending on the daily number of cremations. This can be easily understood considering that, in order to heat the furnace to an operating temperature (800°C), a large quantity of coke was necessary. If in the course of a day only one cremation took place, the entire coke consumption was used on it; if 20 cremations were carried out, it was divided amongst them all. For example, a civilian crematorium requires about 415 kg of coke for heating and the first cremation, but for the twentieth consecutive cremation only about 37.5 kg.[18]

The documents relating to the Gusen Furnace perfectly illustrate this fact of energy consumption in cremations:

---

[17] ÖDMM, Archiv, B 12/31. See Mattogno/Deana, Part 1, pp. 299-303, 355-362; Part 2, Doc. 255, p. 415.

[18] Mattogno/Deana, Part 1, p. 106, and Part 2, Doc. 90, p. 121.

– From September 26 to October 15, 1941, a period of 20 days, 193 corpses were cremated in this furnace during ten days of activity. On average, the cremations were carried out every two days, 19 corpses were cremated in each cycle, and coke consumption was 47.5 kg per corpse.
– From October 26 to 30, a period of five days, 129 corpses were cremated. Cremations were performed every day; on average, 26 corpses were cremated in each cycle, and the coke consumption was 37.2 kg per corpse.
– From October 31 to November 12, a period of 13 days, 677 corpses were cremated. The cremation cycles were performed every day; on average, 52 cadavers were cremated in each cycle, and coke consumption was 30.6 kg per corpse.

Therefore, from intermittent operation (cremations every other day) and with (relatively) few cremations (19 per day) to continuous operation (daily cremations) with many cremations (52 per day), coke consumption dropped from 47.5 kg to 30.6 kg per cremation, that is, to (30.6 ÷ 47.5 =) 64.42%, with slightly more than ⅓ less usage of coke.[19]

The normal consumption of the furnace therefore ranged from about 30 kg (continuous operation of about 18 hours per day) to about 47 kg of coke per corpse (discontinuous operation on alternating days).

We may ask whether these values can be applied directly to the Topf double-muffle furnace of Auschwitz. Although the two types of furnace were not identical, on the whole we can answer in the affirmative.

Considering the differences between the two systems, the consumption of the Auschwitz furnace with continuous operation (18 hours) can be calculated at 23.3 kg for a normal corpse, 27.8 kg for an average corpse and 32.3 kg for an emaciated corpse (in the language of the camps, a *Muselmann*).[20]

Excluding the presence of normal corpses, the average consumption of coke per corpse at Auschwitz would range from a minimum of 27.8 to a maximum of 32.3 kg, so that we can assume an average of about 30 kg, which should be considered beyond dispute, thus the margin of error could hardly reach 10%.

From this it is clear that the arguments put forward by Setkiewicz have no probative value. He states that there is no certainty that the documented supply of coke for the period in question (78 tons) is complete. But even if this were so, the data would not change much. From August 18 to 31, 1942, 26 tons of coke were delivered in 10 days out of 14; since the average daily delivery was about 2.5 tons, in the four days when no deliveries were recorded (2.5 × 4 =) 10 tons of coke would have been delivered. In September 1942, the days when coke was delivered were 25 out of 30, with an average of about two tons, but four of the five missing days were Sundays, so there could be only one miss-

[19] *Ibid.*, Part 1, pp. 368-370.
[20] *Ibid.*, pp. 346-368.

ing delivery of two tons of coke. As a result, the 78 tons listed on the Museum's list would increase to 90 tons, corresponding to (90,000 ÷ 2,748 =) approximately 32.7 kg per corpse, a figure still compatible with the results from the operation of the Gusen Furnace (30,6 to 37.2 kg, depending on the daily operating time).

Since the maximum supply of coke in September 1942 could have been 54 tons of coke, the cremation of 1,536 bodies registered in the Morgue Registry would have consumed on average (54,000 ÷ 1,536 =) 35.1 kg of coke, which corresponds perfectly to the real-world data of the Gusen Furnace applied to the double-muffle furnace at Auschwitz (32.3 kg for an emaciated body with continuous operation; see Mattogno/Deana 2015, Vol. 1, p. 362).

Setkiewicz argues moreover that it is possible that, in addition to the bodies registered in the Morgue Registry, a number of corpses from Birkenau were also cremated. This allegedly occurred on the days when the number of corpses deposited in the morgue (corresponding to the number recorded in the Morgue Registry) was too small in relation to the capacity of the furnaces.

In reality the opposite scenario is much more probable, indeed almost certain, *i.e.* that it was not possible to cremate all the bodies in the crematorium, so that some were buried at Birkenau. I will return to this later.

From a historical point of view, it should be noted that the treatment of the bodies of dead prisoners at Auschwitz and Birkenau was entrusted to two separate administrations acting independently of each other. In the cases where, for particular reasons, the bodies of dead prisoners at Birkenau were transported to Auschwitz, they were entered into the Morgue Registry, such as the bodies of 22 detainees registered with the consecutive numbers 25-46 dated October 30, 1941.[21]

Setkiewicz confirms this fact by asserting:

> *"We know for example that even in the period immediately following the beginning of cremations on pyres (September 1942), sometimes the bodies of prisoners who had died or were murdered at Birkenau were transported to the morgue of the Main Camp: October 31, November 3, 12 and 25, December 5, 9 and 31, 1942, and January 7, 8, 14, 15, 16, 19, 27, 28 and 29, February 1, 4, 8, 9, 10, 16, 17, 18, 22, 23, 24, 26, 27, and March, 1, 6, 13, and 30, 1943 (in total, however, not many, because in the course of five months the delivery of 322 corpses was recorded, which is less than the number of registered inmates that died during two days at Birkenau."* (pp. 53f.)

That these corpses were taken to the mortuary of Block 28 "in order not to waste coke" is a mere conjecture of Setkiewicz which is unfounded. From this perspective, in fact, the maximum saving of coke would be obtained by exploiting the maximum cremation capacity of the facility, *i.e.*, according to

[21] AGK, NTN, OB/385, p. 2.

Setkiewicz, cremating 200 or 250 corpses per day (a number which he mentions on p. 53). In fact, from May 1942, when the third furnace went into operation, to December 1942 (except July and October, as the data is incomplete for these months), 9,189 corpses were recorded in the Morgue Registry, an average of about 51 per day. It is evident that a few hundred corpses brought from Birkenau to Auschwitz would only have changed this average insignificantly.

Setkiewicz also states that in Auschwitz executions of Poles were carried out whose bodies were probably cremated without going through the morgue, but the example he cites is not very relevant: he mentions an execution of 20 detainees registered on June 10, 1943 whose bodies were not registered in the morgue (p. 54, note 25). This is clearly an exceptional case – moreover from June 1943 – of the few prisoners who had been detained by the Political Department in the camp prison of Block 11, who all died precisely on June 10 according to the prison register, the *Bunkerbuch*.[22]

Even if there were other similar cases, they do not affect at all the issue of the supply of coke to the crematorium.

On the other hand, there is an order by the SS garrison physician of January 4, 1944 which requested that no more corpses of inmates be brought into the morgues of Auschwitz I, II and III, but to transport them, after identification, directly to the crematorium.[23] Apparently until then, as a rule, it was not permissible to bring the bodies to the crematoria without going through the morgue of the relevant camp.

To support his hypothesis, Setkiewicz adduces a single reference, a passage from a book by Wieslaw Kielar of 1979:

> *"Kielar recalls that in March 1942 the bodies of dead prisoners in the men's camp at Birkenau were cremated in the crematorium of the Main Camp. Anus Mundi, p. 122."* (p. 60, note 41)

In the book in question, Kielar tells a rather vague story (Kielar, p. 122):

> *"Almost half of the sick inmates who were at the hospital were brought to Birkenau, to the so-called block of convalescents.* […] *The sick transferred to Birkenau were not gassed. Their fate was sealed, however. Over the following days, almost all of them died there, because they had been left on their own without supervision or medical help in the terrible conditions of the camp at Birkenau which was only emerging. Their corpses were cremated in our crematorium, loading four bodies at a time in a furnace in order to keep up with the cremation. The combustion process was also shortened, and in consequence the bodies were not completely reduced to ashes."*

---

[22] The respective page of the *Bunkerbuch* have been published in Brol *et al.*, pp. 60f.
[23] This document is reproduced in Frąckiewicz, p. 74.

Leaving aside the untenable story of the simultaneous cremation of four corpses in one muffle, it should be noted that Kielar was not a member of the crematorium staff, so that his story is not even a direct testimony, not to mention that he gives neither dates nor numbers.

Setkiewicz has obviously drawn the date (March 1942) from Czech's *Auschwitz Chronicle*, who wrote in her entry for March 13, 1942 (Czech, p. 143):

> *"1,200 convalescents and patients whose rapid recovery to the point of being able to work seems questionable are transferred to Birkenau and lodged in Barrack Number 4, later Number 7, the so-called isolation ward of Section B-Ib. The sick are unloaded in the courtyard of the barrack and are beaten to death with rods by SS men. The corpses of the murdered men are brought back to Auschwitz and incinerated in the crematorium."*

But here already a blatant contradiction appears: Kielar says that the sick died on their own during the following days, while Czech says they were killed on the same day of their transfer.

Among the sources cited by Czech are the Morgue Registry and an article by Czesław Ostańkowicz.

The first source is nothing short of spurious, because the records of the Morgue Registry blatantly contradict the alleged massacre: on the 13th, there are in fact 38 deaths recorded, and from the 13th to the end of the month, 413 deaths are recorded. So where are the alleged 1,200 victims?

In his paper "Isolation Station – the 'Last' Block," Ostańkowicz begins his story as follows (Ostańkowicz 1978, p. 159):

> *"I am one of the 1,200 political prisoners who were selected from a block of the Auschwitz hospital in March 1942, and taken to Birkenau at the very time when the concentration camp was being erected. After five weeks, 40 of these 1,200 were still alive."*

This is another blatant contradiction to Czech's claim, which confirms her strange methods, to say the least. The fact is that, according to these sources, almost all of these inmates died within a few days or five weeks, or were murdered on the same day of the transfer.

Setkiewicz therefore relies on a highly dubious source.

He uses his above-examined hypothesis to declare any conclusion on the issue as arbitrary, except of course for his own:

> *"It results from Kurt Prüfer's report of September 8, 1942 that the capacity of the crematorium in the Main Camp was 250 corpses per day; the items of the Polish resistance movement of the time contain an estimate of 200 corpses; according to the deaths records, on average 266 deaths per day were recorded at that time in Auschwitz and Birkenau. However, it is not certain that so many corpses were indeed cremated on a continuous and daily basis. Confronted with such sketchy data, it becomes increasing-*

> *ly risky to propose further reliable estimates. We should therefore be content with the affirmation that, for the cremation of the body of an individual prisoner in the crematorium, probably approximately (less than) 10 kg of coke were used (therefore, less than two tons of coke for the cremation of 200-250 bodies).”* (p. 53)

The cremation of 250 or even merely 200 corpses per day in the three double-muffle cremation furnaces of Crematorium I is technically impossible, as I have shown elsewhere.[24] The actual capacity was one corpse per hour and muffle, hence theoretically 144 corpses per day in the crematorium’s three furnaces, but in practice only about 120 corpses in 20 hours of continuous operation (with four hours per day for letting the fire burn out and cleaning the gas generator). This alone reveals how foolish Setkiewicz’s reasoning is, but I will elaborate on it some more to make it more comprehensible.

In the above-mentioned period (August 18 to September 30, 1942, hence 44 days), 78 metric tons of coke were consumed, plus a certain undetermined amount. Since on average 266 deaths per day were registered during that time in the Auschwitz and Birkenau Camps together, the crematorium worked at its maximum capacity, cremating 200 or even 250 corpses per day according to Setkiewicz.

If we take the upper value of 250 corpses cremated per day, the coke supply for the 44 days in question would have been according to Setkiewicz, assuming that his claim of “less than” 10 kg coke per corpse means 9.8 kg per corpse:

250 corpses/day × 9.8 kg coke/corpse = 2,450 kg/day

And for the 44 days in question:

44 days × 2,450 kg/day = 107,800 kg of coke, or some 108 metric tons.

For 200 corpses per day, the result would be 86.2 metric tons.

I pointed out earlier that, according to Setkiewicz, the total supply of coke would have amounted to 90 tons or (90,000 kg ÷ 44 days =) 2,045 kg per day, so that the consumption per corpse in the two cases considered would be 8.2 and 10.2 kg per corpse, respectively.

Since already the premises of Setkiewicz’s reasoning are absurd, because he even includes all the casualties of the Birkenau Camp and assumes an absurdly high cremation capacity of 200 to 250 corpses per day for Crematorium I, his conclusions are absurd as well.

There is also another problem that Setkiewicz does not consider at all. The throughput capacity of the double-muffle furnace’s gas-generator grate, that is, the quantity of coke that could be burned in the gas generator, was about 30 kg of coke per hour,[25] hence 60 kg for the furnace’s two gas generators. The

---

[24] Mattogno/Deana, Part 1, Chapter 8, pp. 292-311.
[25] *Ibid.*, pp. 259, 309.

consumption of one double-muffle furnace within 24 hours was therefore (24 h × 60 kg/h =) 1,440 kg, and for all three furnaces together 4,320 kg. Therefore, if 250 corpses were cremated within 24 hours, the consumption of coke for each cremation would have been (4,320 kg ÷ 250 =) 17.3 kg and not "less than 10 kg."

It is worth pointing out that the hourly consumption of 60 kg of coke in one double-muffle furnace corresponds perfectly to the cremation of two corpses using 30 kg of coke for each, as I explained above.

The file memo by civilian employee Rudolf Jährling of March 17, 1943[26] "on data of the Topf & Söhne Company," gives the estimated coke consumption of the four crematoria of Birkenau. The entry "10 gas generators = 350 kg/hr." means that the five triple-muffle furnaces installed in each of Crematoria II and III had a total of 10 gas generators, two for each furnace, each of which had a throughput of 35 kg of coke per hour (5 kg more than the double-muffle furnace's gas generator). The eight-muffle furnace located in each of Crematoria IV and V had four gas generators, likewise with a throughput of 35 kg of coke per hour each. The coke consumption for a 12-hour operational period of the Birkenau crematoria calculates thus as follows:

– Crematorium II & III: 2 × 12 hrs × 35 kg/hr × 10 gas generators = 8,400 kg
– Crematorium IV & V: 2 × 12 hrs × 35 kg/hr × 4 gas generators = 3,360 kg

In the case of continuous operation (*Dauerbetrieb*), the consumption decreased by a third, which for 12 hours of operation per day means that Crematoria II & III consumed together (8,400×2/3 =) 5,600 kg, while Crematoria IV & V together consumed (3,360×2/3 =) 2,240 kg.

This does not mean that the gas generator's throughput decreased by a third during continuous operation, however. The firebox of a gas generator cannot act like a gas burner that can be turned on or off or be adjusted at will. Compared to the natural draft of a furnace/chimney system, its throughput can be increased up to 50% by using forced draft, but it cannot be significantly reduced, because with natural draft, even when closing the gas generator's combustion air door, the chimney's draft still aspired sufficient amounts of air to keep the throughput more or less constant. This is illustrated by charts showing data of cremation experiments carried out by Ing. Richard Kessler in January 1927, where the gas generator's draft was maintained with slight oscillations around 5 mm of water column,[27] following the trend of the chimney's draft, which stood at 10 mm water column with peaks at 15 mm.[28] The gas generator's draft remained stable even with the fireplace damper closed, and it increased with the draft of the chimney.

---

[26] *Ibid.*, pp. 368-370, and Vol. II, Document 264, p. 423; APMO, BW 30/7/34, p. 54.
[27] The draft of a furnace system describes the pressure difference between the air inlet and air outlet, usually given in mm of water column, with 10 m of water column roughly corresponding to one atmosphere.
[28] I dwelt on this aspect more extensively in Mattogno 2020a, pp. 91-95.

Jährling's file memo, which was compiled improperly (it would have made more sense to give the coke consumption for the number of cremations carried out within 12 hours, as was common practice for civilian crematoria), simply means that, in the case of continuous operation, the heat retained in the furnace's refractory masonry allowed a third of fuel savings when heating up the furnace to operating temperatures the next day. As pointed out above, this is demonstrated empirically by the data of the Gusen Furnace, where the transition from continuous (30.6 kg per cremation) to discontinuous operation (47.5 kg) indicates a fuel saving of (1 – 30.6 ÷ 47.5 =) 35.6%, *i.e.*, roughly a third.

Setkiewicz's arguments are therefore mere arithmetic games without any basis, because the coke consumption for the cremation of one corpse with continuous operation, approximately 30 kg, is a matter of record, so the only logical and sensible reasoning is: if during these 44 days 90 tons of coke were indeed delivered to the crematorium, then at most (90,000 kg ÷ 30 kg/corpse=) about 3,000 corpses could have been cremated. Here the only real variable is the coke delivery, because the minimum coke consumption per cremation is certain, while the supply of coke was at least 78 tons with certainty, but no more than 90 tons, if assuming incomplete records, for which there is no evidence. So the maximum number of cremated bodies can be between 2,600 and 3,000, which is a maximum increase of (1 – 90 t ÷ 78 t =) 15.4% from the former to the latter.

Vice versa, the maximum (hypothetical) delivery of 90 tons of coke means that on average (90,000 kg ÷ 30 kg/corpse ÷ 44 days =) about 68 corpses could be cremated per day. In practice, the three double-muffle furnaces of Crematorium I would have operated on average for about 12 hours per day, which allowed for the almost-identical daily number of cremations of:

12 hrs × 1 corpse/hr/muffle × 6 muffles = 72 corpses

Interestingly, this figure is confirmed by a message from the Auschwitz resistance group which was logged in London on October 11, 1943, where the crematorium in the Main Camp was described as follows:[29]

> *"There were three furnaces, which cremated using coke. During an entire day, about 70 corpses could be cremated, since in each muffle the corpses were completely combusted within a mere half hour. If there were more corpses, this time was shortened to 20 minutes, and in consequence the bones were not completely burned when they were thrown into the garbage dump or in the street along with the remaining coke cinders."*

The period under review, as I will explain below, was somewhat out-of-the-ordinary; considering the month of September 1942, it had a supply of 52 tons of coke, and 1,536 deaths were listed in the Morgue Registry, which means an

---

[29] *Obóz koncentracyjny w Oświęcimiu - informacje* (Auschwitz Concentration Camp – Information). APMO; AU-D-RO/192, T. XXX, p. 2.

average consumption of (52,000 kg ÷ 1,536 corpses =) 33.9 kg of coke per corpse and a daily number of (1,536 corpses ÷ 30 days =) 51 cremations.

Why were the furnaces of the Crematorium I used so moderately in such a critical time? Given that according to Jährling's file memo a continuous operation of 12 hours was considered normal, the answer lies in the history of these furnaces.

First, the completion dates of the individual furnaces need to be kept in mind:

– 1st furnace: August 15, 1940 (start of operation)
– 2nd furnace: end of February 1941
– 3rd furnace: end of March 1942

The second and third furnace both probably became operational only some two weeks after their completion, because the masonry was slowly heated dry for about two weeks in order to prevent the formation of cracks in the masonry due to too-rapid evaporation of water from the mortar.

Damage and Breakdowns of the Crematoria

We have already seen that the first furnace was severely damaged due to "heavy use" within just four months of operation with a few dozen cremations a day and no more than some 2,000 cremations in total.

On April 2, 1941, the SS New Construction Office sent a telegram to the Topf Company saying: "Second furnace has no draft, send technician here immediately."[30] In a letter to Topf of the same day, Schlachter explained that "the second furnace unit does not have sufficient draft, which means that the incineration cannot be carried out completely."[31]

In early June of 1941, the second furnace was in operation "almost daily,"[32] which probably caused the chimney to be damaged, leading to repair work done between June 23 and 28, during which the brickwork was braced with angle irons (*Winkeleisen*) and turnbuckles (*Spannschrauben*)[33]. Toward the end of September 1941, Topf received the verbal order for the "delivery of a coke-fired Topf double-muffle cremation furnace with blower, corpse-introduction cart, rails and turntable."[34]

Between November 27 and December 4, 1941, Topf's installer Albert Mehr laid the foundations of this third furnace and carried out "a repair to both coke-fired double-muffle cremation furnaces."

33 RGVA, 502-1-214, p. 31.
34 RGVA, 502-2-23, pp. 270f.

In this letter Topf stated that the Plützsch Company of Fichtenhainiken near Rositz had loaded a railroad car with refractory, stating:[35]

> *"These materials were ordered by your local KL administration as spares for repair work. We can, however, temporarily make use of these materials – which suffice for the construction of a furnace – for the new furnace and kindly ask you to inform us in time to allow us to assign a technician to the site for the erection of the furnace."*

A railway car containing the refractory material in question arrived at Auschwitz on January 3, 1942, while another such car shipped from the Plützsch Company on behalf of Topf arrived on January 20. Hence, the material of the first car was probably used for repairs on the first and second furnace. On January 9, 1942, the head of the camp administration, by order of the commandant, sent to the Central Construction Office's inmate metalworking shop (*Häftlings-Schlosserei*) the order for the following works to be done in Crematorium I, among other things:[36]

> *"Repair 3 furnace doors*
> *Repair 2 grates 700 x 30 x 30"*

The furnace doors to be repaired ware indubitably the gas-generator doors (*Feuerungstüren*), since two gas-generator grates also had to be repaired. The work was carried out between January 14 and 21, 1942.[37]

On January 31, the head of the Political Section, Maximilian Grabner, sent the following request to the camp commandant:[38]

> *"As an engineer of Topf and Sons is presently on the site for the construction of a furnace in this camp, it is requested to repair, on this occasion, Furnace No. 2 of the crematorium, which is in need of repair work."*

The repair work on the second furnace, requested by Grabner, was carried out on February 4, as we can see from a handwritten note on his above-mentioned letter.

On February 10, the inmate metalworking shop carried out another repair in an attempt to make two gas-generator doors functional again ("*2 Türen für die Feuerung gangbar machen*").[39]

After the installation of the third furnace, even more-serious problems than before arose in the crematorium. On May 13, the head of the camp administration requested the Central Construction Office to "repair the chimney and the motor shed."[40] The latter, located next to the chimney, housed the forced-draft motors. That work was carried out on May 14 and 15. The first repair did not,

in fact, deal with the chimney but rather with the flue ("*Kaminunterkanal*") carrying the fumes from the furnaces to the chimney.[41]

On May 30, 1942, SS *Oberscharführer* Josef Pollok, in his capacity as local building inspector, sent a report to Bischoff which stated:[42]

> *"On the chimney of the crematorium in the Auschwitz Concentration Camp, the chimney bracing has become loose. This was caused by improper workmanship and partly by overheating of the chimney. The braces have not been made as a framework in accordance with their purpose and are therefore useless. As the chimney already shows wide cracks which, though refilled on the outside, are still there inside the brickwork in my opinion, the danger exists that the chimney may collapse under a strong wind. To avoid unforeseeable consequences, I ask the head of Central Construction Office to take immediate measures to eliminate these defects. When doing this, attention is to be paid that all braces are removed and replaced by an appropriate framework of braces in keeping with good workmanship."*

On June 1, Bischoff, in a letter to the camp command, endorsed Pollok's report and, as head of the Central Construction Office and in his capacity as local representative of the building inspectorate (*Baupolizei*), prohibited the use of the chimney on the basis of Article 365 of the civil code, as long as repair work was not carried out completely. Bischoff also asked to forward a request for repair of the chimney to the *Wirtschafts-Verwaltungshauptamt* (*WVHA*).[43] Bischoff, sending a copy of his letter to the *WVHA*, added:[44]

> *"The chimney has suffered from overheating on account of its continuous use (operation day and night)."*

On the same day, the Central Construction Office prepared an explanatory report (*Erläuterungsbericht*) for the construction of a new chimney, where we read:[45]

> *"On account of continual and excessive operation of the crematorium and the ensuing overheating of the chimney, the latter shows major cracks, presenting the danger that the chimney might collapse. Repairing the old chimney is not possible. Therefore, by telex dated June 2, 1942, Head of Office Group C,* SS *Brigadeführer and Major-General of Waffen-SS Dr.-Ing. Kammler gave the order for the replacement of the chimney."*

The new chimney was constructed by the Robert Koehler Company of Myslowitz, 10 meters away from the old chimney and with new flues. The work began on June 12 and was done by August 10.[46] In the meantime, however,

---

41 APMO, BW 11/5, pp. 5f.
42 RGVA, 502-1-314, p. 12.
43 RGVA, 502-1-132, p. 62.
44 RGVA, 502-1-272, p. 256.
45 RGVA, 502-1-312, p. 34.
46 RGVA, 502-1-22, p. 38.

the old chimney continued to be used. Hence, on July 6, SS *Oberscharführer* Pollok sent another report to Bischoff stating:[47]

> *"During the building-safety inspection of the work on the crematorium it was established that the old chimney has developed more cracks, both horizontal and vertical, which must result in a collapse of the chimney. This is due to the fact that the chimney has continued to be taxed excessively, although the Central Construction Office of the Waffen SS and Police had prohibited its use by letter of June 4, Bftgb.No. 8195/42/Po/Qu., to the headquarters of the concentration camp.*
> *I ask the head of Central Construction Office to prohibit once again the continued use of the chimney, and to arrange for the chimney to be demolished immediately, because otherwise the consequences would be incalculable."*

This time, Bischoff's order was obeyed: during the course of the month, the old chimney was demolished. The construction report (*Baubericht*) for that month states:[48]

> *"BW 11 crematorium. Completion of the new chimney and dismantling of the damaged one including removal of the rubble. At present, laying of the new connecting channel."*

Four days after the work had come to an end, the new chimney was already damaged, because the three furnaces had been operated at full load without waiting for the brickwork to dry out. On August 13, Bischoff, referring to his telephone conversation with SS *Hauptsturmführer* Robert Mulka the day before, sent the following message to the camp command:[49]

> *"On the basis of the telephone conversation mentioned above, camp command was informed that due to a too-rapid heating of the new chimney installation of the crematorium (all 3 furnaces are in operation) damage to the brickwork has already been observed.*
> *As the start-up of the 3 combustion furnaces took place at full load before the mortar of the chimney brickwork had dried out completely, any further responsibility* [of this office] *for the building must be rejected."*

The damage to the new chimney is also mentioned in a file memo by SS *Unterscharführer* Hans Kirschnek of August 21, 1942:[50]

> *"The damage to the newly erected chimney for the existing crematorium* [at the main camp] *were inspected in the company of Herr Koehler and* SS Unterscharführer *Kirschnek and measures to be taken were discussed. – As the chimney lining expands under the great heat, it must be enabled to move freely at the top and must not be attached to the outer mantle."*

---

47 RGVA, 502-1-312, pp. 29, 31.
48 *Baubericht für Monat Juli 1942*. RGVA, 502-1-24, p. 181.
49 RGVA, 502-1-312, p. 27.
50 RGVA, 502-1-313, pp. 159f.

On August 22, Robert Koehler submitted to the Central Construction Office a new estimate for the construction of yet another chimney, 15 meters high.[51] For the following period the documentation is quite incomplete, but it seems that the new chimney was not built.

From this brief history of the cremation furnaces of the Auschwitz Main Camp it is clear that their continued use for 20 hours a day would not have been possible without incurring even greater damage than that which occurred repeatedly even with moderate use.

As for the damage to the crematorium chimney, the documented chronology matches the history of coke supplies well: from July 19 to August 9 no coke deliveries registered at all. This means that, after the letter by SS *Oberscharführer* Pollok of July 6, 1942, the crematorium was on occasion still used moderately for a few days, but then it was closed and was reopened only on August 10.

On that day, the crematorium received (2 + 1.5 =) 3.5 tons of coke, sufficient for continuous operation of three furnaces for some (3,500 kg ÷ [60 kg/hr/furnace × 3 furnaces][52]) = 19.5 hours. It is likely that the crematorium suspended its operation on July 14 and that the supply of 5 tons of coke on July 18 was kept in stock and was used to rekindle the furnaces on start-up. This was enough for two to three days of use at full capacity which, however, damaged the new chimney.

This explains the longest gap in coke supplies highlighted by Setkiewicz. But the others are also understandable in light of the short history of Crematorium I as given above.

– Gap between January 31 and February 15, 1942 (16 days): during that time, the second furnace was repaired (Grabner‘s letter of Jan. 21) as well as two gas-generator doors, presumably of the first furnace (order to the inmate metalworking shop of Feb. 10).
– Gap between Feb. 25 and March 4 (8 days): during those days, the construction of the third furnace was completed; given that its flue duct had to be connected to the duct of the two existing furnaces before the entry into the chimney, it is obvious that these could not be used until the completion of the work.
– Gap between April 28 and May 8 (only one ton of coke delivered during 11 days): we do not have any information about any repairs being done during that time. The crematorium was closed on May 14 and 15 due to repairs of the flue pipe, but the Auschwitz Museum’s list still has 4 tons of coke delivered for May 14. It is certainly possible that this is a real gap, and that the total supply for May 1942 was 39 tons (instead of the 32 listed) as during the previous two months, but it seems more likely that during these 11

[51] RGVA, 502-1-313, p. 157.
[52] With 30 kg of coke per hour and gas generator, with two gas generators per furnace.

days' surplus coke was used which had accumulated due to incomplete use of previous deliveries. In fact, if we consider the total quantity of coke delivered during April and May (71 tons) in relation to the deaths listed in in Morgue Registry (1,356), this results in a coke consumption (71,000 kg ÷ 1,356 corpses =) 52.3 kg per corpse, which surpasses even that of the Gusen Furnace during discontinuous operation (47.5 kg). If there had been coke deliveries during the days in question for which no documents have been preserved, this overly high value would rise even further.

Connecting Coke Deliveries to Number of Cremations

In a rather clumsy way, Setkiewicz tries to contest the empirical data relative to the Gusen Furnace's coke consumption by asserting:

> *"According to the report for the period from September 26 to November 12, 1941 compiled by the head of the Gusen Crematorium,* SS *Unterscharführer Wassner, 1,010 cremations of deceased inmates were carried out during that time using 578 wheelbarrows of coke (about 60 kg per load – in total, therefore, 34,680 kg of coke), hence 34 kg of coke were used for the cremation of each inmate corpse. Unfortunately, it seems that the list contained in this document is in part questionable; for example, on October 3, 11 inmate corpses were cremated using 13 wheelbarrows of coke (*i.e. *more than 70 kg per corpse), while on other days (*e.g. *November 7 and 12) less than 30 kg of coke were used for the cremation of a corpse."* (p. 53, Note 22)

Setkiewicz displays an astounding ignorance of the thermo-technical issues that I outlined above.

First, I list in Table 2 the data of discontinuous cremations of the Gusen Furnace. The document's last line gives a total of 204 corpses, while the sum of all entries amounts merely to 193. The 153 wheelbarrows, corresponding to 9,180 kg, results in an average consumption of (9,180 ÷ 193 =) 47.6 kg coke per corpse. The total amount of 9,180 kg coke used is confirmed by another document, a note stating:[53]

> *"From Sept. 26, 1941 to Oct. 15, 1941, 9,180 kg of coke were used.*
> *The furnace remained idle during the rest of the time."*

No other documents are known about the number of corpses cremated, however, so we don't know where the total figure of 204 corpses came from. To get there, the number for October 3 (the only anomalous figure in the list) could have been 22 instead of just 11. In that case, the average coke consumption would be 35.4 kg of coke per corpse, but an error like this is not very

[53] ÖDMM, Archive, B 12/31, no. 350.

Table 2: Coke Consumption of the Gusen Cremation Furnace during Discontinuous Cremations

DATE	# CORPSES	WHEELBARROWS OF COKE	KG COKE	KG COKE/ CORPSE
Sept. 26, 1941	20	16	960	48.0
Sept. 29, 1941	14	12	720	51.4
Oct. 01, 1941	25	20	1,200	48.0
Oct. 03, 1941	11	13	780	70.9
Oct. 06, 1941	25	20	1,200	48.0
Oct. 08, 1941	12	10	600	50.0
Oct. 10, 1941	21	16	960	45.7
Oct. 13, 1941	23	16	960	41.7
Oct. 14, 1941	19	14	840	44.2
Oct. 15, 1941	23	16	960	41.7
Total:	204[193]	153	9,180	47.6

plausible. Assuming therefore that the figure of 11 cremated corpses is correct for that day, the consumption of almost 71 kg of coke per corpse, while evidently being abnormal, is not necessarily incorrect, because it can have been caused by exceptional events occurring on that day, for example by corpses that burned very badly, thus extending the duration of the cremation process to more than two hours; a power failure that made the blowers inoperable; or any other malfunctions of the furnace or the loading system, etc.

On November 7 and 12, 1941, respectively, 94 corpses were cremated with (45 × 60 kg =) 2,700 kg of coke, on average (2,700 kg ÷ 94 corpses =) 28.7 kg per corpse, and 53 corpses with (25 × 60 kg =) 1,500 kg of coke, on average (1,500 kg ÷ 53 corpses =) 28.3 kg of coke per corpse.

Setkiewicz's comparison of the two sets of cremation cycles does not make sense, because the two in November relate to a period during which the furnace was used continuously – every day with an average of 26 cremations per day in 2 muffles (52 corpses) – while the data of October 3 is part of a period of intermittent operation, during which the furnace was used only on 10 days of a total of 20 days, with about 10 cremations per muffle and day (about 20 corpses).

It is important to emphasize that the consumption of 28.7 and 28.3 kg of coke per corpse mentioned by Setkiewicz are among the lowest during the entire period of continuous operation from October 31 to November 12, as can be seen from Table 3.

I speak of "cremation cycles" precisely because these were not 24-hour days, but often the last cremation was completed the day after it had begun. For this reason, Setkiewicz's claim that this type of furnace could cremate 94 bodies per day (Note 13, p. 49), is incorrect, because the times indicated in the "hour" column (h) of the Gusen list of cremations do not refer to the start and

Table 3: Coke Consumption of the Gusen Cremation Furnace during Continuous Cremations

CYCLE	DATE	# CORPSES	COKE [KG]	KG COKE/ CORPSE
1.	Oct. 31, 1941	63	2,100	33.3

end of cremations, but to the unloading of the indicated numbers of wheelbarrows of coke next to the furnace.

We can glean from this that the lowest daily average consumption of coke per cremated corpse was 27.1 kg on November 3, while the average for the time span observed was 30.6 kg. It is evidently foolish to contest this fact with mere unfounded assumptions, that is to say, with the unfounded claim about an average consumption of 10 kg coke per corpse for the Auschwitz furnaces.

Contrary to what Setkiewicz insinuates, the consumption of the Gusen Furnace is not questionable at all, since it is based on clear and unequivocal empirical data. In addition, there is supporting evidence that covers a much-larger period of up to seven months. A list compiled by SS *Unterscharführer* Karl Wassner shows the coke consumption for each month from January 29 to August 27, 1941. The first supply of 226 Zentners of coke (1 Zentner = 50 kg) covers the period January 29 to February 24. Subsequent deliveries each cover the days from the 25th to the 24th of the subsequent month, except for the last month, which runs from July 25 to August 27. The total supply of coke was 2,006 Zentners, corresponding to 100,300 kg of coke.[54] For convenience's sake, we may define this period to stretch from the beginning of February 1941 to the end of August 1941. According to the Gusen Camp's deaths register, 2,300 prisoners died during this period (Marsalek 1980, p. 156). Therefore, the average coke consumption was (100,300 kg ÷ 2,300 corpses =) 43.6 kg of coke per corpse, because the furnace did not operate continuously.

[54] ÖDMM, Archive, B 12/31, no. 353.

By way of Setkiewicz's erroneous and fallacious arguments as just analyzed, he draws the following conclusion:

> *"The gaps existing in the documentation make it virtually impossible to ascertain the average coke consumption of the Birkenau crematoria in any time period. For example, the delivery receipts for the period from November 1 to 3 are preserved (5, 6, and 4 tons), and those of November 8 and 9 (twice 19 tons), plus those of November 16, 18 and 19, 1943 (8, 7 and 6 tons). It is unknown, however, whether they are complete or whether the largest recorded delivery – 35 tons on Sept. 19 – covered the coke requirements of the crematoria only for that day, or even for the next few days (which is very likely). This reservation does not even allow us to make a legitimate estimate based on a wholesale trend-line, according to which roughly 9 to 13 tons of coke were delivered per day to the Birkenau crematoria from March to November 1943."* (pp. 54f.)

In fact, even though it is true that there is no absolute certainty that documents on coke supplies are complete, it is not true that the whole matter is in doubt and has no known parameters. In order to recognize this, it suffices to formulate the problem properly.

Since Crematorium II, according to Holocaust historiography, became operational on March 14, 1943 (the other three crematoria followed later), we have to take this date as the starting point for our calculations.

According to the list of coke supplies compiled by the Auschwitz Museum, the crematoria received a total of 607 tons of coke from March 14 to October 25, 1943. Furthermore, they received a total of 96 cubic meters of firewood during the months of September and October, which is equivalent to about 43 metric tons. The heating value of one kg of wood is at best equal to half of that of one kg of coke, so these 43 tons of wood correspond to some 21.5 tons of coke. Consequently, we can assume the equivalent of a total quantity of (607 + 21.5 =) 628.5 tons of coke.

Setkiewicz, however, mentions two notebooks that report the following supplies of firewood from the wood-storage site (*Holzplatz*) to the administration of the crematoria (p. 66):

– 2 carts of firewood crematory administration for I, II, III, IV of Sept. 8, 1943, p. 40
– 20 m [sic] firewood crematory administration for C. I-IV of Sept. 11, 1943, p. 2
– 10 m [sic] firewood crematory administration I, II, III and IV of Sept. 12, 1943, p. 4
– 30 loads firewood crematory I, II, III, IV of Sept. 22, 1943, p. 34
– 30 m [sic] firewood crematory administration for K. I, II, III, IV; request #209 of Sept. 16, 1943, p. 22

– 30 m³ firewood crematory administration I, II, III, IV of Nov. 11, 1943, report sheet #18
– 10 m³ firewood Crematory I, II, III, IV of Nov. 18, 1943, report sheet #35
– 10 m³ firewood Crematory I, II, III, IV of Nov. 20, 1943, report sheet #40

For the subsequent period, only very few transports are documented: in the register of travel orders (*Fahrbefehl*) one trip to Bystra is entered; a series of trips to Kobiór between June 21 and 24, 1944; and a trip to Rybnik on September 18, 1944 (p. 66). That means in practice that, for the period of the alleged mass cremation of the Hungarian Jews (from May to July 1944), no transport of firewood to Birkenau is documented at all (apart from wood transported by rail).[55]

Hence, for September 1943 results a total of 60 m³, 30 "loads," which amount to another 45 m³, therefore in total 105 m³, plus "2 carts," which, if we assume at most a 5-ton truck (see farther below), corresponds to a load of 10 tons.

The list of coke deliveries compiled by the Auschwitz Museum already contains 36 m³ of wood, which therefore must be subtracted from the 105 m³ mentioned above, this resulting in 69 m³, corresponding to some 34.5 tons. Adding the 10 tons of the two trucks, the total is therefore 44.5 tons of wood, the equivalent, in round figures, of about 22.2 tons of coke, which, when added to the 628.5 tons mentioned above, gives the equivalent total of some 651 tons of coke.

In rounded numbers, some 15,000 registered prisoners died from March 14 to October 25, 1943, so that the coke consumption per corpse was (651,000 kg coke ÷ 15,000 corpses =) 43.4 kg. This value is not too far off the average consumption of the Gusen Furnace during daily operations and 13 cremations per muffle and day: 37.2 kg of coke per corpse, which confirms the full compatibility of coke supplies with the mortality of registered prisoners.

According to the *Auschwitz Chronicle*, some 116,800 inmates were allegedly gassed between March 14 and October 25, 1943. Because outdoor cremations were no longer carried out in 1943 after Crematorium II had become operational, as F. Piper asserts (but see the next chapter), all corpses of those allegedly gassed are said to have been cremated in the crematoria.

Adding the approximately 15,000 deceased registered inmates to these claimed gassing victims, we arrive at 131,800 corpses that are said to have been cremated with approximately 651,000 kg of coke, or (651,000 kg ÷ 131,800 =) 4.9 kg per corpse, which is pure nonsense, and all the more-so because that amount of coke includes the fuel required to heat up the furnaces to

[55] Starting on July 28, 1944 (although the previous documentation is fragmentary), a Kommando 61-B of "wood unloaders Crem.[atorium] IV" existed ("*Holzablader Krem. IV*"). APMO, D-AuI-3a/1a, p. 18.

operating temperature, and the coke and/or wood used to fuel the waste incinerators located in each of the Crematoria II and III.

Robert Jan van Pelt Conjectures

Setkiewicz then analyzes Robert J. van Pelt's assertions on crematoria and coke supplies (p. 55). Since this is not easily understandable for non-specialists, I will explain his summary more clearly.

As mentioned earlier, Jährling's file memo of March 17, 1943 indicates a coke consumption over 12 hours of activity of (2 × 2,800 =) 5,600 kg for Crematoria II & III and (2 × 1,120 =) 2,240 kg for Crematoria IV & V. Referring to a well-known letter of the Central Construction Office dated June 28, 1943,[56] which lists the alleged cremation capacities of the crematoria at Auschwitz-Birkenau, van Pelt asserts that Crematoria II-V could cremate a total of (1,440 + 1,440 + 756 + 756 =) 4,392 corpses per day, with a coke consumption of ([5,600 + 2,240] × 24 hr ÷ 12 hr =) 15,680 kg of coke (Setkiewicz writes mistakenly 15,540 kg). This would result in a coke consumption per corpse of only (15,680 ÷ 4,392 =) 3.5 kg. Setkiewicz does not realize that the data relating to Crematoria IV and V is incorrect, since the figure in the document in question is 768, so the total is not 4,392 but 4,416 corpses per day, but that does not change the result by much.

Van Pelt claims that the coke supply to the crematoria was about 844 tons in 1943, although it is unknown whence he got that figure (even Setkiewicz wonders about that). With that invented coke supply, van Pelt calculates that it allowed the cremation of (844,000 kg ÷ 3.5 kg/corpse) some 241,000 corpses, or nearly all of those allegedly gassed, which for 1943 is said to have amounted to 250,000, if we follow van Pelt.[57]

Setkiewicz comments that "van Pelt's premises are wrong, however" (p. 55), and so are his conclusions, one should add. Van Pelt argues that Jährling's file memo relates to a continuous furnace operation of 12 hours per day, which allowed to save a third of the fuel, because the furnaces remained always hot. However, there were interruptions in the use of the crematories and days of reduced performance, and reheating the furnaces required a greater expenditure of coke. The main objection invalidating van Pelt's speculation, however, is evidently different and is of a radically different import: If the Gusen Furnace, with continuous operation of about 18 hours a day, required 30.6 kg of coke per corpse, it is impossible that the furnaces at Birkenau required 3.5 kg per corpse during a continuous operation of only 12 hours a day.

---

[56] See Mattogno/Deana, Part 1, Chapter 9.6., pp. 341-344; Mattogno 2020a, pp. 145-159.

[57] For a more-thorough critique of van Pelt's elaboration see Mattogno 2019, Chapter 12.4. and 12.5. (pp. 402-405), as well as Mattogno 2020a.

Against van Pelt's conjecture one could also object that in his case there would have been (250,000 corpses ÷ 365 days per year =) 685 cremations per day, but a continuous operation of 12 hours per day (with the purported consumption of 3.5 kg of coke per corpse) with the cremation capacity assumed by him would have required (4,416 corpses × 12 hr ÷ 24 hr =) 2,208 cremations per day. If all the furnaces at Birkenau could really cremate (4,416 ÷ 24 hr =) 184 corpses per hour, the furnaces would have operated on average only (685 corpses/day ÷ 184 corpses/hr =) less than 4 hours a day instead of 12, hence rather discontinuously.

Such objections are pretty worthless, however, because it is known that, precisely in order to save fuel, normally only a limited number of furnaces was used continuously, which kept them constantly hot. This was, for instance, the procedure in the crematorium of Terezin (Theresienstadt), which was equipped with four oil-fired cremation furnaces by Ignis-Hüttenbau: Usually, cremations were performed in only one furnace, which was used for 14 hours a day. After a certain period (usually a few weeks), operations switched to another furnace, and this was repeated cyclically.[58]

The real problem is that van Pelt bases his calculations on a decidedly absurd amount of coke presumably necessary for a single cremation: 3.5 kg!

In my study on the cremation furnaces of Auschwitz, I calculated the theoretical minimum coke consumption of these devices based on empirical data relating to the Gusen Furnace. This resulted in a theoretical minimum consumption of 32.3 kg of coke for the double-muffle furnace (Crematorium I), of 23 kg for the triple-muffle furnace (Crematoria II and III) and 16 kg for the eight-muffle furnace (Crematoria IV and V).[59] This refers to emaciated corpses (the heat balance for normal corpses and those with an average loss of weight is also calculated).

From Jährling's aforementioned file memo it results that the triple-muffle furnace consumed in its two gas generators (35 kg × 2 =) 70 kg of coke per hour, while the eight-muffle furnace consumed in its four gas generators (35 kg × 4 =) 140 kg per hour; since a cremation lasted at least one hour, the actual consumption of coke was (70 kg ÷ 3 =) 23.3 kg per hour in the triple-muffle furnace, and (140 ÷ 8 =) 17.5 kg per hour in the eight-muffle furnace, which confirms the order of magnitude of the data given above.

On the coke consumption of the various types of furnaces there are, therefore, incontrovertible fixed parameters.

---

[58] See in this regard Mattogno/Deana, Part 1, pp. 393-397 and 417-424 (List of Cremations).
[59] *Ibid.*, pp. 346-379.

The Number of Deportees to Auschwitz in 1943

Setkiewicz tries to raise doubts even about the number of inmates deported to Auschwitz and of the number of registered inmates who died there in 1943. In this respect, he says:

> *"The list of direct transports to the Auschwitz Camp does not always contain exact data on the number of deported Jews. These numbers were compiled by D. Czech and completed by F. Piper based on various types of sources. Since death certificates were no longer issued in 1943 for the majority of Jewish inmates who had died in the camp, no one knows exactly what the mortality was among registered inmates in this period."* (p. 55)

However, lists of Auschwitz transports do in fact exist even for 1943, consisting of simplified transcripts of German original documents secretly compiled by inmates working for the camp's Political Section. The Investigating Judge Jan Sehn transcribed and analyzed these lists in a memorandum dated Krakow, December 16, 1946, in the course of his investigations leading to the Höss Trial. These lists subsequently became known as NOKW-2824.[60] They include:

– 2,377 male transports from May 20, 1940 to September 18, 1944, with the consecutive inmate-registration numbers from 1 through 199531;
– 1,046 female transports from February 26, 1942 to March 26, 1944, with the consecutive inmate-registration numbers from 1 through 75697.

These lists don't contain the numbers of deportees, but in the vast majority of cases these can be derived from other sources. Even according to the orthodox point of view, only very few transports are said to have arrived at Auschwitz that were allegedly "gassed" entirely without leaving any trace in the aforementioned transport lists. These traceless transports, however, are all utterly fictitious.[61] Yet even if we include these fictitious transports, the numbers of deportees allegedly gassed in 1943 are said to have been as follows (compiled from the many entries in Czech 1990):

– January:	appr. 45,800	– July:	appr. 400 [440]
– February:	appr. 18,800	– August:	appr. 42,600
– March:	appr. 24,200	– September:	appr. 8,100
– April:	appr. 20,400	– October:	appr. 11,600
– May:	appr. 13,500	– November:	appr. 9,600
– June:	appr. 7,200	– December:	appr. 5,700

This is a total of 207,900. For orthodox historians, there is little doubt about this figure, so why was it necessary for van Pelt to posit further Jewish trans-

[60] I have published the data contained in these lists (together with those of various other inmate lists) in Mattogno 2019a, Part One, pp. 17-161.
[61] See Mattogno 2019, pp. 461-472; in Mattogno 2021, pp. 11f., I have dedicated ample space to these fictitious transports.

ports gassed in their entirety, for which we have no clue as to where they came from?

The Number of Deceased Registered Inmates in 1943

The issue of registered inmates who died during 1943 must also be elucidated. Setkiewicz claims that, starting in March 1943, only a fraction of the registered Jewish inmates who died at Auschwitz was recorded in the Auschwitz Deaths Registers (*Sterbebücher*), which allegedly results from those documents themselves. In fact, we glean from them that, in January 1943, 2,841 deceased Jewish inmates were registered, 2,393 in February, but only 873 in March, and just 82 in April (Grotum/Parcer 1995, p. 249). Even though it is true that the Death Registers Nos. 4 (February), 12 (April), 15 (June) and 19-20 (August-October) are missing, these missing registers do not solve the problem.

However, when asserting that only a fraction of the deceased registered Jewish inmates was recorded in the Deaths Registers since March 1943, it is pivotal to also

1. quote the SS *WVHA* directive which modified the previously existing provisions in this regard, and
2. explain why some deceased Jews were registered in the Death Registers while others were not.

The historians at the Auschwitz Museum who advocate such a point of view, starting with Franciszek Piper, don't even skim these two fundamental issues, which therefore remain unanswered.

In another study, I demonstrated that the claim that the majority of deceased Jewish inmates was no longer registered in the Death Registers is completely unfounded (Mattogno 2016d, pp. 91-96). I reiterate here only that the directive of November 21, 1942 by SS *Brigadeführer* Richard Glücks, head of Office D of the SS *WVHA*, with the heading "Reporting Procedure for Deaths in Concentration Camps" ("*Meldeverfahren bei Todesfällen in Konzentrationslagern*"; NO-1543) prescribed that future deaths of Jewish inmates were to be recorded in batch lists, which had to include the first and last name, date and place of birth, nationality, last place of residence, date and cause of death, and the detaining authority. Yet these were precisely the data recorded in the death certificates of the Death Register, which were therefore used to compile these batch lists. On the other hand, until February 1943, Jewish inmates who had died at Auschwitz continued to be recorded in the Death Register, although Glücks's directive was effective immediately, hence since late November 1942; the first batch lists were due by December 3, 1942.

On March 23, 1944, Rudolf Höss, who at the time was the head of Office D of the SS *WVHA*, issued another directive on inmates who had died in concentration camps (NO-1553). Höss referred in it to Glücks's directive of November 21, 1942, which was therefore still in effect. This shows that no directive existed which ordered that a certain (undefined and unknown) category of Jewish casualties was to be excluded from registration in the Death Registers.

But the question is even more complex, as I have shown in another study.[62] For example, for the months of April, May and June 1942 the figures of Jewish detainees mentioned by Grotum and Parcer (1995, p. 249) are lower than those resulting from the camp's inmate registry (*Stärkebuch*), which certainly does not make those of 1943 seem any more-reliable.

The historians at the Auschwitz Museum don't even explain how the low number of deceased registered Jewish inmates listed in the Death Registers can be reconciled with the many statistical reports on the camp's occupancy which the cognizant departments were required to produce. Reports such as the so-called Strength Report (*Stärkemeldung*) were in fact based on admissions (*Zugänge*, newly registered inmates) and deductions (*Abgänge*) caused by releases, transfers and deaths. The net changes caused by admissions and losses defined the camp's occupancy and determined the new number for the next day. If prisoners listed among deductions had died, they had to appear in the Death Registers. If they were not entered there, they could not be considered deceased and could also not count as deductions.

The Alleged Lack of Documents

Regarding this claim, we have criteria which allow us to come to safe conclusions.

The proportions of the documented coke supplies to Crematorium I that are not contained in the list of the Auschwitz Museum amounts to (1 – 42 ÷ 68 =) 38% for the period from March 4 to April 2, 1942, and to (1 – 38 ÷ 47 =) 19% for the period from May 19 to June 21, 1942.

In September 1942, coke was delivered on 25 out of 30 days; the average delivery was about 2 tons, therefore, assuming documentary gaps for the remaining five days, the total supply would have been (52 + [5 × 2] =) 62 tons, and the fraction of undocumented deliveries would amount to (1 – 52 ÷ 62 =) 16%.

If we assume the average percentage of the first two periods, a shortfall of [(38%+19%) ÷ 2 =] 28.5% corresponds to a new total of (651,000 kg ÷ [1 – 0.285] =) 910,490 kg coke, so that for the cremation of each of the 131,800

[62] Mattogno 2019a, Part 3, Chapter 5, pp. 257-264.

corpses (actual and presumed) mentioned above, only 6.9 kg of coke would have had to suffice, which technically absurd. Keep in mind here that the hourly consumption of coke per muffle was 30 kg for the double-muffle furnace, 23.3 kg for the triple-muffle furnace and 17.5 kg for the 8-muffle furnace, and the cremation of a corpse could not last less than an hour. [63]

From March 14 to July 19, 1943, when Crematorium I was shut down for good, about 3,100 inmates died in the Auschwitz Camp and were registered in the Morgue Registry and were therefore cremated in Crematorium I. The remaining (131,800 – 3,100 =) 128,700 corpses (actual and presumed) would have had to be cremated in the Birkenau crematoria. From March 14 to October 25, 1943, Crematoria II and III were in service for a total of 241 days, Crematoria IV and V for 132 days.[64] From the weighted average resulting from the number of service days and the number of muffles for each type of crematorium, some 77% of all cremations would have been performed in Crematoria II-III, and the remaining 23% in Crematoria IV-V.[65]

Assuming a distribution of the cremations among the two type of crematoria along these lines, this corresponds to an average consumption of (23.3 kg/h × 0.77 + 17.5 kg/h × 0.23 =) 22 kg per corpse for 128,700 corpses, hence the requirement for some (22 kg × 128,700 =) 2,831,400 kg of coke for Crematoria II through V, plus some (30 kg/h × 3,100 =) 93,000 kg for those cremated in the Crematorium I, hence a total of some 2,924,400 kg, compared to an extrapolated maximum delivery of some 910,490 kg of coke, or barely a third of the minimum that would have been needed.

On the other hand, the documentation for coke supplied during August 1943 is certainly complete. For this month, we know the number of deceased registered inmates: 2,380 detainees, 1,442 of them men and 938 women.[66] Since 71 tons of coke were supplied that months, the average consumption for a cremation was of (71,000 kg coke ÷ 2,380 corpses =) 29.8 kg of coke.

In conclusion, although the Auschwitz Museum's list of coke deliveries for 1943 has some gaps which are comparable to those for 1942, even if we fill those gaps by interpolating, the coke supplies are always consistent with the cremation of registered detainees deceased in the camp, yet absolutely inconsistent with the hypothesis of mass gassings.

Let's now turn to the alleged outdoor cremations.

---

63 Mattogno/Deana, Part 1, pp. 94-105, 292-311.

64 See Mattogno 2019, pp. 262-265; esp. Table 11 on p. 265; from the total time of existence of Crema II in 1943 (293 days), we deduct the 67 days from Oct. 26 to the end of the year, and 108 days when it was out of service due to major repairs to flues and chimney (from May 17 to September 1), resulting in just 118 days in service. Crema III was in existence and operational for 190 days in 1943, minus the 67 days from Oct. 26 to the end of the year, hence 123 days. Hence, a total of 241 service days for both together. The values for Cremas IV and V are taken from the above-mentioned table without further deductions.

65 KII & III: 241 days × 30 muffles = 7,230 days × muffles; KIV & V: 132 days × 16 muffles = 2,112 days × muffles; of the total of 9,342 days × muffles, KII & III had 77%, KIV & V 23%.

66 PS-1469, p. 4.

The Alleged Outdoor Cremations of August 1943

Although a reference to outdoor cremations during 1943 exists in a clandestine report of the camp's resistance group, these alleged cremations are usually ignored by the Auschwitz Museum in its narrative of the camp's history, simply because they are neither confirmed by any documents nor even by any witnesses. In particular the members of the *Sonderkommando* said nothing about them. The issue was raised only recently in an attempt to somehow refute revisionist arguments on the number of corpses cremated in 1943 in Birkenau.

Setkiewicz mentions such cremations only indirectly when referring to the deportation of 30,000 Jews from Będzin (Bendsburg) and Sosnowiec (Sosnowitz) to Auschwitz, which occurred in the first half of August 1943. Setkiewicz comments:

> *"Of these transports to the camp, only fifteen per cent of the reported persons were registered, the rest was killed in the gas chambers. On individual days the number of those exterminated undoubtedly surpassed the cremation capacity of all the crematoria in operation; for example, on August 1, some 10,000 Jews were deported, only 2,177 of which were registered* [sic: 2,137]*; on August 2, 1,615 Jews deported from Będzin, 1,087 people from Mechelen in Belgium, and 727 from Drancy in France were exterminated; on August 3, 6,728 Jews from Sosnowiec and 200 Jews from Berlin were murdered."* (p. 66)

This enormous concentration of mass gassings is said to have occurred during the first six days of the month. Table 4 gives the data taken from Czech's *Auschwiz Chronicle*.

The first point to make is that Czech gives no sources whatsoever for the claimed transports from Będzin and Sosnowiec, except for the one from Sosnowitz of August 5, but the source for this transport is extremely dubious: a propaganda book by Natan Eliasz Szternfinkiel. So all these numbers of deportees are purely imaginary. The real number of deportees in fact is somewhere between 14,000 and 20,000.[67]

Setkiewicz's argument is incomplete, however, because he carefully avoids indicating what the daily capacity of the Birkenau crematoria was. Commenting on the famous letter of the Central Construction Office of June 28, 1943, which, as mentioned earlier, assigns a cremation capacity of 4,416 corpses per day to the Birkenau crematoria, he simply states:

> *"Without entering into a discussion whether the numerical data of this document are completely reliable, there is no doubt, however, that the capacity of each of the four Birkenau crematoria was higher than that of the*

[67] On this see Mattogno 2021, entry for August 1-12, 1943.

TABLE 4: DEPORTATIONS TO AUSCHWITZ ACC. TO DANUTA CZECH

Aug.	# deportees	origin	registered males	registered females	allegedly gassed

old crematorium at the Main Camp, requiring certainly less than ten kilograms of coke for the cremation of a single corpse." (pp. 57f.)

In a footnote, he adds:

"It is important to note that the use of furnaces equipped with three or four muffles instead of two could result in a certain increase in combustion efficiency, but it is doubtful that this would be that significant (40%). At the present state of research, however, solving this problem is practically impossible, because – as appears from the testimony of Sonderkommando members – the bodies of the dead prisoners were often cremated incompletely, and the remaining bones were crushed in primitive mortars. The estimates provided by former detainees and the authors of studies differ considerably; but even if assuming that the cited document contains exaggerated data, even if assuming a lower capacity of 50%, the crematoria, throughout the period of their operation, could cremate far more than a million corpses. Cf. F. Piper's review of the studies on this issue, the books by J.C. Pressac, Les crematoires... *in, 'Zeszyty Oświęcimskie' No. 21, 1995, p. 322, and the article by Fritjof Meyer,* Die Zahl der Opfer von

> Auschwitz. Neue Erkenntnisse durch neue Archivfunde*, Osteuropa, 52, Jg. 5/2002, p. 631-641, 'Zeszyty Oświęcimskie,' No. 25, 2009, pp. 231-266."* (Note 33, p. 57)

It is clear that Setkiewicz does not even respect the most basic facts about this topic. First we must clarify the problem. He compares the cremation capacity of one muffle of a double-muffle furnace (57 corpses per hour) with that of one muffle of a triple- and eight-muffle furnace (96 corpses per hour), as it is listed in the just-mentioned letter of the Central Construction Office, and he notes that the double-muffle furnaces had a capacity that is about (1 – 57 ÷ 96) 40% lower than that of the two other types of furnaces. Such a difference is not only "doubtful," as he writes, but it is actually absurd and already by itself renders the data provided in the letter in question untrustworthy. Even though it is true that the triple- and 8-muffle furnaces had a higher energy efficiency than the double-muffle furnace due to their different design, this merely resulted in a lower consumption of coke, but did not touch the question of cremation capacity, that is to say, the number of corpses that could be cremated in each muffler per hour.

Let me briefly explain the issue. As I mentioned earlier, the fuel economies depend on the fact that the hourly coke consumption was 60 kg for two corpses in the double-muffle furnace, 70 kg of coke for three corpses in the triple-muffle furnace, and 140 kg of coke for eight corpses in the eight-muffle furnace. The hourly quantity of coke burning on the grates of the gas generator and therefore the actual fuel consumption in relation to each muffle was clearly in favor of the triple- and even-more-so the eight-muffle furnaces by virtue of their design: the triple-muffle furnace exploited the heat from the end muffles to heat the center muffle; in the eight-muffle furnace, the combustion products of each of the four gas generators passed through two muffles in sequence. This means that in the first case two gas generators served three muffles, while in the second case each gas generator served two muffles.

This design explains why the triple-muffle furnace consumed 23.3 kg of coke per hour and muffle, *i.e.* per corpse, while the eight-muffle furnace consumed 17.5 kg of coke per hour and muffle, compared to 30 kg per hour and muffle of the double-muffle furnace. This does not mean that the triple- or eight-muffle furnace required less energy for the cremation of a corpse than the double-muffle furnace. It merely means that their design allowed in a certain way the capture and application or, put differently, the recycling of energy coming from the end muffles or the muffle nearest to the gas generator, while the double-muffle furnace lost such energy through radiation, convection and mostly with the exhaust gas through the smoke ducts and chimney. But it is also evident that in times of maximum heat demand (when preheating the furnace and during the initial cremation phase of desiccating the corpses)

this lower availability of heat was an inconvenience prolonging the duration of these processes.

Therefore, it is not permissible to claim that the triple-muffle and eight-muffle furnaces had a greater capacity, *i.e.* could cremate more bodies per time unit, than that of the double-muffle furnace; on the contrary, all the technical elements militate in favor of the superiority of a double-muffle furnace:

1) Weight of the refractory brickwork

The triple- and eight-muffle furnaces were economical designs resulting in great savings in refractory material:[68]

- The double-muffle furnace had two gas generators; the total weight of refractory material was 10,000 kg, hence 5,000 kg per muffle.
- The triple-muffle furnace also had two gas generators; the total weight of refractory material was 11,500 kg, hence only 3,467 kg per muffle.
- The eight-muffle furnace had four gas generators; the total weight of refractory material was 24,100 kg, hence only 3,012.5 kg per muffle.

The double-muffle furnace was therefore the most-massive model.

2) Maximum combustion temperature

The robustness of the masonry directly influenced the thermal load and the maximum temperature which the muffle was designed to withstand, which, according to the operating instructions, was 1,100 °C for the double-muffle furnace and only 1,000 °C for the triple-muffle furnace.

3) Air blower (*Druckluftgebläse*)

The double-muffle furnaces were equipped with an individually adjustable blower for each muffle; the triple-muffle furnaces had only one blower which was not individually adjustable and served all three muffles simultaneously. The eight-muffle furnaces had no blower at all. The amount of combustion air blown into each muffle could therefore be adjusted for each individual cremation only in the double-muffle furnace.

4) System to control the draft

The double-muffle furnaces were equipped with two smoke dampers, which allowed adjusting the draft for each muffle. The triple-muffle furnaces were equipped only with one smoke damper serving all three muffles simultaneously. The eight-muffle furnace possessed two smoke dampers, each of which regulated the draft of a group of four muffles.

---

[68] Mattogno/Deana, Part 1, pp. 251-286; Mattogno 2020a, p. 62.

5) Forced-draft device

Until the reconstruction of its chimney in the summer of 1942, Crematorium I was equipped with a forced-draft device (*Saugzuganlage*) serving three double-muffle furnaces. The Birkenau crematoria had no such devices. The forced-draft device allowed increasing the throughput of the gas generators during critical moments when the muffle temperature dropped below a critical level (especially during the corpse-desiccation phase).

6) Design flaw of the triple-muffle furnace

This furnace was designed in such a way that the central muffle was fed with the gases coming from the two end muffles, to which were added the gases produced by the incineration of the corpse in the center muffle, so that the gas volume passing through it was more than twice that of the gases passing through each of the end muffles. To maintain the required velocity of the gas passing through, allowing it to burn up and to transmit the combustion heat to the muffle walls and the corpse, it would have been necessary to double the cross section of the central muffle, exactly as was the case with the flue-gas discharge system of Crematoria II and III, where each pair of smoke ducts coming from two furnaces merged into one larger duct with more than twice the cross section (growing from 0.6 m × 0.7 m = 0.42 m² to 0.8 m × 1.2 m = 0.96 m²). But since the center muffle had the same cross section as the end muffles, the combustible gases formed by the combustion of the corpse in the center muffle and those coming from the end muffles did not have enough time to burn up completely and thus entered into the flue while still burning. This heat loss in this way resulted in a corresponding increase in the coke consumption, and it also increased the time it took to cremate a corpse in that center muffle.

This very phenomenon of gases burning in the flue rather than inside the muffles caused Crematorium II to be seriously damaged only a few weeks after it had become operational. On March 25, 1943, SS *Unterscharführer* Hans Kirschnek wrote a file memo about a meeting at Auschwitz on March 24 and 25 between representatives of the Topf Company – the engineers Kurt Prüfer and Karl Schultze – and representatives of the Central Construction Office. Kirschnek wrote:[69]

> *"As the three draft enhancers in suction have not proved to be useful in any way and have even suffered damage after the first usage at full load because of high temperatures, they will be dismantled at the expense of Topf & Söhne Co. and removed by this company."*

The damage was due to the combined effect of two causes: in order to raise the capacity of the furnaces, the draft enhancers were run at full speed and this, together with the just-mentioned design flaw of the triple-muffle furnac-

[69] APMO, BE 30/25, p. 8.

es, led to a rise in the flue-gas velocity to such a degree that the combustion gases generated by the corpses in the center muffles left the furnaces in an uncombusted state, with combustion taking place essentially in the flue ducts, where it caused overheating. In this manner, the three draft enhancers, placed upstream of the chimney, suffered irreparable damage. As was discovered shortly thereafter, however, the damage was not limited to the draft enhancers: the refractory lining of the chimney was damaged and had partly collapsed, as had parts of the vaults (*ganze Gewölbeteile*) of the flue ducts.[70] As a consequence, the three forced-draft devices of Crematorium II were removed, and those planned for Crematorium III were never installed (Mattogno/Deana, Part 1, pp. 238-240).

This brief review gives me the opportunity to make two important observations. The first one pertains to the 1941 decision to install three forced-draft devices in the future Crematorium II, based upon the fact that "frozen corpses will be cremated, requiring more fuel, which increases the amount of exhaust gases."[71] When it was considered in early 1943 to preheat Morgue #1 of Crematorium II, the background was in no way criminal in nature. The aim was simply to prevent corpses from freezing during the winter, hence to obviate the need for more fuel (and time) during the cremation.[72]

The second remark concerns four mass transports of Jews who were allegedly gassed and cremated on the following dates, if we follow the orthodox Holocaust narrative:

– March 14: 1,492 Jews from Krakow
– March 16: 959 Jews from Krakow
– March 20: 2,191 Greek Jews
– March 23: 1,700 Gypsies,

hence, in total 6,342 gassings and cremations. Therefore, the alleged cremation of 6,342 corpses within 10 days would have caused the damage described.

The problem of the triple-muffle furnaces described above also applied to the eight-muffle furnaces, although to a lesser extent, because the combustion gases of each of the four external muffles were discharged into the internal muffle connected to it, in which even more combustion gases were generated.

Taken together with the fragility of the eight-muffle furnace's refractory brickwork, this explains the frequent failures that occurred in Crematoria IV and V, and that led to the final closure of Crematorium IV in May 1943. On April 3, 1943, just days after it had started operating (March 22), this cremato-

[70] Letter of the *Zentralbauleitung* to the Topf Company of July 17, 1943. APMO, BW 30/34, p. 17.
[71] RGVA, 502-1-333, p. 83, order confirmation by the Topf Company to the *Bauleitung* of Auschwitz for five triple-muffle furnace and other equipment, dated November 4, 1941.
[72] See Mattogno 2019, Chapter 2.7, "*Warmluftzuführungsanlage*," pp. 104-113.

rium had already cracks,[73] and from a telegram by Bischoff to the Topf Company of May 14, 1943, with which he requested to "Bring thermotechnical and structural calculations for chimneys of Crematoria II and IV,"[74] it results that the chimney(s) of Crematorium IV had also been damaged.

Returning to the subject of our discussion, all the above shows that, leaving aside the absurdity of the data in themselves, it would be foolish to assert that the triple- and eight-muffle furnaces had a cremation capacity which was (96÷57=) 168% of that of the double-muffle furnace.

In any case, Setkiewicz's claim that "the crematoria, throughout the period of their operation, could cremate far more than a million corpses," reveals another serious gap in this author's technical knowledge. The refractory brickwork of the coke-fired cremation furnaces had a relatively short lifespan of about 2,000 cremations. As I have shown earlier, the brickwork of Crematorium I at Auschwitz wore out after some 2,000 cremations, or some 1,000 cremations per muffle, and had to be replaced. The Gusen Furnace withstood nearly 1,500 cremations per muffle. In the 1930s, the lifespan of a civilian cremation muffle was about 2,000 cremations, but the Topf Company had managed to increase that to 3,000. It is clear, however, that the maximum service life for the economically designed furnaces built inside concentration camps was 2,000.

It follows that, in order to cremate more than a million corpses, and assuming the use of all the crematoria to their full extent (46 muffles), it would have become necessary to carry out (1,000,000 corpses ÷ 46 muffles × 2,000 corpses/muffle =) almost eleven replacements of the refractory lining for all the muffles, but there is not the slightest trace in the extant documentation of even one invoice by, or request to, the Topf Company to do even one such complete replacement.[75]

In a separate paper, I have dealt at length with F. Piper's and F. Meyer's theses as laid out in the articles cited by Setkiewicz and in the reciprocal polemics of these two authors, to which I refer the interested reader (Mattogno 2004c).

Therefore, Setkiewicz turns out to be quite evasive on the question of the crematoria's cremation capacity. The data he adduces, however, make it possible to calculate a capacity of about 1,600 cremations per day. For if, as he says, a cremation required less than 10 kg of coke, the Birkenau crematoria's theoretical daily consumption (15,680 kg, see p. 35) would have corresponded to the cremation of (15,680 kg/day ÷ 10 kg/corpse =) just over 1,568 corpses per day. On the other hand, if the double-muffle furnace had a cremation ca-

---

[73] Letter from the Topf Company to the *Zentralbauleitung* of April 10, 1943. APMO, BW 30/34, p. 42.

[74] APMO, BW 30/34, p. 41.

[75] See Mattogno 2019, pp. 268-270; 2020a, pp. 168-171; Mattogno/Deana, Part 1, pp. 425f., "Summary of the Topf Company's Activities at Auschwitz-Birkenau."

pacity of 70 corpses per day, 35 per muffle, the 46 Birkenau muffles should have been able to cremate (35 × 46 =) 1,610 corpses per day.

This estimate of the cremation capacity is in direct conflict with the – official – estimate by one of his colleagues, Franciszek Piper, who, in Volume III of the five-volume history of the camp published by the Auschwitz Museum, took at face value the data listed in the letter by the Central Contruction Office of the June 28, 1942, and commented:

> *"All the crematoria together could therefore burn 4,756 corpses in a 24-hour period. In the following month, July 1943, Crematorium I was, however, withdrawn from use. This brought capacity down to 4,416 corpses per day."* (Długoborski/Piper 2000, p. 164)

A few lines later on the same page he adds:

> *"Sonderkommando survivors recall that in practice three to five corpses were burned at a time. This doubled this 'capacity', bringing it up to around 8,000 corpses per day. Seldom was this maximum capacity, or even the design capacity, actually needed – except in periods of large and frequent transports, for instance during the liquidation of the Sosnowiec, Będzin, Dąbrowa Górnicz and Łódź ghettos, or during the annihilation of the Hungarian Jews."*

For Piper, therefore, the cremation of the allegedly gassed deportees from Sosnowiec and Będzin did not involve the use of "cremation pits," but simply the use of the crematoria at their claimed full capacity.

Hence, the historians at the Auschwitz Museum should first come to an agreement among themselves and with the witnesses.

It is obvious that it is not permissible to cherry-pick the data on the spur of the moment. But that's exactly what Piper and his colleagues have been doing. In fact, the Auschwitz Museum has based the story of the alleged homicidal gas chambers of Auschwitz for decades on the Polish declaration by Henryk Tauber of May 24, 1945 (to the point that F. Piper felt obliged to transcribe it in its entirety in his treatment of the "extermination" at Auschwitz: *ibid.*, pp. 273-302), a testimony which Pressac considered "95% historically reliable" (Pressac 1989, p. 481). Since Tauber's testimony had not yet been repudiated or revised, and his numerical claims had not yet been downsized, the cremation capacity of the Birkenau crematoria as claimed by Tauber simply had to be true. Tauber stated that Crematorium II (and thus also Crematorium III) could cremate an average of 2,500 corpses per day. One muffle would therefore have cremated (2,500 ÷ 15 =) about 167 corpses per day, and all 46 muffles at Birkenau allegedly could thus cremate (167 × 46 =) 7,682 corpses per day, or some 8,000, generously rounded up.

In Tauber's testimony before the Soviet Commission of Investigation on February 27 and 28, 1945, Tauber made three very-precise statements:

1. the furnaces operated 21 hours per day (the remaining three hours were used to remove the slag from the gas generators);
2. the triple-muffle furnace could cremate four to five corpses at once in one muffle within 20-25 minutes;
3. the eight-muffle furnace could cremate four to five corpses at once in one muffle within 35 minutes.[76]

From this, the following minimum cremation capacities per day result (with 21 hours × 60 minutes/hour = 1,260 minutes):

1,260 ÷ 25 × 4 = 201.6 corpses per muffle for the triple-muffle furnace, and
1,260 ÷ 35 × 4 = 144 corpses per muffle for the eight-muffle furnace.

The total capacity of all the cremation furnaces at Birkenau would therefore have been (201.6 corpses/muffle/day × 30 muffles + 144 corpses/muffle/day × 16 muffles =) 8,352 corpses per 21-hour daily session.

As a result, it is either true that the Birkenau crematoria were unable to cope within six days with the 24,669 gassing victims allegedly produced during the first six days of August 1943 (on average 4,116 per day), in which case one must declare Tauber‘s statements false, or else Tauber‘s claims are true, in which case any claim about outdoor cremations is false, because the crematoria were more than up to that task.

There is yet another option which neither Setkiewicz nor any of his colleagues have ever taken into account, which results from. the actual activity times of the Birkenau crematoria. It is known that in August 1943 only Crematorium III was in operation (see Mattognno 2019, pp. 264-266), whose cremation capacity, according to the Polish declaration of Tauber, was at least 2,500 corpses per day.

But even that would not change the calculus decisively, because if we follow Tauber, Crematorium III could have cremated (2,500 corpses/day × 6 days =) 15,000 corpses during the first six days of August. The remainder to be allocated to any “cremation pits” would therefore have been (24,669 – 15,000 =) 9,669 within 6 days, on average 1,611 per day. Would such a surplus really have required the laborious creation and messy operation of outdoor cremation pits? The problem was in fact caused by the claimed massive deportations from the ghettos of Będzin and Sosnowiec, which ended on August 12 and was followed by a break of five days, until August 17.

As a matter of fact, it would have sufficed to deposit the surplus corpses for a few days in the various morgues at Birkenau, and to cremate them, plus the claimed additional victims of the two later transports of August 10 and 12 (28,318 in total) step-by-step in Crematorium III within (28,318 ÷ 2,500 =) the first eleven days of the month, or, even more easily, distribute them all evenly

[76] See my detailed analysis of Tauber‘s testimonies in Mattogno 2019, pp. 331-375, esp. pp. 337f.

over the first 17 days of August to get (28,318 ÷ 17 =) 1,665 corpses to be cremated daily.

On the other hand, the number of deportees from Będzin and Sosnowiec indicated by Danuta Czech (32,000), as I pointed out above, has no documentary basis. Artur Eisenbach, for instance, claims that there were "around 20,000 people," while several other groups were allegedly transferred to the Annaberg Labor Camp and there assigned to the *Organisation Schmelt* (Eisenbach 1961, p. 540). If there were only 20,000 deportees sent to Auschwitz, the number of those presumably gassed decreases by 12,000 to 16,318, whose bodies could have been cremated in less than seven days, if we follow Tauber.

With regard to outdoor cremations of the surplus corpses created by the claimed mass gassings, Setkiewicz refers to this source:

> *"The Annex No. 61 to the Report of the Government's Delegation in the Country for the period of November 1 to 30, 1943 has the following fragment: 'During the extermination of 30,000 Jews of Zagłebie Dąbrowskie, the crematoria were not enough for the cremation of the corpses, so they were cremated on pyres, and children were thrown alive into the fire.' Obóz koncentracyjny Oświęcim w świetle akt Delegatury Rządu RP na Kraj, Oświęcim 1968, p. 142."* (Note 71, p. 66)

Apparently, Setkiewicz does not find it strange that this "information" appears only in the report on November 1943, while the report on August does not mention it at all. The "Annex No. 58 for the period of August 1 to 31, 1943" ("*Aneks nr 58 za okres od 1 do 31 sierpnia 1943 R.*") in fact mentions only some transports of June (*Obóz*… 1968, p. 121).

A dispatch of August 31 says that, "between August 1 and 4, the ghettos in the Zagłebie Dąbrowskie region were liquidated, mainly in the cities of Sosnowiec, Będzin, Strzemieszyce, Dąbrowa Górnica. All Jews were deported to Auschwitz" (*ibid.*, p. 122).

A report on "mass executions from July 15 to August 8, 43" describes the deportation of all Jews from Sosnowiec and Będzin:

> *"15 full trains arrived, some 15,000 people. Also for entire nights, trucks drove to and fro."*

It is then reported that, "because the crematoria could not cope with the number of people, the bodies were usually cremated outdoors in a field near Birkenau, and for three days nothing but relentless flames could be seen in which the people were burned." The report concludes with a reference to an elusive transport from France (originating from French resistance propaganda), which is said to have helped establish the "record" of 30,000 gassed victims in one single day! (*Ibid.*, pp. 128f.)

The underground newspaper *Biuletyn Informacyjny* (*Information Bulletin*) No. 40 of October 7, 1943 dedicated a long article to Auschwitz. It stated, among other things (*Biuletyn Informacyjny* 2002, pp. 1553f.):

> *"The 'delousing' of the camp was announced for the days of August 1 to 3. This was nothing but a mass gassing. The sick were also rounded up, Aryans and Jews, and dragged into the gas chambers, anyone who had a face unwelcome to the SS.* [...]
> *So, simultaneous with the 'delousing' of the camp, 15,000 Jews from Będzin and Sosnowiec were killed. Since the camp's three crematoria could not cope with the number of people – on that day, extreme punishment celebrated its record at Auschwitz: 30,000 victims – the corpses were cremated outdoors, and the flaring flames could be seen all around."*

When considering, however, that according to Czech the majority of those allegedly gassed in August 1943 were Jewish deportees from Będzin and Sosnowiec, who numbered 15,000 and arrived at Auschwitz in 14 transports between August 1 to 12, more than 6,100 of whom were registered and therefore not gassed, it was most certainly not possible to achieve this "record" of 30,000 victims on a single day.

The story of these immense mass gassings emerged no doubt as a misrepresentation of massive disinfestation activities unfolding precisely during those days at the Birkenau Camp:

– Special Order (*Sonderbefehl*) No. 16/43 of July 23, 1943 provided for the start of the disinfestation of Camp Section BIa on the next day.[77]
– On July 25, 1943, the doctor in charge of Camp Section BIa communicated in a letter with the subject "Delousing of the camp" ("*Entlausung des Lagers*") that the disinfestation campaign will last until July 28.[78]
– On July 30, 1943, Special Order No. 17/43 announced the disinfestation of Camp Section BIId on July 31 and August 1, weather conditions permitting.[79]

There is not even a veiled allusion to any gassing of prisoners in the documents.

Another essential problem for the orthodox Holocaust narrative is the total lack of evidence for any cremation pits claimed for August 1943. One of the most-frequently quoted witnesses, Filip Müller, wrote about it (Müller 1979, p. 68):

> *"Soon after my arrival* [at Auschwitz] *tens of thousands of Jewish citizens from France, Greece, Holland, the ghetto of Bialystok, and the camps of Pomeran, Kola, Zawiercie and Poznan were swallowed up by the insatiable ovens of the crematoria. The liquidation of the ghettos of Sosnovits and Bedzin which began in August 1943 was one of a number of particularly brutal measures carried out in Birkenau at that time. Umpteen thousands were gassed within a period of ten days."*

---

77 RGVA, 502-1-32, p. 299.
78 RGVA, 502-1-68, pp. 62-62a.
79 APMO, Kommandantur-Befehl, D-AuI/1.

On the following pages, Müller says that at the time he had been a stoker in Crematorium V for a few weeks, and he goes on to describe the alleged gassing of a transport from Mechelen (August 2), which he claims encompassed 2,000 deportees (*ibid.*, pp. 68f.).

Even for Filip Müller, the corpses of deportees from Sosnowiec and Będzin who had allegedly been gassed were cremated in the crematorium, not in the "cremation pits."

The consequence of what I have laid out above is that the objection relating to any "cremation pits" in 1943 has no significance in the discussion concerning the coke supply for the crematoria in that year.

It is worth mentioning that Pressac, facing the impossibility of the crematoria of Birkenau incinerating so many corpses in such a short time, said that the number of deportees had been overestimated (Pressac 1993, p. 147). Setkiewicz, on the other hand, insists that the excess corpses were cremated outdoors.

At the end of his section on coke supplies, Setkiewicz states:

> *"Assuming also that, of the more-than-one-million corpses of victims of the Auschwitz Concentration Camp, some were cremated in the crematorium at the Main Camp and some on pyres in the autumn and winter of 1942 and in the spring and summer of 1944, this shows that in total no more than 800,000 corpses were cremated in the Birkenau crematoria."* (p. 58)

Here he does not mention the alleged outdoor cremations of August 1943, which means that for him they were at best so irrelevant that they have no bearing on the overall account.

As for the alleged 800,000 cremations in the Birkenau crematoria, these, as I explained above, would require (800,000 ÷ [46 × 2,000] =) eight complete replacements of the refractory brickwork of all the muffles, but the documents attest only to one single replacement only for the muffles of Crematorium I.

Setkiewicz continues:

> *"Considering instead the time of their operation and the estimated coke consumption mentioned above, we get an average of more than 500 tons of coke needed in the course of a month for the operation of these crematoria. Since the fuel supply of 1942 already amounted to more than a thousand tons per month, there is no reason to doubt that, in the years 1943-1944, the infrastructure of the Auschwitz Camp (the transit capacity of the railway station and sidings, the capacity of the warehouses) could meet the coke demand of the Birkenau crematoria on such a large scale."* (p. 58)

This is therefore what he was aiming at with his summary of coal and coke deliveries from June 1941 to October 1942 which appears on his p. 50 (see my Table 1, here on page 14).

The argument is silly, however, because no one has ever claimed that in 1943 the entire Auschwitz complex had such a scant fuel supply that for this

reason the crematories would not have had enough fuel. The question is not how much fuel the entire Auschwitz complex received, but how much of it was delivered to the crematoria. In fact, this argument proves the opposite. It highlights the merits of the revisionist thesis and the absurdity of the orthodox narrative, because if we follow Setkiewicz, in the seven and a half months ranging from mid-March to the end of October 1943, the Birkenau crematoria would have consumed (500 × 7.5 =) 3,750 tons of coke, while we have a documented supply of just 628.5 tons. How can anyone seriously believe that the documentation is so utterly incomplete as to account for as little as (628.5 ÷ 3,750 =) 16.8% of the claimed total?

The conclusion is that the documentation about the coke supplies of 1943 may be incomplete, yes, but not more than that of 1942, or only insignificantly more, because even if 30% of the documents are missing, the total including the extrapolated coke deliveries remains consistent with the cremation of the registered detainees but totally inconsistent with that of those allegedly gassed. For this, one would have to assume that 5/6 of the documentation is missing.

II. Wood

Setkiewicz states that, when the camp started admitting Soviet PoWs on October 7, 1941, the death rate at Auschwitz increased to such an extent that Crematorium I could not cremate all the bodies, which the camp authorities therefore began to have buried at Birkenau. According to the Register of the Dead (*Totenbuch*), 8,333 PoWs had died up to March 28, 1943 (p. 58). This much of his storyline is entirely sustainable. In this context, he cites the statement of an ex-convict, Mirosław Pietrzak, who claimed to have been employed in the excavation of mass graves 10 m long, 6 m wide and 3 m deep (p. 59). However, it is known that the groundwater level in Birkenau had a maximum depth of 1.2 meters from the ground surface (Mattogno 2019, pp. 354f.; 2016e, pp. 97-127). Therefore, particularly in late 1941/early 1942, when the drainage work had not yet begun, it would have been futile to dig much deeper than one meter. This explains the large area of the traces of four mass graves that can be seen in the area north of Crematorium V and west of the sewage-treatment plant on aerial photographs taken on May 31, 1944.[80] Two of them had a length of about 130 meters, the other two of about 100 meters, and all four had a width of about 10 meters. If assuming a covering layer of 20-30 cm of sand, the total volume of the pits was about 4,600 m^3.

Setkiewicz obviously speaks of the alleged gassing activities of the "Bunkers" of Birkenau. Since I refuted this story already very thoroughly in a 2004 study (Mattogno 2004b/2016a) and have dealt with it again more-recently (Mattogno 2015/2020), there is no reason to reiterate all this again here. I will limit myself instead to the fundamental issue of open-air cremations by assessing, as in the case of coke, whether the wood supplies attested to by the documents are consistent with the mass-extermination claims. I will briefly deal with the genesis of outdoor cremation at Auschwitz and with Höss's alleged visit to Chełmno in order to learn about this cremation technique from

[80] NA, Record Group No. 373, Mission 60 PRS/462 60SQ, Can 1508, Exposure 3055, 3056.

SS *Standartenführer* Paul Blobel, a topic that I have already dealt elsewhere (see Mattogno 2020a; 2016a, pp. 196f.).

Setkiewicz describes the genesis of outdoor cremations as follows:

> *"The necessity to exhume and cremate the corpses appeared with the arrival of the hottest season of the year, when it turned out that the ground where the mass graves were located started emitting an unbearable stench, and when the leaders of adjacent farms reported a massive die-off of fish in their fish ponds caused by the seepage of toxic substances from the mass graves into the groundwater. Höss recalled in his autobiography that he received such an order immediately after Heinrich Himmler's visit to Auschwitz (July 17-18, 1942)."* (p. 60)

Here the author paraphrases what Pery Broad wrote in relation to the mass graves where the bodies of Soviet PoWs had been buried. Broad wrote about this (Bezwinska/Czech 1984, p. 179):

> *"At the same time there were complaints from the fisheries that fish had perished in the big lakes round Birkenau, e.g., near Harmense. Experts maintained it was due to the infection of the ground waters with cadaveric virus. That was not all. The sun shone hotly that summer upon Birkenau, the only partially decomposed bodies began to fester and a dark red mass poured out from gaps in the ground. The resulting stench was indescribable."*

The decision to exhume and cremate the corpses contained in mass graves, therefore, did not have a direct relationship with the alleged extermination in "Bunker 1" near the Birkenau Camp, and it is surprising that Setkiewicz committed such an oversight.

The scene described above was confirmed, although generously spiced-up with many imaginative elements, by another witness: Kurt Marcus, author of a detailed report about Auschwitz in German which is undated but probably dates back to 1945 or 1946. He stated that in May 1942 the gassing of Polish Jews had begun, whose bodies were buried in the area of the future "Sauna" (*Zentralsauna*). Then he explained:[81]

> *"Since this is a very swampy area, with a high, iron-rich water table, it is natural that after a short while the surface of the ground began to rise and sink; it all happened in a kind of fermentation process, from which little by little water jets mixed with blood squirted up to a height of 3 meters; the corpses, sprinkled with chlorine, were ejected up one meter high, until eventually the whole area was covered with blood and putrid water.*
>
> *The emanating cadaverous stench polluted not only the air of the nearby Birkenau Camp, but the stench spread even to the city of Auschwitz, so that the outbreak of epidemic was feared. Then the corpses were exhumed and*

[81] AGK, NTN 135, p. 148 (Trial against members of the Auschwitz Camp Garrison).

incinerated in two parallel pits 4 meters deep that were connected to the farmhouse [82] *by narrow-gauge tracks.*
Such total destruction yielded good results, because:
1) it saved space
2) all traces of this massacre disappeared."

Setkiewicz continues as follows:

"Kurt Prüfer, an engineer of the Topf und Söhne Company, found out early about the intention to cremate the corpses in the mass graves at Birkenau, because on August 21, 1942 he proposed to use for this purpose two field furnaces. His proposal, however, was rejected very quickly by the SS in favor of a more-economical and safer solution employed at the extermination camp near Chełmno on the Ner – the cremation of corpses on pyres. Höss assigned SS Untersturmführer Franz Hössler, Rapportführer of the Auschwitz Camp, to carry out this task.
The cremation of corpses in pits or on pyres at Birkenau probably began in late August or early September [1942]*, using stored firewood (scrap wood), later, however, around September 7-8, also systematically, when they began to bring in wood from outside. This results from the analysis of data on truck departures from the camp to places that are located within the large forest areas in Tychy, Żory and Pszczyna.*
5-ton trucks headed to Radostowice at Pszczyna on September 7, 8 and 9.[83] *As the purpose of the trip was given: 'Abholung von Holz, Holztransport' (pick up wood, transport wood).*
We must assume that initially none of the SS men of the camp garrison had any experience in the construction of cremation pyres, and that not even written instructions existed about it. For this reason, during the initial period of pyre cremations at Birkenau, problems arose regarding the cremation of corpses, be it that the cremations lasted too long, or that too much wood was needed. Höss must subsequently have realized that the difficulties were so serious that in mid-September he decided to halt the operation and to make a trip to the extermination center at Chełmno on the Ner in order to inquire about the corpse-cremation methods used there." (pp. 60f.)

The documents confirm Setkiewicz's chronology: after September 9, supply of wood from the forests of Pszczyna was suspended, and on September 15, a travel permit (*Fahrgenehmigung*) was issued by Oranienburg for a trip to Lodz (Litzmannstadt), which stated:[84]

---

82 "*Bauernhütte*," the alleged "*Bunker 1*".
83 APMA [= APMO]-B. D-AuI-4/29-31. Fahrbefehl, Vol. 1, pp. 671-673.
84 AGK, NTN, 94, p. 170; reproduced as Document 2 in Mattogno 2008, p. 85.

> *"Travel permission is hereby granted for a passenger car from Au.*[schwitz] *to Litzmannstadt and back for visit to the testing station of field furnaces Operation Reinhard on Sept. 16, 42."*

The next day, Setkiewicz states, Höss, accompanied by SS *Untersturmführer* Franz Hössler and SS *Untersturmführer* Walter Dejaco, made a short visit to the ghetto of Lodz, then allegedly went to Chełmno, where SS *Standartenführer* Paul Blobel is said to have been carrying out cremation experiments for quite some time in order to identify the most efficient method. Setkiewicz continues:

> *"The results of the interview must have been satisfactory, because two days after their return to Auschwitz, the firewood supplies resumed and – consequently – the pyres were put back into operation."* (p. 61)

He also points out that, up to the end of September, at least eight more trips for transporting firewood were carried out. Together with those of early September already mentioned, the overall picture of September 1942 looks as follows:

– 7 September to Radostowice, 1 transport
– 8 September to Radostowice, 1 transport
– 9 September to Radostowice, 1 transport
– 19 & 21 September to Tromnitz (Promnitz – Promnice), 2 transports
– 22 September to Radostowice and to Kobiór, 1 transport
– 23 & 24 September to Radostowice, 2 transports
– 26 September twice to Radostowice, 2 transports
– 28 September to Meserzitz (Międzyrzecze), 1 transport

As sources, the author gives: for the first three trips (September 7-9): "APMA-B. D-AuI-4/29-31. Fahrbefehl, t. 1, pp. 671-673" (Note 46, p. 61), and for the rest: "APMA-B. D-AuI-4/25-38. Fahrbefehl, t. 1, pp. 660-688" (Note 49, p. 61).

The register in question therefore goes from page 671 to page 688 and contains all documented truck transports of firewood to Auschwitz – eleven of them. This amounts to (11 × 5 =) 55 tons of wood. In a previous study, I have already dealt with these (and other) transports (Mattogno 2020, pp. 68-72, 195f.). I showed, among other things, that the firewood supplies were not intended exclusively for cremation of exhumed corpses at Birkenau, as Setkiewicz assumes, but also for the families of married SS men to heat their homes, as is shown for example by Garrison Order No. 55/43 of December 15, 1943 (*ibid*., pp. 71f.). I also point out that no document specifically gives Birkenau as the destination of the wood transports.

Setkiewicz also points out:

> *"The travel permits for firewood of October have not been preserved, because the camp's motor pool administration began to treat them* [the trips] *as journeys within the 'sphere of interest of KL Auschwitz.' This was*

> *pointed out in the 'Headquarters' Special Order of November 2, 1942, APMA-B. D-AUI-1/77. Kommandatur-Sonderbefehl on trips to the 'forest unit Pszczyna.'"* (Note 49, p. 61)

The Headquarters' Special Order in question, issued by Höss, relates to "Violations when using motor vehicles," and refers to a letter by the SS Headquarters, Head Office of the Waffen SS (SS *Führungshauptamt Kommandoamt der Waffen*-SS) of October 27, 1942. I quote here the section referred to by Setkiewicz (Frei *et al*. 2000, p. 192):

> *"1. Caused by a given event, I once more call attention to the fact that journeys by trucks, cars and motorcycles outside the area of interest can only be authorized by me* [Höss] *personally and can only be carried out with a travel order signed by me personally. Requests for vehicles are to be submitted to the headquarters the day before, by 12:00 noon.*
> *2. Trips to the construction grounds of the IG-Farbenindustrie and to Jawischowitz are also to be considered within the area of interest; but <u>not</u> to Golleschau, Chelmek and the forest units at Pless* [Pszczyna]*."* (My emphasis)

The area of interest (*Interessengebiet*) was the area of relevance around the camp where the camp authorities had jurisdiction. Pszczyna is the Polish name for what the Germans call Pless, a town about 17 km west-southwest of the Birkenau Camp, hence far away from the "area of interest". It is therefore clear, and this is also expressly stated in this special order, that trips to the Pless/Pszczyna forest unit continued to require travel orders, as had been the case before ("I once more call attention"). So for example, "Travel Order No. 7" of September 7, 1942 relating to picking up wood at Radostowice (a village immediately west of Pszczyna) with a 5-ton truck with trailer already bears Höss's signature under the stamp "*Der Kommandant des Konzentrationslagers Auschwitz SS Obersturmbannführer*" (see Document 5).

Therefore, Setkiewicz either completely misunderstood the last sentence of this special order, or he deliberately turned its meaning on its head. Be that as it may, it results from all this that no firewood transports occurred during October 1942.

After having lingered for a few pages on "Bunker 1" and the "*Sonderkommando*" in order to create an spurious link between the wood supplies and the gassings claimed for "Bunker 1", Setkiewicz states:

> *"Since the travel orders for trucks have not survived in large numbers, we do not know how often they went to Kobiór during the following period; we do know, however, that such trips occurred, for example on January 22 and May 26, 1943.*
> *The register of the camp's motor pool, on the other hand, lists 29 trips by various vehicles (almost exclusively trucks) to Kobiór between mid-June*

> *and mid-September (64 days)* [recte: 92 days]. *For 23 of them, the task or the trip's purpose is specified, including:*
> *– Sonderkommando – seven times*
> *– DHW*[85] *(?) Sonderkommando – twice*
> *– Sonderkommando – Holz – twice*
> *Furthermore, the transport of firewood is given a few times as the reason for the trip (Tr. Holz, Holzhof, Holz fahr., Schlager Holz), without specifying, however, what purposes this wood was to serve, although it seems beyond doubt that these trips – as before – were related to the supply of wood used to cremate the corpses of prisoners."* (p. 64)

With "prisoners," he obviously means those presumably gassed.

The curious thing is that Setkiewicz gives no archival reference for these 29 trips. He merely mentions the "travel log of the camp's motor pool" (what he calls in Polish "*kolumna transportowa*" – German: *Fahrbereitschaft*, the group of vehicles and drivers at the immediate service of the camp headquarters), without saying clearly that this is the same register of travel orders he referred to with regard to the firewood transports of September 1942. I understand this omission perfectly well: if, as he claims, trips to forest areas outside the Auschwitz area of interest were no longer listed in this register since October 1942, why does it contain more entries between mid-June and mid-September 1943?

From the orthodox point of view, here according to Czech's *Auschwiz Chronicle*, about 135,500 individuals are said to have been gassed and cremated outdoors at Birkenau up to the end of December 1942. However, from September (when those cremations are said to have begun) to December 1942, merely 11 firewood transports are documented – those of September. If the trucks had a capacity of five metric tons, and the trailers two tons (Setkiewicz's pp. 60 and 71), then they transported to Auschwitz 77 tons of firewood, enough to cremate some 220 to 260 corpses (see also Mattogno 2020, pp. 71f.).

Setkiewicz's reconstruction of the origins of outdoor cremations, and the significance he attaches to Höss's trip to Litzmannstadt, are clearly farfetched, because if we follow him, 15 tons of firewood were used for the alleged experimental cremations (the three transports of September 7-9), but when mass cremations began at Auschwitz after Höss had returned from his trip, only 40 additional tons of firewood were supplied up to the end of September 1942 (the eight transports of September 19 through 28). Höss, however, declared after the war that, after his return to the camp, 2,000 corpses were cremated at a time, first on pyres, then in pits (Höss 1959, p. 210). Such a

---

85 This is probably a transcription error for "DAW," acronym for the *Deutsche Ausrüstungswerke*, German Equipment Works. In fact, there even existed a *"D.A.W." Sonderkommando*. See Mattogno 2016b, p. 112.

quantity of corpses, however, would have required some 640 tons of firewood, while the 40 tons delivered would suffice to cremate just some 125 (assuming the need of 320 kg of wood per corpse)! And this is said to have been the beginning of "mass cremations"!

Being fully aware of the inconsistency of such data with the claims of huge outdoor cremations of those allegedly gassed, Setkiewicz endeavors to find another source of wood. He supposes first that some of the 29 trips inside the camp (*Lagerbereich*) bearing the notation "*Sonderkommando*," for which the trip's purpose is not given, carried firewood, in particular lumber from demolished Polish houses within the area of interest. Many of these houses were indeed torn down and their bricks reused for the construction of barracks in Construction Sector BI of the Birkenau Camp. However, in the villages of Brzezinka, Broszkowice, Rajsko, Pławy, Harmęże and Bor, there were still many houses which had only partly been dismantled by the inmate demolition teams (*Abbruchkommandos*); a lot of structural lumber and lumber from damaged roofs was suitable to be used as fuel.

This demolition work is delineated in a compilation by the mayor of Auschwitz which describes the housing situation in three villages as of late January 1943:

Table 5: Housing situation in villages near Birkenau

	October 4, 1940		January 14, 1943	
	Houses	Residents	Houses	Residents
Babice	314	226	76	393
Brzezinka	537	4,450	53	610
Broszkowice	54	400	1	0

Many of these houses, Setkiewicz continues, were rural and included stables and wooden barns which were also demolished. He then mentions an inventory of the Central Construction Office which found that in these villages there were still a number of houses whose preservation status was generally estimated to be around 15% to 65%. On June 10, 1943, the inventoried buildings were photographed, and to those photos showing houses that had been completely destroyed in the meantime, a pertinent note was added.

Setkiewicz summarized in a table the data for the "damaged buildings or ruins in the 'Area of Interest of KL Auschwitz'" (see Table 6). Then he reveals what he is aiming at with this data:

> *"The vast majority of truck trips carried out for the needs of the Sonderkommando took place during the last days of July and especially in the first half of August, when over thirty thousand Jews from the liquidated ghettos at Będzin and Sosnowiec were transported to the camp."* (all the above on pp. 64-66)

Table 6: Damaged buildings or building ruins in the Auschwitz Area of Interest

	February 1, 1943	June 10, 1943
Harmęże	91	53
Broszkowice	106	77
Brzezinka	131	48
Rajsko	137	121
Budy	154	136
Babice	198	164
Total:	817	599

I have already dealt earlier and in detail with these claimed transports, so there is no need to repeat it here. Instead, it is worth the effort to look deeper into the topic of the demolished houses. If 11 of these 29 trips were undertaken on behalf of a "*Sonderkommando*," it is not at all certain that this unit was involved with the claimed "gas chambers" of "Bunker 1" at Birkenau, because multiple "*Sonderkommandos*" existed at Auschwitz that were engaged in the most diverse kinds of activities (Mattogno 2020, pp. 58-65); furthermore, only for some of these 19 trips do the documents state that wood was involved. But in the present context, the main objection is that Setkiewicz confuses the Headquarters' motor pool with that of the Central Construction Office.

All activities related to houses, buildings and structures of all kinds, their construction, renovation and demolition, were the jurisdiction of the Central Construction Office. A first inventory of all structures, with registration and numbering, was compiled in February 1942. A document of March 2, 1942, deals with the "Numbering of the houses between the Old and the New Railroad Street."[86]

The Central Construction Office had its own motor pool with a fleet of vehicles assigned to serving its own needs. It was headed by SS *Untersturmführer* Fritz Wolter (*Fahrbereitschaftsleiter*) until May 1942, at which point SS *Scharführer* Kurt Kögel took over that position.

The head of the motor pool had to file a monthly report titled "Report on the activities of the motor pool of the Central Construction Office of the Waffen SS and Police Auschwitz for the month of …" The first known report refers to May 1942. The following reports are much more-detailed. For the period that interests us, the reports of May 1943, a general report on the second quarter of 1943 (April-June) and that of September 1943 have been preserved.

The report for May 1943 contains a list regarding the "Detailed use of vehicles within the area of the camp" with 2,448 trips divided into 30 groups.

[86] *Tätigkeitsbericht der Tiefbau- und Vermessungsabteilung. Februar 1942*, March 2, 1942. RGVA, 502-1-24, p. 416.

Some of these also mention wood (*Holz*), but it concerned construction lumber transported *to* the location indicated. For instance:

– "*8) Broschkowitz – Holz, Kies und Stückgut*" (Broschkowitz – wood, gravel and bulk cargo): 7 trips.
– "*9) Budy – Sand, Kies, Lehm und Holz*" (Budy – sand, gravel, loam and wood): 36 trips
– "*24) Raisko – Ziegel, Kalk, Rohre, Sand, Kies, Holz und Zement*" (Raisko – bricks, lime, pipes, sand, gravel, wood and cement): 71 trips

References to Birkenau using the acronym "K.G.L." (for PoW Camp) concern 134 trips transporting "sections of barracks" ("*Barackenteile*") and 1,251 trips with "other construction material" ("*Sonst. Baumaterial*"). The only reference to Birkenau as such is this one:[87]

"7) "Birkenau – lime, cement, gravel, bricks and sinks."

The report dealing with the entire second quarter of 1943 is very general in nature. It provides only general information about the trips made in the months of April, May and June (2,946 in total), the type of vehicles used, the mileage driven, etc.[88]

The report covering September 1943 contains the obligatory list regarding the "Detailed use of vehicles within the area of the camp," subdivided in 55 groups relating to a total of 2,457 trips. It includes 380 trips hauling "parts of barracks", 1,059 trips carrying "other construction material" for the K.G.L. (Birkenau), and 56 trips to Birkenau as such for "construction materials and lumber" ("*Baustoffe und Bauholz*").[89]

Setkiewicz's argument is therefore inconclusive. Although it is true that many buildings within the Auschwitz Camp's area of interest were demolished, nothing even suggests that any reclaimed lumber had been brought to Birkenau and used for any outdoor cremation of corpses.

In conclusion, the supply of wood to the Auschwitz Camp does not support in any way the reality of the claimed immense outdoor cremations. In fact, we cannot even infer anything from them about the actual, real outdoor cremation of the corpses of registered inmates.

If, as Setkiewicz claims, the outdoor cremation of corpses exhumed from mass graves began in late August or early September 1942, then some 26,100 prisoners had died up to then since January 9, 1942. The delivery of 371.5 tons of coke, as documented by the Auschwitz Museum's list of coke supplies and other documents mentioned by Setkiewicz for the period from January 29 until December 31, 1942, would have sufficed to cremate about 10,000 bod-

ies, assuming an average operation of the furnaces as in the case of the Gusen Furnace examined earlier (37.2 kg of coke per corpse).

From January 1 to January 28, 1942, some 650 inmates died in Auschwitz, the vast majority, if not all, of whom were probably cremated in Crematorium I. The number of corpses cremated in that crematorium therefore probably reached some 10,650.

In the entire year 1942, all in all about 47,000 inmates died at Auschwitz, plus some 1,500 Soviet PoWs who perished in the months of January and February,[90] hence in total some 48,500, some 26,100 of them by the end of August, as just mentioned. With approximately 291.5 tons of coke delivered to Crematorium I by then (adding the supplies indicated by Setkiewicz and assuming a supply of 39 tons for the months of January and February), some (291,500 kg ÷ 37.2 kg/corpse =) 7,850 corpses could have been cremated.

This means that that some (26,100 – 7,850 =) 18,250 corpses must have been at least temporarily buried until the end of August 1942.

This amount is perfectly consistent with the assumed total volume of the Birkenau mass graves as calculated earlier, 4,600 m³, in which would have been buried up to (18,250 ÷ 4,600 =) four corpses per cubic meter, a density that can be considered normal.[91]

If we were to add to these real corpses those that are said to have been gassed up to the end of 1942 (about 56,350), we would get a total of about 74,600 buried bodies, which would result in an extremely unlikely packing density of (74,600 ÷ 4,600 =) 16 corpses per cubic meter.

All those inmates who died in 1942 *after* the open-air cremations are said to have begun, hence between September and December 1942 – roughly (48,500 – 26,100 =) 22,400 – were not buried but cremated directly.

From all this it follows that in 1942 at most some (48,500 – 10,650 =) 37,580, or rounded up some 38,000 corpses were probably cremated outdoors.

These outdoor cremations are undoubtedly the darkest aspect of the Auschwitz Camp's history, for which not even a single document exists, and testimonies about it are almost non-existent, because almost all witnesses regularly mention the alleged gassing victims, but they always neglect to mention the registered prisoners who died in the camp. Yet the elimination of some 38,000 corpses would have had to be planned by the camp headquarters, by the Political Department and by the SS garrison physician, the doctor in charge of the garrison's sanitary conditions, and thus of the entire Auschwitz area of interest. This planning and operation necessarily would have created a considerable amount of documentation, of which not even the slightest trace exists. This

[90] *Totenbuch*, analysis by Jan Sehn. AGK, NTN, 92, pp. 135f.; see Mattogno 2019a, pp. 232f.

[91] One of the few empirical such data is provided by a Soviet report of September 24, 1944 concerning a mass grave containing 2,402 bodies (men, women and children) that were exhumed. The density of the bodies was three per cubic meter. Cf. Yakovlev, pp. 50-54; Mattogno/Kues/Graf 2014, Vol. II, p. 864.

fact is all the more strange because the SS left intact many death registers and a rich documentation on the crematoria.

One could argue that, since it was possible to cremate outdoors the bodies of about 37,500 registered inmates without creating any evidence, it would also have been possible to cremate outdoors the bodies of about 210,000 gassed inmates without creating any evidence. Between these two cases, however, there is a world of difference: while the deaths and thus the presence of corpses of registered detainees is documented and proven, as attested to by numerous documents (*Totenbuch*, *Sterbebücher*, *Leichenhallenbuch*, *Stärkebuch*, *Totenmeldungen*, etc.), no documentary of any kind evidence exists on the deaths of those allegedly gassed, so that this amounts to comparing an indisputable reality with pure conjecture.

In fact, the reality explains how this false conjecture came about. In my study of the "Bunkers" of Birkenau, I came to the conclusion that (Mattogno 2016a, p. 199.):

> *"the black propaganda about the 'gas chambers' in the 'Bunkers' began to be disseminated in 1942. It was spread by various resistance groups in and around Auschwitz, although their respective reports contradicted one another. These reports were based on the disinfestation plants BWe 5a and 5b. If the presence of these installations is a necessary element, it is not sufficient to account for the birth of the propaganda story. The connecting element that would focus the energies of the propagandists was still missing: the mass graves and the open-air cremations. The incineration of corpses exhumed from mass graves, which went on day after day for months on end, struck the imagination of the detainees at Auschwitz, and it was this 'eternal fire' which inspired the propaganda makers. If thousands of corpses were burned outside the camp, there must have been mass extermination, and if there was mass extermination, the assumption seemed logical that there were also 'gas chambers,' equipped, of course, with the 'showers' and installations similar to those in the gas chambers of BWe 5a and 5b.*
>
> *That is the origin of the propaganda story of the Birkenau 'Bunkers.'"*

See from this point of view, Höss's alleged visit to Chełmno, assuming for the sake of the argument that it actually took place, does not prove anything about the alleged mass murder at Auschwitz, because it would fit well with the necessity to cremate such a large number of bodies of deceased registered prisoners who could not be cremated in Crematorium I at the Auschwitz Main Camp.

Any discussion of that question cannot be separated from the following four basic tenets.

First, the groundwater at Birkenau stood at a depth of between 0.30 and 1.20 meters below the surface. In 1942, when the work to create an extensive

network of drainage ditches had not yet begun, the situation was unchanged (Mattogno 2016e, pp. 97-127). Excavating mass graves no deeper than one meter and filling them with thousands of dead bodies would inevitably have contaminated the groundwater. This threat became all the more-serious in the summer of 1942, because in July 1942 deaths from infectious diseases (especially typhus) increased enormously. That this danger was real and feared by the SS may be seen from the fact that on June 2, 1944 the new head of the Central Construction Office, SS *Obersturmführer* Werner Jothann, refused to permit the use of 14 barracks as inmate accommodations which were located in Birkenau Construction Sector BIII, where the groundwater level had remained at the level where it had been in 1942. He justified this by writing:[92]

> *"Barracks are only partly roofed, area is swampy and not leveled in any way. A contamination of the groundwater and the formation of further sources of disease is feared."*

The second tenet is that the SS garrison physician had to prevent the occurrence of epidemics and eliminate their causes, which was among his main tasks.

The third tenet is that, since May 1940, the administration of the Auschwitz Camp was in constant contact with the Topf & Söhne Company, which at that time was Germany's market leader in the field of cremation technology. Their chief engineer Kurt Prüfer, director of the department for furnace technology, visited Auschwitz personally four times between 1940 and 1942, most-recently on August 19 and 20 (Mattogno 2014, pp. 31f.).

The fouth tenet – which is even admitted by Setkiewicz – is the fact that the exhumation and outdoor cremation of corpses of registered prisoners was performed for hygienic-sanitary reasons. Although not documented, this fact is an inescapable result of the above facts.

In addition to Pery Broad, the sanitary motivation for the corpse cremation was also mentioned by Maximilian Grabner, the former head of the Political Department at Auschwitz, who was arrested at the end of 1943 and sentenced by an SS court to 12 years' imprisonment for embezzlement. Retaliating against the SS and hoping to save his own skin, he "confessed" right after the war that, until the end of 1943, three to six million Jews had fallen victim to the claimed mass murder at Auschwitz![93]

In the Community Camp (*Gemeinschaftslager*), the section of the Birkenau Camp where the civilian (non-inmate) workers were accommodated, the first cases of typhus were discovered on July 1, 1942.[94] Two days later, the Public Health Department of the Bielsko District ordered that the commandant of

94 Report by the *Zentralbauleitung* of July 2, 1942. RGVA, 501-1-332, p. 153.

Auschwitz take health measures to deal with the epidemic, which at that point was still confined to civilian workers.[95] Soon, however, the epidemic spread to the inmates, as a result of which Höss was forced to decree the camp's immediate closure on July 20 "because of the danger of epidemic typhus" ("*infolge Flecktyphusgefahr*");[96] the order for a "complete camp lockdown" ("*vollständige Lagersperre*") was reaffirmed by Garrison Order No. 19/42 of July 23.[97] Because the mortality among prisoners had already conspicuously increased since mid-June, it is hard to believe that the SS garrison physician and the Auschwitz camp headquarters waited until early September with the exhumation and cremation of the buried corpses. In fact, the groundwater was extremely important not only for farming fish in local ponds, but especially for supplying the Auschwitz Camp, in fact, also the City of Auschwitz and the surrounding areas with drinking water. In a very large area that stretched between Auschwitz and the Birkenau Camp existed a restricted drinking water catchment area (*baupolizeilich gesperrtes Brunnen-Einzuggebiet*)[98] where eleven wells were located.[99] There was also a string of wells (*Brunnengalerie*) that supplied water directly to the camp. Other wells were scattered around the camps of Auschwitz and Birkenau. A March 1942 report mentions wells near the houses for married officers and NCOs and the houses for civilian workers Nos. 136, 77, 27, 151, 152, 160, 132, 151a, 163 and the "Haus Record."[100]

The drinking water was periodically analyzed, as may be seen from a letter of the SS garrison physician to the Central Construction Office of June 1, 1943 which states that the last bacteriological analysis confirmed the presence of the bacterium E. coli.[101]

It therefore seems much-more likely that the exhumations began much earlier, as was confirmed by SS *Hauptsturmführer* Hans Aumeier, Höss's deputy, who stated:[102]

> *"Most of the prisoners who died before my time had been buried and were dug up again and burned in the early summer of 1942 to the spring of 1943."*

This means, as seems reasonable, from mid-June 1942, when the mortality began to rise conspicuously, until March 1943. The operation was therefore carried out for at least nine months, with on average of about (37,500 bodies ÷

270 days ≈) 140 corpses cremated per day, which is a substantial amount, to be sure, but is much more-tenable than the purported average cremation rate, if we add to these bodies the roughly 210,000 corpses of those allegedly gassed, hence a total of about 247,500 corpses, which are said to have been cremated in about six months (from mid-September 1942 to mid-March 1943) at a rate of about (247,500 ÷ 180 ≈) 1,400 a day.

In an earlier study, I analyzed the "Travel Report on a Business Trip to Lodz" ("*Reisebericht über Dienstfahrt nach Litzmannstadt*") of September 17, 1942 prepared by SS *Untersturmführer* Walter Dejaco. It deals with a journey Dejaco had made the day before together with Höss and SS *Untersturmführer* Franz Hössler. Thanks to a recently discovered document, I could confirm what the "experimental station for field furnaces Operation Reinhard" (*Versuchsstation für Feldöfen Aktion Reinhard*) was which the three SS officers visited, and what these "field furnaces" were (Mattogno 2020, pp. 133-135). Another additional consideration underscores that these were *not* corpse-cremation devices.

Seen from the orthodox perspective, Operation Reinhard(t) began in March 1942 with the opening of the "extermination camp" Bełżec, where the burning of the victims' corpses that allegedly had initially been buried in mass graves is said to have begun not before mid-December 1942 or in January 1943 (Mattogno 2016f, pp. 82-85), while at Sobibor, cremations started perhaps already in September 1942 (Schelvis 1998, p. 51), whereas Treblinka was last, with cremations starting only in March 1943 (Graf/Mattogno 2020, pp. 141f.). This means first of all that no general order regarding cremations existed by Himmler, who oversaw the whole operation. Hence, if Blobel had set up an "experimental station for field furnaces Operation Reinhard" in September 1942 – supposedly at Chełmno (the "Travel Report" of September 17 mentions only Litzmannstadt/Lodz), these furnaces could not have been intended for the cremation of corpses. That Himmler had indeed not given any specific order to that effect at the time may be seen from the letter he wrote on November 20, 1942 to the Gestapo Chief Heinrich Müller (who would have ordered Blobel to carry out the cremation experiments). Referring to a propaganda speech by the U.S.-American Rabbi Stephen Wise of September 1942, in which Wise had mentioned the infamous human soap allegedly made from Jewish corpses, Himmler wrote (quoted by Hoffmann 2008, p. 84):

> *"Considering the great immigration movement of the Jews, I am not surprised that such rumors have been spread in the world at some point. We both know that there is an increased mortality among the Jews deployed for labor.*
>
> *You have to guarantee me that at each location the corpses of these deceased Jews are either cremated or buried, and that nowhere anything else can happen to these corpses."*

If the corpses of dead Jews could be discretionarily either cremated or buried as late as November 20, 1942, it is clear that Himmler had not previously given a general order for the cremation of such bodies.

As SS *Sturmbannführer* Alfred Franke-Gricksch wrote in a report on his inspection trip to Poland from May 4 to 16, 1943, during which he visited the camps at Auschwitz and Lublin, the "*Sonderaktion 'Reinhard'*" was a special operation dealing with the seizure of Jewish assets (Mattogno 2020, pp. 114f. I will return to this issue in Chapter IV). Any combustible objects that could not be reused were incinerated outdoors. On September 26, 1942, an ill-advised burning of old suitcases at Birkenau near the storage buildings for inmate effects threatened to cause a conflagration (*ibid.*, pp. 133-135). Apparently, this practice had been in place for a while, and precisely in order to find a solution to this problem, Höss went to see the "field furnaces Operation Reinhard." The "ball mill for substances" ("*Kugelmühle für Substanzen*") mentioned in the "Travel Report" of September 17 served to grind down useless, incombustible objects. That this mill was not destined to crush the remnants of the cremation of corpses, as the orthodox Holocaust narrative has it, is demonstrated by the fact that the exhumation and cremation of the buried corpses at Birkenau was motivated by hygienic-sanitary considerations to protect the camp and its vicinity from poisoned drinking water rather than by any intention to erase any traces of a crime, so there was no reason to thoroughly crush the cremation remains.

If we were to assume the opposite, then, on the one hand, it would have been mandatory for the SS garrison physician or one of his representatives to participate in this inspection trip to Lodz in order to determine whether these so-called field furnaces were able to cremate the corpses in a hygienically safe manner. On the other hand, that trip would actually have been utterly superfluous, because, as I explained above, in order to solve all his cremation challenges, Höss could and would have simply turned to the Topf Company, and here especially to Kurt Prüfer.

III. Zyklon B

In this section, Setkiewicz summarizes the origin of the use of Zyklon B at Auschwitz for the purpose of disinfestation. I quote his remarks and complete them where appropriate.

> *"Zyklon B* [Setkiewicz always writes "Cyklon"] *was used for the first time at Auschwitz for the fumigation of the SS guard building between July 5 and 11, 1940."*

The document mentioned by him states in this regard:[103]

> *"Building No. 54, designated for accommodating the guard detail, was fumigated against pests and diseases."*

Setkiewicz continues:

> *"Subsequently, other buildings in the area of the camp were disinfected*[104] *that way, including inmate dwelling barracks as well as the offices and barracks of the SS.*
>
> *It is apparent from the deposition of the former inmate Zdizsław Michalak that the Entwesungskammer* [fumigation chamber] *commando was established at the end of August 1941. It consisted of about 20 prisoners, who were initially employed to disinfest Blocks Nos. 1-9. These were meant to be used for Soviet prisoners of war, a camp section that was established more than a month later. The members of the commando later disinfested other blocks, but in mid-November they were permanently assigned a new job – at the disinfection* [sic] *chambers located at the so-called 'Kanada I' area.*
>
> *We have a fairly accurate description of the disinfection of residential premises and the offices in the 'staff building' (Stabsgebäude) carried out*

---

[103] *Tätigkeitsbericht vom 5. Juli bis 11. Juli 1940* by *Bauleiter* August Schlachter of July 12, 1940. RGVA, 502-1-214, p. 97.

[104] In the Polish text "*dezynfekowano*." Setkiewicz repeatedly uses terms related to disinfection (*dezynfekcja*) instead of those related to disinfestation (*dezynsekcja*).

> *at the end of January 1942. As may be seen from the content of the instructions issued by Commandant Höss, extraordinary prudence was maintained during its implementation: On the morning of January 22, the cracks in the windows had already been sealed with strips of paper (to seal them), and the inhabitants of the building had been transferred to other blocks for the night. The SS were ordered to leave any dirty clothes in their rooms. After taking a bath, they would get some clean underwear. They were forbidden to bring along 'clothes, luggage, bags of documents etc.,' in order to avoid the danger of reintroducing the epidemic. The actual 'gassing' (*Vergasung*) of the buildings lasted three days, until Tuesday January 27. Detailed instructions for disinfecting the prisoners' barracks (at Birkenau) have also been preserved in two other orders by the camp commandant issued in 1943: one took place on July 24 and 25 in Camp Sector BIa (Women's Camp), the other on July 31 and August 1 in Sector BIId (Men's Camp)."*

Setkiewicz then mentions the fumigation of the Main Camp on August 12, 1942, and adds:

> *"Probably due to a gas poisoning accident that took place during this event, the camp commandant issued an order on that same day that, for five hours after the opening of fumigated premises, the SS men were not allowed to get closer to them than 15 meters without wearing a gas mask."* (pp. 68f.)

He refers to the "special order" (*Sonderbefehl*) of August 12, 1942, with which the commandant of Auschwitz imparted the following directive:[105]

> *"A case of indisposition with slight symptoms of poisoning by hydrocyanic gas which occurred today makes it necessary to warn all those participating in gassings and all other SS members that in particular on opening fumigated rooms, SS members without mask must keep a distance of 15 meters from the chamber for at least five hours. In addition, particular attention should be paid to the wind direction."*

The fumigation carried out at the end of January 1942 is mentioned in the commandant's order headlined "Fumigation of staff building" (*Vergasung des Stabsgebäudes*).[106]

It is important the emphasize that, in the vast documentation on Auschwitz, the term "gassing" (*Vergasung*) in each and every single case solely and exclusively refers to pest control, yet never to any murderous activities.

Setkiewicz then moves to the more general problem of the supply of Zyklon B to Auschwitz. He finds that there are no documents that enable precise determination of the number of fumigations that were performed and the

---

[105] *Sonderbefehl* of August 12, 1942. RGVA, 502-1-32, p. 300.
[106] *Kommandantur-Befehl* No. 2/42 of January 22, 1942. RGVA, 502-1-36, p. 4.

associated Zyklon consumption. There is a register of orders for consumables (*Verbrauchsmittel*) placed by the camp, but it has been preserved only in part, for the months of August 1940, for January, February, and one week in April and June 1941, plus for the time period from August 1941 to November 1942.

The first entry is for a delivery of 3,000 kg of hydrogen cyanide ("*Blausäure*," meaning Zyklon B) from Dessau in November 1941 (see Document 7).

A letter from the Heerdt-Lingler Company to the Friedrich Boos Company, which was in charge of installing the Zyklon-B-disinfestation chambers at the laundry and admission building containing a delousing facility and inmate bath, Building 160 (*Wäscherei- und Aufnahmegebäude mit Entlausungsanlage und Häftlingsbad – Bauwerk* 160) at the Auschwitz Main Camp, mentions an order of 500 kg Zyklon B in cans of 200 grams for disinfestations (*Entlausungen*; NI-14163).

The order was confirmed with a letter of December 2, 1941 from the Heerdt-Lingler Company to the Degesch Company with the subject "*K.L. Auschwitz*" (NI-14164).

Setkiewicz then lists the subsequent deliveries, which refer to 1942 (p. 69):

– 2,200 kg in February from Dessau,
– 2,365 kg in March from Dessau,
– 5 crates in June from Dessau,
– 33 crates in July from the *Dessauerwerke für Zucker und Chemische Industrie A.G.* – Dessau,
– 3,465 kg in September, of which 1,260 kg from the *Deutsche Gesellschaft für Schädlingsbekämpfung* (Degesch) of Frankfurt/Main, and 2,205 kg from the *Dessauerwerke für Zucker und Chemische Industrie A.G. Dessau*.

Setkiewicz informs us that the cans of Zyklon B delivered in February 1942 were packed in 40 crates, so each crate contained (2,200 kg ÷ 40 crates =) 55 kg of Zyklon. The number of crates delivered in March is unknown, but when using the mass per crate established above, this results in (2,365 kg ÷ 55 kg/crate =) 43 crates. However, in September, 3,465 kg of Zyklon were packed in 55 crates, so each of them contained (3,465 kg ÷ 55 crates =) 63 kilograms. From this, Setkiewicz concludes that the five crates delivered in June contained (5 crates × 55 kg/crate or 63 kg/crate =) either 275 or 315 kg of Zyklon B. In the same way, the 33 crates of July corresponded to either 1,815 or 2,079 kg of Zyklon B, so that the total supply of 1942 would range from a minimum of 10,120 to a maximum of 10,424 kg (pp. 69f).

The crates of Zyklon B had different weights depending on the size of the cans. In addition, the weight indicated on the can referred to its net content of hydrogen cyanide, not to its gross weight, which was obviously higher, as may be seen also from the labels on the cans (see Document 8). From five shipping advices for Zyklon B from the Dessauer Werke to Degesch of April and May

1944 (see Document 9; NI-9913A) it may be seen that the 500-g can of hydrogen cyanide had a gross weight of 1.425 kg, hence the combined weight of the inert carrier (gypsum pellets called "Erco-Würfel") and the empty can was 0.925 kg. A crate weighed 64 kg and contained 30 cans, which contained (0.5 kg/can × 30 cans =) 15 kg of hydrogen cyanide.

A shipping advice of May 16, 1944 refers to 8 crates with 1,000 cans of Zyklon B, each containing 100 g of HCN. One such can had a gross weight of 350 g; while a crate containing 125 cans weighed 69 kg, it had a total HCN content of (125 cans × 0.1 kg/can =) 12.5 kg (NI-9913 B, p. 2).

Finally, the shipping advice of December 29, 1944 relates to 35 crates of Zyklon B with 420 cans of 1.2 kg HCN contents each. A can weighed 3.2 kg; a crate, which weighed 55 kg, had 12 cans with total hydrogen-cyanide content of (12 cans × 1.2 kg/can =) 14.4 kg (*ibid.*, p. 3).

From another shipment advice of the Dessauer Werke dating back to August 10, 1937 we glean that a crate of Zyklon B containing 16 cans with 1 kg hydrogen cyanide each weighed 61 kg (TNA, WO-309-1603).

I summarize the data in the table below:

Table 7: Mass of Zyklon B cans of various sizes

can size (HCN mass)	mass of can	mass of crate	no. of cans/crate	total mass of HCN in crate
100 g	0.350 kg	69 kg	125	12.5 kg
500 g	1.425 kg	64 kg	30	15.0 kg
1,000 g	2.650 kg	61 kg	16	16.0 kg
1,200 g	3.200 kg	55 kg	12	14.4 kg

It follows that the 40 crates of Zyklon B delivered to Auschwitz in February 1942, each weighing 55 kg, contained a total of (40 crates × 12 cans/crate =) 480 cans of 1.2 kg. Hence, the actual weight of Zyklon B (hydrogen cyanide) was (480 cans × 1.2 kg/can or 40 crates × 14.4 kg/crate =) 576 kg.

The 2,365 kg of Zyklon B delivered to Auschwitz in March corresponded to (2,365 kg ÷ 55 kg/crate =) 43 crates, equivalent to (43 cates × 12 cans/crate =) 516 cans with 1.2 kg HCN each, with a net weight of (43 crates × 14.4 kg/crate =) 618.2 kg of HCN.

The five crates of 500-gram cans delivered in June contained (5 crates × 30 cans/crate =) 150 cans, with a total weight of (5 crates × 15 kg/crate =) 45 kg of hydrogen cyanide.

If the July deliveries consisted of the cans size 1.2 kg, then the 33 crates contained (33 crates × 12 cans/crate =) 396 cans and (33 crates × 14.4 kg/crate =) 475.2 kg of HCN.

The average weight per crate of the 3,465 kg of Zyklon B delivered in September in 55 crates – 63 kg – does not correspond to any of the can sizes listed above, so it either was a mixture of various can sizes, the number in the document is incorrect, or Setkiewicz made a transcription error. If the average

weight had been 64 kg per crate, each crate would have contained 30 cans of 500 g HCN each, in which case the gross weight would have been (64 kg/crate × 55 crates =) 3,520 kg, and the HCN content (55 crates × 15 kg/crate =) 825 kg.

In conclusion, the data for the Zyklon-B deliveries in 1942 is as follows:

Table 8: Documented HCN deliveries (in Zyklon-B) to the Auschwitz Camp in 1942

Month	gross mass	no. of crates	total mass of HCN
February	2,200 kg	40	576 kg
March	2,365 kg	43	618 kg
June	[320 kg]	5	[45 kg]
July	[1,815 kg]	33	[475 kg]
September	3,465 kg	55	[825 kg]
		Total:	2,539 kg

The maximum documented quantity of HCN delivered to Auschwitz therefore did not even reach 2,540 kg, barely a quarter of Setkiewicz's estimate ranging from 10,120 to 10,424 kg!

Deliveries of Zyklon B in November 1941 and in February 1942 arrived via railroad (wagons "Münch. 19931" and "Karlsr. 51113"), whereas subsequent deliveries were picked up by a truck from the camp's motor pool at the production plant.

It is unknown whether the 3,000 kg of Zyklon B delivered in November 1941 refer to the gross weight or the HCN content. According to Rudolf Höss, fumigations were initially carried out at Auschwitz by the firm Tesch & Stabenow; a special fumigation detail was formed only later (staffed with SDG – *Sanitätsdienstgrade*, SS corpsmen, called "*Desinfektoren*," desinfectors; see Höss 1958, pp. 209f.).

This was confirmed in 1945 by two employees of the Tesch Company: August Marcinkowski said that in March 1940 he carried out a fumigation at Auschwitz using 120 kg of Zyklon B.[107] Hans Willy Max Rieck stated that another fumigation was carried out in early summer 1941.[108] The delivery of November 1941 was therefore probably one of the first deliveries.

For 1942, Setkiewicz mentions two travel permits for a 5-ton truck from Auschwitz to Dessau in order to pick up Zyklon B. The first travel permit of July 22 was about "gas for the gassing of the camp for the fight against the epidemic that has occurred" (p. 70). This confirms the use of the term "*Vergasung*" (gassing) for of pest control, as I pointed out earlier.

[107] Deposition of October 24, 1945. TNA, WO 309/1603.
[108] Deposition of October 22, 1945, *ibid*.

The second order is a radio message of July 29, 1942 containing a number of typos. It granted "the travel permit by truck from Auschwitz to Dessau to pick up gas which is urgently needed to disinfect the camp."[109]

Setkiewicz notes that the previously mentioned register of orders for consumables shows only two tons of Zyklon B picked up in Dessau, which would mean that the two Zyklon-B deliveries of July 1942 picked up by truck contained not quite a metric ton of cargo each. It is possible, he hypothesizes, that such small cargos, when seen in relation to the distance between Auschwitz and Dessau, were due to an emergency situation (Setkiewicz says "*interwencyjnych*," literally "of intervention"), and that these deliveries were not entered in the aforementioned register.

Setkiewicz then states that two more travel permits exist for 1942. The first, issued on August 26, was "for picking up material for special treatment"; see Document 11). The other of October 2 refers to a 5-ton truck with trailer "for picking up materials for the resettlement of the Jews" (see Document 12). Strangely enough, he does not comment on these presumable "criminal traces," so that I refer to what I have set out elsewhere in this respect (Mattogno 2016b, pp. 39-60; 2019, pp. 193-205). Here I note only that the orthodox interpretation of these two documents would require a double purposing for the purchase of Zyklon B, one for disinfestation and the other for homicidal purposes. This does not only make little sense, it is also inconsistent with the alleged intention of the SS to "camouflage" their activities, which was supposedly done by using a sort of "code language." Seen from that point of view, it evidently would have been much easier to order all the Zyklon B for the purpose of disinfestation and then divert the required amount to the claimed homicidal gassings.

Setkiewicz merely notes that the above supplies are not listed in the register of orders for consumables, and he concludes that in 1942 a quantity of Zyklon B was delivered to the camp which significantly surpassed the 10,120 to 10,425 kg calculated by him (pp. 70f.), but as I demonstrated above, his figures are erroneous to begin with.

For the year 1943, Setkiewicz cites two documents. A travel permit for a five-ton truck with trailer from Auschwitz to Dessau and back to pick up material for disinfestation ("*zwecks Abholung von Materialien zur Desinfektion*") dated January 7, 1943 (see Document 13), and a travel permit for a five-ton truck from Auschwitz to Dessau to pick up Zyklon ("*zwecks Abholung von Zyklon*") of July 30 (see Document 14). These cargo trips are confirmed by two other documents, therefore we may assume that they did indeed take place. Setkiewicz writes (p. 71):

> *"Both trucks had a freight capacity of five tons, the trailers two tons,*[110] *so in total they theoretically could carry 14 tons of cargo, i.e. – after deduct-*

[109] AGK, NTN, 94, p. 168; see Document 10.

> *ing the weight of packaging – an amount almost equal to or even exceeding the gas deliveries during 1942. But there is no reason to believe that these were the only such trips; it is most likely that subsequent travel permits simply did not survive."*

Here he commits the same mistake that I have explained above. If a crate with 30 cans of Zyklon B of 0.5 kg HCN each weighed 64 kg and contained 15 kg of HCN, then 14 tons of freight (14,080 kg, to be precise) correspond to 220 crates, with a HCN content of (220 crates × 15 kg/crate =) 3,300 kg.

As for the rest, it is all-too-obvious that one can never categorically exclude the possibility of additional deliveries whose documentation has not been preserved.

Setkiewicz then notes that

> *"based on a list of Zyklon-B deliveries to German concentration camps that has been preserved, it was assumed that the Auschwitz Camp received 7,478.6 kg of gas in 1942, and 12,174.09 kg in 1943.*[111] *This list, however, only covers deliveries made by the Testa Company, yet does not include purchases made directly from the Dessau factory or other dealers. As has been shown above, these* [documented] *quantities, at least as regards 1942, are decidedly low."* (p. 72)

It should be noted that the document cited by Setkiewicz – NI-11397 – is an affidavit of October 18, 1945 by Alfred Zaun, accountant of the Testa Company, in which he details the Zyklon-B deliveries to concentration camps during 1942 and 1943 (see Document 15).

As for the quantities, Zaun refers to the actual content of hydrogen cyanide, so the 7,478.6 kg delivered in 1942 corresponds to a gross weight of the cans of 21,367 kg (excluding the crates themselves), a figure almost twice that calculated by Setkiewicz.

It is also incorrect that deliveries picked up directly at the Dessau factory are not included in these 7,478.6 kg. In fact, Zaun declared (NI-11937):

> *"For the purchase and delivery of Zyklon, the company* [TESTA] *depended completely on the German Association for Pest Control Frankfurt-upon-Main (DEGESCH), which, as the sole proprietor of the patent and the production license, had Zyklon produced by the Dessauer Werke für Zucker und Chemische Industrie A.G. and the Kaliwerke Kolin A.G. All orders that the company TESCH & STABENOW (TESTA) received from concentration camps and SS organizations had to be passed on to DEGESCH; in each case, TESTA submitted the processing request for the quantities of Zyklon ordered to DEGESCH with information about the can sizes requested and the delivery details. DEGESCH in turn requested the mer-*

---

[110] APMA-B. D-Au I-4/1a, p. 35.

[111] In other affidavits, the figures provided by A. Zaun are slightly different: 12,174.9 (NI-11396, p. 2); 12,183.4 kg (NI-11889, p. 10).

> *chandise from the factory in Dessau or Kolin. The merchandise was then shipped directly from the Dessau or the Kolin factories to the end customer, and DEGESCH was sent a shipping advice with a copy to Testa."*

This is confirmed by the series of documents headed "shipping advice for Zyklon-B poison" ("*Versandanzeige über Zyklon B Gift*"), which I mentioned earlier (Documents NI-9913A-B).

The DEGESCH had two major distributors, the *Heerdt und Lingler GmbH* of Frankfurt ("Heli") and the *Tesch und Stabenow. Internationale Gesellschaft für Schädlingsbekämpfung* ("Testa") of Hamburg, who had divided the market: Heli was operating in the territories west of the Elbe River, while Testa supplied customers in the territories to the east of the Elbe, including the Sudetengau, the General Government (occupied Poland), the Reichskommissariat Ostland (occupied territories of the USSR), as well as Denmark, Finland and Norway. Due to the Auschwitz Camp's location, it fell within the territory of Testa. Hence, all Zyklon-B deliveries which the camp administration of Auschwitz had picked up directly from Dessau fell in the accounts of the Testa Company. Even the document quoted by Setkiewicz speaks explicitly of "DEGESCH delivery of Zyklon to concentration camps by the Testa Company." However, at least for one camp the data contained in it are incomplete, because it is established that Testa supplied the Lublin-Majdanek Camp with 2,211 kg of Zyklon B in 1942, and with 4,500 kg in 1943 (Graf/Mattogno 2016, pp. 200-203), while the list in Document NI-11937 contains no deliveries at all for 1942, and only 1,627.5 kg for 1943.

For 1944, Setkiewicz writes with reference to Franciszek Piper's deliberations about "Zyklon B as a means of extermination" (in Długoborski/Piper 2000, Vol. III, pp. 198-204):

> *"We don't know much about the Zyklon deliveries during the year 1944; according to research by F. Piper, the camp received 2,263 kg of gas in four deliveries during that year; independent of these, the company 'Azot' of Jaworzno delivered 1,155 kg of Zyklon between August 1943 and April 1944 to Auschwitz Concentration Camp."* (p. 72)

Piper refers to the invoices of February 14, March 13, April 30 (in three delivery batches) and May 31, 1944, which I summarize below along with the delivery dates, noting that shipments involved a gross weight of 832 kg (net 555 kg), for larger shipments respectively of 896 kg (net 598 kg), for a total of 3,392 kg (net 2,263 kg; *ibid.*, Note 620, p. 167).

He makes the same mistake here as well, as explained earlier, by confounding the weight of the cans with their HCN content, which was actually only 1,185 kg, as shown in the Table 9.

The shipments were made by DEGESCH through the Dessau Factory to the attention of SS *Obersturmführer* Kurt Gerstein. The recipient was the Department for Disinfestation and Pest Control Auschwitz (*Abt. Entwesung und*

Table 9: Documented Zyklon-B deliveries to the Auschwitz Camp in 1944

	Total	2,370	1,185

* see Document 16

Entseuchung). The bills were attached by Gerstein to his famous report of April 26, 1945.[112]

Gerstein received invoices in his name already in 1943, however. An undated statement by Degesch titled "Company: Obersturmfuehrer Kurt Gerstein; City: Oranienburg; Account No.: G 36; Sheet No. 1" lists, in this order, an invoice for 240 kg Zyklon B of June 30, 1943, two invoices of September 21 for 200 kg each, two invoices of October 14 for 195 kg each, two invoices of November 19 with the simple term "Zyklon," and two invoices of November 9 for 195 kg each (NI-7278).

The twin invoices undoubtedly refer to identical deliveries sent to both Oranienburg and Auschwitz, which means that the latter camp should have received at least 590 kg of Zyklon B.

For 1944, the document lists supplies from February 15 to May 31, which correspond to those mentioned above.

Little is known about the supply of 1,155 kg of Zyklon B by the company "Azot" of Jaworzno. Piper merely repeats what the investigating judge Jan Sehn wrote, who in turn evidently quoted the indictment against Höss. In a footnote, Sehn stated that the chemical plants at Jaworzno "delivered a total of 1,155 kg of Zyklon to Auschwitz between August 11, 1943 and April 24, 1944" (Sehn 1956, Note 2, p. 109). Further details of these supplies are unknown. It is unlikely, however, that they had not passed through the Tesch Company.

In a footnote Setkiewicz explains:

> *"In 1944, another modern disinfectant was already being used for the disinfection of barracks: 'Lauseto,' which was the German equivalent of the American DDT. During that year, the Auschwitz Camp's department in charge of pest control ('Referat für Schädlingsbekämpfung der Waffen-SS und Polizei Auschwitz O/S') received 9 tons of this chemical on April 18, 1944, 15 tons on August 21, 1944 – and 2 tons on October 3, 1944 for the*

[112] PS-1553; There was also a supply of 195 kg on February 15, 1944. NI-7278.

> *camp's pharmacy. Archive of Bayer in Leverkusen, letter by Paulsen* [a company executive?] *to the lawyer Dr. Nele of November 24, 1947 with a brief list of the deliveries."* (Note 105, p. 72)

At least one document exists mentioning the use of this substance. It is from July 26, 1944, and headlined "Inmate Infirmary BII/a. Auschwitz II. Monthly report on the H[ungarian]. Jews temporarily accommodated in the camp." ("*HKB Ambulanz BII/a. Auschwitz II. Monatsbericht über vorübergehend im Lager untergebrachte u*[*ngarische*]. *Juden"*), which reads (some of the text is illegible; GARF, 7021-108-32, p. 76):

> *"During the period under review, /June 26 to July 26, 1944/ of …… on average 2,500 Ungar. Jews ready for transport in the camp in 3 blocks, remaining 3 - 10 days in the camp. They are subjected to a thorough medical examination and are monitored for lice both on admission and on dismissal. Daily monitoring for fever and lice; lice bearers are deloused in the camp's own delousing facility, clothes and underwear are disinfected in steam vessels and impregnated with Lauseto."*

In 1944, other pesticides were used in Auschwitz as well, such as Areginal, which is based on ethylformiate. In the letter by Tesch & Stabenow to the Auschwitz Central Construction Office of June 13, 1944 we read about this:[113]

> *"We have noted that the gassing chambers are to be arranged also for AREGINAL gassing. Your garrison surgeon has not yet approached us in this matter, but on the 9th of this month we received instructions from the Surgeon General SS and Police, the Top Hygienist, to include the additional AREGINAL devices. No modifications of the gassing chambers are necessary; only the AREGINAL gassing unit has to be installed. You will receive an appropriate installation drawing when the AREGINAL units have been supplied by the manufacturer. For the sake of completeness, we inform you here that the price of the AREGINAL unit amounts to RM 27.-, and the steel requirements are 12 kilograms."*

In 1944, a microwave delousing device was also introduced at Auschwitz (*Kurzwellen-Entlausung*; see Nowak 1998; Wallwey 2019). These innovations undoubtedly reduced the need for Zyklon B.

Setkiewicz informs us that at Auschwitz, Zyklon B was stored on the ground floor of the so-called old theater building (*Theatergebäude*), or in the storage area of the SS hospital's basement (SS *Revier*). The camp pharmacist Dr. Viktor Capesius was in charge of it.

On the alleged homicidal use of Zyklon B, the author mentions a testimony that borders on comedy:

> *"Initially, Zyklon was introduced into the gas chambers by the simplest methods: the former detainee Antoni Szwajnoch, in 1942 assigned to the*

[113] RGVA, 502-1-333, pp. 30-30a. Cf. Mattogno 2019, pp. 163f. and Doc. 35, pp. 641f.

> *'Kanada I' commando, testified that, after the beginning of the extermination activities in the 'Red House' and in the 'White House'* [Bunkers I & II]*, he received the order from time to time to withdraw a few cans of Zyklon from the stock at the theater building, after which he had to run with them on the road to Brzezinka (Birkenau), while an SS guard watched him riding a bicycle at his side."* (p. 72)

Subsequently, however, Zyklon B was delivered to the alleged gas chambers using ambulances bearing Red Cross symbols, which at the camp were colloquially called "sankas" (*Sanitätskastenwagen*). The inmates of the disinfestation commando took four or five crates from the theater building and brought them in a wheelbarrow to the 'Kanada I' area, where they were loaded into an ambulance. Setkiewicz continues as follows:

> *"In those parts of the register of the camp's motor pool* [*Fahrbereitschaft*] *which have been preserved (for the period of May 30 to August 17, 1943) 591 trips of this type of vehicle* [presumably ambulances] *are logged. It is likely that the majority of them was for purposes unrelated to the delivery of Zyklon to the gas chambers:* [trips] *to subcamps for the supply of medicines for dispensaries located there, for the transport of prisoners' corpses (Totentransport) to Katowice or other neighboring cities. The majority of records (324), however, concern trips within the camp area (Lagerbereich), made mostly on behalf of the SS hospital. Unfortunately, it does not contain any information on the transport of Zyklon.*
>
> *However, this should not surprise us, particularly because the clerk assigned to the register had been instructed to avoid creating any record that attests to the operation of an extermination center at Birkenau."* (pp. 72f.)

This explanation is rather naive, because hydrogen-cyanide-disinfestation gas chambers existed at Birkenau (in Buildings *BW* 5a and 5b), to which Zyklon B was supplied in a routine fashion. Therefore, if there had been a need to "camouflage" Zyklon-B deliveries, they could have been easily recorded as deliveries to these delousing installations instead of to the alleged homicidal gas chambers. The fact is that among the extant records "there are no clear references to selections or the operation of [homicidal] gas chambers" (p. 73).

Setkiewicz then writes that

> *"former detainees assigned to work at the gas chambers or at the disinfestation chambers recalled that the Zyklon granules, after their use, were collected in containers, transported to the theater building warehouse, and shipped back to the manufacturer. However, we have been unable to find traces of these transports in the camp's documents."* (p. 73)

This was standard procedure; the granules were sent to the manufacturer at Dessau as "spent Zyklon" ("*verbrauchtes Zyklon*"; see Document 17). This recycling procedure, however, is not mentioned by any of the main witnesses

of the so-called *Sonderkommando* of Auschwitz allegedly involved in the claimed homicidal gassings.

As in the case of firewood supplies for cremation, the total deliveries of Zyklon B do not support inferring anything and do not provide the slightest clue about the alleged homicidal gassings. To make this clear, I submit a simple example.

According to the cost estimate for the extension of the PoW camp of the *Waffen SS* at Auschwitz (*Kostenvoranschlag zum Ausbau des Kriegsgefangenenlagers der Waffen-SS in Auschwitz*) of October 1, 1943, the following barracks existed at the Birkenau Camp:

Table 10: Number and volumes of the buildings at the Birkenau Camp on October 1, 1943

Building	Number and Type of Building	Volume per Building	Total Volume
BW 3a *BA* I	30 dwelling barracks	1,034.00 m³	31,020.0 m³
BW 4a	3 storage barracks	2,106.20 m³	6,318.6 m³
BW 6a	5 wash barracks	582.00 m³	2,910.0 m³
BW 7a	5 toilet barracks	582.00 m³	2,910.0 m³
BW 3b	25 dwelling barracks	1,032.60 m³	25,815.0 m³
BW 4a	2 barracks for domestic economy	1,032.60 m³	2,065.2 m³
BW 4b	2 storage barracks	1,032.60 m³	2,065.2 m³
BW 8a	1 morgue barracks	1,032.60 m³	1,032.6 m³
BW 12c	4 infirmary barracks	1,032.60 m³	4,130.4 m³
BW 12c	2 infirmary barracks	405.00 m³	810.0 m³
BW 12e	2 quarantine barracks	1,593.75 m³	3,187.5 m³
BW 12f	2 block leader barracks	406.00 m³	812.0 m³
BW 3d *BA* II	135 dwelling barracks	1,032.60 m³	139.401.0 m³
BW 4c	9 barracks of domestic economy	1,381.50 m³	12,433.5 m³
BW 6b	14 wash barracks	1,032.60 m³	14,456.4 m³
BW 7b	14 toilet barracks	1,032.60 m³	14,456.4 m³
BW 12a	11 infirmary barracks	470.40 m³	5,174.4 m³
BW 12d	12 block leader barracks	406.00 m³	4,872.0 m³
BW 34a	4 effects barracks	1,032.60 m³	4,130.4 m³
		Total:	278,000.6 m³

To this we must add about 30 barracks of the camp's SS garrison, hence 1,032.60 m³ × 30 ≈ 31,000 m³.

The Main Camp consisted of 28 masonry blocks of two floors each with basement. They measured 45.10 m × 13.84 m externally, hence had a total area of 624.18 m². For the height of the rooms, we can assume 3 m, so that the total volume of each floor was 624.18 m² × 3 m = 1872.54 m³; for 28 blocks of three floors each, this yields 1872.54 m³ × 3 × 28 = 157,293.36 m³, which we can round down to 150,000 m³ when considering the presence of parti-

tions.[114] At Monowitz there were 67 barracks plus a few other buildings, so we can assume a total volume of approximately 1032.60 m³ × 67 = 69,200 m³.

In practice, therefore, the camps of Auschwitz, Birkenau and Monowitz alone already had buildings with a total volume of at least approximately 500,000 m³. This situation obviously also applies to 1944. One complete disinfestation of these camps with the standard amount of 8 g HCN per m³ (see Document 23) would therefore have required almost 4 metric tons of Zyklon B (net HCN content).

In another study, I demonstrated that the Zyklon-B disinfestation chambers in existence at Auschwitz on January 9, 1943 would have required more than 11 metric tons of Zyklon B per year if used once a day (Mattogno 2019, pp. 444-446). The known deliveries of Zyklon B are thus not at all out of proportion to the camp's legitimate disinfestation needs, quite to the contrary. The opposite claim was put into circulation already in the second half of 1945 by the Americans during their investigations in preparations for the trial of Bruno Tesch *et al*. The interrogations of Joachim Drosihn, chief chemist of the Tesch company, and of Bruno Tesch by U.S. investigators clearly show the nature of the Holocaust myth of that era, for we find there the claims that

– 5 (five) million people were allegedly gassed at Auschwitz;
– therefore, the Zyklon-B supplies to this camp served mostly for those gassings;
– those gassings allegedly took place in "shower rooms"; during an interrogation of October 17, 1945, U.S. Captain A.W. Freud asked Drosihn how many "shower rooms" (*Duschräume*) he personally had converted into gas chambers![115]

Zyklon B at Auschwitz: Two Inexplicable Gaps

1. Testing HCN on Inmates

The allegations about the use of Zyklon B at Auschwitz for homicidal purposes have two very significant documentary gaps regarding the testing and the way this substance was used. These gaps should not exist if its homicidal use had been real.

In August 1976, the biomedical laboratory of the U.S. Department of the Army, located at Edgewood Arsenal in Maryland, published a 25-page report for its internal use bearing the title *The Toxicity of Hydrocyanic Acid Vapors*

[114] For the fumigation of buildings, however, external measurements were taken to calculate the volume. See Document 23.
[115] TNA, WO 309/1603, interrogation of B. Tesch dated September 26, 1945, p. 7, and interrogation of J. Drosihn dated October 17, 1945, p. 2.

in Man. The author, B.P. McNamara, PhD, had written it in February of that year (see Document 21).

The author summarized his research as follows (McNamara 1976, p. 5):

> *"A reexamination of the estimated LCt's for inhaled hydrocyanic acid (AC, HCN) vapors revealed that the internationally accepted figure of 5000 mg min/cu m*[m³] *and the figure published in scientific journals were invalid for reasons explained in this report. A new estimate has been proposed."*

The author first examines the "Previously Accepted Estimates of the Toxicity of HCN in Man," then explores the origin of estimates listed in expert literature (*ibid.*, pp. 8-11) and tracks them down to experiments conducted by a certain Karl B. Lehmann prior to 1912, which were picked up by Rudolf Kobert in a German book which appeared in 1912 (*Kompendium der praktischen Toxikologie zum Gebrauche für Ärzte, Studierende und Medizinalbeamte*). Kobert published a table of values attributed to Lehmann which contained the following estimates:

Concentrations (parts per 1000 by volume)… of HCN which:	
produce rapid death for man and animals	0.3
are dangerous to life after 1/2-1 hr	0.12-0.15
may be tolerated for 1/2-1 hr without severe illness	0.05-0.06
cause only minimal symptoms after several hours exposure	0.02-0.04

In 1927, Henderson and Haggard reproduced Lehmann's data with reference to Kobert in their work *Noxious Gases and the Principles of Respiration Influencing Their Action* as follows:

	Parts of Hydrogen Cyanide Per Million Parts of Air
Several symptoms after several hours of exposure	20 to 40
Maximum amount that can be inhaled for 1 hour without serious disturbance	50 to 60
Dangerous in 30 minutes to 1 hour	120 to 150
Rapidly fatal	3,000

In 1931, Ferdinand Flury and Franz Zernik wrote in their book *Schädliche Gase, Dämpfe, Nebel, Rauch- und Staubarten* that the degree of toxicity of inhaled HCN for man is probably the same as for the monkey, the dog, or the cat. The following table, attributed to Lehmann-Hess, was presented:

Toxicity of Inhaled Hydrogen Cyanide According to Lehmann-Hess.		
	mg/L	Parts of vapor in a million (cm^3/m^3) about:
Immediately fatal	0.3	270
Fatal after 1/2-1 hr, or later	0.12-0.15	110-135
Dangerous to life after 1/2-1 hr (Hess)	0.12-0.15	110-135
Tolerated for 1/2-1 hr without immediate or late effects	0.05-0.06	45-54
Slight symptoms after several hours (Hess)	0.02-0.04	18-36
Tolerated 6 hrs without symptoms	0.02 (-0.04)	18 (-36)

In a 1942 article titled "Toxicology of Acrylonitrile (Vinyl Cyanide)," Dudley, Sweeney and Miller reproduced the table published by Flury and Zernik, which was in turn quoted in a chapter by D.W. Fassett about "Cyanides and Nitriles" in F.A. Patty's 1963 book *Industrial Hygiene and Toxicology*.

McNamara points out that none of the scholars who quoted Lehmann showed the experimental basis of his values. From a text published by Lehmann in 1919, however, we can glean that he had performed experiments on rabbits only, and that he thus could not make any quantitative statements about men.

The author then refers to experiments during which certain animals and human volunteers were exposed to low concentrations of hydrogen cyanide. The most significant data are those reported by Joseph Barcroft in an article published in *The Journal of Hygiene* in 1931 (McNamara 1976, p. 13):

> *"A report by S. H. Katz and E. S. Longfellow from the American Bureau of Mines issued in July 1923 states: 'Men employed in fumigation with HCN have been tested while at rest in 250 parts per million of air for 2 minutes and 350 parts per million for 1-1/2 minutes but felt no dizziness, although possibly on exertion they might have done so.' In experiments during the war men have been exposed to 500 parts per million for about a minute without injury. Hydrocyanic acid gas was formerly considered one of the deadliest gases in minute concentrations, but later experience, especially in the war, has shown that man is more resistant than some other forms of life."*

The concentrations of 250, 350 and 500 parts per million correspond to 0.3, 0.42 and 0.6 mg per liter, respectively. A concentration of 270 ppm (0.324 mg per liter) was said to have been immediately fatal.

McNamara then reproduces a number of tables with data about the toxic effect of hydrogen-cyanide vapors on a number of different animal species according Barcroft, noting that some are much-less-sensitive than others to the effects of the gas, such as monkeys in comparison to dogs. When a man and a

dog were exposed together to the same concentration of HCN, the dog almost died while the man showed only slight symptoms (*ibid.*, pp. 13-18).

What matters most here is the fact that even in the 1970s a laboratory of the U.S. military had to resort to estimates based on animal experiments in order to determine the toxicity of hydrogen-cyanide vapors for humans. This means that, among the thousands of tons of seized German documents, which included numerous documents about experiments on human beings of various kind, there was nothing on experiments with hydrogen cyanide.

For the Holocaust orthodoxy, this is an inexplicable paradox. In the 1940s, the Germans' knowledge about the toxicity of hydrogen cyanide was not much different from that of twenty or thirty years earlier. In an article published in 1941 titled "Hydrogen-Cyanide Poisoning in Disinfestations," Dr. Kurt Naumann summarized the best literature of the time, writing (Naumann 1941, p. 38):

> *"Anhydrous hydrogen cyanide is a highly volatile, colorless liquid with an odor difficult to describe, stinging or similar to bitter almonds, which boils at 25.6 °C. 0.05 to 0.06 grams* [by ingestion] *have a lethal effect on men. As a gas, it is acutely lethal at a concentration of more than 0.35 mg per liter of air; at 0.12 mg per liter, death occurs within half an hour; 0.06 mg per liter is not lethal, but causes symptoms of poisoning among many."*

Naumann reported a large series of hydrogen-cyanide poisonings largely due to incidents during fumigations. Given the widespread use of Zyklon B in Germany as a pesticide, the issue was important both for the prevention of poisonings and for the medical care of its victims. 42.5% of the shares of the Degesch Corporation, which held the production license for Zyklon B, belonged to the I.G. Farbenindustrie AG, another 42.4% to the Degussa corporation (*Deutsche Gold- und Silber-Scheideanstalt*), and the remaining 15% to a certain Theo Goldschmidt (NI-12073).

As is known, the I.G. Farbenindustrie AG was building a gigantic chemical plant at Monowitz, a few kilometers distant from Auschwitz, whose workforce consisted both of civilian workers and of Auschwitz inmates.

At the trial against the CEOs of the I.G. Farbenindustrie (from August 1947 to June 1948), the US-American prosecutors introduced thousands of documents that demonstrated, among other things, various pharmacological experiments on prisoners,[116] many of which were carried out at Auschwitz,[117] but none of them concerned experiments with hydrogen cyanide or other lethal gases on detainees. It is known that the Natzweiler-Struthof Camp was the site of experiments with yperite and phosgene since 1942. On August 31, 1942, SS *Obersturmbannführer* Wolfram Sievers and Prof. August Hirt visited this camp to determine whether the conditions for experiments were met

[116] "Prosecution Exhibits" No. 1631-1737 deal with this topic.
[117] See in this regard the documents NI-9418, NI-9444, NI-12451 A.

there (NO-098). In 1944 (the exact date is not specified), Hirt wrote a report for Dr. Karl Wimmer, a medical officer of the Luftwaffe, about experiments with inmates exposed to yperite (NO-099). At Natzweiler, an experimental gas chamber of 20 cubic meters was built, in which an antidote for phosgene poisoning was tested (hexamethylene tetramine). In 1944, experiments were carried out on 40 prisoners, four of whom died as a result. However, the minimum lethal dose of phosgene could not be established, because one detainee died at a concentration of 2,275 (presumably mg/m³, exposure time not given), while at a concentration of 5,400 one inmate died after four hours and one after 14 hours (NO-1852).

As for hydrogen cyanide, both the I.G. Farbenindustrie AG and the research institutes of the SS, such as the Hygiene Institute of the *Waffen* SS in Berlin,[118] should have been very interested in experiments on inmates both in order to improve the treatment of cases of accidental poisoning and to empirically determine the lethal dose of this gas. The Hygiene Institute of the Waffen SS operated a branch near Auschwitz, which was conducting research on cyanide compounds, among other things (Kieta 1987, p. 217). Setkiewicz published the results of an analysis of a "Zyklon solution" – a sample meant to prove the presence of HCN in Zyklon B (probably of left-over carrier substance stored and carried in water) compiled on July 22, 1943 on behalf of the SS garrison physician Auschwitz by the Hygienic-Bacteriological Research Station of the Waffen SS Southeast (*Hyg.-bakt. Unters.-Stelle der Waffen-SS Süd-Ost*; Setkiewicz 2011a, p. 111). At Auschwitz, medical, pharmacological and surgical experiments were carried out, but no experiment about the effects of aggressive warfare chemicals (such as phosgene and tabun, produced by I.G. Farbenindustrie),[119] and above all no experiments involving hydrogen cyanide,[120] although hundreds of thousands of people are said to have been gassed with this substance in special "gas chambers" – 800,000 according Setkiewicz!

Seen from the orthodox Holocaust perspective, with such a vast number and variety of human beings destined to be killed with hydrogen cyanide anyway, controlled gassing experiments to scientifically determine the gas's full range of effects would even have been indispensable in order to obtain maximum efficiency, avoid wasting Zyklon B and endangering the staff.

---

[118] This institute also occupied itself with disinfections and with fumigations using Zyklon B, as may be seen from Dötzer 1943 (Dötzer was an SS *Hauptsturmführer*), which was published within the series *Arbeitsanweisungen für Klinik und Laboratorium des Hygiene-Instituts der Waffen-SS Berlin*, edited by SS *Standartenführer* Joachim Mrugowski. The author had sought the help of SS *Obersturmführer* Kurt Gerstein, an official of that institute, and Dr. Bruno Tesch, owner of the company bearing his name.

[119] A nerve gas of which between 11,000 and 12,000 tons were produced, according to Albert Palm, a chemist at the I.G. Farbenindustrie. NI-9772. Its effects have evidently not been tested on inmates.

[120] Irena Strzelecka, "Experiments," in: Długoborski/Piper 2000, Vol. II, pp. 347-398.

Seen from this perspective, it is no-less-amazing that no experiments were ever carried out on prisoners to test the efficacy of gas masks and related filters, neither at Auschwitz nor anywhere else. In 1943, R. Queisner from the Oranienburg School of Disinfectors of the *Waffen* SS (*Desinfektorenschule der Waffen-SS*), published an article titled "Experiences with filter cartridges and gas masks for highly poisonous gases for pest control." It was established that the warning irritant added to Zyklon B – ethyl bromoacetate – was actually useless, both because it was absorbed by gas filters and because of its low volatility (its boiling point is 144°C compared to 25.7°C of hydrogen cyanide). Experiments with Zyklon B with and without the irritant were performed on dogs and cats. A new, more-efficacious filter called "G" was subsequently developed from the old "J" type, which it replaced. It was tested on a volunteer (Queisner 1943, pp. 191f.):

> *"In further experiments with the new G filter of the Auerwerke in a stationary Degesch fumigation device with a gas concentration of 40 g/m³ of hydrogen cyanide and a chamber temperature of 60°C, an experienced volunteer equipped with a G filter was sent into the room towards the end of the disinfestation. The experienced volunteer managed to cope with this high concentration of hydrogen cyanide and the high temperature for 12 minutes. On opening the chamber, the person in question had a high heart rate and was sweating heavily. The high temperature and the high transpiration, combined with hydrogen-cyanide absorption through the skin, forced him to terminate the experiment. Neither warning irritant nor hydrogen cyanide passed through the filter. The experiments were repeated again with the same filter, yielding the same result. It is unknown whether a J filter would have withstood this high a concentration."*

With hundreds of thousands of victims allegedly gassed with hydrogen cyanide at Auschwitz, is it credible that the SS would have resorted to dogs, cats and volunteers in order to test the filters of gas masks?

2. Operating Procedure of Hydrogen-Cyanide Fumigations

I reproduce in this section an important section that I published in a 2004 booklet which is now out of print, No. 4 of my series *I Quaderni di Auschwitz* (The Auschwitz Notebooks). It was published in an English translation in 2004 as an article which is now out of print as well, although available online (Mattogno 2004a, pp. 150-154). That paper concerns the German legislation on the use of hydrogen cyanide for fumigation purposes with particular attention to the "gas-residue test" ("*Gasrestprobe*") which was carried out with a chemical device called a "residual-gas detection device" ("*Gasrestnachweisgerät*").

After the First World War, the German standard for the regulation of the use of hydrogen cyanide for fumigation was the "Directive about fumigation of vermin with highly poisonous materials" of January 29, 1919,[121] which was, however, rather general. It limited itself to questions about who is authorized to handle hydrogen cyanide. The subsequent "Directive for the implementation of the directive about fumigation of vermin with highly poisonous materials" of August 22, 1927[122] contained only a few additional clarifications of the previous directive of January 29, 1919.

A revised "Directive about fumigation of vermin with highly poisonous materials" was enacted on March 25, 1931.[123] It combined both previous directives, but included also for the first time actual regulations on how to carry out hydrogen-cyanide disinfestations. Paragraphs 6 and 7 dealt with safety precautions:[124]

> *"§ 6. Each person who is working with the application of the mentioned material has to be equipped with the following:*
> *a well-fitting gas mask with a filter insert specifically suitable for the decontamination of the material mentioned in the directive. The mask has to be ready to be put on at any time during all work with highly poisonous material and during all inside work. The inserts have to be provided with the date of manufacture; if they are older than two years, they shall not be worn, even if unused.*
> *§ 7. Furthermore must be held ready locally:*
> *a mouthpiece with breathing insert and nose clamp for work with highly poisonous materials on the outside.*
> *a resuscitator with instructions for the treatment of gas poisoning,*
> *three additional gas masks as per § 6 for different head sizes and the required number of inserts,*
> *a set of equipment to administer lifesaving sterile injections below the skin (0.01 gram lobelin and 0.25 gram caffeine-sodium-benzoate or other medications approved by the Imperial Government) and in case of injuries the necessary bandages and instructions with special directions for first-aid of gas poisoning,*
> *a complete set of equipment for the testing of gas residuals in accordance with a procedure recognized by the responsible authorities."*

Paragraph 11 contained directions for what to do after completion of a fumigation (*ibid.*):

---

[121] "*Verordnung über die Schädlingsbekämpfung mit hochgiftigen Stoffen*," *Reichsgesetzblatt*, 1919, Nr. 31, pp. 165f.
[122] "*Verordnung zur Ausführung der Verordnung über die Schädlingsbekämpfung mit hochgiftigen Stoffen*," *Reichsgesetzblatt*, 1927, Teil I, Nr. 41, p. 297.
[123] "*Verordnung über die Schädlingsbekämpfung mit hochgiftigen Stoffen*," *Reichsgesetzblatt*, 1931, Teil I, Nr. 12, pp. 83-85.
[124] *Ibid.*, p. 84.

"After completion of the gassing, the buildings shall be thoroughly aired by opening the doors, windows, and other possibly existing air inlets, and by starting existing ventilation installations. Furniture with upholstery, pillows, beds, carpets, blankets, curtains, clothes, and similar objects have to be thoroughly beaten and shaken under the supervision of the fumigation supervisor or his delegate, if possible outdoors in the open air. After the airing of the fumigated rooms or buildings, which must last for at least twenty hours (which can be reduced in special cases through appeal to the authority in charge), all objects, which were removed for outdoor beating and shaking, shall be returned and then all doors, windows, and all other air inlets shall be closed for one hour. In rooms that can be heated the temperature shall be brought up to at least 15 degrees Celsius. After that a gas-residue test has to be performed by the fumigation supervisor.
If, after careful testing for gas residues including between blankets, mattresses, etc., no traces of hydrogen cyanide can be found, the building can be released; otherwise the airing has to be continued and the gas-residue test has to be repeated".

The "Circular of the Minister for Welfare" of August 8, 1931, about "Fumigation of vermin with highly poisonous materials"[125] included detailed instructions about prevention of accidents, and warned against the extreme danger of hydrogen cyanide:

"Toxicity of hydrogen cyanide: Hydrogen cyanide is one of the most-potent gaseous materials. Only a few breaths of air heavily saturated with hydrogen cyanide will certainly lead to death".

The circular also contained an exact description of the gas-residue test (*ibid.* column 794):

"c) The most useful procedure considered to measure gas residues (§ 7d) is the benzidine-copper-acetate reaction according to Pertusi and Gastaldi; the following equipment is needed for its implementation, which has to be available on the premises according to § 7:
– 2 small clear bottles of Solution I (2.86g of copper acetate per 1 liter of water),
– 2 small brown bottles with Solution II (475 ccm at room temperature of a saturated solution of benzidine acetate, filled up with water to 1 liter),
– 1 small test tube with cork plug to store the wetted paper strips,
– 2 clear test tubes with copper acetate for half a liter of Solution I,
– 2 brown test tubes with benzidine-acetate powder for one half liter of Solution II,
– 1 color chart
– Blotting-paper strips.

[125] Runderlaß des Ministers für Volkswohlfahrt, "*Schädlingsbekämpfung mit hochgiftigen Stoffen*," VMBl. 1931, columns 792-796.

This equipment has to be available on the premises.
Test procedure:
Fill the mixing container with equal amounts of Solutions I and II, shake well after closing with the plug, moisten the lower half of a couple of blotting-paper strips by immersing them into the mixing container and store each strip in a closed test tube until ready to be used. The freshly prepared paper strips will clearly turn blue within 7 seconds if there is danger of hydrogen-cyanide poisoning within the tested area".

The already-mentioned Walter Dötzer explained more-clearly the use of the device (Dötzer 1943, pp. 124f.):

"Directions for the Gas-Residue Detection Device
Pour equal parts of Solutions I and II into the mixing container; cover with plug and shake. Dip a few blotting-paper strips half-way into the mixed solution. By dipping them into the test tube with calcium cyanide, examine whether the mixed liquid solution reacts to hydrogen cyanide (blue coloring!). In case blue coloring occurs, the already-aired room is to be examined using more soaked blotting strips. This work is done while wearing a gas mask. Any time after ten seconds, when no significantly stronger blue coloring occurs than the weakest color tone on the chart, the chamber may be opened without hesitation; otherwise, one must air again and repeat the test.
The production of Solution I and II is accomplished in the following manner: The contents of a brown test tube (Solution I) and a clear test tube (Solution II) are to be dissolved into a half liter of distilled water and this solution is to be filtered. Solutions showing a residue at the bottom of the test tube are not usable and are to be discarded. Solutions I and II must only be combined shortly before the testing.
The small color charts are to be renewed after five years.
Only after the careful procedure of testing for gas residues including between objects stacked on top of one another result in no traces of hydrogen cyanide, the building may finally be opened up. Otherwise one is to aerate again and repeat the test."

The "Directive for the implementation of the directive about fumigation of vermin with highly poisonous materials" of November 29, 1932[126] regulated the "arrangement and use of stationary devices for fumigations."

The "Circular of the Reichsminister for Nutrition and Agriculture and of the Reichsminister of the Interior" of November 4, 1941 on the use of hydrogen cyanide for fumigation combined all previous instructions, including

[126] "*Verordnung zur Ausführung der Verordnung über die Schädlingsbekämpfung mit hochgiftigen Stoffen*," *Reichsgesetzblatt*, 1932, Teil I, Nr. 78, pp. 539f.

those about the gas-residue test. About the application of gas masks the document established:[127]

> *"It has to be especially emphasized that it is necessary to renew the gas mask inserts on schedule. A gas-mask insert can only be used for one hour while working in air containing up to 1 percent by volume of hydrogen cyanide. In air with a higher concentration of hydrogen cyanide (up to 2% by volume* [= 24 g/m³]*) the inserts can only be used for half an hour. The inserts shall not be older than two years. These limits have to be obeyed, even if no evidence of the warning ingredient that is added to the hydrogen cyanide can be noticed."*

Many technical details on the structure and operation of the Degesch circulation fumigation chambers are included in the *Small Testa Manual on Standard Gas Chambers* (*Die kleine Testa-Fibel über Normalgaskammern*) of the Tesch & Stabenow Company (Testa; see Document 22), to which I will return below. It is well to remember that Pressac inferred from the term "standard gas chamber" ("*Normalgaskammer*") used by the Tesch Company in a letter to the Auschwitz Central Construction Office of June 13, 1944, the existence of non-standard, "abnormal," that is to say, homicidal gas chambers! (On this see Mattogno 2019, pp. 163-167, 640-642)

The "Guidelines for the Use of Prussic Acid (Zyklon) for Pest Control (Disinfestation)" ("*Richtlinien für die Anwendung von Blausäure (Zyklon) zur Ungeziefervertilgung (Entwesung)*"; NI-9912), published by the Health Authority of the Protectorate of Bohemia and Moravia in Prague, describes all the basic provisions for proper fumigations with Zyklon B.

These guidelines were translated into French and published in 1980 by Robert Faurisson, who first recognized its importance (Faurisson 1980, pp. 165-178). An English translation is available in Volume 14 of the series Holocaust Handbooks (Rudolf 2016a, pp. 115-124), and a German transcript can be found in the German edition of that same book (Rudolf 2016b, pp. 132-141), so I will refrain from repeating it here, but I reproduce the original document in the Appendix (Document 23).

In addition, two remarks are due about this document:

1. In its Section II, the document states that one form of Zyklon B consisted of "small blue cubes ('Erco')." The fact that the gypsum pellets soaked with HCN, called "Erco", could have a slightly bluish or greenish-blue tint was based on the fact that some of the gypsum used for these pellets had a minor amount of iron content (as rust) which turned into Iron Blue under the influence of HCN. The intensity of that tint depended on the amount of rust contained in the gypsum. This bluish tint is confirmed by an expert opinion about a 200-g Zyklon-B can compiled by a British military laboratory on December

---

[127] "*Runderlaß des Reichsministers für Ernährung und Landwirtschaft und des Reichsministers des Innerns*." See Puntigam *et al*., p. 108.

17, 1944 (see Document 8d; TNA, WO-208/2169). The can contained 450 grams of calcium-sulfate pellets (gypsum) of a slightly bluish color soaked with hydrogen cyanide. This may explain the statements of some witnesses speaking of "blue" crystals in relation to Zyklon B, but this does not support the claim by some of these witnesses that homicidal gassings took place, because these witnesses could have seen these "Erco" pellets during or after fumigations, or they may have learned about its color from other inmates.

2. The sentence "gaseous hydrogen cyanide is innocuous" refers not to its lack of toxicity, but merely to its lack of corrosivity, in contrast to liquid HCN, which is corrosive, as the previous sentence states (hence the published English translation makes that clear by keeping both sentences together and by avoiding the term innocuous altogether). This is a direct refutation of Pressac's incompetent statement that the proposal to install a wooden extraction fan in Morgue 1 (the alleged gas chamber) of Crematorium II at Birkenau indicates that the room was intended for gassings with hydrogen cyanide, because Pressac opined that a steel blower would have been corroded by the vapors of this gas (see Mattogno 2019, pp. 113-117). Such a statement is not only wrong but also foolish, because it is well-known that the circulation device (*Kreislaufanlage*) of the DEGESCH HCN fumigation chambers was made of steel.

3. The Rules for the Handling of Hydrogen Cyanide for Disinfestation in the Gusen Camp

The legislation discussed in the previous section also applied to the German concentration camps, as is demonstrated by the "Service Instruction for the Operation of the Hydrogen-Cyanide Fumigation Chamber in the Concentration Camp Gusen," issued by the SS garrison physician of the Mauthausen Camp, SS *Hauptsturmführer* Eduard Krebsbach,[128] on February 25, 1942. The original German document is reproduced in the Appendix (Document 24) and transcribed in Mattogno 2003, pp. 382f. The English translation reads as follows:[129]

> *"SS Camp Physician Mauthausen*
>
> *Mauthausen, February 26, 1942*
>
> *S E R V I C E I N S T R U C T I O N*
> *for the operation of the hydrogen-cyanide fumigation chamber in the C*[oncentration]*C*[amp] *M*[authausen]*, GUSEN quarters*

[128] Transferred to Auschwitz in August 1942.

[129] "*Dienstanweisung für die Bedienung der Blausäure-Entwesungskammer im K.L.M. Unterkunft Gusen*"; ÖDMM, M 9a/1; also in Mattogno 2004a, p. 152.

1. The work with and in the hydrogen-cyanide fumigation chamber is extremely dangerous if the following operational instructions are not precisely followed.
2. During the work inside the hydrogen-cyanide chamber, the supervising and working personnel must wear special work clothes, which are tied closed at the hands and feet. After completion of work the work clothes must be immediately taken off and kept in the front room. It is strictly forbidden to take work clothing to the living area.
3. Before entering the hydrogen-cyanide chamber in order to load it, is absolutely necessary to test for gas residues.
4. Loading moist articles into the gas chamber is not allowed.
5. The gas-residue test equipment has to be checked weekly by the pharmacist of the Mauthausen Concentration Camp for its useability.
6. During the loading procedure of the gas chamber, all doors and windows are to be kept open. Pieces of clothes, blankets, etc. are to be placed on the racks provided.
7. After the chamber is loaded, it has to be heated for half an hour to a minimum temperature of 25°C. After that the windows and doors have to be closed and sealed gastight with masking tape. Before closing the windows, the gas-exhaust openings have to be closed. Then a can of Zyklon B is to be opened outside in open air and the contents have to be poured at the provided location from the outside into the chamber. The Zyklon-B-inlet sliding door has to be closed and sealed gastight with masking tape. The work can only be performed after putting on a gas mask (special filter).
8. After the chamber is completely closed gastight, the ventilator inside the chamber has to be switched on.
9. The exposure time of hydrogen cyanide on the articles to be disinfested has to be 2 hours.
10. A large sign with the inscription: 'Attention! Danger! Chamber being gassed!' has to be displayed at each side of the chamber and in the front room.
11. After completion of the gassing time, the gas-exhaust opening has to be opened from the outside, while the chamber ventilator is running. Also, all these tasks are only allowed to be done with the gas mask (special filter) put on.
12. The ventilation interval has to last at least 1½ to 2 hours.
13. After 1 hour at the earliest, gas residue is to be tested for at one of the windows. Should this test prove positive, the exhaust time has to be extended. The execution of the gas-residue test can only be done with the gas mask on.
14. After 2 hours at the earliest, depending on the results of the gas-residue tests, the articles shall be removed from the chamber. The unloading of the

chamber can only be done with gas masks on, even if the gas-residue test was negative.
15. Fumigated pieces of clothes, blankets, etc. can only be used, or taken to the laundry, after being thoroughly aired for at least 6 hours or treated with rug beaters.
16. It is strictly forbidden to enter gas chambers alone. Everyone who enters a gas chamber has to be observed by at least one other man, so that he can assist in case of an accident. The second, of course, also has to wear a gas mask.
17. A first-aid kit must always be available and ready to be used. This kit serves exclusively for first-aid in case of accidents in the hydrogen-cyanide chamber. It contains, besides the necessary medications, accurate instructions for their use. Everyone who is working with the hydrogen-cyanide chamber has to be thoroughly familiar with these directions.
18. At least twice weekly, the camp medical doctor has to check out the correct operation of the hydrogen-cyanide chamber, the age of the special mask filters, and the condition of the first-aid kit.
19. Operational problems, irregularities, and other occurrences, even of lesser importance, have to be reported immediately to the SS camp physician Mauthausen.
20. On the fifth of each month the medical camp physician reports:
a. Number and types of fumigations performed in the chamber.
b. Quantity of hydrogen cyanide used.
c. Condition of the first-aid kit and the gas masks.
d. Which SS members were responsible for the individual gassings.
e. Anomalous occurrences.
21. At least once every two weeks the camp physician has to personally check the fitting of gas masks of all participants. Furthermore, every two weeks he has to inform the operating teams that the usable time of the filter inserts lasts several hours only in case there are only minor residues of hydrocyanic gas after the ventilation. Without sufficient ventilation the usable time of the filter inserts (with the gas chamber filled) is only 10 minutes.
SS Camp Physician Mauthausen
[signed] *Krebsbach*
SS Hauptsturmführer"

In summary, the issue of Zyklon-B deliveries to Auschwitz reveals a number of essential aspects that contradict the orthodoxy's claim of homicidal gassings. Setkiewicz doesn't even bring up these issues, let alone discuss them.

There is, first of all, the total absence of any documentary or testimonial trace about experiments with hydrogen cyanide on prisoners who were destined to die anyway, and if only to study the best ways of meting out this type

of death sentence, but also in order to gather practical experience on the toxicity of hydrogen cyanide for normal disinfestations.

In addition, the testimonies of the members of the so-called "*Sonderkommando*" contain strange omissions about the procedure of using Zyklon B during the claimed homicidal gassings. No one ever mentioned the established practice of testing any gassed space for residual gas before opening it, or – equally critical – the collection and recycling of the inert carrier substance of Zyklon B, the depleted bluish gypsum pellets.

Regarding the first point, the objection is usually made that the SS did not apply the safety standards normal for hydrogen-cyanide disinfestations to homicidal gassing because they allegedly did not care much about the health of prisoners of the "*Sonderkommando*." That objection does not have much value, though, both because the SS guards of the so-called Bunker or the crematoria were also in danger of being poisoned, and because these inmates – seen from the orthodoxy's perspective – were in a certain way skilled workers whose health and fitness were prerequisite for the smooth operation of the claimed conveyor-belt extermination process, so their poisoning leading to the incapacity or even death of one or more of them would have stalled the "extermination machine."

Not to mention the essential element that, if it were true that hundreds of thousands of inmates were gassed while ignoring the safety standards established for fumigations, many accidents would have occurred which would have left paper trails, at least in a "camouflaged" way, if we were to follow the orthodox narrative. In practice, this paper trail would verify what Kurt Prüfer told his Soviet investigators on March 4, 1948, namely that, as he was allegedly told by Bischoff, the head of the Auschwitz Central Construction Office:[130]

> *"After the poisoning of inmates in the gas chambers, it happened often that, even after their ventilation, hydrogen-cyanide vapors were lingering in them which led to the poisoning of the service staff* [the "*Sonderkommando*"] *who worked in these chambers."*

In reality, however, only two incidents are documented; both occurred during the use of Zyklon B for the purpose of disinfestation: the one already referred to earlier which was mentioned by Höss in his Special Order of August 12, 1942 (see p. 72), and another that took place on December 9, 1943 when a civilian worker tried to enter a dwelling barracks by force that had just been fumigated.[131]

The witnesses say nothing about the recovery of the inert carrier of Zyklon B:[132] when, by whom and how was it done? The issue reaches far beyond the

---

[130] See on this Mattogno 2014, p. 53. The story is false and set in a context that makes no sense.
[131] RGVA, 502-1-8, p. 25.
[132] Except for the very few witnesses, such as Henryk Tauber, who mentioned a wire-mesh column for introducing Zyklon B, which would have permitted the recovery of the inert carrier: "To the right and left of those pillars there were four columns. The outer wall of those columns was made

simple fact itself, because leaving the carrier in a gassed room while working in it could have had deadly effects. According to many witnesses, the death of the victims of the claimed homicidal gassing occurred in a very short period of time: 3 minutes (Janda Weiss, Aaron Pilo; see Chapter V), 2 minutes (Charles Sigismud Bendel), 2-5 minutes (Miklós Nyiszli),[133] 3-15 minutes (Höss), 10 minutes (Filip Müller)[134]. Dov Paisikovic talked about 3-4 minutes,[135] Henryk Mandelbaum of 7 minutes,[136] and Joshuah Rosenblum of 15 minutes.[137]

The Polish investigative judge Jan Sehn, summarizing the results of the Höss Trial, wrote the following about this (Sehn 1956, p. 108):

> *"However, the SS staff of the Auschwitz crematoria did not care to perform calculations in order to determine for each gas chamber the proper dose of Zyklon causing instant death, which would have spared the victims the torment of a terrible agony. They simply poured into the chambers the contents of a can of Zyklon, and to be sure, they kept the victims in the gas chamber for about 25 minutes. At the time of the most-intensive gassing activities – during the summer of 1944 – this* [time] *was shortened to 10 minutes, and at the same time the amount of Zyklon was reduced from 12 to 6 cans for the sake of economy."*

According to Höss, the amount of Zyklon B used for the gassing of 1,500 people was 5-7 cans of 1 kg of HCN, with 2-3 additional cans in cold and wet weather (NI-034). As I have explained elsewhere, the average number of "6 cans per 1,500 men" which he explicitly asserted, referring to the gassing of 1,500 people in the alleged gas chambers of Crematoria II and III at Birkenau, would have created a theoretical HCN concentration of 17.1 g/m³, which is 57 times greater than what was then considered to be instantly fatal! (Mattogno 2019, pp. 443f.) This is another good reason why it would have been crucial to conduct preliminary experiments on prisoners with hydrogen cyanide.

But there is another important issue related to the gassing time. McNamara's study summarized earlier demonstrated that the lethal concentration of hydrogen cyanide for humans is much higher than previously assumed.

According to experiments carried out in 1942, it took some two hours for all of the hydrogen cyanide absorbed in the Zyklon-B carrier to evaporate at a

---

of a webbing of thick steel wire which extended to the ceiling and the outside. Behind this wall there was a screen of fine mesh and inside a third one fine[r yet]. Within this third [column of] wire mesh moved a box which collected – aided by a wire – the powder when the gas had escaped." Protocol of the testimony of H. Tauber of 24 May 1945 before the examining magistrate Jan Sehn. Höss Trial, Volume 11, p. 130. This description, however, applies only to the "gas chambers" of Crematoria II and III at Birkenau, and apart from the above passage, the witness never mentions anything about the recovery of any spent Zyklon-B carrier.

temperature of 15°C, at low relative humidity and with the product finely distributed – both for the fiberboard discs (*Pappscheiben*) and the gypsum pellets (*Ercowürfel*).[138]

In August 1944, the Soviets carried out evaporation experiments with four cans of Zyklon B after they had occupied the Majdanek Camp (Graf/Mattogno 2016, pp. 124-126). Two of the cans had a gross weight of 3,750 grams and contained 1,500 grams of hydrogen cyanide; the empty cans weighed 600 grams, and the carrier material 1,650 grams. The other two cans nominally contained 500 grams of hydrogen cyanide. Their total weight amounted to 1,400 grams [sic: 1425], the empty cans weighed 350 grams, and the carrier material 575 grams. Apparently, the Zyklon-B pellets were not poured out on a flat surface, but left in the cans for two hours, the large ones at a temperature of 23-28°C, the small ones at 28°C. At the end of these experiments, the residue was weighed. The 1,500-gram cans weighed 2,310 and 2,330 grams, respectively, including the can; the 500-gram cans weighed 930 and 950 grams, respectively, also including the can. The net weight of hydrogen cyanide evaporated from the cans during these two hours was therefore 1,420 and 1,440 grams for the two 1500-gram cans, respectively, hence 94.6% and 96% of the nominal amount. The 500-gram cans had lost 450 and 470 grams of hydrogen cyanide, i.e. 90% and 94% of the nominal net amount. Therefore, in two hours, at most 96% of the HCN had evaporated, which is in agreement with the 2-hour evaporation rates as published by Irmscher (1942) for thinly spread-out carriers at 15°C (96.4% for gypsum and 96.9% for the fiber disks).[139]

The *Small Testa Manual on Standard Gas Chambers* gives two charts on the "exposure time in hours" of Zyklon B in a fumigation gas chamber with and without circulation device (*Kreislauf*; see Document 25). The thin curves in both charts indicate the concentrations in the four corners of the chamber, while the thick curve gives the HCN concentrations in the chamber's center. The right-hand chart shows that the distribution of hydrogen-cyanide gas throughout the chamber occurred very slowly without circulation device; after about an hour and a half, a concentration of only 1 g/m³ was reached in the center of the chamber, and the maximum concentration of some 5 g/m³ was reached only after some four hours. After half an hour, a concentration of merely 0.1-0.2 g/m³ was reached in the center of the chamber.

It goes without saying that a room filled with moving, breathing people is not the same as an empty room or a room filled with immobile, lifeless clothes. The former would lead to a more rapid distribution of the HCN vapors throughout the room than an empty chamber without circulation device,

---

[138] Irmscher 1942, p. 36; see the discussion in Rudolf 2020, pp. 236-240.

[139] This corrects an error of interpretation which I committed elsewhere, where due to an oversight I attributed the net weights of 450 and 470 grams, respectively, to the 1,500-gram cans instead of the 500-gram cans. See Mattogno 2016c, p. 33.

but it is just as safe to assume that people filling a room would not distribute the HCN vapors as swiftly and evenly as a circulation device would. The truth is somewhere in between. However, the lethal concentration values established by McNamara show that brief exposures to low or even medium concentrations of HCN, as must be expected for many minutes in areas of the claimed homicidal gas chambers remote from the HCN sources, do not kill at all, or at least not all victims. Hence, in practice, when opening the doors of the alleged homicidal gas chambers, it had to be expected on the one hand that some of the victims were still alive. On the other hand, when the doors are said to have been opened (half an hour after the initiation of the procedure at the latest, but according to some witnesses already much earlier) there can be no doubt that the Zyklon-B pellets would still have contained a large amount of hydrogen cyanide,[140] so that, during the removal of the corpses of those allegedly gassed, the Zyklon B lying among and beneath the victims would have continued to release hydrogen-cyanide vapors.

None of the "eyewitnesses," however, says anything about this at all.

[140] According to Irmscher 1942, with Erco pellets, after *one hour* at 15°C only 75% of the HCN had evaporated (his listed value of 57% is a typo, as may be seen from his evaporation chart).

IV. "Resettlement" of Jews and the Franke-Gricksch "Report"

The Holocaust orthodoxy attributes a "criminal" purpose to the travel permit of October 2, 1942 regarding "material for the resettlement of the Jews" due to the so-called Franke-Gricksch "Report," which I have dealt with elsewhere in detail in a deconstructive manner (orthodox historians would call it "negationist" in nature).[141] Access to new sources now gives me the opportunity to deal with the matter in a constructive or positive manner. These new sources were discovered by British historian David Irving in the files relating to this SS officer at the British National Archives, Kew, Richmond (the former Public Record Office).

The "report" in question was first published by Gerald Fleming in 1982, who thereby gave a taste of his amazing credulity (if not of his bad faith; Fleming 1982, pp. 155-157).

In 1989, this report was also quoted by Jean-Claude Pressac, who introduced it as follows (Pressac 1989, p. 236):

> *"In the afternoon of the same day, SS Major Alfred FRANKE-GRICKSCH, adjutant to SS General Maximillian VON HERFF* […]*, Head of the SS Central Personnel Office (SS Personal Hauptamt, 98-99 Wilmersdorferstraße, Berlin-Charlottenburg), accompanying the General on a tour of inspection in the 'General Government' (the half of the Polish territory occupied by the Germans and placed under the authority of Hans Frank), arrived in KL Auschwitz (although reported, the presence of General von Herff is doubtful). Franke-Gricksch visited Krematorium II and is* ***supposed to have witnessed*** *the gassing of those unfit for work from a convoy*

[141] Mattogno 2019, Chapter 7.6., pp. 197-205.

> *of 2,930 Greek Jews (from the Salonika ghetto). Following this visit,* ***between the evening of 4th May and 16th May****, he wrote a report on what he had seen at Auschwitz Birkenau for his chief, von Herff, and for Reichsführer SS Himmler. This report was entitled: 'JEWISH RESETTLEMENT ACTION'"* (Pressac's emphases)

Pressac wrote the following about the origins of this document (*ibid*., p. 238):

> *"This report was shown to Professor Charles W Sydnor of Hampton-Sydney College, Virginia (United States) in 1976 by a person from Richmond (Virginia) who had discovered it after the second world war. This man, apparently Eric M Lipmann according to the signature, was at the time employed by the US Army on collecting documents and seeking anything that might be used as evidence in the Nuremberg trials. He seems to remember finding carbon copy of the original report among a set of documents in a place he cannot recall exactly, somewhere in Bavaria. The original was not there. Having immediately realized the value of this report, which described the whole process of exterminating the Jews in Auschwitz, he made a typed copy for himself, as he had to hand the carbon over to the American Prosecutor at Nuremberg. He certified in longhand that he had made a true copy, and signed it 'Eric M Lipmann'. The two sheets that he typed are now preserved in the Tauber Estate of Brandeis University with other documents from the Third Reich."*

Pressac published the document in question (see Document 18), which is written in flawed German. However, there is another version of this document that differs slightly from the version published by Pressac. I will discuss this document in the next section. Most text deviations are typos which get lost during the translation, but there is one exception where a sentence is arranged differently in the carbon copy, which I add here in braces. Here is our translation:[142]

> *"Part of a report rendered by SS Sturmbannführer Franke-Gricksch on a trip through the General Government on May 4 to 16, 1943.* [This heading is typed in English in Lipmann's typescript]
> *R e s e t t l e m e n t – A c t i o n*
> *of the Jews*
> *A special task in the arrangement of the Jewish question has* [been given to] *the A u s c h w i t z camp. The most modern measures enable the Führer order to be carried out within the shortest possible time and without major commotion.*
> *The so-called 'resettlement action' of the Jews takes place in the following manner:*

[142] Translator's note: the present translation differs somewhat from Pressac's (1989, p. 239) in its choice of words and its sentence structure. The typed copy of the "original" has many spelling errors, some of them hinting at a native English-language typist.

The Jews arrive in special trains (freight cars) toward the evening and are moved on special tracks to sections of the camp specifically fenced off for this purpose. There, they are unloaded and examined, first of all, by a medical commission in the presence of the camp commandant and several SS officers to determine their fitness for work. Here, all those who can be integrated into the work process in any way, will go[143] *into a special camp. The temporarily sick are moved immediately to the hospital camp and made healthy again by a special diet, the basic rule being: to maintain any kind of manpower for work. The older type of 'resettlement action' is rejected entirely, as one cannot afford to continually destroy important work energies.*

The unfit are placed in a larger house in the basement rooms which have access from the outside. One goes down 5-6 steps and enters a longish, well-built and -aerated basement room which is equipped with benches on its right and left sides. It is brightly lit and there are numbers above the benches. The prisoners are told that, for their new tasks, they will have to be disinfected and cleaned and must therefore undress completely to be bathed. In order to avoid any kind of panic or commotion they are ordered to fold their clothes properly and place them below the numbers they have been assigned in order to find them again after the bath. Everything proceeds in utter calm. Then you walk through a small hallway and come to a large basement room that resembles a shower bath. There are three tall columns in this room. Certain agents can be lowered into it – from above, outside the basement room. After 300 – 400 people have gathered in this room, the doors are closed, and the containers with the substances are lowered into the pillars from above. As soon as these containers touch the bottom of the column, they develop certain substances that put people to sleep within a minute. A few minutes later, a door opens on the other side, which leads to an elevator. {A few minutes later, on the other side a door opens, which leads to an elevator.} The hair of the corpses is cut and other experts (Jews) break out the teeth (gold teeth). One has come to know that the Jews keep hidden in hollow teeth jewels, gold, platinum etc.

After that, the corpses are loaded into elevators and are taken to the first upper floor. There are 10 large cremation furnaces in which the corpses are cremated. (Since fresh corpses burn particularly well, you only need 25 to 50 kg of coke for the entire process.) This work is carried out by Jewish detainees who will never leave this camp.

Success so far of this 'resettlement operation': 500000 Jews

Current capacity of the 'resettlement' furnaces: 10,000 Jews in 24 hours.

[Handwritten note:] *I affirm, that this* [is] *a true copy of the original report.*

---

143 The verb "*kommen*" is used twice in this sentence; the second occurrence is faulty German; translator.

Eric M. Lipmann"

Brian Renk had already dealt with this topic in 1991. In my above-mentioned study, I demonstrated that this "report" is a crass forgery, and that Pressac, incredible as it may sound, undertook to endorse it. In this regard I stated (2019, p. 202):

> *"Pressac's remarks are a good example of the way in which a scholar with a fine critical and sometimes even very sensitive mind can get lost in useless suppositions and sophistications. His whole reasoning is grounded on the assumption that the document in question is authentic, although there is no proof for this, and hence his analysis aims merely at explaining the 'mistakes' in the 'report,' instead of checking into the veracity and, ultimately, the authenticity of the document itself. In other words, he preempts what he is going to find out."*

If this document had actually been handed over "to the American Prosecutor at Nuremberg" – which prosecutor and for which Nuremberg trial?[144] – given its extraordinary importance for the orthodox Holocaust narrative, why did Pressac not even inquire why this document was not instantly introduced and included in the files of any of the Nuremberg trials?

I will now complete my demonstration in an eminently positive way by adducing the authentic Franke-Gricksch Report, which was foolishly transmogrified into something completely different by this overly zealous official of the U.S. military.

We can deduce from two letters of British officials located in the file WO 309-2241 of the British National Archives that the report was found among the documents of SS *Obergruppenführer* von Herff, and that at the time these letters were written, an original document with the German text existed, which subsequently disappeared (TNA, WO-2241, pp. 7 and 10). What is left is an excerpt published by Irving and, in another file, the English translation of the original German text.

I reproduce in the Appendix this translation (see Document 19) and quote here the excerpt dealing with Auschwitz (*ibid.*, p. 6):

> *"K.L. Auschwitz. Prisoners numbered 54,000 in May 1943. Camp to be enlarged to take 200,000. To be sub-divided into blocks each containing 10,000 persons. Prisoners are 'Jews', Gypsies, Poles and women.'*
> *The Polish intelligentsia are to remain in the camp for life and work in the chemical labs. Women who work in these labs are Jewish students from Sorbonne. On account of air-raid damage to the Krupp works in Essen, part of these works has been transferred near the camp. Prisoners worked in three new workshops, and within a month it is claimed that the prisoners are producing 2/3ds of the fuse manufacture of Krupp.*

---

[144] As is known, after the famous International Military Tribunal, during which the U.S. Chief Prosecutor was Justice Robert H. Jackson, the Americans conducted twelve more trials at Nuremberg.

Women had to build new dykes for the fishponds and dig irrigation ditches etc. The guard consists of 13 coys. of 200 men each. Every company has only one officer. They are formed into a 'Lagersturmbann' commanded by a Stubaf. Auschwitz, itself, was a small, dilapidated place. It had 11,000 inhabitants including 8,000 Jews who have now 'disappeared'. The I.G. Farben built an 8 sq. mile industrial works partly using foreign workers and partly prisoners from the camp. The works will produce buna, petrol and special quantities of gas."

Another file contains the translation of the entire report. It was published in transcription by David Irving on his website,[145] and also on the website Action Reinhard Camps, oddly without comment.[146] The document itself is reproduced in the Appendix (Document 20; TNA, WO-309-374), and below I reproduce the relevant sections on Auschwitz:

"AUSCHWITZ

We carried on immediately and went to AUSCHWITZ Camp. At 1300 hrs we arrived at AUSCHWITZ, the leaders of the Camp were assembled and introduced to the Gpf. Amongst those were Oberführer CAESAR who is in charge of all agricultural work as Stbf. After the Gpf had addressed the leaders and informed them of the purpose of his visit, he joined them at dinner.

In order to get a clear picture of the camp, its structure and purpose, SS Ostbf HESS drove us round the whole camp area. The camp itself was an old Austrian hutted camp which has been extended to a small town by the work of SS Ostbf HESS. AUSCHWITZ is the biggest concentration camp in Germany. It covers about 18,000 morgens[147] *and has at the moment 54,000 inmates. Out of these 18,000 morgens, 8,000 are arable, 4,000 are fishbreeding and 3,000 are used for market gardening and green houses. They are breeding their own horses and keep their own poultry farms.*

In 1932 (should probably read 1942) the breeding measures have produced 32,000 chicks. Besides, the camp has its own kennels with 500 picked animals [dogs] *specially trained to guard prisoners. The camp is to be gradually extended to hold 200,000 prisoners. It has got its own leather tannery, a factory for brushes, a butchers shop, bakery, cobblers shop, blacksmiths, a place for breeding pheasants, their own research institute (e.g. a research for diseases of plants) nurseries, plants of rubber, testing field for different kinds of corn, suitable for Eastern purposes. The best methods to get the most out of the soil are tried out in the camp in order to gain experience for the settlement. Special coal* [=cold] *resisting fruit trees*

---

145 www.fpp.co.uk/Auschwitz/docs/controversies/Franke_Griksch/index.html
146 www.deathcamps.org/reinhard/frankegricksch.html
147 Old Prussian unit; 1 Morgen corresponds to a little more than ¼ hectare.

are being planted, and corn usually used in the Kauhasus [sic] *is being developed for the East.*
The actual concentration camp is sub-divided into blocks for 10,000 [inmates] *each, and the Ustbf*[148] *is to be in charge of each block. The inmates are Jews, gypsies, poles and women. The camp has its own orchestra, which is conducted by the former Warsaw Radio Orchestra conductor.*
The whole Polish Intelligentsia remain in the camp for life, and will be employed in laboratories and science research institutes, according to their knowledge. The Jewish women who work in the chemical laboratories are students from the Sorbonne University.
Because of the Krupp-works in ESSEN having been practically destroyed, the transfer of these to Poland and the Auschwitz district has taken place. Three new factory sheds have been created in a comparatively short time in the camp which will after a month take over two-thirds of the Krupp production of matches and will be run entirely by prisoner labour. The sheds are constructed in accordance with modern principles and give a clean and friendly impression.
In the agricultural sphere, they have succeeded in producing nice large fields by creating a large network of draining systems. This does not only enable them to work these fields very extensively but also to work it on a profitable basis. The small Polish farms and villages have been expropriated and the Polish farmers settled in different areas.
Near the completely neglected fishponds, dykes are being built by women, and in that way thousands of morgens of swampy meadow have been drained and the foundations for a new fishbreeding ground have been laid.
The guarding of the prisoners is done by a 'Wachkommando' consisting of 13 companies each having 200 men. Each company has got a leader (an officer) and the 13 companies form a so-called Lager-sturmbann which is commanded by a Stbf and one assistant.
The personnel reports of the Camp Commandant are very interesting. It is very difficult task to cope with the individual groups of prisoners. The gypsies have to be treated differently from Poles, and the Poles differently from the Ukrainians. The hygiene question is a very heavy responsibility for the Administration, nearly all the inmates, especially the jews from the East and South-East have to be trained in this respect for they show a particular fear of keeping themselves clean. In parts there have to be very strict measures in order to train the prisoners out of superstition. When having a shower bath they wrap up their lice in a piece of paper and hide it in their mouth in order to have them in their new clothes as they are of the opinion that whoever has lice will not become ill.

148 Non-existing abbreviation; perhaps this was supposed to be "Ostbf," *Obersturmbannführer*.

> *After the inspection of the camp we drove through AUSCHWITZ. It is a completely neglected small town which had at one time 11,000 of which 8,000 were jews who have left now. The town has changed completely under German leadership. It is typical of Polish mismanagement, the sanitary conditions at AUSCHWITZ. An Artillery Regiment was stationed there for six years. There were neither light nor water laid on, but only open wells which are dug near the latrines. Those latrines were closed up when they were full and new ones opened a few yards further on so a rather interesting circulation, sewer, drinkwater, sewers, was a consequence. Neither the Polish Military authorities nor the medical officers have ever drawn the attention to the danger for the health of the troops.*
> *Not far from AUSCHWITZ we saw a wonderful sign of the German strength in the 4th year* [of the war]. *The HG* [IG Farben] *built in a very short time, industrial works which extended over 12 kms square. These works were run mainly on foreign labour with the aid of prisoners. This establishment is one of the largest chemical works in Germany and will commence production within a few months. They produce Buna (artificial rubber) petrol and a considerable amount of gases.*
> *After a short talk with the Camp Commandant in his flat, we left AUSCHWITZ and arrived in KRAKOW after a two hours trip".*

How does the orthodoxy explain the existence of the fake Franke-Gricksch report evidently created by Eric M. Lipmann?

"Holocaust Controversies" and the Franke-Gricksch Report

In August 2019, bloggers of the web site "Holocaust Controversies" published the scan of a carbon copy of what they claim to be the original text of the alleged Franke-Gricksch Report.[149] It was a sensational discovery, as they put it. In general, I only consider in my books what has been published in paper form, but in this case I make an exception.

Before I begin, some general statements about historiographic methods are in order.

As in the case of the letter by the Zentralbauleitung Central Construction Office of June 28, 1943, the problem of the formal authenticity of the document is entirely secondary to that of its veracity, as I will document below. However, one cannot seriously assert the authenticity of this carbon copy either. The document headlined "*Umsiedlungs-Aktion der Juden*" ("Resettlement Operation of the Jews") is neither signed nor dated, has neither a letter

[149] BAK, R 187/539, pp. 24f.; the blog entry, without attribution to any author, was posted on August 11, 2019 at https://holocaustcontroversies.blogspot.com/2019/08/nazi-document-on-mass-extermination-of.html.

head, nor a stamp of any kind, nor any element that directly or indirectly links it either to SS *Sturmbannführer* Alfred Franke-Gricksch or to May 4, 1943, the date on which he visited the Auschwitz Camp together with SS *Gruppenführer* and General of the *Waffen* SS Maximilian von Herff. It is conducive to point out immediately that the visit is real, while this alleged report is patently false.

The bloggers argue that this document is authentic based on an "expert opinion of 3 April 2019 by Bernhard Haas, Sachverständiger für Maschinenschriften" (expert on typescripts). According to this opinion, "the matching system features and type features justify the conclusion that the documents 'A' and 'B' were with a great probability [*mit großer Wahrscheinlichkeit*] written with one and the same typewriter. A higher probability statement was not possible because the examined documents were not available as originals." This conclusion is based on the expert's claim that "the letters 'i,' 'm,' 'n' and 'u' appear defective in the Franke-Gricksch report and the letter to Krüger," referring to a letter from von Herff of April 22, 1943 to Friedrich-Wilhelm Krüger, Higher SS and Police Leader of the General Government.

Even assuming the hypothesis that the alleged Franke-Gricksch Report really came from von Herff's office at the *SS-Personal-Hauptamt* (SS Personnel Main Office), the verification criterion adopted by the bloggers is completely insufficient, given that the Americans, in Berlin, seized tons of documents and stationery from all the institutional offices, including paper, carbon paper and typewriters, so they could have filled in this and any other text with great ease.

Secondly, it cannot be ruled out that entire series of certain typewriters of the time had some "defective" types due to manufacturing imperfections.

Obviously, and this is the essential point, no "expert opinion" of any "expert on typescripts" will ever be able to ascertain *who* used a certain typewriter to write a certain text, and *when* he used it.

Therefore, attention must be paid to the contents of the document. It presents a description of the "Resettlement Operation" which agrees in generally with that proposed by orthodox Holocaust historiography, but also presents very serious discrepancies with respect to it and to reality. In what follows, I enumerate and briefly examine the most striking ones. It should be borne in mind that, if we follow the orthodox lore, it is assumed that Franke-Gricksch had been an *eye*witness to what is described in the report, and had also received direct and accurate information from camp officials. In this case, however – and here I anticipate the conclusions of the analysis that follows – Franke-Gricksch would have been either a demented person or an intentional impostor, which are both obviously unacceptable hypotheses, therefore it is appropriate to speak for now of a Pseudo-Franke-Gricksch.

Having said that, I pass to the examination of the text. Any underscoring is mine.

1) *"The Jews arrive in special trains (freight cars) toward the evening and are moved on special tracks to sections of the camp specifically fenced off for this purpose."*

This is a clear reference to the so-called "Judenrampe", the railway platform with three tracks that was located inside the Birkenau Camp where the special trains deporting Jews were unloaded. The problem is that at the beginning of May 1943 it did not exist yet, because it was handed over for use only on April 16, 1944, as a Reichsbahn employee communicated to the Auschwitz Central Construction Office on April 19, 1944.[150]

How could Pseudo-Franke-Gricksch "see" something that didn't then exist?

2) *"The unfit are placed in a larger house in the basement rooms* […]*"*

Did the Pseudo-Franke-Gricksch not know the term "crematorium," and did he not know how many cremation facilities existed? The report mentions basement rooms, therefore it refers to Crematorium II, because at the beginning of May 1943, Crematorium III was still under construction, hence could not have been used for anything. Was it so difficult for an "eyewitness" to state that the alleged visit had taken place in Crematorium II, or even just "a crematorium"?

3) *"Then you walk through a small hallway and come to a large basement room that resembles a shower bath"*, the alleged homicidal gas chamber.

Keep in mind that this description refers to May 4, 1943.

For an in-depth analysis of the question, I refer to other studies;[151] here I limit myself to pointing out that Crematorium III was handed over by the Central Construction Office to the camp's headquarters on June 24, 1943. In the inventory of the basement attached to the relevant hand-over protocol, 14 showers are mentioned for Morgue #1,[152] which were real showers and had a clear relationship with the project of the "Special measures for the improvement of hygienic installations" for the Birkenau Camp. However, this project was implemented by Hans Kammler only on May 7, 1943, hence three days *after* Franke-Gricksch's visit! Precisely because these measures were formally introduced only in May 1943, the inventory of the basement of Crematorium II, which was formally handed over on March 31, 1943, has no showers listed.[153]

The period of the installation of these showers was even confirmed by Henryk Tauber, Robert van Pelt's witness *par excellence*, who declared:[154]

[151] Mattogno 2019, pp. 134-141; Mattogno/Poggi, pp. 28-33.
[152] RGVA, 502-2-54, page number illegible.
[153] RGVA, 502-2-54, pp. 77f.
[154] AGK, NTN 93 (Höss Trial), Vol. 11, pp. 130f.

> *"I emphasize that in the beginning there were no benches or clothes hooks in the undressing room, and in the gas chamber* [no] *showers* [*tuszów*]. *Both were installed only in the fall of 1943* [*w jesieni 1943 r.*] *to disguise the undressing room and the gas chamber, presenting them as a bathroom and disinfection."*

How is it possible that the Pseudo-Franke-Gricksch "saw" in the alleged gas chamber non-existing showers?

> **4)** *"There are three tall columns in this room* [the alleged gas chamber]. *Certain agents can be lowered into it – from above, outside the basement room."*

The Holocaust orthodoxy insists, however, that *four* Zyklon-B introduction columns were installed in Morgue #1 (Długoborski/Piper 2000, Vol. III, p. 166); how can we explain that Pseudo-Franke-Gricksch "saw" only three of them?

> **5)** *"After 300 – 400 people have gathered in this room, the doors are closed, and the containers with the substances are lowered into the pillars from above. As soon as these containers touch the bottom of the column, they develop certain substances that put people to sleep within a minute. A few minutes later, a door opens on the other side, which leads to an elevator."*

a) The density of alleged victims is extremely low: the orthodoxy usually speaks of at least 2,000 people (*ibid*., p. 169). For the author of the report, the killing of 2,000 people would have required five gassings!

b) According to the report, the alleged gas chamber had two doors, one entrance and one exit on the opposite side, which is known to be wrong: how could the Pseudo-Franke-Gricksch "see" a door that did not exist?

The way the bloggers of Holocaust Controversies try to explain away this error is inconclusive and was already tried by Jean-Claude Pressac:

> *"Therefore, one can presume that a break occurred during the visit, as pointed out by the Auschwitz researcher Jean-Claude Pressac. If the SS visitor left the basement before the gas chamber was opened, and returned to the basement later on through a different entrance (or did not return at all), one could explain his confusion concerning the clearing of the gas chamber as a misunderstanding."*

This conjecture is patently nonsensical, but I will argue it as if it were serious.

Illustration 1 shows a section of the basement of Crematorium II as Pseudo-Franke-Gricksch would have seen it (Pressac 1989, p. 303).

According to the report, Pseudo-Franke-Gricksch entered Morgue #2 (the alleged undressing room) through the entrance from the courtyard, walking down "5-6 steps." "Then you walk through a small hallway and come to a large basement room that resembles a shower bath." The "small hallway"

would be the "Gang" shown in Illustration 1, 5 meters long and 1.97 meters wide, which in the blueprints of Crematorium II joins Morgue #2 to the large "anteroom" ("*Vorraum*") – unknown to Pseudo-Franke-Gricksch – from where the alleged gas chamber was accessed at the right-hand side.

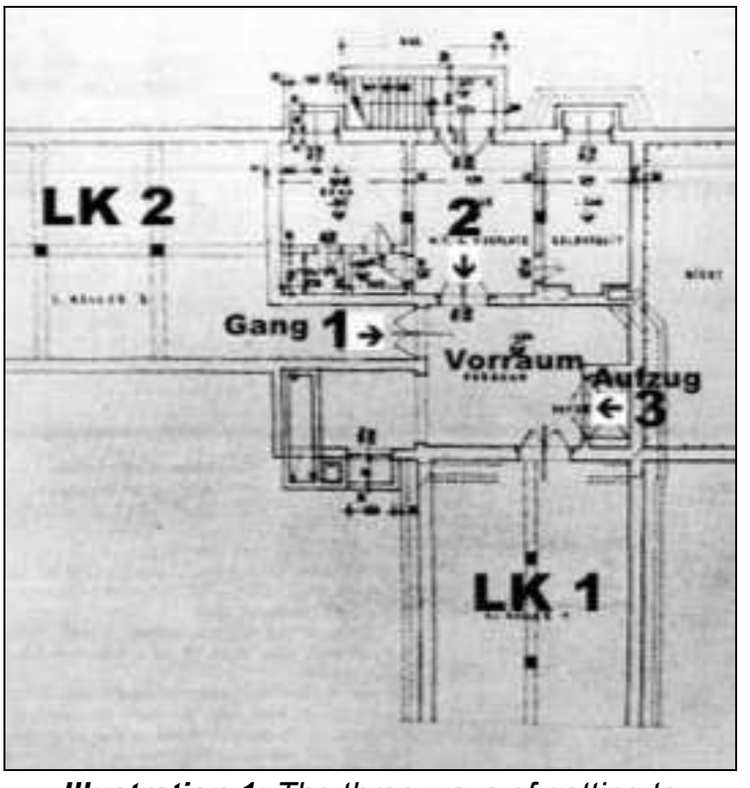

Illustration 1: *The three ways of getting to Morgue #1 (LK 1): 1. Through Morgue #2 (LK 2). 2. Through a staircase near the building's main entrance. 3: Down the rickety corpse elevator (*Aufzug*).*

If we follow Pressac's conjecture, after crossing the "Gang," Pseudo-Franke-Gricksch therefore found himself in the anteroom, saw the door of Morgue #1 and perhaps looked inside, after which his visit was interrupted for an unknown reason and continued on the ground floor. Considering that the corpse elevator was rather unsuitable for carrying an SS *Sturmbannführer* upstairs, and excluding the illogical reverse route to Morgue #2, he exited the external back stairs via Room 2. Then his visit to the ground floor was interrupted again, and he was taken back down into the basement, saw the door of Morgue #1 again, but this time believed it to be a door opposite to the one he had seen before.

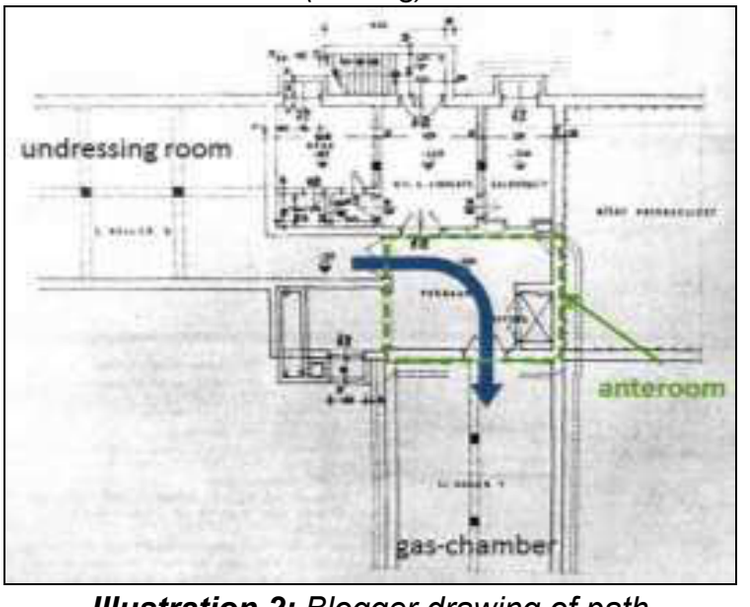

Illustration 2: *Blogger drawing of path presumably walked by Pseudo-Franke-Gricksch.*

How did our eyewitness return to the basement? Either the same way as the first time (through Morgue #2), or the way he had just left it (through the external staircase and Room 2), or maybe by using the corpse elevator. He knew the first two well, and he also knew the elevator, which he calls "*Fahrstuhl*": "A few minutes later, a door opens on the other side, which leads to an elevator." Therefore, even if he had gone down into the basement using the elevator, Pseudo-Franke-Gricksch

could not have mistaken the door just seen as a different one at the opposite side.

Such an explanation is not just demented but also disrespectful, because it implies that the alleged eyewitness was a perfect imbecile: a person unable to recognize a place in which he had been just before only because he had entered it a different way!

The bloggers used the aforementioned basement plan in a childish way, simplistically indicating the path from Morgue #2 to Morgue #1 (Illustration 2): what an extraordinary explanation!

In reality, however, there is no interruption in the Pseudo-Franke-Gricksch Report at all! The absurd journey described there is the one I illustrated in Illustration 3 (with the underlying blueprint taken from Pressac 1989, p. 327): The fake eyewitness went from Morgue #2 crossed through the *Gang* and *Vorraum*, entered Morgue #1 through the door T/1, saw "three tall columns" inside, reached the end of the room, left through the non-existent door T/2 into a non-existent adjacent room where he "saw" the elevator (*Fahrstuhl/Aufzug*)!

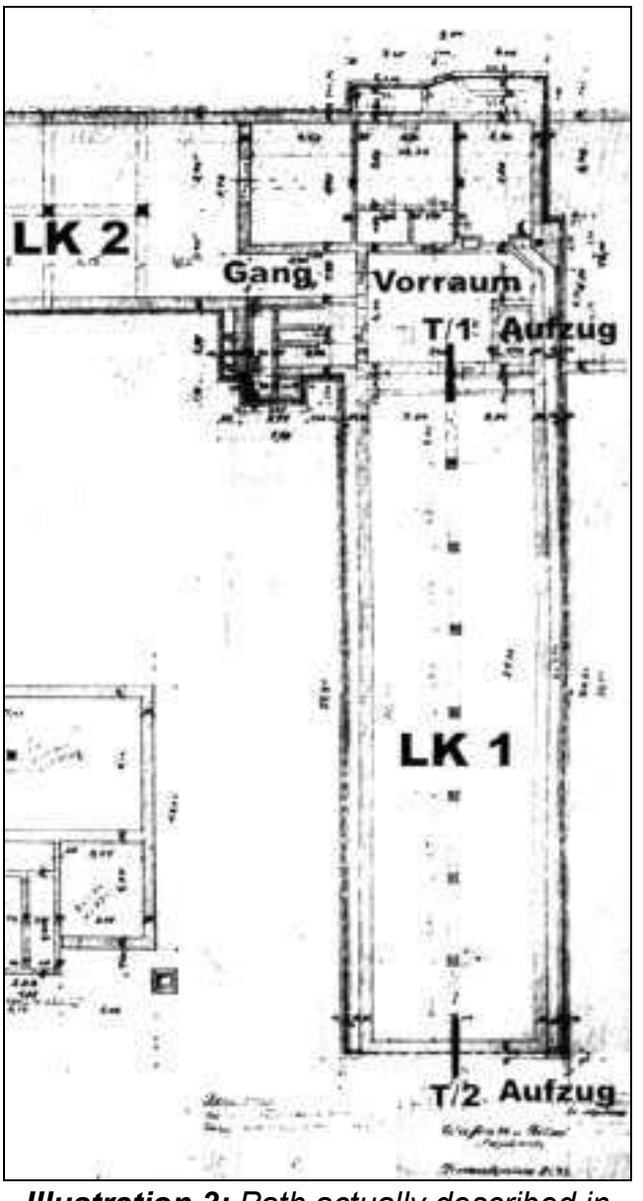

Illustration 3: *Path actually described in the Pseudo-Franke-Gricksch Report: from Morgue #2 (LK 2) through a passage way (*Gang*) directly to door T/1 (skipping the anteroom/*Vorraum *and ignoring the elevator/*Aufzug*), from there into Morgue #1 (LK 1), passing through that room to the opposite end, exiting through a non-existing door T/2 to see a non-existing elevator (*Aufzug*) behind that door.*

c) Pseudo-Franke-Gricksch knew nothing of Zyklon B or hydrogen cyanide. What were supposed to be the cans (*Büchsen*) of Zyklon B, for him were simple containers (*Behälter*), and instead of the hydrogen cyanide absorbed in a porous carrier material, he only talked of "certain agents" and "certain substances". In his story, the "substances" in the containers were not poured into the "columns," but the containers themselves, which, when reaching the bottom of the columns, developed "certain substances"! Their strange effect set in extremely fast, because they put the victims *to sleep* (!) "within a minute"! But that's not enough: "A few minutes later," the victims, evidently

still asleep, were transported to the furnaces after their hair had been cut and their teeth inspected, meaning they were burned while sleeping!

6) *"Success so far of this 'resettlement operation': 500000 Jews."*

According to Franciszek Piper, 330,000 Jews had been deported to Auschwitz by April 1943.[155] Czech claims in her *Auschwitz Chronicles* that about 245,000 Jews had been gassed by then, less than half of those claimed in this report.

7) *"There are 10 large cremation furnaces in which the corpses are cremated. (Since fresh corpses burn particularly well, you only need 25 to 50 kg of coke for the entire process.)* [...] *Current capacity of the 'resettlement' furnaces: 10,000 Jews in 24 hours."*

The adverb "there" refers to Crematorium II, which had five furnaces with three muffles each: therefore either five furnaces, or 15 muffles. How are we to explain that Pseudo-Franke-Gricksch "saw" 10 furnaces there?

The "Current capacity," which refers to May 4, 1943, of the "Oefen" "furnaces" (excluding, therefore, the cremation pits, which, moreover, were not in use at that time according to the orthodox narrative) was 10,000 "Jews" within 24 hours. Since Crematorium III was not yet in operation, this presumed capacity must be divided between Crematoria II, IV and V. The subdivision can be made on the basis of the only known element: the number of muffles. Since Crematorium II had 15 and Crematoria IV and V together had 16, there would have been a capacity, in round figures, of 4,840 corpses in 24 hours for Crematorium II, and 5,160 for the other two facilities.

But in order to use this claimed capacity, (4,840 ÷ [300 to 400] =) 12 to 16 gassings had would have to be carried out in Crematorium II within 24 hours!

It can therefore be said that the report in question contemplated a cremation capacity for all four Birkenau crematoria of some 14,840 corpses within 24 hours (9,680 in Crematoria II and III and 5,160 in Crematoria IV and V). This is more than three times the "official" figure of the letter of June 28, 1943 in relation to the Birkenau crematoria (which is already absurd in itself): 4,416 corpses within 24 hours, which is considered "real" by Robert Jan van Pelt. In fact, he states that each of the 46 muffles of the Birkenau cremation furnaces could cremate 96 corpses per day (96 × 46 = 4,416) or four corpses in one muffle in one hour (4 × 24 × 46 = 4,416; van Pelt, p. 345).

But a capacity of 10,000 corpses within 24 hours in 31 muffles, as claimed by the Pseudo-Franke-Gricksch Report, corresponds to (10,000 ÷ 31 =) 322 corpses per muffle within 24 hours and (322 ÷ 24 =) 13 corpses per muffle per hour!

Let us now turn to the claimed coke consumption. From the letter of June 28, 1943 and from a file memo written by civilian employee Rudolf Jährling

---

[155] Piper 1993, "*Tabelle* D" outside of text titled "*Die Transporte mit Juden nach Auschwitz aus den einzelnen Ländern von 1940 bis 1945*".

on March 17, 1943, which gives a coke consumption of 2,800 kg within 12 hours "during continuous operation" for Crematoria II/III, and 1,120 kg for Crematoria IV/V, as mentioned in Chapter I, van Pelt concluded that the cremation of a corpse required 3.5 kg of coke (2002, p. 122). In the Pseudo-Franke-Gricksch Report, the expression "for the entire process" evidently designates the entire cremation process, although we don't know for how many corpses.

From Jährling's file memo of March 17, 1943, the following coke consumption in 24 hours results for the crematoria in question "during continuous operation":

– Crematorium II: 5,600 kg
– Crematorium IV: 2,240 kg
– Crematorium V: 2,240 kg

Hence, in total 10,080 kg.

Adopting van Pelt's reasoning, the cremation of a corpse would have required (10,080 kg/day ÷ 10,000 corpses/day =) 1 kg of coke! If the "entire process" referred to the cremation of just a single corpse, the daily quantity of coke would have been (25 kg to 50 kg × 10,000 =) 250,000 to 500,000 kg. No matter which way we look at it, it makes no sense. Therefore, the consumption of 25-50 kg given in the report is meaningless.

As a side effect, the claims by Pseudo-Franke Gricksch and by van Pelt are mutually exclusive: if you give credit to one of them, you have to reject the other, and vice versa. Therefore, it is easy to understand why van Pelt, in his book *The Case for Auschwitz*, did not make the slightest mention of the Pseudo-Franke Gricksch Report.

8) *"One has come to know that the Jews keep hidden in hollow teeth jewels, gold, platinum etc."*

How big were the Jews' teeth and how big were their tooth cavities that they could hide jewelry, gold and platinum in them? And how long can one endure the toothache that comes with hollow teeth? A number of testimonies report that female Jews sometimes hid such valuables in their vaginas, which is why the men of the Sonderkommando had to search the vaginas of murdered women on a regular basis. Drilling one's teeth open in order to be able to put hardly anything into these tiny, sometimes-painful cavities doesn't make any sense at all.

Despite this amount of obvious nonsense, the bloggers brandish this report as "the most detailed and explicit contemporary Nazi document on the mass murder of Jews in an extermination camp"!

Only a totally incompetent person or a person of bad faith can take seriously this mass of silly lies, technical nonsense and crude Polish propaganda inventions, which were already widespread during the war. For example, the figure of 500,000 victims had already appeared in the report of the resistance

activist "Tadeusz" of February 1943, and was then repeated in other reports (see Mattogno 2021a, p. 150):

> *"Approximately 500,000 registered and unregistered inmates have died since the beginning, mostly Jews, the elderly, women and infants."*

The alleged cremation capacity of 10,000 corpses in three crematoria had already been mentioned in the "Description of the Auschwitz Concentration Camp" dated "Auschwitz, July 10, 1943" (*ibid.*, p. 163):

> *"Three large crematoria with a capacity of 10,000 bodies per day have now been built at Birkenau, which burn bodies continually and are called the 'Eternal Flame' by the local population."*

And the three columns for introducing the sleep-inducing "substances" are clearly inspired by the three "roof traps" of the Wetzler-Vrba Report.

A few words on the differences between Lipmann's typed copy and the carbon copy. As mentioned earlier, Lipmann's text contains a number of typos or bad expressions which don't exist in the carbon copy:

Lipmann	Carbon Copy
had	*hat*
and	*an*
minute	*Minute*
Später	*später*
selber	*selbst*

The carbon copy correctly has a comma and a period where Lipmann's text has none ("*Gold{,} Platin usw{.}*"), while the carbon copy has one mistake, where Lipmann's text has none ("*gelässen*" instead of "*gelassen*"). Nothing of this is particularly unusual, if assuming that Lipmann retyped the text and introduced the errors by accident. However, what is striking is that one sentence in the carbon copy is arranged differently than in Lipmann's text:

> *"Einige Minuten Später öffnet sich die Tür an der anderen Seite, die zu einem Fahrstuhl führt."* Lipmann
>
> *"Einige Minuten später öffnet sich an der anderen Seite eine Tür, die zu einem Fahrstuhl führt."* Carbon copy

Grammatically speaking, Lipmann's way of arranging the words in this sentence is wrong and would mean that the other *side* ("*Seite*") leads to the elevator, rather than the door ("*Tür*"). Had Lipmann simply retyped the text from the carbon copy, the words should be arranged as they are in the carbon copy, but that is not the case.

In addition, both words in this text which start with an upper-case umlaut are spelled as such in Lipmann's text – "*Öfen*" and "*Ärztekommissionen*" – but are spelled as "*Oefen*" and "*Aerztekommissionen*" in the carbon copy. All lower-case umlauts are spelled as such in both versions, so both typewriters used must have had them. The only explanation why the typist of the carbon

copy didn't use the upper-case umlauts is that he wasn't familiar with how to type them, or was used to typing them in this unusual manner. Neither of these two options applies to a native-German-speaking typist.

All this points to one very-likely explanation: Lipmann's text with its numerous errors and bad expressions was retyped in better (though not flawless) German by a person evidently unfamiliar with typing on typewriters having umlauts – and having the "ß", which is never used in either text:

Spelling in Both Version	Correct Spelling (Old Rules)
grosse(s)/grösseres	große(s)/größeres
folgendermassen	folgendermaßen
Arbeitsprozess	Arbeitsprozeß
aussen/ausserhalb	außen/außerhalb
dass	daß
mussten	mußten

In other words, these clues point to Lipmann's text being the original, while the carbon copy is a retyped, cleaned-up, improved version of it, yet either not typed by a native speaker of German, or not on a fully functional German typewriter. While it is true that Lipmann claimed that his version is a retyped, "true copy of the original report," this remark was evidently added by hand after the text had been typed, which fuels our suspicion even more.

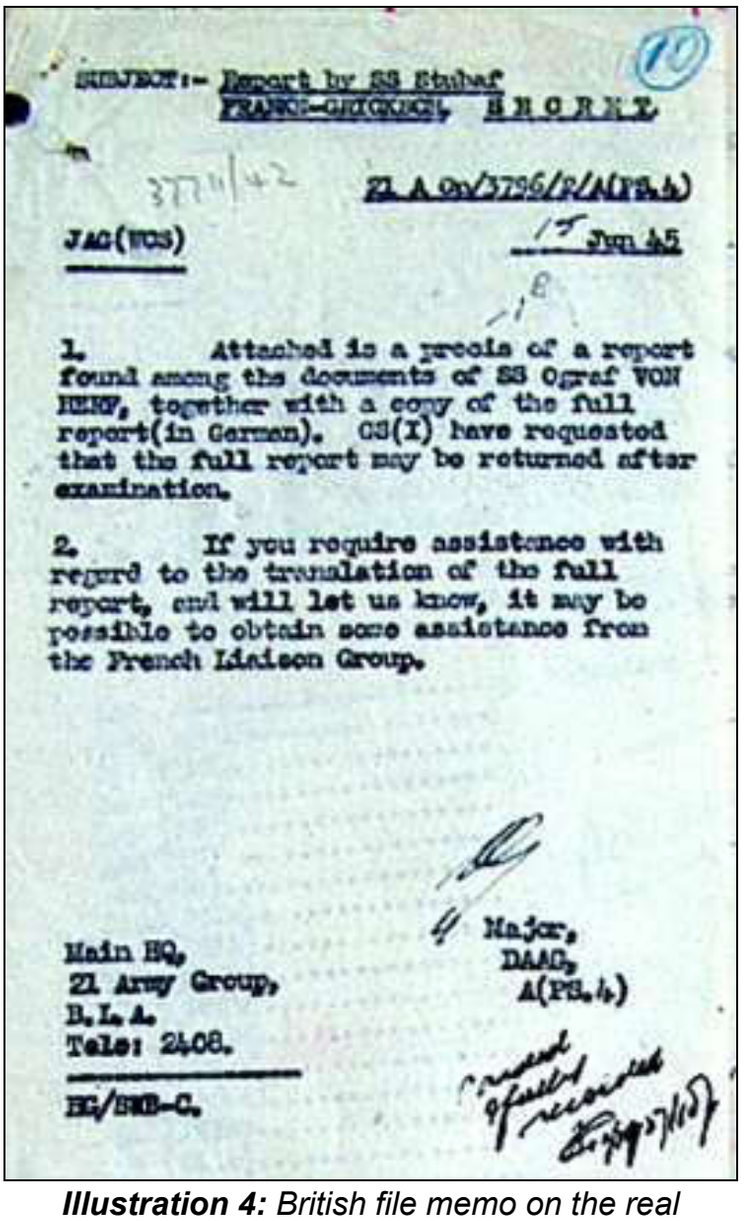
Before closing, some other considerations are conducive. The real Franke-Gricksch Report was famously seized by the British and translated into English (the German original has been lost or destroyed). The translation is titled "Report on the Duty Journey through POLAND from the 4th to 16th May 1943 by SS Sturmbannführer FRANKE GRICKSCH." The Holocaust-Controversy bloggers have published this report as their "Appendix A." This report does not include the text of the Pseudo-Franke-Gricksch Report, and it contains no allusion to it and no reference to any kind of extermination of the Jews. The bloggers' explanation of this fact is puerile:

> *"The otherwise lengthy report of Alfred Franke-Gricksch on his trip to Auschwitz (Appendix A) is quite short, not to say silent on the role of the large Birkenau camp for the Final Solution of the Jewish Question. The omission can be well understood if this delicate issue had been split off into an own report entitled 'Resettlement Action of the Jews'."*

In this case the real Franke-Gricksch report would at least contain a reference to the text "*Umsiedlungs-Aktion der Juden*" in order to inform the reader that certain aspects of Auschwitz were exposed in a separate report. In fact, however, it does not mention crematoria or cremation furnaces or facilities at all. I will return to this question later.

Franke-Gricksch and his superior arrived at Auschwitz at 1 pm on April 4. Several camp officers were introduced to the *Gruppenführer* (von Herff), in-

cluding *Oberführer* (Joachim) Caesar, who was the leader of the Auschwitz agricultural enterprises, the only officer to be named besides the camp's commandant Höss. After this introduction, they all had lunch. Then, SS *Obersturmbannführer* Höss gave the two visitors a tour. The report elaborates in great detail precisely on Caesar's farms. It also dwells on the Jews in the following terms:



SUBJECT:- Report by SS Stubaf FRANKE-GRICKSCH, AUSCHWITZ

21 A Gp/3756/P/A(PS.4)

JAG(WCS) 17 Jan 45

1. Attached is a precis of a report found among the documents of SS Ogruf VON HEINZ, together with a copy of the full report(in German). CS(I) have requested that the full report may be returned after examination.

2. If you require assistance with regard to the translation of the full report, and will let us know, it may be possible to obtain some assistance from the French Liaison Group.

B.L.A.
Tele: 2408.

EC/SMB-C.

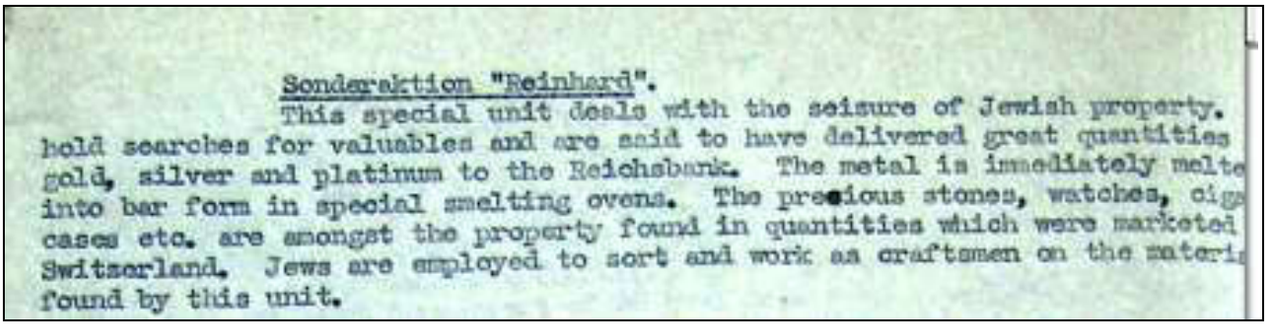
Illustration 4: *British file memo on the real Franke-Gricksch Report*

> *"The hygiene question is a very heavy responsibility for the Administration, nearly all the inmates, especially the Jews from the East and South-East, have to be trained in this respect for they show a particular fear of keeping themselves clean. In parts there have to be very strict measures in order to train the prisoners out of superstition. When having a shower bath they wrap up their lice in a piece of paper and hide it in their mouth in order to have them in their new clothes as they are of the opinion that whoever has lice will not become ill."*

After inspecting the camp, the visitors went to the city of Auschwitz, and then also saw the IG-Farbenindustrie factories at Monowitz. There they had a brief conversation with the commandant of the local camp, then left for Krakow, where they arrived "after a two hours trip."

In practice, the inspection at Birkenau, which began in the early afternoon, lasted only a few hours, focused mainly on the numerous agricultural operations around Auschwitz, and did not concern the crematoria at all.

The archival reference of the true Franke-Gricksch Report is TNA, WO 309-374. However, there is also another folder that concerns it directly, TNA, WO 2241, which contains an English summary of the report, with a note ex-



Sonderaktion "Reinhard".
This special unit deals with the seizure of Jewish property. hold searches for valuables and are said to have delivered great quantities gold, silver and platinum to the Reichsbank. The metal is immediately melte into bar form in special smelting ovens. The precious stones, watches, cig cases etc. are amongst the property found in quantities which were marketed Switzerland. Jews are employed to sort and work as craftsmen on the materi found by this unit.

Illustration 5: *British summary of the real Franke-Gricksch Report.*

plaining that the original was found "among the documents of SS Ograf VON HERF" (see Illustration 4).

Therefore the Pseudo-Franke-Gricksch Report was not part of these documents.

In their childish superficiality, the bloggers do not even ask themselves what was the reason for the journey of von Herff and Franke-Gricksch. The SS Personnel Main Office, headed by von Herff, was one of the eleven institutions of the SS, including the *Reichssicherheitshauptamt*. They constituted "an independent organization of the party, ... under the command of the Reichsfuehrer SS." The tasks of the SS Personnel Main Office are described as follows by the 1943 *Organisationsbuch* of the NSDAP:[156]

> *"*[H]*andling of the personnel affairs of all the officers of the SS as well as the General SS, the Armed SS and the SD with regard to induction, promotion, and discharge. Further it handles the SS length-of-service lists, the bestowal of death head rings and daggers of honor as well as the promotion of the General SS."*

It is evident that a report on the alleged extermination of the Jews at Auschwitz was completely outside the competence of this office, and if such a report was ever to be compiled, it would have been the responsibility of the *Reichssicherheitshauptamt* to create it.

The second problem is: on whose behalf was von Herff's and Franke-Gricksch's business trip made? And whom should they report to?

The only person who could have charged von Herff with such a task was Himmler himself, von Herff's only direct superior, unless von Herff undertook the trip on his own initiative. In the first case the final recipient of the Franke-Gricksch report was obviously Himmler, and in the second case von Herff. Under such circumstances, one cannot seriously believe that Franke-Gricksch had compiled a separate report – for what reason anyway? – on matters that were not his responsibility, and without making any mention of it in the main report.

One last observation. The true Franke-Gricksch Report says on p. 6:

---

[156] PS-2640. *Nazy Conspiracy…*, Vol. V, p. 349.

> *"From Travniki we travelled back to Lublin to inspect the special enterprise REINHARD. This branch has had the task of realising all mobile Jewish property in the Gouvernement Poland."*

This is followed by a description of Operation Reinhard(t). In the summary of TNA, WO 2241, the description is summarized as follows (Illustration 5):

> *"Sonderaktion 'Reinhard'.*
> *This special unit deals with the seizure of Jewish property."*

Therefore the real Franke-Gricksch knew nothing of a *Sonderaktion* "Reinhard" consisting of an extermination operation of Jews.

V. Auschwitz Testimonies

In his 2011 book *Voices of Memory* containing witness accounts of the Auschwitz crematoria, Setkiewicz quotes a plethora of Auschwitz testimonies, some of which are well known while others are almost unknown. Here, I briefly discuss the relevant sections among the less-known statements.

Władysław Lutecki worked for the electricity detail of the Central Construction Office. In that context, he also worked at Crematorium III. In an undated statement he claimed (Setkiewicz 2011a, p. 43):

> *"Among other things I saw the so-called 'unconnected showers' through which water never flowed. It was an imitation bathhouse. In the middle of the chamber were three columns – the chutes for the Zyklon gas."*

Leaving aside the fact that the showers were real, hence connected (Mattogno 2019, Chapter 4, pp. 134-142), it is known that, according to the orthodox Holocaust narrative, the alleged introduction devices for Zyklon B numbered four, not three, and that they were not "in the middle of the chamber" but distributed more-or-less-evenly around the entire room. Setkiewicz does not detect these inconsistencies.

Władysław Girsa, an inmate who was charged with carrying out repairs in the crematoria, asserted in another undated statement (Setkiewicz 2011a, p. 44):

> *"I saw that in the ceiling of the gas chambers of crematoria II (I) and III (II), two or three rectangular openings had been made with sides measuring about 40 cm. In each of these openings a steel screen was attached to thick steel reinforcing rods. A fitted lid closed or opened the openings in the ceiling."*

The witness was close enough to "see" the size of those "openings," yet he was unable to count their exact number. His estimate of two or three is incorrect, as I explained above. According to the witness Kula (see below), who claims to have made those steel-meshwork columns, the square openings must

have been 70 cm wide (at least if we follow the measures he gave in his first post-war statement). Also in this case, Setkiewicz makes no comment.

Konrad Gracz, who was also involved in repair work inside the crematoria, made a deposition in 1979, in which he stated (Setkiewicz 2011a, p. 45):

> *"As far as I remember, near the end of 1942 we made four wire screen columns for crematorium II in the machine shop with a square cross-section of 20 x 20 cm, and a height of 2 m. 20 cm., which had cones (tips) at the top made of bare sheet metal, for the purpose of pouring Zyklon in. The sheet-metal workers made the fine green screens necessary for the construction of these columns. In the machine shop we also made additional covers out of thick screens to enclose the columns for inserting Zyklon B as described above. The idea was to prevent the people in the gas chamber from damaging them. The above-mentioned protective screen surrounded the column for the insertion of Zyklon B on four sides. The gap between the protective screen and the insertion column might have been about 25 cm. Both screens (insertion and protective) were stretched over railings built into the floor and ceiling of the gas chamber."*

The "machine shop" mentioned by the witness was the inmate locksmith workshop (*Häftlings-Schlosserei*). According to a document by the Auschwitz Camp authorities dated February 8, 1943 with the headline "Inmate locksmith workshop. List of detainees," 192 inmates were employed at the workshop on that date. The list also includes the name of Konrad Gracz with the Registration Number 27042.[157] Another employee at the workshop was Michał Kula, Registration Number 2718, who even claimed to have built these columns. However, in a statement recorded before the Höss Trial, Kula gave a different description for these devices, especially with regard to their alleged size (Höss Trial, Vol. 2, pp. 99f.):

> *"Among other things, the fake showers intended for the gas chambers and the wire-mesh columns to pour the contents of the Zyklon cans into the gas chambers were manufactured in the metal workshop. This column was about 3 meters high, with a square section of about 70 cm* [wide]. *This column was composed of three meshworks inserted one inside the other. The outer screen was made from wire three millimeters thick, fastened to iron corner posts of 50 by 10 millimeters. Such iron corner posts were on each corner of the column and were connected at the top in the same manner. The openings of the wire mesh were 45 millimeters in square. The second screen was made in the same manner, and constructed within the column at 150 millimeters distance from the first. The openings of the second were some 25 millimeters in square. In the corners these screens were connected to each other by iron posts. The third part of this column could*

[157] RGVA, 502-1-295, p. 63.

> *be moved. It was an empty column with a square footprint of around 150 millimeters made of sheet zinc* [inner layer]. *At the top it was closed by a metal sheet* [cone-shaped, "distributor cone," see below]*, and at the bottom with a square base. At a distance of 25 millimeters from the sides of this column, sheet-metal corners were soldered supported by sheet-metal brackets. On these corners was mounted a thin mesh with openings of about one millimeter in square. This mesh ended at the bottom of the cone, and from there, extending the meshwork, ran a sheet metal casing for the entire height up to the top of the cone. The contents of a Zyklon can were poured from above onto the distributor cone, which allowed for an equal distribution of the Zyklon to all four sides of the column. After the evaporation of the gas, the entire central column was extracted and the evaporated* [depleted] *silica* [carrier] *removed."*

Without going too much into details, the alleged devices, which had a square section of 70 cm for both Gracz and Kula (first version), had two screen layers according to Gracz, yet three layers according to Kula, and the column was 2.20 m high for Gracz (hence wouldn't even have reached the 2.50-m-high ceiling) and about 3 m high for Kula.

To complicate matters, Kula changed his mind when testifying during the Höss Trial, where he stated the following:[158]

> *"On Höss's order, the gassing columns that were used for the gassing were made by the metalworking shop. The columns were 2 meters and a half high, the inner space 150 square mm in diameter, the following* [layer] *at a distance of 30 mm, the third 15 mm away. The wire mesh used was like that used for windows, green in color; between the wire mesh and the sheet metal there was a distance of 15 mm. All this was about 1 meter and a half tall. At the mouth of this network was a so-called distribution cone. 7 pieces of these columns were made. The columns were installed in the gas chamber right next to the opening through which the can of gas was thrown in. This column was installed beneath this opening, the gas was poured directly onto the distribution cone. The cone was to uniformly distribute the gas into these four slots of 15 mm between the sheet metal and the netting, since that increased the gas evaporation surface."*

Hence, according to Kula's first, pre-trial deposition, the column was 3 meters high, which he changed to 2.50 meters during the trial. The width of the column shrank during the trial to only (15+30+150+30+15=) 240 mm in total, compared to the 700 mm of his pre-trial statement. These were obviously two entirely different objects he described. While one may confuse 3 m with 2.5 m, confusing 70 cm with 24 cm is not likely.[159]

---

[158] Höss Trial, APMO, Vol. 25, p. 498.
[159] For a detailed discussion of these alleged columns see Rudolf 2020, pp. 148-161.

While citing a different passage of Kula's pre-trial testimony, Setkiewicz did not mention these discrepancies, and therefore did not explain them either (Setkiewicz 2011a, p. 59).

In this context, the "Guidelines for the Use of Prussic Acid (Zyklon) for Pest Control (Disinfestation)" mentioned earlier (Document NI-9912, see p. 92) provide a starting point for further considerations. According to this, the contents of a Zyklon B can was poured out in a thin layer on suitable sheets of paper, probably waxed paper, which facilitated the recovery of the inert carrier afterwards. The guidelines clarified that "Moist, wet or dirty remnants, and damaged cans should never be returned." Not only did no witnesses ever speak of these sheets of paper, but in the alleged gas chambers of the elusive "bunkers" and the Birkenau Crematoria IV and V, the depleted carrier substance could never have been recovered intact, dry and clean from among the inmates, because it is literally said to have been dumped amidst the victims through side openings, so it inevitably would have been crushed and soiled with feces, urine and vomit, with which the floors of the "gas chambers" are said to have been covered after the killing of the victims, if we follow the witnesses. Not to mention that the Zyklon-B carrier would have continued releasing hydrogen-cyanide fumes for much of the time it took to remove the corpses, because the Zyklon B could have been removed only after all the corpses piling up between the doors and the introduction openings had been removed.

Regarding the alleged introduction devices for Zyklon B, it needs to be emphasized that

1. the **only** document that mentions anything remotely sounding like it (as "*4 Drahtnetzeinschiebevorrichtung*" – 4 wire-mesh push-in device), which is the turnover protocol (*Übergabeverhandlung*) of Crematorium II dated March 31, 1943, gives as its location *Morgue #2* (the alleged "undressing room"), *not* Morgue #1 (the alleged "gas chamber"),[160] and that
2. in the register of the Inmate Locksmith Workshop, where orders for the crematoria are also listed, despite assurances to the contrary by Kula, no order for any "wire-mesh push-in device" or any similar item appears. It should be noted that the structure of the device described by Kula presupposes that it was only used for Zyklon B of the types "Diagrieß" and "Erco," but could not work with the "discoid" type (see Document 26), which consisted of disks of wood fiber, as it would have been difficult, to say the least, to stick those disks into the innermost square-shaped column, which, if we follow Kula, consisted of an inner layer of galvanized sheet metal with a side length of 15 cm (first version) or 12 cm (second version), and an outer layer some 25 mm (first version) or 15 mm (second version) farther outward (hence 25/15 mm wide) made of a fine wiremesh with a mesh size of only 1 mm. The inner part was capped with a pyramid-shaped

[160] Mattogno 2019, Chapter 2.5, "*Drahtnetzeinschiebevorrichtung*" and "*Holzblenden*," pp. 76-85.

top, and the entire column was closed at the bottom with a piece of 20 cm × 20 cm sheet metal (or 15 cm × 15 cm for the second version). Zyklon B is said to have been poured from the top onto the "distributor cone," making the Zyklon-B pellets fall into the 25-/15-mm-wide space between the inner and the outer layer. Pressac provided a drawing (see Document 27), and so did G. Rudolf, whose drawings of the two different versions claimed by Kula are more accurate (Rudolf 2020, pp. 152f.; see Document 28). Looking at the extant orders for Zyklon B, the Auschwitz administration apparently never troubled to specify the type of carrier material best suited for the alleged homicidal gassings.

Setkiewicz furthermore invokes the rather terse and superficial testimony of a former Jewish inmate from Greece, Aaron Pilo,[161] who claims to have been a member of the Birkenau *Sonderkommando* as well. I have translated and thoroughly discussed Pilo's testimony elsewhere (Mattogno 2021b, pp. 227-229), so I will limit my elaboration here to a few highlights of his absurdities:

– each of the four Birkenau crematoria "was capable of burning 3,000 corpses in the course of a day" or "120 per hour."
– Within two years, "five million human corpses were burned in those four crematoria."
– "Up to three thousand people at a time fit into such a [gas] chamber" [= 14 persons per m² for Morgue #1 of Cremas II & III]
– After "three minutes all of those inside the [gas] chamber died, poisoned by the gas."
– In the furnace room, "a prisoner poured gasoline on the bodies and threw them into the fire."

In an attempt to justify the insane statement of the last entry, Setkiewicz reports what other witnesses have claimed about the procedures allegedly used to light pyres outdoors (*ibid*., FN 5, p. 47), but here Pilo is clearly talking about how the corpses were set "on fire" inside the furnace room of a crematorium!

[161] Registration Number 113204; Setkiewicz 2011a, pp. 47f.

Conclusion

Setkiewicz's summary at the end of his article is not exactly flattering to orthodox Holocaust historiography:

> *"Although many years have passed since the war ended, the researchers* [of the Auschwitz Museum] *have failed to find any major body of documents in the archives on the basis of which the entire extermination process at the Auschwitz Concentration Camp can be described accurately. In view of the many gaps in the archival materials that are crucial to our understanding of this issue, we are left with hundreds and thousands of witness reports, first of all by former inmates, or the testimonies by members of the SS, who were either in marginal or in permanent contact with the crematoria and the gas chambers. These reports, however, although most are credible and complement each other, contain – by their very nature – a number of inaccuracies and errors (especially with regard to the chronology), so in the end they cannot be considered as absolutely sufficient historiographical sources."*

As a small consolation, the author says that

> *"the testimonies referred to above, however, can be supported – as demonstrated above – by references* [*wzmiankami*] *contained in the documents of the various groups of the camp's files which, although certainly rare, are at once immensely important. Only together, when analyzed in conjunction, these documents and the testimonies of the former detainees permit to reconstruct the course of events and to understand the magnitude of the crimes committed at Auschwitz."* (pp. 73f.)

Thus, everything is reduced to testimonies and to rare "references" in documents (Pressac's "criminal traces").

With his silences and false explanations about the many absurdities contained in the witness testimonies, Setkiewicz demonstrates that the "inaccuracies and errors," and moreover the contradictions of these statements are

much-more-pronounced than what he would have us believe, and they do not even primarily concern chronological issues. This is all the more reason to conclude that testimonies alone cannot be considered sufficiently reliable historical sources.

And since documents for the existence of homicidal gas chambers do not exist, what remains of the "history" of the gas chambers of Auschwitz?

The end of Setkiewicz's article clearly shows his actual intent: to respond to revisionism without mentioning it:

> *"To those who still doubt, the following question can be asked: if Auschwitz was merely a simple 'labor camp,' then what were those 'field furnaces,' the 'gassing rooms,' the 'mortuary chambers' and the 'bathing installations'; what purposes did the 'material for special treatment' or 'material for the resettlement of the Jews' really serve, which was ordered from the Cyklon factory at Dessau in thousands of kilograms; why were considerable quantities of firewood transported by truck to the Sonderkommando, while at the same time thousands of tons of coke were delivered to the cremation furnaces?"*

If the SS had nothing to hide at Auschwitz, Setkiewicz concludes, they would not have invented "complicated euphemisms," but since they invented them, they tried to "hide the traces of unprecedented crimes" (p. 74), which means that the "proof" *par excellence* for the alleged gassings at Auschwitz is reduced to those alleged "euphemisms"! Curiously, Setkiewicz only reports the respective Polish translation:

- *"obozem pracy" = "Arbeitslager"*
- *"piece polowe" = "Feldöfen"*
- *"pokoje do gazowania" = "Vergasungsräume"*
- *"kostnice" = "Leichenhallen, Leichenkeller"*
- *"zakłady kąpielowe" = "Badeanstalten (für Sonderaktionen)"*
- *"materiał do specjalnego traktowania" = " Material für Sonderbehandlung"*
- *"materiał do przesiedlania Żydów" = "Material*[*ien*] *für Judenumsiedlung"*

If Setkiewicz, in addition to asking questions, were also willing to listen to the answers, he would know that all the issues he raised were dealt with and explained in depth in their historical and documentary context by those same unnamed revisionists.

The best mainstream treatment of the issue of coke, firewood and Zyklon-B deliveries to Auschwitz is thus totally inconclusive and utterly unable even to scratch the surface of revisionist critiques.

Appendix

Tables

Table I: Coke Deliveries and Death Cases at Auschwitz

The five columns of the following table reporting day of the week, date (day.month.year), supply of coke in tons, the number of deaths according to the *Stärkebuch* (register of force) and *Leichenhallenbuch* (register of the morgue). Bold numbers on the last day of each month give monthly totals. Totals in brackets are based on additional coke deliveries as discovered by Setkiewicz.

Zur Inbetriebnahme des Krematoriums benötigen Sie noch Asche-Urnen, einen Beschriftungs-Apparat für die Urnendeckel und Schamottemarken. Wir nehmen an, daß Sie vorerst mit 500 Aschekapseln und Schamottemarken in gleicher Anzahl auskommen werden und empfehlen Ihnen, die Bestellung schon jetzt aufzugeben, da für vorstehende Materialmengen eine Lieferzeit von 6 Wochen erforderlich ist. Wir bieten Ihnen, aufgrund unserer Ihnen bekannten Allgemeinen Lieferungs-Bedingungen B., wie folgt an:

500 Stück Asche-Urnen
DIN-Format, aus Schwarzblech,
mit SchwarzblechsDeckel,
zum Preise von RM 675.--

500 Stück Schamotte-Marken
mit laufender Nummer 1 - 500,
zum Preise von RM 65.--

Part of a report rendered by SS Sturmbannführer Franke-Gricksch on a trip through the General Gouvernement on 4 to 16 May 1943.

U m s i e d l u n g s - A k t i o n
der Juden.

Eine besondere Aufgabe hat das Lager A u s c h w i t z in der Regelung der Judenfrage. Modernste Massnahmen ermöglichen hier in kürzester Zeit und ohne grosses Aufsehen die Durchführung des Führerbefehls.

Die sogenannte "Umsiedlungsaktion" der Juden läuft folgendermassen ab:

Die Juden kommen in Sonderzügen (Güterwagen) gegen Abend an und werden auf besonderen Gleisen in eigens dafür abgegrenzte Bezirke des Lagers gefahren. Dort werden sie ausgeladen und durch Ärztekommissionen in Anwesenheit des Lagerkommandanten und mehrerer SS-Führer erst einmal auf Arbeitsfähigkeit untersucht. Hier kommt jeder, der noch irgendwie in den Arbeitsprozess eingebaut werden kann, kommt in ein besonderes Lager. Vorübergehend Erkrankte kommen sofort in das Sanitätslager und werden durch besondere Kost wieder gesund gemacht. Grundsatz ist: Jede Arbeitskraft der Arbeit zu erhalten. Die "Umsiedlungsaktion" älterer Art wird völlig abgelehnt, da man es sich nicht leisten kann, wichtige Arbeitsenergien, laufend zu vernichten.

Die Untauglichen kommen in ein grösseres Haus in die KellerrÄume, die von aussen zu betreten sind. Man geht 5-6 Stufen herunter und kommt in einen längeren, gut ausgebauten und durchlüfteten Kellerraum, der rechts und links mit Bänken ausgestattet ist. Er ist hell erleuchtet und über den Bänken befinden sich Nummern. Den Gefangenen wird gesagt, dass sie für ihre neuen Aufgaben desinfiziert und gereinigt werden, sie müssten sich also völlig entkleiden, um gebadet zu werden. Um jegliche Panik und Unruhe zu vermeiden, werden sie angewiesen, ihre Kleider schön zu ordnen und unter die für sie bestimmten Nummern zu legen, damit sie nach dem Bad auch ihre Sachen wiederfinden. Es geht alles in völliger Ruhe vor sich. Dann durchschreitet man einen kleinen Flur und gelangt in einen grossen Kellerraum, der einem Brausebad ähnelt. In diesem Raum befinden sich drei grossen Säulen. In diese kann man von oben ausserhalb des Kellerraums- gewisse Mittel herablassen. Nachdem 300-400 Menschen in diesem Raum versammelt sind, werden die Türen geschlossen und von oben herab die

Document 18: *Fake report falsely attributed to SS* Sturmbannführer *Alfred Franke-Gricksch. Source: Pressac 1989, p. 238.*

2

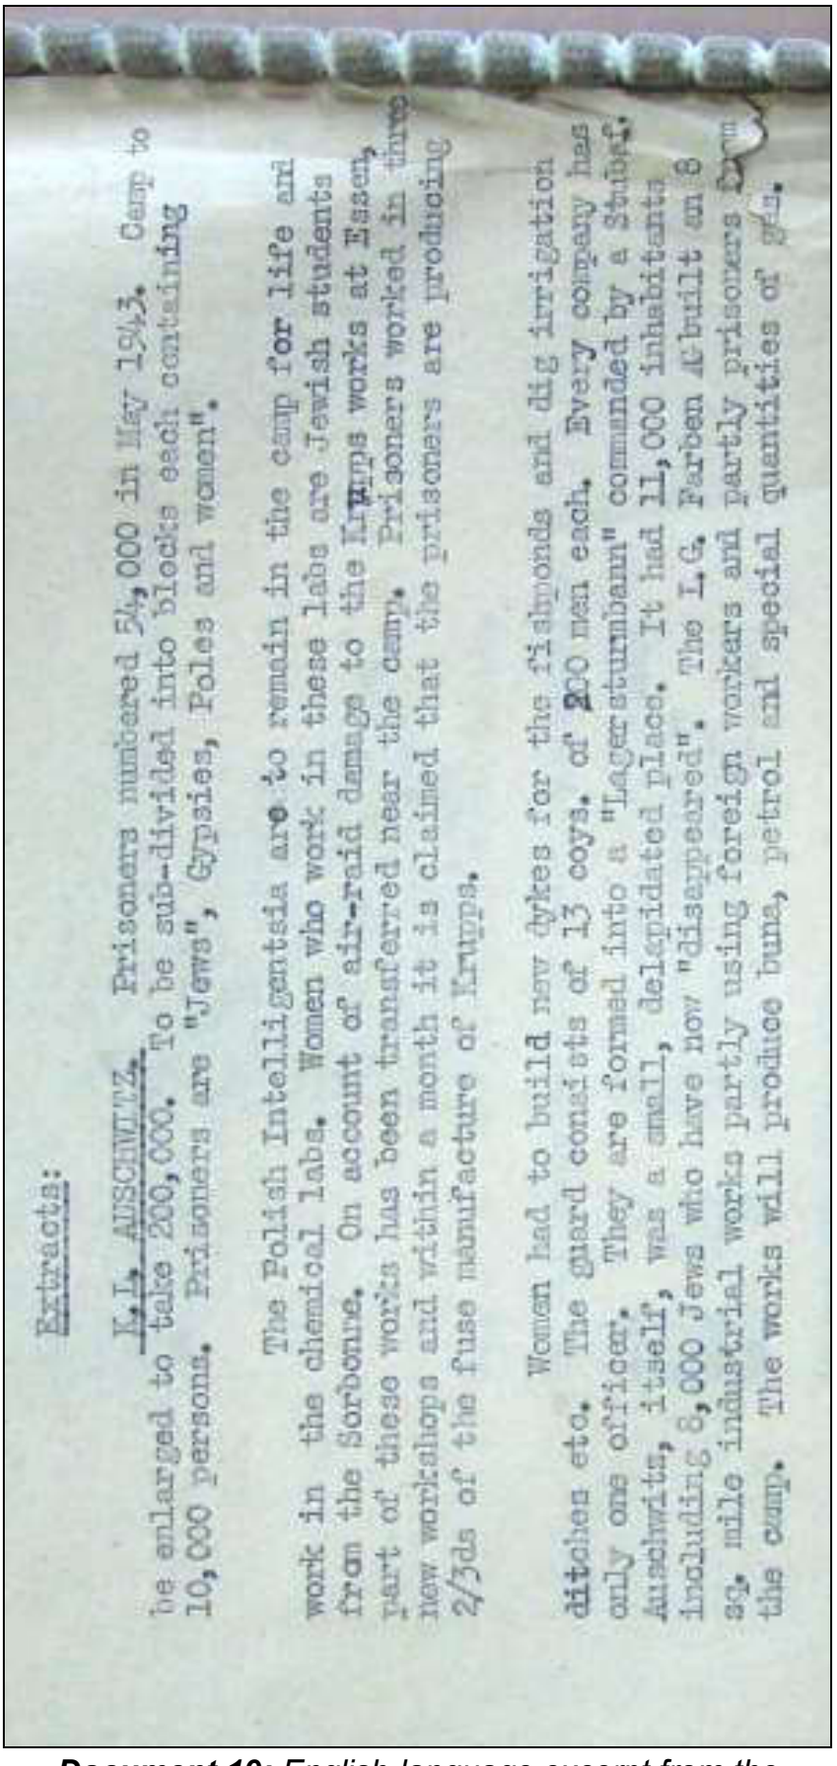
Behälter mit den Stoffen in die Säulen gelassen. Sowie die Behälter den Boden der Säule berühren, entwickeln sie bestimmte Stoffe, die in einer Minute die Menschen einschläfern. Einige Minuten Später öffnet sich die Tür an der anderen Seite, die zu einem Fahrstuhl führt. Die Haare der Leichen werden geschnitten und von besonderen Fachleuten (Juden) die Zähne ausgebrochen (Goldzähne). Man hat die Erfahrung gemacht, dass die Juden in hohlen Zähnen Schmuckstücke, Gold Platin usw versteckt halten. Danach werden die Leichen in Fahrstühle verladen und kommen in den 1. Stock. Dort befinden sich 10 grosse Krematoriumsöfen, in welchen die Leichen verbrannt werden. (Da frische Leichen besonders gut brennen, braucht man für den Gesamtvorgang nur 1/2 - 1 Ztr. Koks.) Die Arbeit selber wird von Judenhäftlingen verrichtet, die dieses Lager nie wieder verlassen.

Bisheriger Erfolg dieser "Umsiedlungsaktion": 500000 Juden

Jetzige Kapazität der "Umsiedlungsaktion"-Öfen: 10 000 in 24 Stunden.

I affirm, that this a true copy of the original report. Eric M. Wiegmann.

Document 18 continued.



Extracts:

K.L. AUSCHWITZ. Prisoners numbered 54,000 in May 1943. Camp to be enlarged to take 200,000. To be sub-divided into blocks each containing 10,000 persons. Prisoners are "Jews", Gypsies, Poles and women".

The Polish Intelligentsia are to remain in the camp for life and work in the chemical labs. Women who work in these labs are Jewish students from the Sorbonne. On account of air-raid damage to the Krupps works at Essen, part of these works has been transferred near the camp. Prisoners worked in three new workshops and within a month it is claimed that the prisoners are producing 2/3ds of the fuse manufacture of Krupps.

Women had to build new dykes for the fishponds and dig irrigation ditches etc. The guard consists of 13 coys. of 200 men each. Every company has only one officer. They are formed into a "Lagersturmbann" commanded by a Stubaf. Auschwitz, itself, was a small, delapidated place. It had 11,000 inhabitants including 8,000 Jews who have now "disappeared". The I.G. Farben A built on 8 sq. mile industrial works partly using foreign workers and partly prisoners from the camp. The works will produce buna, petrol and special quantities of gas.

Report on the Duty Journey through POLAND from the 4th to 16th May 1943
by SS Sturmbannführer [illegible].

I. Description of Journey Page 1 to Page 10

II. Experiences on personnel policy, Page 10

The Journey.

On Tuesday 4th May 1943 at 9.15, the plane left the Tempelhof Aerodrome. We landed at the aerodrome at KRAKOW at 1140 hrs after having had a pleasant trip from POTTSDAM and BRESLAU. The Commandant of the Aerodrome reported to SS Gpf HESS. SS Ostbf HESS Commandant of the Concentration Camp at AUSCHWITZ reported immediately after.

AUSCHWITZ.

We carried on immediately and went to AUSCHWITZ Camp. At 1300 hrs we arrived at AUSCHWITZ, the leaders of the Camp were assembled and introduced to the Gpf. Amongst those were Oberführer CAESAR who is in charge of all agricultural work as Stbf. After the Gpf had addressed the leaders and informed them of the purpose of his visit, he joined them at dinner.

In order to get a clear picture of the camp, its structure and purpose, SS Ostbf HESS drove us round the whole camp area. The camp itself was an old Austrian butted camp which had been extended to a small town by the work of SS Ostbf HESS. AUSCHWITZ is the biggest concentration camp in Germany. It covers about 18,000 morgen and has at the moment 54,000 inmates. Out of these 18,000 morgens, 8,000 are arable, ,000 are fishbreeding and 3,000 are used for market gardening and green houses. They are breeding their own horses and keep their own poultry farms. In 1932 (should probably read 1942) the breeding measures have produced 32,000 chicks. Besides, the camp has its own kennels with 500 picked animals specially trained to guard prisoners. The camp is to be gradually extended to hold 200,000 prisoners. It has got its own leather tannery, a factory for brushes, a butchers shop, bakery, cobblers shop, blacksmiths, a place for breeding pheasants, their own research institute (e.g. a research for diseases of plants) nurseries, plants of rubber, testing field for different kinds of corn, suitable for Eastern purposes. The best methods to get the most out of the soil are tried out in the camp in order to gain experience for the settlement. Special cool resisting fruit trees are being planted, and corn usually used in the Kuhasus is being developed for the East.

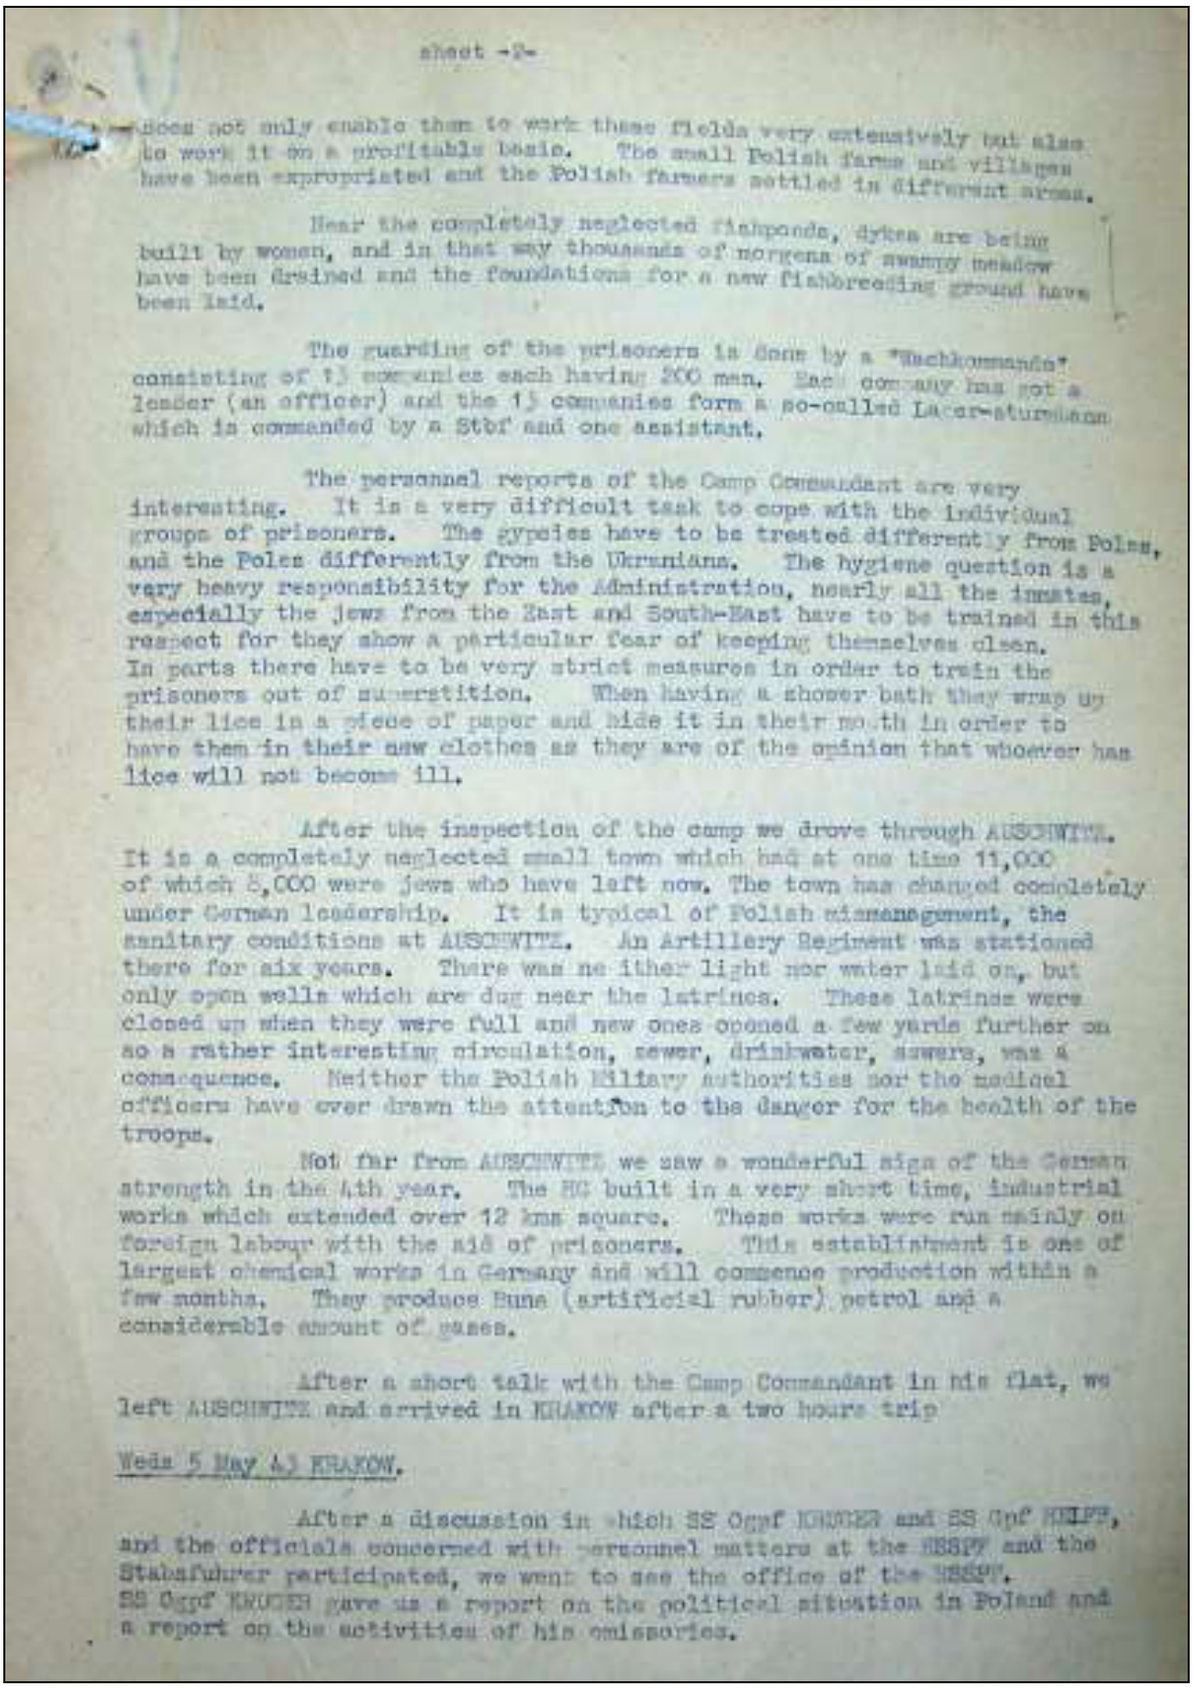
The actual concentration camp is sub-divided into blocks for 10,000 each, and the Ostbf is to be in charge of each block. The inmates are Jews, gypsies, poles and women. The camp has its own orchestra, which is conducted by the former Warsaw Radio Orchestra conductor.

The whole Polish Intelligentsia remain in this camp for life, and will be employed in laboratories and science research institutes, according to their knowledge. The Jewish women who work in the chemical laboratories are students from the Sorbonne University.

Because of the Krupp-works in ESSEN having been practically destroyed, the transfer of these to Poland and the Auschwitz district has taken place. Three new factory sheds have been erected in a comparatively short time in the camp which will after a month take over two-thirds of the Krupp production of matches and will be run entirely by prisoner labour. The sheds are constructed in accordance with modern principles and give a clean and friendly impression.

In the agricultural sphere, they have succeeded in producing nice large fields by creating a large network of draining systems. This

Document 20: *English translation of the presumably authentic report by SS* Sturmbannführer *Alfred Franke-Gricksch. Source: TNA, WO-309-374.*



sheet -2-

does not only enable them to work these fields very extensively but also to work it on a profitable basis. The small Polish farms and villages have been expropriated and the Polish farmers settled in different areas.

Near the completely neglected fishponds, dykes are being built by women, and in that way thousands of morgens of swampy meadow have been drained and the foundations for a new fishbreeding ground have been laid.

The guarding of the prisoners is done by a "Wachkommando" consisting of 15 companies each having 200 man. Each company has got a leader (an officer) and the 15 companies form a so-called Lager-sturmbann which is commanded by a Stbf and one assistant.

The personnel reports of the Camp Commandant are very interesting. It is a very difficult task to cope with the individual groups of prisoners. The gypsies have to be treated differently from Poles, and the Poles differently from the Ukranians. The hygiene question is a very heavy responsibility for the Administration, nearly all the inmates, especially the jews from the East and South-East have to be trained in this respect for they show a particular fear of keeping themselves clean. In parts there have to be very strict measures in order to train the prisoners out of superstition. When having a shower bath they wrap up their lice in a piece of paper and hide it in their mouth in order to have them in their new clothes as they are of the opinion that whoever has lice will not become ill.

After the inspection of the camp we drove through AUSCHWITZ. It is a completely neglected small town which had at one time 11,000 of which 8,000 were jews who have left now. The town has changed completely under German leadership. It is typical of Polish mismanagement, the sanitary conditions at AUSCHWITZ. An Artillery Regiment was stationed there for six years. There was no ither light nor water laid on, but only open wells which are dug near the latrines. These latrines were closed up when they were full and new ones opened a few yards further on so a rather interesting circulation, sewer, drinkwater, sewers, was a consequence. Neither the Polish Military authorities nor the medical officers have ever drawn the attention to the danger for the health of the troops.

Not far from AUSCHWITZ we saw a wonderful sign of the German strength in the 4th year. The IG built in a very short time, industrial works which extended over 12 kms square. These works were run mainly on foreign labour with the aid of prisoners. This establishment is one of largest chemical works in Germany and will commence production within a few months. They produce Buna (artificial rubber) petrol and a considerable amount of gases.

After a short talk with the Camp Commandant in his flat, we left AUSCHWITZ and arrived in KRAKOW after a two hours trip

Weds 5 May 43 KRAKOW.

After a discussion in which SS Ogpf KRUGER and SS Opf [illegible], and the officials concerned with personnel matters at the HSSPF and the Stabsführer participated, we went to see the office of the HSSPF. SS Ogpf KRUGER gave us a report on the political situation in Poland and a report on the activities of his emissaries.

NI-9912

Richtlinien für die Anwendung von Blausäure (Zyklon) zur Ungeziefervertilgung (Entwesung).

I. Eigenschaften der Blausäure.

Blausäure ist ein Gas, das sich durch Verdunsten entwickelt.

Siedepunkt: 26° C.

Gefrierpunkt: — 15° C.

Spez. Gewicht: 0.69.

Dampfdichte: 0.97 (Luft = 1.0).

Flüssigkeit ist leicht verdampfbar.

Flüssigkeit: wasserhell, farblos.

Geruch: eingenartig, widerlich süßlich.

Außerordentlich großes Durchdringungsvermögen.

Blausäure ist im Wasser löslich.

Explosionsgefahr: 75 g Blausäure auf 1 cbm Luft. (Normale Anwendung ca 8—10 g pro cbm, daher nicht explosiv). Blausäure darf nicht mit offenem Feuer, glühenden Drähten usw. zusammengebracht werden. Sie verbrennt dann langsam und verliert vollkommen ihre Wirkung. (Es entsteht Kohlensäure, Wasser und Stickstoff.)

Giftigkeit für Warmblüter.

Blausäure hat fast keine Warnwirkung, daher ist sie hochgiftig und hochgefährlich. Blausäure gehört zu den stärksten Giften. 1 mg pro kg — Körpergewicht genügt, um einen Menschen zu töten. Kinder und Frauen sind im allgemeinen empfindlicher als Männer. Ganz geringe Mengen von Blausäure schaden dem Menschen nicht, auch bei stetiger Atmung. Vögel und Fische sind besonders empfindlich gegen Blausäure.

Giftigkeit für Insekten.

Die Wirkung der Blausäure auf Insekten hängt nicht so sehr von der Temperatur ab, wie die Wirkung anderer Gase; d. h. sie wirkt auch bei kalten Temperaturen (auch noch bei — 5° C). Bei vielen Tieren, besonders bei Wanzen und Läusen, sind die Eier empfindlicher, als die Imagines.

Giftigkeit gegen Pflanzen:

Der Grad der Giftwirkung hängt ab von dem Vegetationszustand der Pflanzen. Hartlaubige Pflanzen sind weniger empfindlich als weichlaubige. Schimmelpilze und Hausschwamm werden durch Blausäure nicht abgetötet.

Bakterien werden durch Blausäure nicht vernichtet.

II. Anwendungsform der Blausäure.

Zyklon
ist die Aufsaugung eines Gemisches von Blausäure und Reizstoff in einem Trägerstoff. Als Trägerstoff verwendet man entweder Holzfaserscheiben, eine rotbraunekörnige Masse (Diagrieß) oder kleine blaue Würfel (Erco).

Der Reizstoff hat außer seinem Zweck als Warnstoff noch den Vorteil, daß er die Atmung der Insekten anregt. Entwicklung der Blausäure und des Reizstoffes durch einfache Verdunstung. **Haltbarkeit des Zyklons 3 Monate.** Schadhafte Dosen zuerst verbrauchen. **Inhalt einer Dose muß stets ganz verbraucht werden.** Flüßige Blausäure greift Polituren, Lacke, Farben usw. an. Gasförmige Blausäure ist unschädlich. Durch den Reizstoffzusatz bleibt die Giftigkeit der Blausäure unverändert; die Gefährlichkeit ist aber wesentlich geringer geworden.

Zyklon kann durch Verbrennen unschädlich gemacht werden.

III. Vergiftungsmöglichkeiten:

1. **Leichte Vergiftungen:**

Schwindelgefühl, Kopfschmerzen, Erbrechen, Unwohlsein usw. Alle diese Anzeichen gehen vorüber, wenn man sofort in die frische Luft geht. Alkohol setzt die Widerstandsfähigkeit bei Blausäuredurchgasungen herab. Daher vor der Vergasung keinen Alkohol trinken.

Man gibt: 1 Tablette Cardiazol oder Veriazol, um Herzstörungen vorzubeugen, gegebenenfalls nach 2 bis 3 Stunden nochmals.

2. **Schwere Vergiftungen:**

Der Betroffene fällt plötzlich zusammen und ist bewußtlos. Erste Hilfe: Frische Luft, Gasmaske ab, Kleidung lockern, künstliche Atmung, Lobelin i. m. 0,01 g. **Kampfer-Injektionen sind verboten.**

Document 23: *"Guidelines for the Use of Prussic Acid (Zyklon) for Pest Control (Disinfestation)." Source: NI-9912.*

NI - 9912

3. **Vergiftungen durch die Haut:**
Anzeichen wie unter 1. Desgleichen auch Behandlung.

4. **Magenvergiftungen:**
sind zu behandeln mit:
Lobelin, 0,01 g i. m.,
Eisenvitriol,
gebrannte Magnesia.

IV. **Gasschutz.**

Bei Durchgasungen mit Zyklon nur Spezialfilter, z. B. Filtereinsatz „J" (blaubraun) der Auergesellschaft, Berlin, oder der Drägerwerke, Lübeck, verwenden.

Tritt Gas durch die Maske, unverzüglich das Gebäude verlassen und Filter wechseln, nachdem auch die Maske und der Maskensitz auf Dichtigkeit geprüft sind. Der Filtereinsatz ist erschöpft, wenn Gas durch die Maske tritt. Mit Filter „J" erst ca 2 Minuten im Freiem bewegen, damit eine gewisse Feuchtigkeit durch die Ausatemluft im Filtereinsatz erreicht wird. — **Filter darf keinesfalls im gaserfüllten Raum gewechselt werden.**

V. **Personal:**

Für jede Entwesung wird ein Entwesungstrup eingesetzt bestehend aus mindestens 2 Mann. — Verantwortlich für die Durchgasung ist der Durchgasungsleiter. Ihm obliegt besonders die Besichtigung, Lüftung, Freigabe und die Sicherheitsmaßnahmen. Für den Fall seines Ausscheidens bestimmt der Durchgasungsleiter einen Stellvertreter. Den Anordnungen des Durchgasungsleiters ist unverzüglich nachzukommen.

Unausgebildete Personen oder ausgebildete, die noch keine Bescheinigung besitzen, dürfen nicht zu Gasarbeiten herangezogen werden. Sie dürfen auch nicht in gaserfüllte Räume hinein genommen werden. Der Durchgasungsleiter muß stets wissen, wo seine Leute zu erreichen sind. Sämtliche Leute müssen sich jederzeit darüber ausweisen können, daß sie die behördliche Genehmigung besitzen, Blausäure zur Schädlingsbekämpfung zu verwenden.

Die vorliegenden Richtlinien sind in allen Fällen genau zu beachten.

VI. **Ausrüstung:**

Jeder muß stets bei sich führen:

1. Seine eigene Gasmaske.
2. Mindestens 2 Spezial-Einsätze gegen Zyklon-Blausäure.
3. Das Merkblatt: »Erste Hilfe bei Blausäurevergifteten«.
4. Arbeitsvorschrift.
5. Zulassungsbescheinigung.

Jeder Entwesungstrupp hat stets bei sich zu führen:

1. Mindestens 3 Spezial-Einsätze als weiteren Vorrat.
2. 1 Gasentnachweisgerät.
3. 1 Vorrichtung, um Lobelin einzuspritzen.
4. Lobelin 0,01 g Ampullen.
5. (Cardiazol, Veriazol Tabletten.
6. 1 Hebeldöffner oder Spitzhammer zum Öffnen der Zyklondosen.
7. Warnungsschilder der vorgeschriebenen Art.
8. Abdichtungsmittel.
9. Papierbogen zur Unterlage.
10. Elektr. Taschenlampe.
Alle Geräte sind stets sauber und in Ordnung zu halten. Beschädigungen von Geräten sind sofort auszubessern.

VII. Planung einer Durchgasung:

1. Ist die Durchgasung überhaupt **durchführbar?**
   a) Bauart und Lage des Gebäudes.
   b) Beschaffenheit des Daches.
   c) Beschaffenheit der Fenster.
   d) Vorhandensein von Heizkanälen, Luftschächten, Mauerdurchbrüchen usw.
2. **Feststellung der Art der zu vertilgenden Schädlinge.**
3. Raumberechnung.
(Nicht auf Pläne verlassen, sondern selbst ausmessen. Nur Außenmaße nehmen. Mauerwerk mitberechnen.)
4. Vorbereitung der Belegschaft.
(Entfernung von Nutztieren, Pflanzen, Nahrungsmittel, unentwickelte fotografische Platten, Genußmittel, Gasmaskenfilter).
5. **Feststellung besonders schwieriger Abdichtungen.**
(Luftschächte, Kanäle, Holzverschalungen für große Öffnungen, Dächer.)
6. **Feststellung der zu treffenden Sicherheitsmaßnahmen.**
(Bewachung, Arbeitskommando zum Verkleben.)
7. **Festsetzung des Durchgasungstages und der Räumungsfrist.**
8. **Gegebenen Falles Sicherheitsmaßnahmen für die Nachbarschaft rechtzeitig veranlassen.**
9. **Anmeldung bei der Behörde.**

VIII. **Vorbereitung einer Durchgasung:**

1. **Abdichtung.**
2. **Öffnen sämtlicher Türen, Schränke, Schubladen usw.**
3. **Betten auseinanderlegen.**
4. **Entfernung offener Flüssigkeit (Kaffeereste, Waschwasser usw.).**

Document 23 continued.

NI-9912

5. Entfernung von Lebensmitteln.
6. Entfernung von Pflanzen und Nutztieren (Aquarien usw.).
7. Entfernung unentwickelter fotogr. Platten und Filme.
8. Entfernen von Verbandspflaster, Arzneimitteln offen und in Tüten (besonders Kohle).
9. Entfernung von Gasmaskenfiltern.
10. Vorbereitung der Erfolgsprüfung.
11. Räumung von der Belegschaft.
12. Schlüsselübernahme. (Sämtliche Türenschlüssel.)

IX. **Gasstärke und Einwirkungszeit** hängen ab von der Art der Schädlinge,
der Temperatur,
dem Füllungsgrad der Räume und
der Dichtigkeit des Gebäudes.

Bei Innentemperaturen von über + 5° C nimmt man in der Regel 8 g cbm Blausäure.

Einwirkungszeit 16 Stunden, wenn nicht besondere Verhältnisse, z. B. geschlossene Bauweise, eine Verkürzung erfordern. Bei warmem Wetter darf man bis auf 6 Stunden heruntergehen. Bei Temperaturen von unter + 5° C ist die Einwirkungszeit auf mindestens 32 Stunden zu verlängern.

Die angegebene Stärke und E.-Zeit ist anzuwenden bei: Wanzen, Läusen, Flöhen usw. mit Eiern, Larven und Puppen.

Bei Kleidermotten über plus 10° C 16 g cbm und 24 Std. Einw.-Zeit.
Mehlmotten wie Wanzen.

X. **Durchgasung eines Gebäudes:**

1. Prüfung, ob das Gebäude von allen Menschen verlassen ist.
2. Auspacken der Zyklonkisten. Für jeden Stockwerk die entsprechende Menge bereitstellen.
3. Verteilung der Dosen. Ein Mann begibt sich in das Gebäude, empfängt dort die die vom Arbeitskommando heraufgebrachten Dosen und verteilt sie. (Läst sie neben die Unterlagebogen stellen.)
4. Entlassung des Arbeitskommandos.
5. Aufstellung der Wache und Belehrung dieser durch den Durchgasungsleiter.
6. Überprüfung der völligen Abdichtung und Räumung.
7. Anlegung des Gasschutzes.
8. Öffnen der Dosen und Ausschütten des Doseninhaltes. Der Inhalt ist dünn auszustreuen, damit das Zyklon schnell verdunstet und möglichst schnell die notwendige Gasstärke erreicht wird. Die Beschickung beginnt im obersten Stockwerk, der Keller wird vor dem Erdgeschoß beschickt, falls ersteres keinen Ausgang hat. Bereits beschickte Räume sollen nach Möglichkeit nicht noch einmal betreten werden. Bei der Beschickung ist ruhig und langsam zu arbeiten. Besonders ist die Treppe langsam zu begehen. Die Beschikkung darf nur im Notfalle unterbrochen werden.
9. Die Ausgangstüre wird verschlossen, abgedichtet (Schlüsselloch nicht vergessen) und der Schlüssel dem Durchgasungsleiter übergeben.
10. Auf die Tür wird eine Warnungstaffel aufgeklebt mit der Aufschrift: »Vorsicht, giftige Gase. Lebensgefahr. Eintritt verboten.« Die Warnungstafel muß — falls erforderlich — mehrsprachig sein. Jedenfalls muß sie mindestens 1 deutlich sichtbaren Totenkopf tragen.
11. Gasschutz, Einrichtungen zur Wiederbelebung und Gasrestnachweis sind bereit zu halten. Jedermann des Durchgasungspersonals muß wissen, wo sich die Gegenstände befinden.
12. Mindestens 1 Mann des Durchgasungspersonals bleibt stets in erreichbarer Nähe des unter Gas stehenden Gebäudes. Sein Aufenthaltsort ist der Wache bekannt zu geben.

XI. **Lüftung:**

Die Lüftung bietet die größte Gefahr für Beteiligte und Unbeteiligte. Sie ist deshalb besonders vorsichtig und stets mit angelegter Gasmaske auszuführen. Grundsätzlich soll derart gelüftet werden, daß **gasfreie Luft stets in kürzester Zeit erreichbar ist,** daß d. Gas nach einer Seite abzieht, auf der **die Gefährdung Unbeteiligter ausgeschlossen ist.** Bei schwieriger Lüftung bleibt 1 ausgebildeter Mann vor dem Gebäude, um den Abzug des Gases zu beobachten.

1. Dafür sorgen, daß sich in der Umgebung des Gebäudes keine fremden Leute aufhalten.
2. Die Wachposten so aufstellen, daß sie durch das abziehende Gas nicht belästigt werden, trotzdem aber die Zugänge zu dem Gebäude beobachten können.
3. Gasmaske anlegen.
4. Gebäude betreten. Türe schließen, nicht verschließen.
5. Zuerst die Fenster auf d.. dem Wind abgekehrten Seite des Gebäudes öffnen. Stockwerkweise lüften. Im Erdgeschoß beginen und nach jedem Stockwerk eine Erholungspause von mindestens 10 Minuten einlegen.
6. In den einzelnen Räumen des Gebäudes müssen die Türen zum Gang, Verbindungstüren zwischen den Zimmern und die Fenster geöffnet werden. Bei einigen Fenster Schwierigkeiten, so dürfen sie erst geöffnet werden, wenn die Hauptmenge des Gases abgezogen ist.

Document 23 continued.

NI-9912

7. Verschläge und andere nicht leicht wieder herstellbare Abdichtungen dürfen erst entfernt werden, wenn die Hauptmenge des Gases abgezogen ist.

8. Bei Frost und Frostgefahr ist darauf zu achten, daß Heizung und Wasserleitung nicht einfrieren.

9. Zimmer mit wertvollen Inhalt wie Kleiderkammern usw., dürfen wieder verschlossen werden, sobald die Fenster geöffnet sind.

10. Geöffnete Fenster und Türen sind gegen Zuschlagen zu sichern.

11. Abdichtungen der Schornsteine werden nach der vorläufigen Freigabe entfernt.

12. Die Lüftung muß mindestens 20 Std. dauern.

13. Die Wache bleibt während der ganzen Lüftungszeit bei dem Gebäude.

XII. Vorläufige Freigabe:

Ein durchgaster Räum darf vorläufig freigegeben werden, sobald bei offenem Fenster und Tür der Papierstreifen des Gasrestnachweisses schwächer blau, als das mittlere Farbmuster ist. In vorläufig freigegebenen Räumen dürfen nur Arbeiten zur Lüftung und Aufräumung ausgeführt werden. Keinesfalls darf in ihnen ausgeruht oder geschlafen weerden. Fenster und Türen müssen ständig geöffnet bleiben.

XIII. Aufräumungsarbeiten nach der vorläufigen Freigabe:

1. Entfernung der Zyklonrückstände aus den durchgasten Räumen. Sie sind im allgemeinen wie Dosen und Kisten an die Fabrik zurückzusenden. Vor der Rücksendung aus den durchgasten Räume muß auf den Kisten die Aufschrift »Gift« entfernt werden. Feuchte, nasse oder verschmutzte Rückstände, sowie beschädigte Dosen, dürfen keinesfalls zurückgesandt werden. Sie können auf den Kehricht oder Schlakkenhaufen geworfen worden, dürfen jedoch niemals in Wasserläufe entleert werden.

2. Matratzen, Strohsäcke, Kissen, Polstermöbel oder ähnliche Gegenstände sind unter Aufsicht des Durchgasungsleiters oder seines Beauftragten mindestens eine Stunde lang im Freiem (bei Regenwetter mindestens 2 Std. auf der Flur) zu schütteln oder zu klopfen.

3. Wenn es möglich ist, soll die Füllung der Strohsäcke erneuert werden. Die alte Füllung darf aber nicht verbrannt, sondern kann nach weiterer Lüftung wieder verwendet werden.

4. Falls die Schornsteine oben abgedeckt werden sind, müssen die Abdichtungen sorgfältig entfernt werden, andersfalls Gefahr besteht, daß das Feuer in Öfen und Herden keinen genügenden Zug hat und Kohlenoxydvergiftungen hervorgerufen werden.

5. Nach der endgültigen Freigabe ist ein Durchgasungsbericht nach vorgeschriebenen Muster in doppelter Ausfertigung auszufüllen. Aus ihm müssen insbesondere zu ersehen sein:

a) durchgaster Rauminhalt,
b) Menge des verbrauchten Zyklons,
c) Name des Durchgasungsleiters,
d) Namen des übrigen Personalstandes,
e) Gaseinwirkungszeit,
f) Zeitpunkt der Freigabe der entwesten Räume.

XIV. Endgültige Freigabe:

1. Keinesfalls vor Ablauf von 21 Stunden nach Beginn der Lüftung.

2. Alle zum Ausklopfen herausgebrachten Gegenstände sind in den Raum zurückzubringen.

3. Fenster und Türen werden für eine Stunde geschlossen.

4. In heizbaren Räumen muß eine Temperatur von mindestens 15° C hergestellt werden.

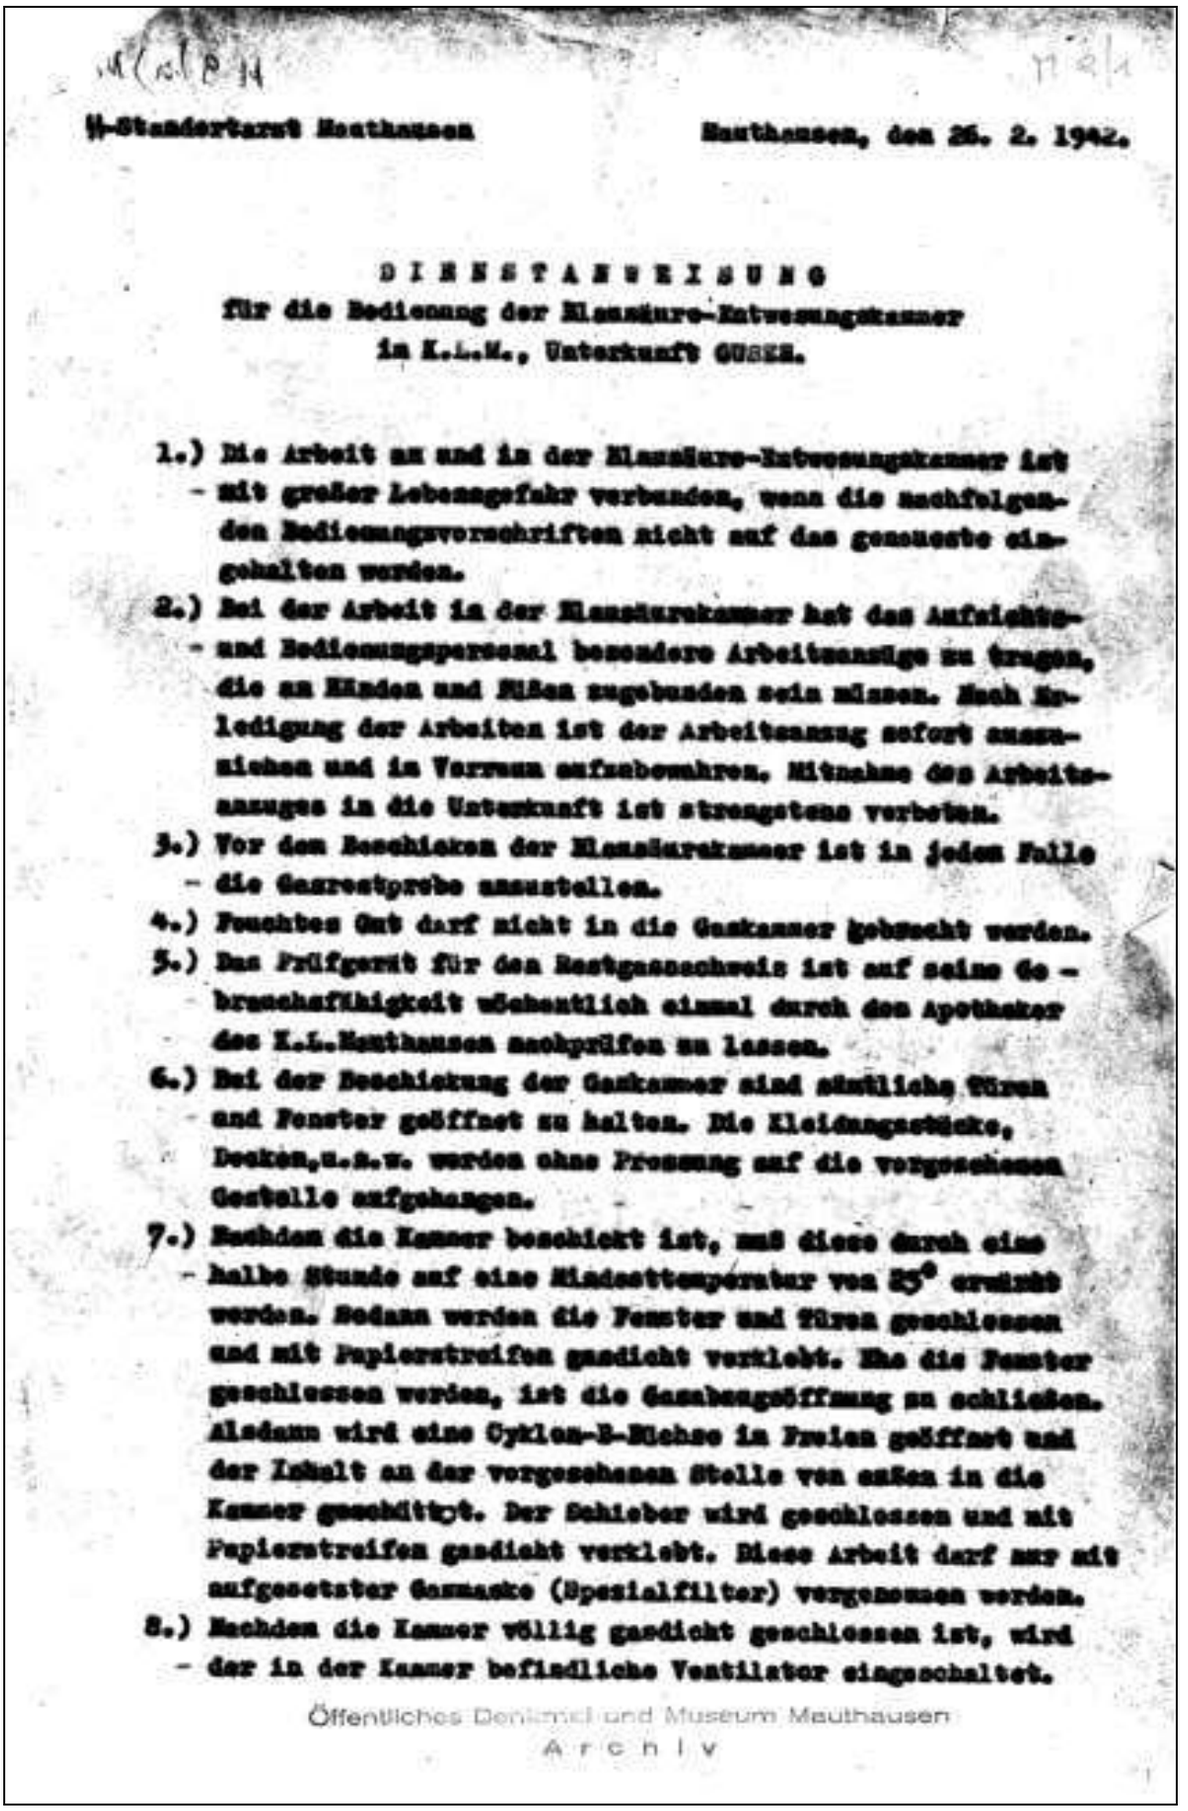
5. Gasrestnachweis. Der Papierstreifen darf auch zwischen übereinander gelegten Decken, Matratzen, und in schwer zugänglichen und schwer lüftbaren Räumen nicht stärker blau sein, als das hellste Farbmuster. Ist dies nicht der Fall, so muß die Lüftung fortgesetzt werden und der Gasrestnachweis nach einigen Stunden wiederholt werden.

6. In Gebäuden, die möglichst bald wieder zum Schlafen benutzt werden sollen, ist der Gasrestnachweis in jedem einzelnen Raum vorzunehmen. **Keinesfalls darf in einem durchgasten Raum in der auf die Durchgasung folgenden Nacht geschlafen werden.** Stets müssen die Fenster in der ersten Nacht, in der der Raum wieder benutzt wird, geöffnet bleiben.

7. Der Durchgasungsleiter oder sein Stellvertreter darf das Gebäude nicht eher verlassen, als bis auch der letzte Raum endgültig freigegeben ist.

Herausgegeben von der Gesundheitsanstalt des Protektorates Böhmen und Mähren in Prag.

Document 23 continued.



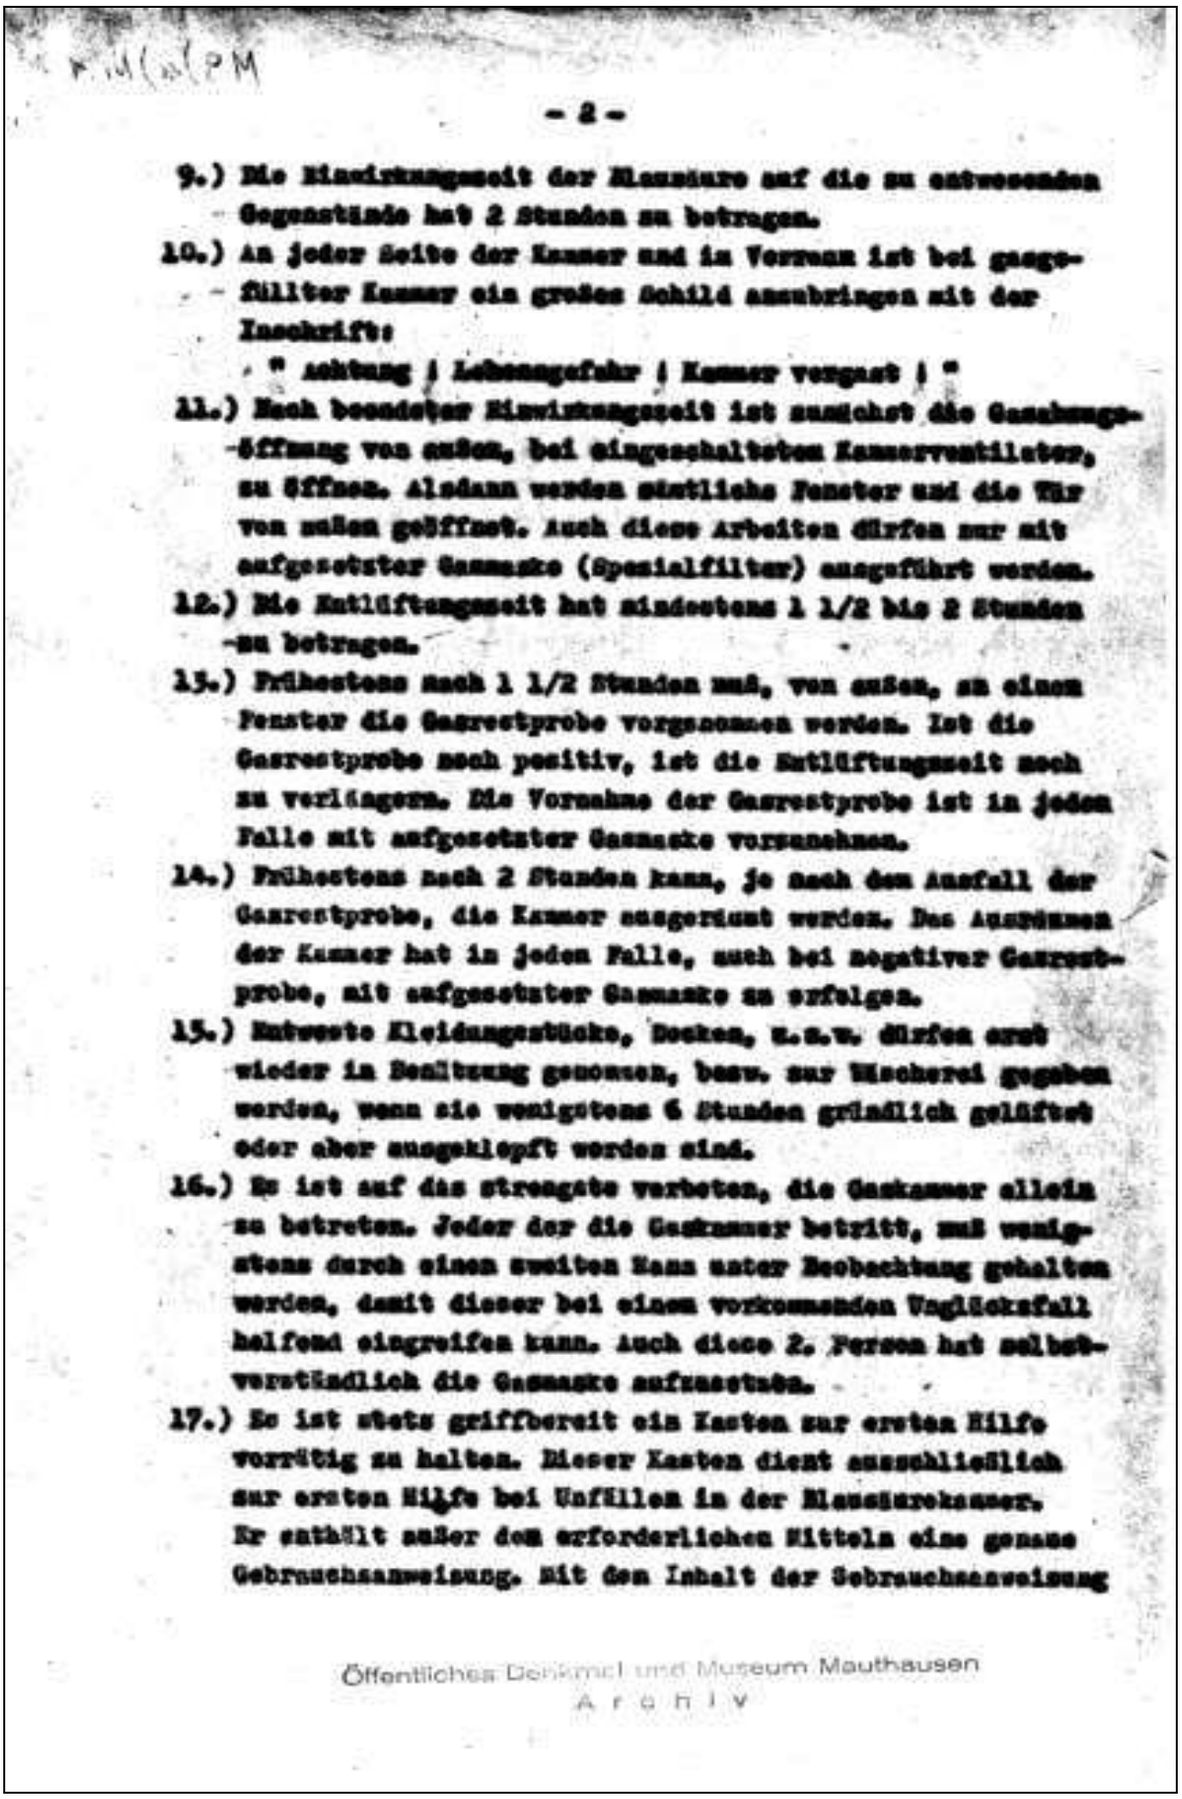
SS-Standortarzt Mauthausen Mauthausen, den 26. 2. 1942.

DIENSTANWEISUNG
für die Bedienung der Blausäure-Entwesungskammer
in K.L.M., Unterkunft GUSEN.

1.) Die Arbeit an und in der Blausäure-Entwesungskammer ist mit großer Lebensgefahr verbunden, wenn die nachfolgenden Bedienungsvorschriften nicht auf das genaueste eingehalten werden.
2.) Bei der Arbeit in der Blausäurekammer hat das Aufsichts- und Bedienungspersonal besondere Arbeitsanzüge zu tragen, die an Händen und Füßen zugebunden sein müssen. Nach Erledigung der Arbeiten ist der Arbeitsanzug sofort auszuziehen und in Verwahrung aufzubewahren. Mitnahme des Arbeitsanzuges in die Unterkunft ist strengstens verboten.
3.) Vor dem Beschicken der Blausäurekammer ist in jedem Falle die Gasrestprobe anzustellen.
4.) Feuchtes Gut darf nicht in die Gaskammer gebracht werden.
5.) Das Prüfgerät für den Restgasnachweis ist auf seine Gebrauchsfähigkeit wöchentlich einmal durch den Apotheker des K.L.Mauthausen nachprüfen zu lassen.
6.) Bei der Beschickung der Gaskammer sind sämtliche Türen und Fenster geöffnet zu halten. Die Kleidungsstücke, Decken,u.s.w. werden ohne Pressung auf die vorgesehenen Gestelle aufgehangen.
7.) Nachdem die Kammer beschickt ist, muß diese durch eine halbe Stunde auf eine Mindesttemperatur von 25° erwärmt werden. Sodann werden die Fenster und Türen geschlossen und mit Papierstreifen gasdicht verklebt. Ehe die Fenster geschlossen werden, ist die Gasabsaugöffnung zu schließen. Alsdann wird eine Cyklon-B-Büchse im Freien geöffnet und der Inhalt an der vorgesehenen Stelle von außen in die Kammer geschüttet. Der Schieber wird geschlossen und mit Papierstreifen gasdicht verklebt. Diese Arbeit darf nur mit aufgesetzter Gasmaske (Spezialfilter) vorgenommen werden.
8.) Nachdem die Kammer völlig gasdicht geschlossen ist, wird der in der Kammer befindliche Ventilator eingeschaltet.

Öffentliches Denkmal und Museum Mauthausen
Archiv

Document 24: *"SERVICE INSTRUCTION for the operation of the hydrogen-cyanide fumigation chamber in the C[oncentration]C[amp] M[authausen], GUSEN quarters." Source: ÖDMM, M 9a/1.*



- 2 -

9.) Die Einwirkungszeit der Blausäure auf die zu entwesenden Gegenstände hat 2 Stunden zu betragen.

10.) An jeder Seite der Kammer und im Vorraum ist bei gasgefüllter Kammer ein großes Schild anzubringen mit der Inschrift:

" Achtung ! Lebensgefahr ! Kammer vergast ! "

11.) Nach beendeter Einwirkungszeit ist zunächst die Gasabsaugöffnung von außen, bei eingeschaltetem Kammerventilator, zu öffnen. Alsdann werden sämtliche Fenster und die Tür von außen geöffnet. Auch diese Arbeiten dürfen nur mit aufgesetzter Gasmaske (Spezialfilter) ausgeführt werden.

12.) Die Entlüftungszeit hat mindestens 1 1/2 bis 2 Stunden zu betragen.

13.) Frühestens nach 1 1/2 Stunden muß, von außen, an einem Fenster die Gasrestprobe vorgenommen werden. Ist die Gasrestprobe noch positiv, ist die Entlüftungszeit noch zu verlängern. Die Vornahme der Gasrestprobe ist in jedem Falle mit aufgesetzter Gasmaske vorzunehmen.

14.) Frühestens nach 2 Stunden kann, je nach dem Ausfall der Gasrestprobe, die Kammer ausgeräumt werden. Das Ausräumen der Kammer hat in jedem Falle, auch bei negativer Gasrestprobe, mit aufgesetzter Gasmaske zu erfolgen.

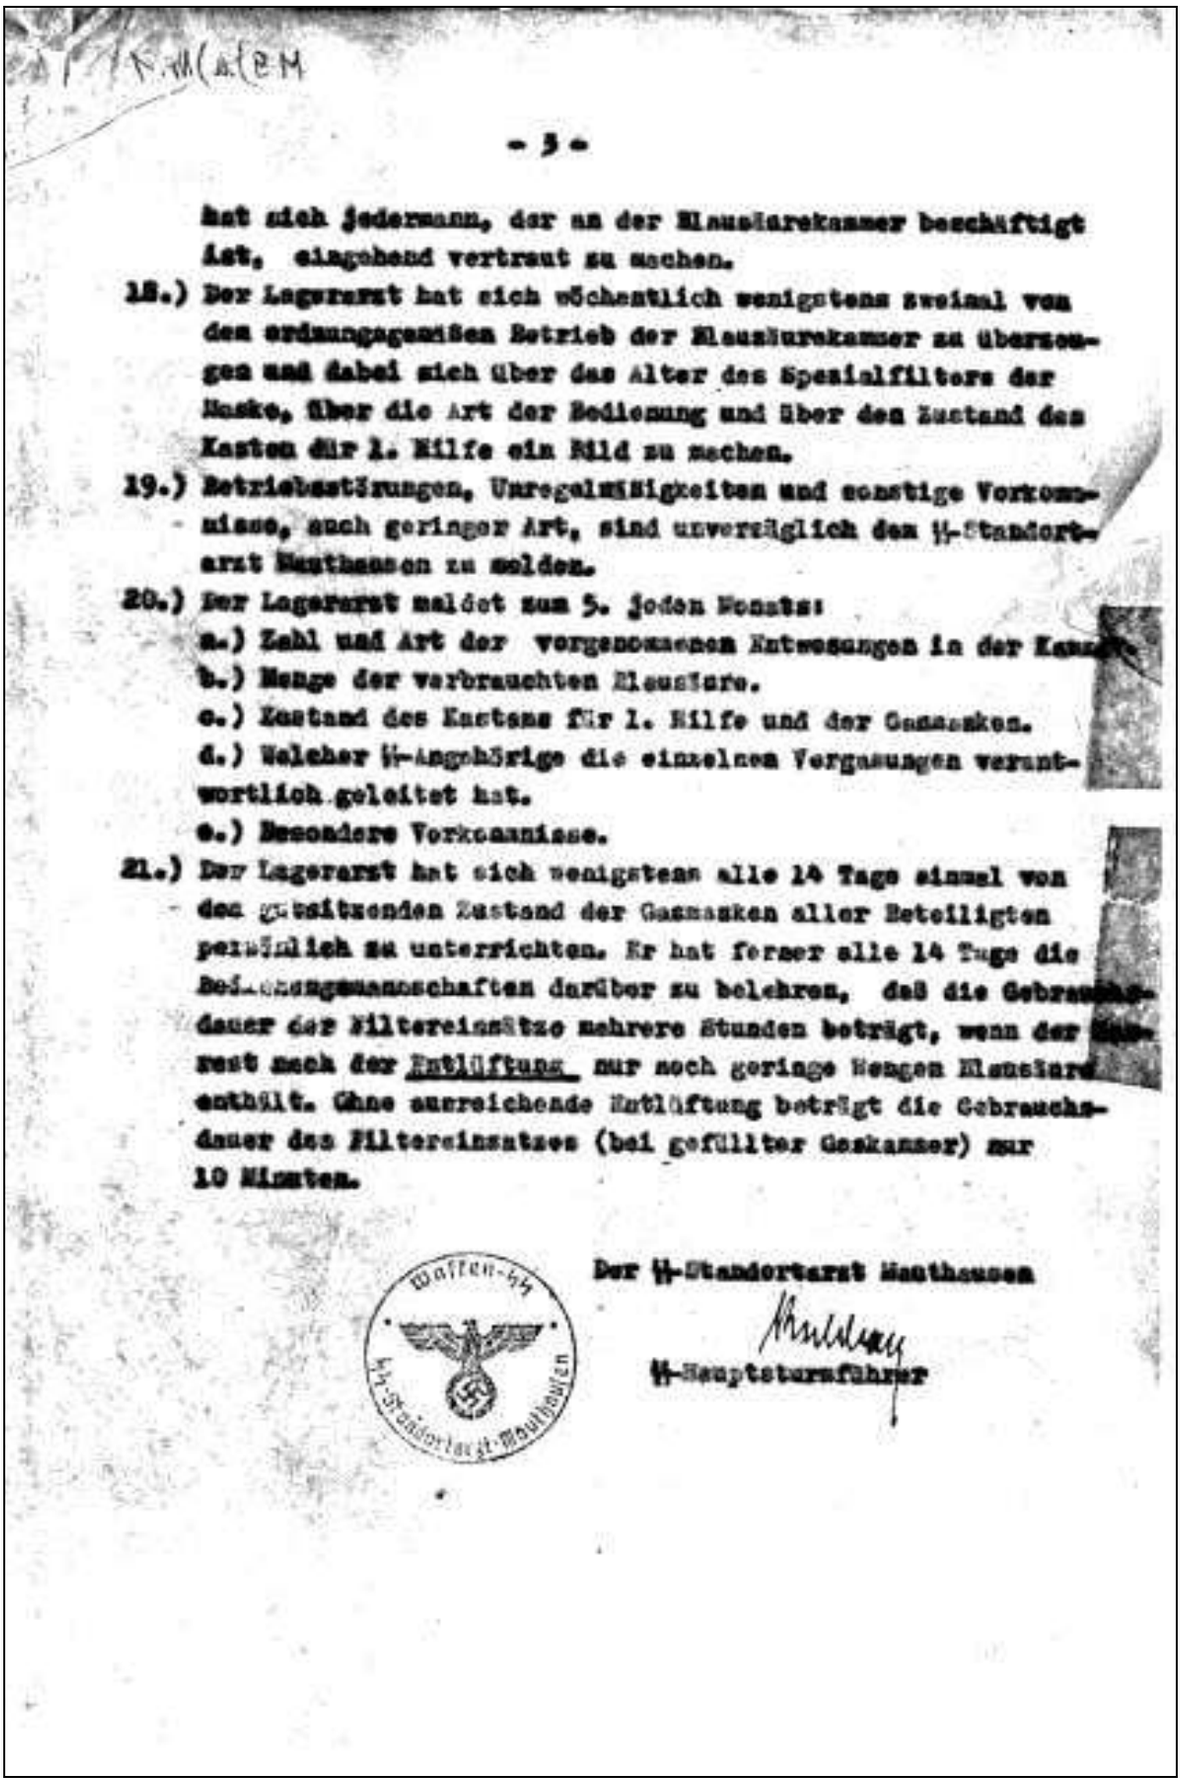
15.) Entwestete Kleidungsstücke, Decken, u.s.w. dürfen erst wieder in Benützung genommen, bezw. zur Wäscherei gegeben werden, wenn sie wenigstens 6 Stunden gründlich gelüftet oder aber ausgeklopft worden sind.

16.) Es ist auf das strengste verboten, die Gaskammer allein zu betreten. Jeder der die Gaskammer betritt, muß wenigstens durch einen zweiten Mann unter Beobachtung gehalten werden, damit dieser bei einem vorkommenden Unglücksfall helfend eingreifen kann. Auch diese 2. Person hat selbstverständlich die Gasmaske aufzusetzen.

17.) Es ist stets griffbereit ein Kasten zur ersten Hilfe vorrätig zu halten. Dieser Kasten dient ausschließlich zur ersten Hilfe bei Unfällen in der Blausäurekammer. Er enthält außer dem erforderlichen Mitteln eine genaue Gebrauchsanweisung. Mit den Inhalt der Gebrauchsanweisung

Öffentliches Denkmal und Museum Mauthausen
Archiv

Document 24 continued.



- 3 -

hat sich jedermann, der an der Blausäurekammer beschäftigt ist, eingehend vertraut zu machen.

18.) Der Lagerarzt hat sich wöchentlich wenigstens zweimal von dem ordnungsgemäßen Betrieb der Blausäurekammer zu überzeugen und dabei sich über das Alter des Spezialfilters der Maske, über die Art der Bedienung und über den Zustand des Kasten für 1. Hilfe ein Bild zu machen.

19.) Betriebsstörungen, Unregelmäßigkeiten und sonstige Vorkommnisse, auch geringer Art, sind unverzüglich dem SS-Standortarzt Mauthausen zu melden.

20.) Der Lagerarzt meldet zum 5. jeden Monats:
a.) Zahl und Art der vorgenommenen Entwesungen in der Kammer.
b.) Menge der verbrauchten Blausäure.
c.) Zustand des Kastens für 1. Hilfe und der Gasmasken.
d.) Welcher SS-Angehörige die einzelnen Vergasungen verantwortlich geleitet hat.
e.) Besondere Vorkommnisse.

21.) Der Lagerarzt hat sich wenigstens alle 14 Tage einmal von dem gebrauchsfähigen Zustand der Gasmasken aller Beteiligten persönlich zu unterrichten. Er hat ferner alle 14 Tage die Bedienungsmannschaften darüber zu belehren, daß die Gebrauchsdauer der Filtereinsätze mehrere Stunden beträgt, wenn der Raum nach der Entlüftung nur noch geringe Mengen Blausäure enthält. Ohne ausreichende Entlüftung beträgt die Gebrauchsdauer des Filtereinsatzes (bei gefüllter Gaskammer) nur 10 Minuten.

Foreword

To really understand the background of Danuta Czech's *Auschwitz Chronicle*, we need to understand the dynamics of the German-Polish relationship during the past 200 years or so. Or rather, we need to understand that dynamic for the past 1,500 years, so let me take you back in time. Actually, far back in time.

Modern gene-sequencing technique has discovered recently that around 5000 B.C., a major invasion of Europe happened coming from Asia. It brought with it a strain of the plague which was heretofore unknown to Europe. Having no immune defense against that disease, most of the then-indigenous populations of large swaths of Europe seem to have been wiped out and replaced by the Asian conquerors. Hence, what we today call "Europeans" are instead for the most part descendants of these Asian invaders. I mention this to make it clear that Europe has never been the eternal home of this or that ethnic group of peoples.

Strictly speaking, one could go even farther back in time and insist that Europe was first populated by Neandertals, which were subsequently replaced by Modern Humans (I refuse to call them Homo Sapiens, because there is little wisdom in our race…), while both groups were interbreeding to some degree. We know this, because, again, modern gene-sequencing technologies have made us understand what sets Neandertal DNA apart from Modern-Human DNA, and we see sequences of Neandertal DNA embedded in the DNA of modern Europeans (and Asians). Whatever the dynamics were that replaced most Neandertals with Modern Humans – diseases, war, higher reproductive success – the fact remains that the original human inhabitants of Europe – Neandertals – were replaced with Modern Humans.

This goes to say that complete population replacements are a regular occurrence in the history of mankind in general, and Europe in particular. The term "indigenous" is therefore relative. Apart from certain areas of Africa where evidently humans evolved, humans are actually an invasive species every-

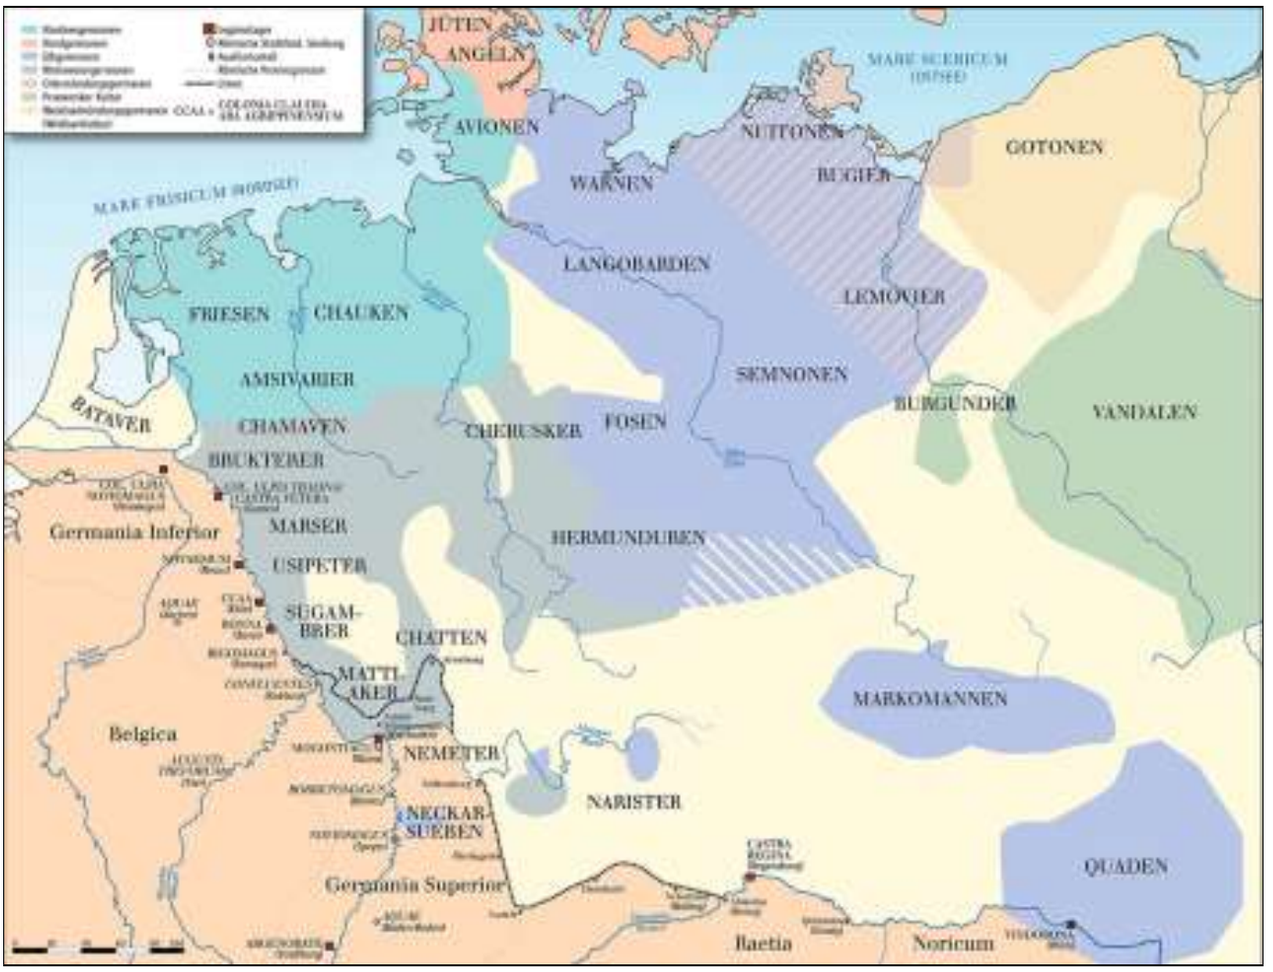

Illustration 1: Map of Central Europe around 50 A.C., showing the rough settlement areas of several Germanic tribes.

where else, not "indigenous." Seen from that perspective, the replacement of America's first set of "indigenous" people by European invaders by means of diseases, war and higher reproductive success starting in the 17th Century is just one more chapter in the long sequence of similar events in human history.

The modern history of the area which today we call Poland and Germany is no exception to that rule. Not being marked by any kind of natural borders, ethnic, political and cultural "borders" have always been shifting forth and back in that region.

In recorded history, the first noteworthy event was the so-called Migration Period that started sometime during the 4th Century A.C. and lasted well into the 6th Century, triggered to some degree by pressure exerted by Huns invading Europe from the east, but also by the deteriorating Roman Empire that started making alliances with Germanic warlords in an attempt to stabilize the western part of the Empire. Without going into details, it is safe to say that earlier assumptions of a "peoples' migration," where entire Germanic tribes set out to migrate west and south, bringing about the collapse of the Roman Empire, are no longer considered to be true. It is far more likely that the Germanic tribes stayed for the most part where they were; that some groups decided to emigrate to the greener pastures of the Roman Empire, and that some

Germanic warlords took advantage of Roman weakness to wage war against Rome, or to form alliances with Rome in order to gain control and power with Rome's consent. Either way, most of the members of the Germanic peoples living in Central Europe were still there when this migration period ended.

The map on the previous page shows the settlement areas of several Germanic tribes around 50 A.C. We see that the Vandals used to reside in what is today's central Poland, whereas the Gotones are thought to have settled in the area later called Eastern Pomerania, West and East Prussia. Central Germany – today's Western Pomerania, Mecklenburg, Brandenburg, Saxony and Thuringia – was the home of a number of related Germanic tribes.

After the collapse of the Roman Empire and the end of the Migration Period, we enter a few centuries without much of any written record as to what was going on in Central Europe. By the time Charlemagne conquered parts of what is today's western Germany (mainly Saxony), the map had changed. When Charlemagne's short-lived Frankish Empire disintegrated, the precursors of today's Germany and France emerged, with Germany being limited to an area which coincides roughly with what was to become Austria and West Germany after World War II. The peoples living in what is today's East Germany and Poland were to a large degree linguistically no longer Germanic, but Slavic, although they were not organized in any way as independent political units, if at all. In the ensuing century or two, the territories between the Rivers Elbe and Oder, which were already tributary territories during the Frankish Empire, were subsequently incorporated into what was the precursor of Germany. Poland entered the political scene in the late 10th century, and this is where the history of German-Polish relationships starts. I will not discuss here any of the many petty conflicts between the various dukes, kings and emperors of both nations, as they had little impact on the people. Let me explain why.

During those ages, political rule had little if anything to do with ethnic commonalities. To put it simply, rulers expected their subjects to pay taxes and to serve in an army, if requested, but no one ever interfered with what languages people spoke or what cultural traditions they followed. Religious associations were important – people were converted to Christianity with fire and sword if needed – but since there was neither any centralized educational system in place nor any kind of structured public administration, language simply didn't play any role. The Church spoke Latin for many centuries to come, and any kind of official government business was also conducted in that old Lingua Franca in most European countries. Hence, whether a person spoke Sorbian (a western Slavic language) or Saxon (a northern German dialect) made no difference to any official. The idea of nationality, ethnicity and language became important to European rulers only during and after the Napoleonic Wars, when the European nobility needed to obtain popular mass support for their wars against unified and nationalized France.

Illustration 2: Settlement areas of various Prussian tribes in the 13th Century in what was later to become West and East Prussia.

Now back to the Polish-German nexus. Two decisions of members of the Polish nobility had a major impact on that relationship. The first was the decision of the Polish Piast Dynasty in Silesia toward the late 12th Century and throughout the 13th Century to invite settlers to their region, which consisted to a large degree of uninhabited, forested lands. Many German settlers followed this call, many of them from Frankonia (today's northern Bavaria); among them also my paternal ancestors (to this day, the last name Rudolf (with an F) is most-common exactly in Frankonia). They settled in an area whose major town is named after the settlers: Frankenstein (yes, the infamous one, but it has no castle). Within two centuries, the population of Silesia grew by a factor of ten, partially by immigration, partially by the economic and thus also reproductive success of the new settlers. By the 14th Century, Silesia was dominated by the new settlers. It was turned from a thinly populated Polish area to a densely populated German area. That development was sealed with the 1335 Treaty of Trentschin, with which the Holy Roman Emperor (who was elected from among and by the German kings) waived all claims to Polish territory, while the Polish king waived all claims to Silesia "for eternity." Subsequently, major parts of the border between German Silesia and Poland were among the most-stable borders in Europe for many centuries.

The second decision was made in 1226 by Piast Duke Konrad I of Masovia, when he asked the Teutonic Order for help in his attempt to conquer the

pagan, Baltic-speaking Prussian tribes living in what was later to become West- and East Prussia (see Illustration 2). They had resisted Christianization and conquest by the Polish Duke for many years. The Teutonic Order, which had been formed to conduct the infamous Crusades to the "Holy Land," was already in control of the regions just west of the Prussians' territory. The knights made short work of the Prussians, conquering and christening them in quick succession with fire and sword, later expanding that outreach all the way up to the Gulf of Finland, hence conquering what was later to become Lithuania, Latvia and Estonia in the process.

The dominance of the Teutonic Knights in this part of Europe came to an end after they lost a major battle against a combined Polish-Lithuanian army in 1410, and then again some 40 years later, after which the Teutonic Order could maintain control only over East Prussia, except for a sliver of land in the midst of it that was controlled by Poland (the Ermland). At that point in time, the Holy Roman Empire's (that is to say: mostly German) control over most of Europe was dwindling, whereas Poland rose to a major power in Europe. This era came to an end in the late 18th Century, however, when a lack of firm leadership made the Polish state a victim of its neighbors, who carved it up in the so-called Partitions of Poland between 1772 and 1795.

Again, I must emphasize that none of these aristocratic, military or nobility reigns over a certain region or people had much of an influence on how the people organized their lives, what cultural traditions they followed, and which languages they spoke. Shifts in what languages people spoke were mainly driven by reproductive success and by economic developments. If you lived in a region where being able to speak German, Polish or Lithuanian was advantageous for economic success, then that's what people did.

All this changed when Napoleon's armies swept through Europe. Napoleon reestablished a Polish state after he defeated the Prussian army and invaded Russia, but that was not to last. With Napoleon's retreat from Russia and Germany, all Polish territories briefly assigned to a Polish state were once more gobbled up by Prussia, Russia and Austria. This time, however, nationalism had been awoken among Europe's nobility, among the political, financial, economic and intellectual elites as well as to one degree or another among the common people. Both the administrations in Prussia and Russia introduced policies in their territories mainly inhabited by Poles exerting pressure to become good German or Russian citizens, respectively. When Germany got united in 1871, triggering a wave of German nationalism, Germany's policy toward its Polish minority radicalized: All schools in Germany had to teach all topics in German (except religion), schools in areas with a Polish majority included. German became mandatory for all matters of state in the judicial, legislative and executive branches. Though this pressure to use German as the language never reached any level that could be called persecution, the Polish minority was not pleased, to put it mildly. This "gentle" way of forcing the as-

similation of a minority is quite common among nations occupying minority areas. France has been doing this in Alsace, and Italy in Southern Tyrol, for instance. To cut this long story short: self-determination was denied the Polish minority, and that was going to backfire on the Germans later.

A little over 100 years later, at the end of World War I, things were going to be put to the test. Although Germany had created a Polish state, a "monarchy," already during the war, giving it the ethnically Polish territories once occupied by Russia but not an inch of the ethnically Polish territories occupied by herself, this construct was just as short-lived as Napoleon's creation had been.

In late 1918, Germany accepted the armistice conditions as suggested in Woodrow Wilson's 14-Points Program, which, among other things, promised self-determination for the peoples of Europe – or rather only to those that were controlled by the Central Powers. Had these conditions been kept, Germany had little to fear. But such was not meant to be. As soon as Germany and her allies laid down their weapons, the other belligerent powers were supposed to do the same, but instead they used their weapons to force a peace onto the Central Powers that had little to do with self-determination. Instead, they started carving up the Central Powers' territories without ever asking most of the populations involved whether they agreed with it. Alsace-Lorraine was given to France – without any plebiscite (and with the subsequent expulsion of some 100,000 Germans who had migrated to that area since 1871). The Eupen-Malmedy area was given to Belgium – without any plebiscite. Southern Tyrol was given to Italy – without any plebiscite (and facing Mussolini's aggressive assimilation policies, some 75,000 Germans left the area by 1943). Southern Carinthia was given to a never-before-seen, unstable country named Yugoslavia – without any plebiscite. The city of Ödenburg was given to Hungary – without any plebiscite. The entire area of Bohemia, Moravia and Slovakia was integrated into a never-before-seen, unstable country named Czechoslovakia – without any plebiscite (resulting in the later Sudetenland Crisis and the ultimate disintegration of that state). Most of West Prussia and the Posen/Poznan Province were given to Poland – without any plebiscite (a plebiscite in the Posen/Poznan area might have been the only one which the Germans might have lost).

The only areas that did see plebiscites were: a) the border area between Denmark and Germany – and its fair result was honored by all sides; and b) some areas claimed by the new Polish Republic: a few eastern counties of West Prussia, southern East Prussia, and Upper Silesia. But here, things didn't develop as anticipated. In particular in Upper Silesia, things got out of control. In fact, as soon as Germany laid down her arms at the end of World War I, Polish paramilitary units picked up their weapons in an attempt to conquer the Posen Region as well as Upper Silesia, a much-coveted war booty due to its rich coal mines and metallurgic industries. The new Polish government was

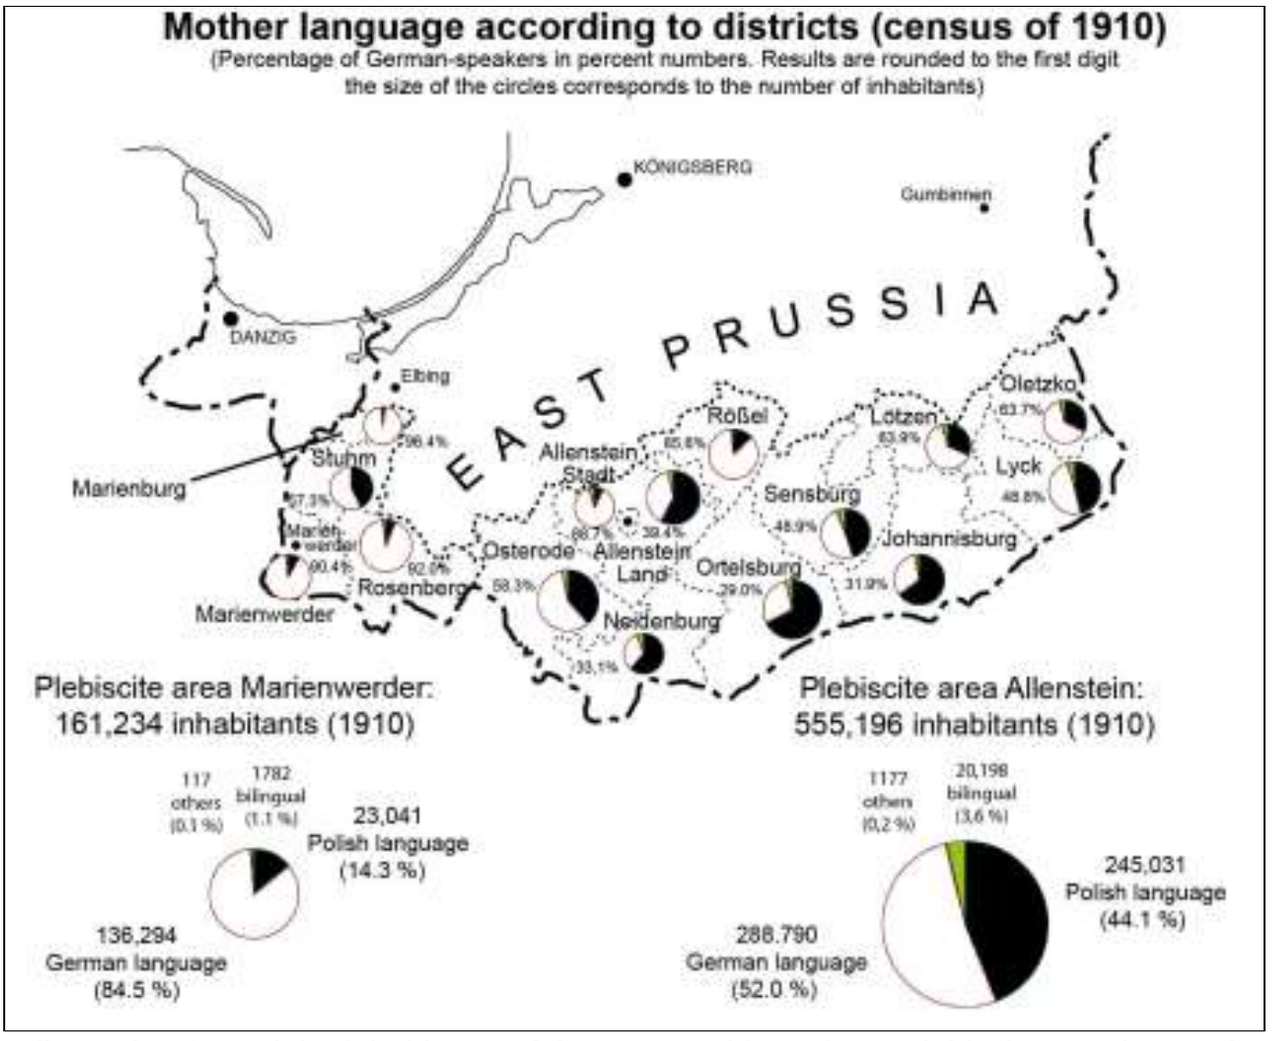

Illustration 3: Had the inhabitants of the areas subjected to a plebiscite voted according to their declared primary language, Poland would have obtained parts of southern East Prussia.

hell-bent on getting their hands on this area, and it did everything to bully the local population into voting for Poland in the upcoming plebiscite, which was held only in March 1921, hence more than two years after the end of the war. This campaign to gain control included armed "uprisings" of Polish paramilitary units led by Wojciech Korfanty and supplied with weapons by the Polish government, meaning that the Polish side tried to force a separation of these areas from Germany by waging an outright war on the local population, resulting in something very close to an undeclared war between the two nations' paramilitary forces. When the plebiscite was won by Germany in Upper Silesia (only a few counties in the very southeast had Polish majorities) and the Poles feared never gaining control of areas they wanted, they staged another "uprising." In the end, to assuage the Poles, the areas with the most important coal mines were ceded to Poland, although even some of them had voted for Germany.

The situation in East and West Prussia was not quite as heated, since the greater part of West Prussia was never to see any plebiscite, because Poland claimed that this area was mainly inhabited by Poles, and because Wilson's 14

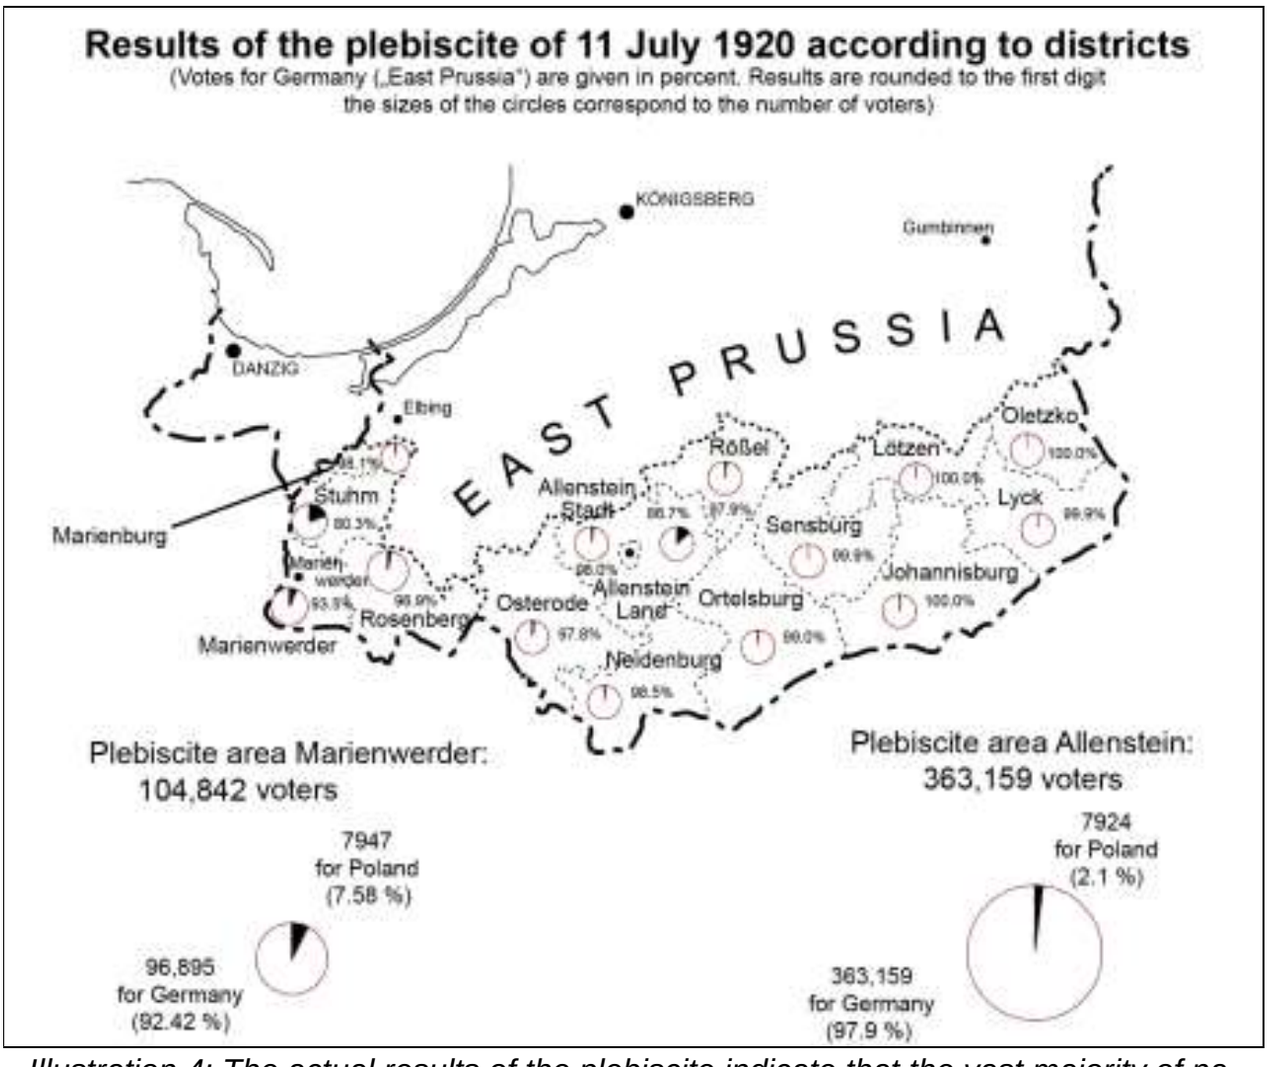

Illustration 4: The actual results of the plebiscite indicate that the vast majority of native Polish speakers still preferred living in Germany rather than seeing their home region transferred to Poland.

Points had promised Poland access to the Baltic Sea, which allegedly required the formation of a corridor through German territory, no matter what the local population thought about it. Furthermore, Poland had hoped that the population in the areas of West Prussia and southern East Prussia (Masuria) would vote for Poland, as it was inhabited to a considerable degree by people whose primary language was Polish according to a 1910 German census (see illustration).

When the actual votes came in after the July 1920 plebiscite, however, even the Germans were stunned. For instance, the inhabitants of the County of Ortelsburg in southern East Prussia, some 70% of whom had declared Polish as their primary language only ten years earlier, voted 99% for Germany. The situation was similar in West Prussia. Here, the County of Marienwerder, the west-most county to ever see a plebiscite which had a self-declared Polish-speaking minority of some 10%, saw 93.5% of all voters cast their vote for Germany.

An exception from this ongoing tussle between Germany and Poland over these territories was the City of Danzig, which was to serve as Poland's access

port to the Baltic Sea. This city, which had been dominated by Germans for centuries – no matter who the ruling power was – had a minority of only some 2% of native Polish speakers in 1910. Had a vote been cast there, it could easily have resulted in 99.9% votes for Germany. Under these circumstances, the League of Nations decided to separate the city with generous surrounding areas from Germany, yet instead of giving it to Poland, it was put under the administration of the League of Nations, which never had any real power to begin with. This impossible situation was to become the focal point around which World War II would ignite twenty years later.

The second Polish Republic of the inter-war years was a dictatorship that was never seriously interested in having any plebiscites. It acquiesced to the Western Powers' decision in this regard only disgruntledly. Where these constraints of international power politics were missing, they showed their real faces: concurrent with the plebiscites on its western borders, Poland started a massive war of conquest on its eastern border by invading the fledgling Soviet Union, then still embroiled in a massive civil war. Poland "got lucky," because the Soviet Union was weak at the time, so in the end, large swaths of Belorussian and Ukrainian territories, inhabited only by a usually weak Polish minority, were taken from the Soviet Union, and integrated into inter-war Poland – without ever having any plebiscites there. Needless to say, the Poles didn't make friends in Moscow with this move, which later came back to bite them when Stalin and Hitler agreed to partition Poland once more in 1939.

As soon as its borders were notionally consolidated, Poland went on a mission to turn its new territory into an ethnically monolithic country. Any Lithuanian, Belorussian, German, Jew or Ukrainian disagreeing with assimilating and being a good Catholic Pole felt the pressure rising. The declared aim was to drive out anyone who did not want to assimilate. The ultimate goal was to undermine any potential future claim of any neighboring country for a border revision, which could be bolstered by the fact that foreign nationals were living in areas formerly controlled by that country. The situation was therefore particularly serious for Germans residing in once-German regions, particularly in West Prussia. Legal as well as extra-legal measures by Polish society to alienate them to the point where the only reasonable option was emigration to Germany were increasing. Already in 1921, there were a few riots against Germans, and by the end of that year, almost 50% of the German-speaking residents in Poland had left the country and moved to Germany. As US-American historian Richard Blanke put it (pp. 64f.):

> *"In many respects, Poland's treatment of its German minority* [initially] *resembled Prussian Polish policy before 1918: harassment of political organizations and the minority press, undermining of minority schools, attacks on the minority's land property, and economic discrimination by the state."*

In the meantime, Polish foreign policy tried numerous times unsuccessfully to persuade France to join them in a "preventive" war against Germany, trying to obtain even more territories from its neighbor up to the Rivers Oder and Neisse. Poland's threatening stance increased when Poland's leader Marshal Józef Piłsudski died in 1935 and was replaced by more-aggressive politicians. The culmination point was reached after Great Britain gave its infamous blank check to Poland in late March 1939, promising to fight alongside Poland in "any action which clearly threatened Polish independence," even if that was a Polish aggression against Germany leading to a conflict between the two nations. The Polish media subsequently stirred up an anti-German hysteria in Poland which led to an escalation of assaults against ethnic Germans and their institutions, leading to a mass exodus of many of the remaining Germans from Poland in the summer of 1939. Talk about a swift war against Germany, accompanied by threats against the German minority in Poland, was rampant in the Polish media. All attempts by Germany to negotiate fell on deaf Polish ears. When war finally broke out, German units advancing into Poland discovered many cases where members of the German minority had been murdered by Polish mobs during what can only be described as a country-wide pogrom. The most prominent of them was the so-called Bromberg Bloody Sunday.

What I have reported so far is information that can be found in standard sources accessible to all. Even a search of Wikipedia will confirm the things I have written here. They are not contentious. When it comes to events during the German occupation of Poland, opinions diverge, however. An uncontested fact is that National-Socialist Germany did not care about plebiscites either if they could get around them by way of force. They displayed that attitude clearly when occupying Czechia in early 1939, and they showed it again in Poland. While Hitler's Germany made multiple suggestions to have plebiscites in the Corridor during peacetime, once the Germans ruled the area starting in September 1939, they never bothered asking anyone whether their rule there was welcome. In addition, Germany annexed areas south of East Prussia that had never been inhabited by any significant number of ethnic Germans. Next, the policies implemented in the "recovered" territories and the newly conquered ones were designed to reverse and supersede the results of the Polish inter-war policy of ethnic pressure aiming at clearing the area of Germans. This time, Poles were resettled out of these areas, and Germans who had once resided there, plus new ones, where settled in it again. This much is uncontested.

What is contested is the number of Polish civilians who perished during the war. Mainstream sources parrot the Polish claim that Six Million Died. Yes, you read that right. The claimed victim number is the same as that claimed for Jewish victims of National-Socialist Germany, its foundation is just as shaky, and its use to justify claims against Germany and to instill an eternal feeling of

guilt and repentance in Germans is exactly the same as well. Here, Polish and Jewish interests and agendas in historiography coincide.

There are two problems with the death toll. The first is that half of this death toll is said to have been Jews living in Poland. I will not discuss the shaky foundation of that claim here. The other half is based on the claim that Poland in its present-day borders lost three million people compared to the population that lived there before the war. The problem is that large swaths of what is today's Poland weren't Polish and weren't settled by Poles up to the end of the war. These were German provinces settled almost exclusively by Germans who fled or were expelled from these lands at war's end or shortly thereafter (East Prussia, East Pomerania and Silesia), many of them dying in the process. These aren't Polish victims of war, but German victims of Polish ethnic cleansing (see O. Müller 2003 for details).

Which brings us to the immediate post-WWII era. During the Potsdam Conference in the summer of 1945, the Allied victors hammered out a basic agreement on what to do with Germany. First, Germany was defined as being the country in the borders of 31 December 1937, hence before the territorial gains that it won after this date (Austria, Sudetenland, Memel Region). Then, in Section XII. of the Conference Agreement about "Orderly Transfer of German Populations," we read:

> *"The Three Governments, having considered the question in all its aspects, recognize that the transfer to Germany of German populations, or elements thereof, remaining in Poland, Czechoslovakia and Hungary, will have to be undertaken. They agree that any transfers that take place should be effected in an orderly and humane manner."*

Keep in mind that the German populations "remaining in Poland" had to be transferred, that Germany had been defined in the borders of 31. December 1937, and that the areas of that very Germany east of the so-called Oder-Neisse-Line were put only "under the administration of the Polish State" (Point VIII.B. of the Agreement), but "ending the final determination of Poland's western frontier" were not a part of Poland proper – yet. Hence, strictly speaking, if taken literally, this agreement did NOT imply that the German population living within Germany of 1937 but east of the Oder-Neisse Line was to be expelled. But that is exactly what subsequently was done. My father and his family were expelled from their century-old home in Frankenstein County in 1946, together with millions of other Germans in Silesia – remember the Treaty of Trentschin: Poland waived all claims to Silesia "for eternity" – Eastern Pomerania, West and East Prussia (although the vast majority of Germans had already been evacuated from East Prussia at war's end).

Compared to the bestial mass slaughter that broke out against ethnic Germans in Czechia and in Slovenia at war's end, costing the lives of hundreds of thousands of Germans, the ethnic cleansing taking place in the eastern Ger-

man provinces was relatively "humane" – if any ethnic cleansing can ever be humane, and considering the fact that millions were expelled with not much more than what they could carry, to more-westerly regions of Germany that were devastated, in utter ruins, starving and stricken with epidemics. Many died of exhaustion and hunger simply because under the prevailing circumstances a safe journey was impossible.

Those Germans who decided to stay behind – or the roughly one million Germans of the Upper Silesian Industrial Area who were kept behind because their expertise in running the factories was needed by Poland – had to assimilate quickly or experience harsh treatment by their new Polish masters. In fact, camps formerly established by the National Socialists to incarcerate criminals, dissidents, persecuted minorities and PoWs, were taken over by the new Polish masters and used to incarcerate Germans unwilling to bend to the will of their new masters. John Sack has aptly reported in his book *An Eye for an Eye* about these Polish extermination camps where thousands of Germans perished. Anyone speaking German in what the new Polish residents considered their new homeland was in danger of being robbed, raped, murdered or thrown into prison. German Jew and Holocaust survivor Josef G. Burg has reported what he experienced in Silesia's devasted capital Breslau in early 1946 when passing through on his way to a displaced-persons' camp near Munich (Burg 2018, pp. 81f.):

> *"The city was horribly destroyed.* […] *Hate was now not only preached but also practiced. The nights were eerie. Again and again, we heard shooting and people screaming for help. Thefts, robberies and murders were the order of the day. Most of the time, when people inquired, they were told: It was only a German who was shot! And nobody cared.* […]
>
> *I went for a walk with my family and some acquaintances in the ruined alleys of the city. It was January 1946, and of course we were talking in Yiddish. Suddenly some half-naked children rushed out of a hole in the ground and ran across the wet snow towards us. Crying, they asked us for something to eat.*
>
> *In the first moment I had recoiled. But then I understood immediately, because the children spoke German. The war had spared them, and like animals they had hidden in caves, where they now led an indescribable life. They thought our Yiddish was German. They thought they were Germans.*
>
> *But before I could react, one of my companions gave one of the children a brutal kick, so that the girl – who might have been six years old – fell to the ground. My wife, who essentially did not share my views, intervened* […]. *While my wife busied herself with the children, I went to the nearest bakery store and bought a bag full of rolls to take to the half-starved kids."*

Post-war Poland was in a fever pitch to ethnically cleanse its own territory and also the newly conquered eastern German territories of millions of ethnic Germans. The pogroms that had started at the outset of the Second World War

became a steady feature of the daily lives of Germans living under Polish rule for the first several years. Whoever was German and stayed, had only himself to blame. Those who could speak Polish, could blend in. Those who couldn't or insisted on speaking German had it coming. Although speaking German in post-war Poland was never officially banned as far as I know, speaking German sure led to severe reactions among the new Polish masters. They went to great lengths to wipe out anything that reminded them of the centuries-old German history of the newly conquered territories. Monuments were destroyed; gravestones removed or their German inscriptions chiseled off; archives and all kinds of records in courts, municipal and regional administration centers, churches, media outlets, companies etc. were either locked away in basements or simply thrown away or burned. All this happened under the mendacious slogan that these old Polish territories had finally been recovered after centuries of German oppression…

In other words, like almost all the nations victorious over Germany, Poland was caught up in a post-war anti-German genocidal frenzy. Any claim of German atrocities fueled that fire and was welcomed by the new system that was looking for any excuse to blame the Germans for just about anything, so that they had a "justification" for their policy of ethnic cleansing. At the end of the day, however, the new Polish masters were well aware of the heinous crimes they were committing. Never before in recorded history had such a robbery of territories in conjunction with such a massive ethnic cleansing happened on such a scale and scope. How could any straight-thinking person ever think they could get away with it?

While it is true that Germany's occupation of Poland during the war created victims and caused quite a lot of damage, this does not justify turning Germans into victims after the war. Two wrongs don't make a right.

The West-German governments of the first two decades after the war certainly saw it that way, and they insisted that Poland should not get away with this robbery. In fact, except for the communist party, all of West Germany's political parties, from the socialist SPD to the conservative CDU, insisted during the first several national West-German election campaigns that those robbed German territories must be recovered. At least that is what they told their voters. During those years, a good 15% of them were expellees from East Germany and Eastern Europe. But considering that the world was locked in a Cold War with both sides armed to the teeth with nuclear weapons, with Germany emasculated and divided right in the middle of this worldwide confrontation, there was never a realistic chance of anything being given back to any part of Germany.[1] But hindsight is always 20/20. Back then, people simply

[1] As a matter of fact, in the mid-1980s, when the Soviet Union faced bankruptcy, Mikhail Gorbachev offered to sell the northern part of East Prussia, which had come "under Soviet administration" after the war, for a billion deutschmarks to West Germany, but Bonn turned down that offer. Considering that this enclave now sits like a festering Russian thorn in the midst of NATO and

could not (or did not want to) imagine that such a huge injustice could ever be accepted.

The Poles, as extremely nationalistic as they were back then, certainly could not imagine that the Germans would ever accept this kind of treatment. No Pole would ever consent to such a treatment of their nation, so why would a German?

The Germans eventually consented, and here is how this came about:

In the toxic, violently anti-German climate in Poland of the immediate post-war period, the new Polish-Stalinist regime held trials against many Germans who were accused of all kinds of wartime atrocities. Given all the circumstances, these trials could not be anything else but Stalinist show trials. Guilty verdicts were pretty much inevitable, no matter the charges. The West-German judiciary was well aware of the unreliable nature of these Stalinist courts' findings, so no West-German court or prosecutor's office initially asked for help by any communist country's institutions for West-German criminal investigations against Germans accused of having committed atrocities during the National-Socialist era. That changed, however, during 1958, when the International Auschwitz Committee lobbied to open criminal investigations against Wilhelm Boger, a former employee at the Political Department of the Auschwitz Concentration Camp. The International Auschwitz Committee was a Polish-communist propaganda organization established in 1952 with its headquarters in Krakow, but because back then not many in the West took anything coming from a Polish-communist organization seriously, they established a General Secretariat in Vienna in neutral Austria. (Tellingly, its headquarters are now in Berlin.) From Vienna, the communist and Auschwitz survivor Hermann Langbein spearheaded a campaign launched in 1958 to initiate a major trial in West Germany against former members of the Auschwitz Camp's SS garrison (see Rudolf 2003). It is safe to say that Langbein was coordinating these attempts closely with his puppet masters in Krakow and Warsaw.

Once the investigations against Wilhelm Boger were officially opened in August 1958 – and soon were expanded to include many more defendants – the Poles set out to prepare a series of documents of grave importance: Danuta Czech at the Polish Auschwitz Museum used the records available to her to write a day-by-day account of what the Polish-communist authorities wanted the world to believe happened in the Auschwitz Camp during the war. She was to create a streamlined account supporting the findings already "established" by the show trials at war's end, foremost the Krakow Trial against former Camp Commandant Rudolf Höss, and the Warsaw Trial against other members of the Auschwitz camp garrison. This streamlined account was pub-

EU territory, I guess Berlin thinks differently about this today, but it is unlikely that Russia will ever repeat that offer…

lished both in Polish and right away also in a German translation. To do this, the Auschwitz Museum actually created its own German-language periodical called *Hefte von Auschwitz* (see Czech 1959-1962, 1964a&b). While German as a language was factually, if not legally, banned in all areas under Polish influence, and while speaking German in Poland in the immediate post-war period could spell doom and disaster for the offender, in the midst of all this anti-German frenzy we find the Polish government in conjunction with one of its museums issuing a German-language periodical. How can we explain that?

The smoking gun clearly points to this project aiming at decisively influencing the expected upcoming Auschwitz Trial soon to be held in West Germany. And indeed, if we read the records of the Frankfurt Auschwitz Trial, references to Czech's *Hefte von Auschwitz* can be found there, and they even served as evidence; in fact, Danuta Czech herself appeared as an expert witness during that trial. But more importantly, it can be assumed that the record Czech created was used to "instruct" Polish witnesses before traveling west to testify in Frankfurt, making sure that they all delivered a coherent story in line with what the Auschwitz Museum's officials had ordained to be "the truth." That this massive manipulation of Polish witnesses happened, indeed, was revealed during the trial itself, as I have reported elsewhere (Rudolf 2019, pp. 110).

The strategy behind this was to force the Stalinist propaganda version of what happened at Auschwitz (and also elsewhere during other, later trials) down the West-German judiciary's throat, establishing it as the only acceptable narrative. Making the West-German judiciary confirm the veracity of the enormous claims made by Polish historians (with the support or even at the behest of many Jewish historians, to be sure) would put a gigantic Mark of Cain onto Germany, an admission of guilt of such preposterous enormity that anything which happened to Germany and the German population at war's end and thereafter could only be seen as a well-deserved punishment for unfathomable crimes. It was the continuation of the war by the means of psychological warfare. It was what the Germans call "*Raubsicherungspolitik*" – literally Robbery-Securing Policy, a policy designed to secure the spoils of history's greatest robbery ever, the annexation of East Germany by Poland, and the ethnic cleansing of its German population.

It worked. The Frankfurt Auschwitz Trial proved to be a watershed event in German history. After it, a deluge of similar trials followed, continuing to this very day against 100-year-old geriatrics, all following the same script of the Stalinist show trials of the immediate post-war period. It turned a once-proud German nation into a nation of self-flagellating spineless creatures who agree that all that was done to them during and after the war – carpet bombing, mass murder of "disarmed enemy forces," mass deportations to Siberia, ethnic cleansing, starvation policies, dismantling of Germany's industrial equipment, robbery of its patents – was a just punishment for all the crimes al-

legedly committed during the war. In fact, some self-hating Germans insist that the only atonement befitting the German nation's crime of "the Holocaust" is for them to disappear forever from the face of the earth: "Germany, you have done enough for mankind; now disappear!" In the face of Hitler's (alleged) crimes, implementing any policy aiming at the preservation of the indigenous German population and culture is generally considered utterly unthinkable. Today's demographic collapse of the indigenous German population, which will cease to exist in just a few generations more, is a logical consequence of this.

If there were tens of millions of a Polish surplus population, they could now take over the rest of Germany, and Poland could celebrate its ultimate victory over its western neighbor! The only problem with that is that there is no Polish surplus population. In fact, with spreading their Stalinist wartime propaganda, the Poles poisoned the well for all European populations the world over, their own included. None of them has any ability to implement any policy of cultural and ethnic self-preservation, for whoever wants to follow such a policy, is called a Nazi by his opponents, and that's the end of that… Hence, Poland's indigenous population is undergoing the same demographic collapse as Germany's; and Italy's; and Greece's; and Spain's; and, and, and…

In the age of the Pill, population and civilization collapse is the true big challenge of Europe (and soon other areas of the world as well). While Europe is paralyzed by the aftereffects of wartime propaganda, millions of immigrants mainly from Africa and the Middle East are slowly but surely taking over the entire continent. Within a century or so, the rest of the currently indigenous European population will be pretty much completely replaced with the new immigrants, with some of the old inhabitants interbreeding with the newcomers, just like it happened to the Neandertals. Europe's history repeats itself, only this time, unlike in previous prehistoric instances, we know the reasons for this population exchange.

Danuta Czech's mis-chronicling of Auschwitz is one of the main reasons why indigenous Europeans are currently defenseless against the collapse of their populations, and thus of their culture and maybe even their civilization.

They all are Danuta Czech's victims. Thank you, Danuta!

In the present book, Carlo Mattogno proves beyond the shadow of a doubt that Danuta Czech's *Auschwitz Chronicle* is exactly what is to be expected when knowing its role in history: An account filled with many correct statements about a camp that was an injustice from its very beginning, but infused with a large amount of propaganda lies created to serve the political agenda described here.

Germar Rudolf, 29 December 2021

Introduction

Danuta Czech's *Auschwitz Chronicle, 1939-1945*" is reputedly a work of fundamental importance for Holocaust historiography on Auschwitz. It received an official endorsement at the Frankfurt Auschwitz Trial, where Czech testified as a witness for the prosecution on 19 February 1965 during the 138th session. In fact, during that trial, the first German edition of the *Kalendarium*, published in Poland in several numbers of the German-language journal *Hefte von Auschwitz* (Czech, Danuta 1959-1962, 1964), constituted for the Frankfurt judges the historical framework into which they fitted the events narrated by the witnesses, and for the witnesses it was a sort of richly detailed panorama from which to draw inspiration for their own stories. Czech herself reports (1990, p. xiv; all subsequent page numbers from there, unless stated otherwise):

> *"The 'Chronicle' has been an important resource for collecting evidence against former members of the SS in Auschwitz and other camps and continues to play this role. As its author, I gave expert testimony in the trial of Robert Mulka, who oversaw the gas chambers and the production of Zyklon B at Auschwitz, and others, in the first Frankfurt Auschwitz Trial, from December 20, 1963, to August 1965 in the Frankfurt District Court. I also served as an expert witness in the trial of the members of the Security Police (Sicherheitspolizei – Sipo) and the Gestapo of Bialystok in Bielefeld 1967-68 and in March 1988 in Siegen in the trial of the former Block Leader in the Gypsy camp in Birkenau, Ernst-August König."*

The Frankfurt Auschwitz Trial, in turn, cemented in legal terms what is considered true about Auschwitz, deviations from which in public statements of any kind can lead to criminal prosecution for "denial" in many countries.

Strangely, however, she did not use this monumental procedural legacy, to which she never referred in the later book edition of her chronicle.

To this day, orthodox scholars consider the *Auschwitz Chronicle* to be a chronicle of real events, which took place on the dates indicated by Czech and in the ways she described. Indeed, both for its size (855 pages letter-size), and for its detail, but above all for its impressive body of references to a plethora of sources – although most of them are cryptic to almost all non-Polish scholars, including high-level historians – this opus is now surrounded by an almost mystical aura, and is considered a kind of *summa holocaustica* in which the *dogmatica Auschwitziana* is revealed, which should neither be verified nor discussed, but rather meekly accepted.

Such an attitude of sacred respect (in addition to the oft-noticed incompetence of non-Polish scholars) is what has hitherto prevented a critical analysis of this chronicle. It is widely known that all Holocaust works have been discussed and scrutinized, even those that have reached, in the eyes of the orthodoxy, the reputational apex of this field of historiography, such as Raul Hilberg's monumental *The Destruction of the European Jews* (Hilberg 1985, 2003) – and this was basically inevitable. But no one has ever attempted to verify the sources of Czech's *Auschwitz Chronicle*, and not even one critical review is known that even hints at its shortcomings and inconsistencies. Yet these flaws exist, and they are numerous and serious, and they are the result of an intentional, duplicitous method, which is even-more-egregious.

It is true that Danuta Czech bases her chronicle on a series of original documents and on simplified transcriptions of German documents made by camp inmates, the main ones of which she diligently lists in her Introduction (pp. xif.): "admission lists," "Camp Occupancy Register," "card index" and "death register" of Soviet prisoners of war, "morgue register," "Bunker register" of Block 11, "register of the Penal Company," "registers of the Gypsy camp," "orders from headquarters, the regiment, and the garrison," "quarantine lists," transport lists compiled by inmates (the so-called "Smoleń List":[2] see her entry for 13 September 1944, p. 708) and others, but these concern only routine concentration-camp life and say nothing about alleged exterminations of Jews.

The historical foundation on which the *Auschwitz Chronicle* was erected is in fact constituted from the two Polish post-war trials about alleged events at the Auschwitz Camp: the Warsaw Trial from 11 to 29 March 1947 against former Camp Commandant Rudolf Höss (*proces Rudolfa Hössa*), and the Krakow Trial from 25 November to 16 December 1947 against forty former members of the Auschwitz camp garrison (*proces załogi Oświęcimia*). During these trials, the extermination claims were substantiated exclusively on the basis of testimonies; the few documents alleged to support these claims remained in the background and remained almost completely unknown to histo-

[2] I reproduced this list in Mattogno 2019, pp. 17-83 (male list, Numbers 1-202499) and pp. 108-142 (female list, Numbers 1-89136). The two sets of numbers are consecutive, so it is easy to check all my subsequent references to the "Smoleń List."

rians. It was only in 1989 that Jean-Claude Pressac resurrected them, drawing from them an apparently coherent body of "criminal traces." Precisely because the extermination claims had been legally "proven" by those two Polish trials, Danuta Czech assumes the alleged extermination as already demonstrated, so that in this regard she substantiates absolutely nothing with documents. She does not refer to a single document regarding any extermination installation nor any mass killing of deportees or camp inmates.

For the claimed establishment of the Birkenau gassing "bunkers," she relies completely on Höss's declarations, as she does for the rather-nebulous repurposing of the morgue of Crematorium I at the Auschwitz Main Camp as a gassing facility.

Her demonstration of the existence of gas chambers inside the Birkenau Crematoria is pathetic. In this regard, Czech limits herself to imaginative hints which nowadays sound ridiculous, especially after Pressac's 1989 work had appeared. Thus, in her entry for 23 January 1942, relating to Plan No. 932 of the new crematorium (the future Crematorium II), she states (p. 129):

> *"In the plan (Drawing 932) are two large underground rooms; after the building is completed, one is to serve as a disrobing room, the other as a gas chamber where people will be killed with Zyklon B gas."*

And in her entry for 15 August 1942, she writes regarding Plan No. 1678 of Crematorium IV/V (p. 218):

> *"Gas chambers are planned in each of these crematoriums."*

Similarly, each time she reports about one of the Birkenau crematoria being turned over by the camp's Central Construction Office to the camp administration, she states that the related building had one or several (homicidal) gas chamber(s),[3] although the related documents say nothing at all about gas chambers.

In the *Auschwitz Chronicle*, the alleged extermination facilities are therefore not documented, but presupposed and proclaimed apodictically and dogmatically.

The source situation regarding the alleged extermination of human beings (Jews and Gypsies) is even worse. Here, Czech relies mostly on anecdotal sources or, worse still, on post-war memoirs or historical secondary literature. As for the memoirs, she cites those of unknown and irrelevant former inmates, such as Júlia Škodová, but incredibly omits the 1979 book by Filip Müller, whom Raul Hilberg had raised to the rank of a key witness already in 1985 by citing his book 17 times.

---

[3] Crematorium IV, 22 March 1943, p. 357; Crematorium II, 31 March 1943, p. 364; Crematorium V, 4 April 1944, p. 368; Crematorium III, 25 June 1944, p. 426.

In a confounded and inextricable mixture of documents and testimonies, the editor of the *Auschwitz Chronicle* misrepresents the few documents she cites.

From a methodical point of view, the most-serious deficiency is the fact that Czech casually elevates the probative value of testimonies onto the same level as that of contemporaneous documents, and then declares claims made by witnesses to be facts, or more-precisely, she transmogrifies witness statements into real events. Her use of testimonies is particularly fallacious, because it is based on extrapolations and interpolations from cherry-picked claims contained in individual statements, which she then presents as "events" in the related entries – without in the least caring about checking the reliability of the testimonies and the trustworthiness of the witnesses, in the process omitting absurdities, impossibilities and contradictions their statements contain.

This is already evident in her treatment of Höss's statements,[4] which form the backbone of the *Auschwitz Chronicle* regarding the extermination order Höss claims to have received from Himmler, and all the subsequent events – the "first gassing" with Zyklon B, the use of the morgue of the Main Camp's crematorium for homicide purposes, and the establishment of the makeshift gassing facilities called "bunkers." Czech distorts the chronology of the former Auschwitz commandant, invents dates, and remains dead silent about the many anachronisms and contradictions in Höss's tales. This fallacious procedure already begins with Höss's alleged summoning to Berlin by the *Reichsführer* SS, which the former camp commandant notoriously placed in June 1941, but Czech postponed it *ex cathedra* to 29 July.

At this point, the editor of the *Auschwitz Chronicle* gets entangled in a series of contradictions with no way out. In his autobiographic notes, Höss refers explicitly to two conflicting orders by Himmler, the first for the total extermination of all Jews, the second for their only-partial extermination (Höss, p. 146):

> *"When the Reichsführer SS modified his original Extermination Order of 1941, by which all Jews without exception were to be destroyed, and ordered instead that those capable of work were to be separated from the rest and employed in the armaments industry, Auschwitz became a Jewish camp. It was a collecting place for Jews, exceeding in scale anything previously known."*

In the course of his trial, he provided further clarifications in this regard:[5]

> *"As I said during the investigation, Himmler's initial order was that in general all Jews sent to Auschwitz by the R.S.H.A., by Eichmann's office, were to*

---

[4] Czech indiscriminately quotes Höss's same statements from two different books, Broszat's *Kommandant in Auschwitz* and her own *Auschwitz in den Augen der SS* (English: *KL Auschwitz Seen by the SS*). I explain the reason for this unusual procedure in the entry for 20 March 1942.

[5] Höss Trial, 14th Session, 26 March 1947, p. 1493.

> *be exterminated. Hence, that is what was decided regarding the first transports that came from Upper Silesia, and also, in part, with regard to transports from the General Government. This was also the case with the first transports that came from the German Reich. Then this order was changed in the sense that it was necessary to select those fit for work. Physicians were responsible for selecting people who were healthy, strong, and of a certain age* [the young].*"*

Czech follows Höss with his claim that Himmler gave him the second order, but she inverts the content of the order – rather than sparing the lives of those able to work, as Höss had claimed, she says that the order presumably issued on 18 July 1942 did not state to spare the lives of deportees able to work, but "to kill the Jewish prisoners who are unfit for work" (entry for 18 July 1942; p. 199), yet she contradicts herself by affirming that the first selection with subsequent gassing of only the deportees unable to work had already taken place on 4 July (pp. 191f.), therefore against Himmler's order then in force to kill all Jews!

The issue becomes more-entangled when Czech has to give a semblance of historical guise to the phantom gassings at the "bunkers" of Birkenau, because she is forced to invent a series of fictitious transports that had to undergird Himmler's alleged first order – that of total extermination. Here are the transports, whose deportees were exterminated all and sundry according to Czech, yet they are totally invented from whole cloth:

Date 1942	Origin	Number of Deportees
February-April? (p. 146)	*Oberschlesien* (Upper Silesia)	"transports of Jews"
5-11 May	Dombrowa [Dąbrowa Górnica], Bendsburg [Będzin], Warthenau [Zawiercie], Gleiwitz [Gliwice]	5,200
12 May	Sosnowitz [Sosnowice]	1,500
2 June	Ilkenau [Olkusz]	[1,500]
17 June	Sosnowitz	2,000
20 June	Sosnowitz	2,000
23 June	Kobierzyn	566

Further contradiction arises here, however, because it is known that the first 18 real, documented transports of Jews that arrived at Auschwitz from Slovakia, France, and from Lublin-Majdanek Camp between 26 March and 30 June 1942, brought 16,767 deportees who were all registered without exception, hence were *not* exterminated, as Czech herself documents, and as shown by the following table:

Date 1942	Deportees	Origin	registered males		registered females	
			#	nos. assigned	#	nos. assigned
26 March	999	Slovakia	/	/	999	1000-1998
28 March	798	Slovakia	/	/	798	1999-2796
30 March	1,112	Compiègne	1,112	27533-28644	/	/
2 April	965	Slovakia	/	/	965	2797-3761
3 April	997	Slovakia	/	/	997	3763-3812 3814-4760
13 April	1,077	Slovakia	634	28903-29536	443	4761-5203
17 April	1,000	Slovakia	973	29832-30804	27	5204-5230
19 April	1,000	Slovakia	464	31418-31881	536	5233-5768
23 April	1,000	Slovakia	543	31942-32484	457	5769-6225
24 April	1,000	Slovakia	442	32649-33090	558	6226-6783
29 April	723	Slovakia	423	33286-33708	300	7108-7407
22 May	1,000	KL Lublin	1,000	36132-37131	/	/
7 June	1,000	Compiègne	1,000	38177-39176	/	/
20 June	659	Slovakia	404	39923-40326	255	7678-7932
24 June	999	Drancy	933	40681-41613	66	7961-8026
27 June	1,000	Pithiviers	1,000	41773-42772	/	/
30 June	1,038	Beaune-La-Rolande	1,004	42777-43780	34	8051-8084
30 June	400	KL Lublin	400	43833-44232	/	/
Totals	16,767		10,332		6,435	

According to the lore picked up by Czech, all these deportees should have been exterminated without exception, given that at that time Himmler's alleged order of total extermination was still in force, which is said to have been changed only on 18 July 1942, according to her.

In this context, it should be noted that, after the "revision" sanctioned by Karin Orth in 1999, no serious orthodox Holocaust scholar takes Höss's or Czech's timeline of the events seriously anymore, because they all move Höss's alleged meeting with Himmler to June *1942*, meaning that they postpone it by one year.

This completely upsets the chronology of fictional and contradictory events listed by Czech, however, but the orthodoxy maintains the claim that all she writes was real, and at best a few key dates are retouched, as did French historian Jean-Claude Pressac with the "first gassing" (which he moved from Czech's dating at 3-5 September 1941 to sometime between 5 and 31 December 1941) and with the establishment of "Bunker 1" (which he moved to the end of May rather than Czech's date of 20 March 1942; Pressac 1993, pp. 34, 39). Others have tried to switch around the claimed victims, as imaginatively proposed by Robert Jan van Pelt, who fancied that the victims of early 1942 were not Jews who had arrived with transports from Upper Silesia, but Jews unable to work from the Schmelt Organization.[6]

[6] van Pelt, p. 204; cf. my critique of van Pelt's paper in Mattogno 2016, pp. 87-114.

That the claimed events relating to the "bunkers" have no historical basis is confirmed by the fact that the *Auschwitz Chronicle* mentions only their presumed institution (p. 186 and 239) but is subsequently completely disinterested in them: In all of 1942, they are mentioned only once ambiguously, on October 11, in relation to the diary of Dr. Johann Paul Kremer (see my comment about that entry). What happened to the two "bunkers"? They vanish without a trace from the pages of the *Auschwitz Chronicle*, but the second of these two facilities, the so-called "Bunker 2," suddenly reappears in the entry of 9 May 1944 (p. 622), where we read that it was "put back into operation," while "Bunker 1" disappears definitively without any explanation.

Yet one of Czech's most-important witnesses on this issue, Szlama Dragon, explicitly stated:[7]

> *"Bunker No. 1 was dismantled completely as early as 1943. After the construction of Crematorium No. 2 at Brzezinka, the barracks near Bunker No. 2 were dismantled as well and the trenches filled in. The bunker itself, however, remained until the end and, after a long period of inactivity, was put back into operation for the gassing of the Hungarian Jews."*

If there was any logic to it, the "bunkers" would have ceased their activity in March 1943, when the new Crematoria IV and II were put into operation. Franciszek Piper also claims that much, albeit with a deliberately fuzzy dating:[8]

> *"In the spring of 1943, with the launching of new gas chambers and crematoria, the two bunkers were shut down."*

In addition to the total lack of reliable sources, Czech's surprising caution in hiding the bunkers all but from the reader's view depended on the difficulties that arise, from an orthodox perspective, with regard to pinpointing that exact installation where a particular gassing action is said to have taken place. Thus, she precisely locates only the claimed first gassing in the new crematoria – the one in Crematorium II of 13 March 1943 (see my related discussion of that entry). For all subsequent gassings, however, she no longer knows what to say, and the claimed concomitant activity of the "bunkers" for a few weeks or months would have further aggravated her embarrassment. For example, on 20 March 1943, 2,191 Greek Jews were allegedly murdered "in the gas chambers" (p. 356) – but where exactly? In Crematorium II? In Crematorium IV? In "Bunker 1"? In "Bunker 2"?

Czech sometimes puts together testimonies claiming distinctly different events, decreeing by her authority that they refer to the same event, the one she tries to prove. At other times she refers to contradictory testimonies, from

---

7 Höss Trial, Vol. 11, p. 106. Interrogation of Sz. Dragon, 10-11 May 1945.

8 Piper 1994, p. 164. The verb "shut down" is undoubtedly an improper translation of the Polish text by F. Piper; for the Auschwitz Museum, "Bunker 1" was demolished, while "Bunker 2" was retired.

which she draws similar elements while hiding their contradictions from her readers.

In Poland, the courtroom climate in 1947 was particularly heated, and the witnesses for the prosecution, almost all former prisoners of the Germans, were understandably resentful, if not vengeful, and ready for *any* declaration against the German defendants. They did not feel bound by the duty to declare the truth, or perhaps they considered the blatant absurdities they uttered to be real. The judges, for their part, adopted criteria of the "truth" that were extremely conducive for the purpose of these trials – convictions. This means that the witnesses basically had a blank check to tell anything they wanted; they could lie with impunity. Not a single witness is known – among the 206 who attended the Warsaw Trial and the 375 who attended the Krakow Trial – who was ever investigated for perjury or even simply reprimanded by the court or retracted by the prosecution.

The overwhelming majority of these witnesses, with regard to the fundamental question of the presumed selections with subsequent gassings, did nothing but regurgitate and embellish in various ways the propaganda tales that had been created and circulated during the war by the Auschwitz resistance movement, which back then were known pretty much to all, as I have amply illustrated in another study (Mattogno 2021). The Polish courts therefore dogmatically assumed the truthfulness of all incriminating testimonies, and Danuta Czech followed that policy slavishly. But even if and when some of the witnesses' claims appear plausible, they can in no way be regarded as a source for historiography, because they cannot be verified or falsified by superior evidence, such as documents and material traces.

The trial sources are indicated by Czech sometimes with the respective initials (Dpr.-Hd: documentation of the Höss Trial; Dpr.-ZO: documentation of the Trial of the Auschwitz Camp Garrison), sometimes explicitly: "Höss Trial," "Krakow Auschwitz Trial," sometimes volumes belonging to the second are cited in a list of volumes starting with those belonging to the first trial (as for example in her entry for 3 September 1941, p. 117).

Czech limits herself too often to mentioning the procedural volume and the page (which are on occasion wrong), without indicating the name of the witness she refers to – a practice which certainly does not serve to enable other scholars to check her sources, and it does not even seem accidental. In these cases, the reader of the *Auschwitz Chronicle* does not even know whether her sources are testimonies (and then which ones) or documents (many volumes of both trial documentations contain documents, document reproductions and transcripts of various kinds).

Alongside this testimonial body, Czech adds the so-called "materials of the resistance movement," a collection of items from the camp's resistance movement with some transcripts of German documents and some purloined originals. The claims made in this material, however, are almost always un-

verifiable, often clearly exaggerated or outright false – a broad hodgepodge of crude atrocity propaganda.[9] Claiming to extract "historical events" from such a witches' brew is an affront to historiography and common sense.

Czech even launches a methodical proclamation, as high-sounding as it is false:

> *"The available sources – original documents, resistance-movement documents, statements of former prisoners, and trial materials – were subjected to a strict source check and were compared with other appropriate documents."* (p. xii)

In reality, as I explained earlier, there is no trace of a "strict source check" in the *Auschwitz Chronicle*, nor of a comparison between documents and testimonies: documents (distorted) and testimonies (extrapolated) are instead apodictically, faithfully assumed to be true, without the slightest critical scrutiny, sometimes even with artful omissions or intentional distortions.

Czech's methodical contortionism comes to light especially in her treatment of the deportation of Hungarian Jews to Auschwitz, the background of which I had outlined in a previous study (Mattogno 2007).

The first, German edition of the *Auschwitz Chronicle* listed 91 transports of Jews from Hungary between 2 May and 18 October 1944, from which a total of 29,159 deportees were registered.[10] As for the fate of non-registered deportees, Czech invariably ruled: "The others were gassed" (Czech 1964a, pp. 91ff.)

In his 1983 French "Attempt to Determine the Death Toll at the Auschwitz Camp," Georges Wellers tried to determine the number of deaths in Auschwitz based on the first edition of the *Auschwitz Chronicle*. In dealing with the case of Hungary, he stated that a total of 437,402 Jews had been deported to Auschwitz in 87 trains, on average about 5,028 people per train. Subtracting from the total number of deportees the number of those registered – which he calculated at 27,758 – Wellers concluded that 409,640 Hungarian Jews had been gassed at Auschwitz (Wellers 1983, pp. 147, 153).

In my critique of Wellers's study mentioned earlier, I pointed out a glaring contradiction in the Auschwitz "Kalendarium" concerning the Hungarian Jews: according to Justification of the Verdict #112 of the Eichmann Trial in Jerusalem (based on the report of Hungarian Lieutenant Colonel Laszlo Ferenczy of 9 July 1944[11]), from mid-May to 8 July 1944, 434,351 Jews were deported from Hungary in 147 trains (Poliakov, p. 199), but the *Auschwitz Chronicle* recorded only 91 transports, 33 of which are said to have arrived after 11 July, the date of arrival of the last train that had departed from Hungary

---

[9] Mattogno 2021, pp. 105-217, where I presented an overview of the resistance movement's messages (1941-1944), and analyzed them in detail. See also the chapter on the Warsaw Trial in Mattogno 2020, pp. 157-177.

[10] See the complete transport list in Mattogno 1987, pp. 51-54.

[11] This is Eichmann-Trial Document T/1166.

on 8 July.[12] The conclusion was inevitable: only the 58 transports recorded in the *Auschwitz Chronicle* up to July 11 had arrived at Auschwitz, but the remaining 33 trains presumably arriving after that date were fictitious (Mattogno 1987, pp. 18-20, 37, 39). Before accepting this conclusion, I submitted the problem to various historical institutes specialized in the study of the Holocaust: The Munich *Institut für Zeitgeschichte* (17 February 1986), The Ludwigsburg *Zentrale Stelle der Landesjustizverwaltungen* (21 February 1986), the Paris *Centre de Documentation Juive Contemporaine* (14 April 1986), the London *Wiener Library* (14 April 1986), the Jerusalem *Yad Vashem* (21 January 1987) and Auschwitz Museum (21 January 1987) – and of course to Wellers himself (17 February 1986). No one was able to resolve this contradiction. On 15 April 1987, when my aforementioned study had already been published, the Auschwitz Museum replied to my letter, stating the following:

1. A part of the Hungarian Jews who arrived at Auschwitz had been sent without registration to the so-called *Depot-Lager* (custody camp) or *Durchgangslager* (transit camp), from where a certain proportion were subsequently registered and admitted to the camp. Therefore, the entries in the *Auschwitz Chronicle* after 11 July 1944 do not refer to transports from Hungary, but to inmates from the transit camp.
2. The registrations of prisoners from Hungary were carried out cumulatively, *i.e*. one entry may refer to several transports that arrived on the same day.

This explanation was adopted two years later by Danuta Czech in the second German edition of the *Auschwitz Chronicle*, where she states that a portion of the Hungarian Jews deported to Auschwitz were housed in Sectors BIIe, BIIc, BIIb, and BIII of Birkenau, which are designated in the records as "Auschwitz II Transit Camp" (p. 564). Records concerning Hungarian Jews are also often introduced with the phrase "from the RSHA transports from Hungary…" (*ibid*., pp. 628ff.), with which Czech makes it clear that the relevant record refers to multiple transports.

Czech was induced – perhaps by my questions – to explicitly state what she already knew, because in the first German edition of the *Auschwitz Chronicle*, she had reported a message from the camp resistance about the numerical strength of the inmates which, among other things, spoke of "30000 Jewish inmates from Hungary who were not registered in the camp (transit camp)" (Czech 1964b, p. 60).

In her entry for 2 October 1944, she further wrote (*ibid*., p. 71):

> *"The number of Jewish female inmates in the 'Jewish transit camp Mexico' (Construction Sector III) was 17202 women and girls."*

[12] The number mentioned in the German source is known to be 437,402 deportees as of 9 July 1944. NG-5615.

In her entry for 4 October, she quoted a letter from the camp's SS administration to the Central Construction Office, according to which Sector BII of the Birkenau Camp was being used "as a reception and transit camp" (*ibid.*; reproduced in Blumental, pp. 95f.).

Finally, in her introduction to the year 1944, Czech wrote (1964a, p. 71):

> *"In Birkenau, the construction of Camp BIIc was finished, and they were building on Construction Section III, called 'Mexico' by the inmates. Both camps were intended for Hungarian Jews,"*

without explaining, however, that these were unregistered inmates. All of this is in open contrast to the claim that, with each transport of Hungarian Jews, the "remaining people are killed in the gas chambers," a phrase she repeats monotonously over and over again. At the time, her point of view was historically nonsensical (*ibid.*):

> *"Höss carries out hasty preparations to enable the rapid mass extermination of some 500,000 Hungarian Jews."*

In the book edition of the *Auschwitz Chronicle*, Czech omitted – and rightly so – the many nonsensical statements found in the "Materials of the Camp Resistance Movement" (in the *Auschwitz Chronicle*: "Mat. RO" = *Materiały Ruch Oporu*), such as those found in the "Extraordinary Appendix to the Periodic Report of the Period from 5 to 25 May 1944," where the arrival at Auschwitz of 13 transports of Hungarian Jews per day is mentioned (see below, entry of 24 and 25 May 1944).

On this subject, she reports another resistance claim dated 15 July 1944 (Mat. RO., Vol. VII, p. 451; p. 666):

> *"Between May 16 and June 13 over 300,000 Hungarian Jews were delivered in 113 trains."*

Strictly speaking, even this claim cannot be considered historically accurate, because by 15 June, 99 trains with about 311,000 deportees had arrived at Auschwitz (Mattogno 2021, p. 192). This can be inferred from Braham's book *The Destruction of Hungarian Jewry*, which is quoted several times by Czech (the first time in her entry for 2 May 1944, p. 618).

The aforementioned information from the resistance movement is also in contrast to another piece of documented information provided by the very editor of the *Auschwitz Chronicle* in her entry for 13 June 1944 (p. 644), where she states with reference to Braham's book (who relies on Nuremberg Document NG-5619 as reproduced by him) that on 7 July the deportation from Zones I and II of Hungary had ended, as a result of which 289,357 Jews had been deported in 92 trains with 45 freight cars each. This corresponds to an average of (289,357 ÷ 92 =) 3,145 persons per train. But 300,000 divided by 113 yields 2,655 people per train. To take the resistance message of 15 July 1944 seriously, if it is true that 289,357 Jews were transported in 92 trains un-

til 7 July, the remaining (300,000 – 289,357 =) 10,643 were transported in (113 – 92 =) 21 transports, each of which carried only (10,643 ÷ 21 =) 507 persons!

Furthermore, in her entry for 3 July 1944 (p. 657), Czech summarizes a German intercept of a BBC message of 2 July in Spanish as follows:

> *"400,000 Jews have been deported from Hungary to Germany and killed in the gas chambers."*

She does not write a single word about the blatant falsity of this information. This shows Czech's obvious lack of critical sense. But she makes a shrewd omission even in the aforementioned resistance message of 15 July 1944, which continues as follows:[13]

> *"Of the transports of Hungarian Jews, 80,000 were sent to the camp with a separate 'A' numbering* [prefix]*, due to the overloading of the gas chambers and crematoria, while the rest had already been successfully disposed of. Naturally, the rest were doomed to suffer the same fate in due time. The Hitlerite hangmen were systematic."*

It is evident that Czech did not find this information credible, so she omitted it. Here the methodical problem I mentioned earlier comes into full view: since the messages contained in the "Materials of the Camp Resistance Movement" (and this applies equally to the parallel source "Files of the Delegation of the Polish Government in Exile") contain both prima facie false and plausible claims, how can the plausible claims be considered correct without an external source to confirm them? Czech commits precisely this abuse as her normal procedure.

Her general methodical principle is even more aberrant, since she assumes as an unquestionable dogma that any unverifiable claim coming from members of the camp resistance movement or from trial witnesses and even from post-war memoirs, is true and constitutes indisputable proof of the reality of claimed events, and can therefore be adduced as a source for this, as long as it is not patently false and absurd.

In the *Auschwitz Chronicle*, the alleged mass killings are divided into two major categories: those of deportees unfit for work selected on arrival and subsequently gassed, and those of prisoners already registered and admitted into the camp, who later became unfit for work or sick or were suspected of suffering from contagious diseases, hence were subsequently killed either with lethal injections or by gassing.

In the first case, Czech does not even pose the problem of proof or documentation of the alleged individual mass-killing operations: she assumes *a priori* as an indisputable fact that deportees unfit for work on arrival were gassed in every case. Hence the monotonous refrain, repeated hundreds of

[13] APMO, D-RO/91, Vol. VII, p. 451.

times, but never proven: "The remaining [number of] people are killed in the gas chambers." Of course, except in rare cases (always based on testimonies), she is not even able to specify in which of the four crematoria or in which of the two "bunkers" the gassing presumably took place.

Regarding the second category, on the other hand, Czech refers to documents, sometimes directly (e.g. the labor-deployment list, the death register of the inmate infirmary of the Main Camp (Block 28) and of the morgue, lists of names of prisoners), but she consistently misrepresents their meaning, more-often indirectly than directly. This is especially the case regarding the very-long testimony of the former Viennese prisoner Otto Wolken, who together with Höss is one of the two key witnesses Czech relies on. Wolken was deported to Auschwitz on 20 June 1943, and registered with Inmate Number 128828. On 2 October 1943, he was transferred to the quarantine camp (Birkenau Camp Sector BIIa), where he worked in the outpatient clinic (*Ambulanz*). Here he furtively transcribed various German documents and created some of his own (the best-known is the so-called "*Quarantäne-Liste*"). A part of this documentation, together with interrogations of the witness, statistics compiled by him and other materials, was collected in Volume 6 of the Höss Trial, which is all dedicated to him. Wolken is the source of at least 15 alleged exterminations reported by Czech.

When it comes to extermination claims, by far the most-important materials are the "Daily Reports" ("*Tägliche Meldungen*") and the "*Quarantäne-Liste*." Since they constitute the sources for many entries in the *Auschwitz Chronicle*, it is worthwhile assessing their value right here.

The "Daily Reports" consist of two notebooks written by Wolken which contain daily changes in the occupancy of Camp Sector BIIa. The first runs from 16 September 1943 to 30 April 1944, the second from 1 May to 3 November 1944. These documents include the following headings: "date" ("*Datum*"), "census" ("*Belegstärke*," later "*Stand*"), "outpatient treatment" ("*Ambul. Behandlung*"), "lice control" ("*Läusekontrolle*"), "admitted to the prisoners' hospital" ("*Überwiesen in H.K.B.*," then "*nach H.K.B.*"), "convalescence" ("*Schonung*"), "request to see a doctor" ("*Arztvormeld*.[ung]"), "petechial fever check" ("*Fleckfieberkontrolle*"), "at the disinfestation" ("*zur Entlausung*") as well as "note" ("*Bemerkung*"). From the third sheet (page 4 of the consecutive numbering), two more headings are inserted between "*zur Entlausung*" and "*Bemerkung*": "deaths" ("*Todesfälle*") and "new arrivals" ("*Zugang*"). From the seventh sheet (page 10) "*zur Entlausung*" is replaced by "*zur Sauna*" ("to the sauna"), "*Todesfälle*" disappears, and after "*Zugang*," the rubric "departure" ("*Abgang*") appears, later also the rubric "scabies" ("*Skabies*").[14]

However, the figures written down by Wolken do not account for the actual change in force, as they are not even internally consistent. For example, on

[14] APMO, D-AuII-5/1, "*Tägliche Meldungen*."

5 October 1943, Wolken records 7,280 inmates; 276 inmates are recorded in "*Ambul. Behandlung*," 8 in "*Überwiesen in H.K.B.*," 5 in "*Schonung*," 10 in "*Arztvormeld*." and "*1-Bl.8*" is written in the "*Bemerkung*" column, probably a death that occurred in Block 8. As a loss of inmates, in addition to those recorded in the columns "*Todesfälle*" and "*Abgang*," Wolken also considers those recorded under the headings "*Überwiesen in H.K.B.*" and "*Schonung*," so that the census on the next day, 6 October, should be (7,280 – 8 – 5 – 1 =) 7,266, but instead he has 7,721 inmates, 441 more than on the previous day.[15]

In practice, it is impossible to reconstruct the daily census of the quarantine camp based on the variations mentioned by Wolken, so that the numbers are always inexplicable. But all of Wolken's conjectures regarding selections leading to gassings are based precisely on these incomprehensible variations of inmate counts. They are moreover invalidated by the fact that he had a very limited view of the events unfolding in the Birkenau Camp, which was limited exclusively to the quarantine camp: for him, the "*Abgang*" of a substantial number of inmates always meant their gassing, without ever knowing anything explicit about it (not even in which crematorium it would take place), and without ever even considering the possibility that any or all of these inmates had been transferred to other sectors of the camp. He never says who the doctor was who carried out the alleged selections, and hardly ever indicates who the selected inmates were.[16]

The "*Quarantäne-Liste*" is a list of inmates admitted to Camp Sector BIIa in Birkenau from 24 October 1943 to 3 November 1944 compiled by O. Wolken, who claimed to have also listed the alleged gassings. However, this is only explicitly stated in the typewritten text of the list, which appended to the protocol of Wolken's interrogation of 24 April 1945 by Polish investigating Judge Jan Sehn.[17] This list in fact contains the columns "date" ("*Datum*"), "category" ("*Kategorie*"), "transport from" ("*Transport von*"), "tattoo number" ("*Tätowierte Nr.*"), "number" ("*Anzahl*") and "gassed" ("*Vergast*").[18] It is telling that, in the "original" handwritten list compiled by O. Wolken prior to the interrogation,[19] the "gassed" column does not appear at all. Instead, on the first two pages covering 24 October to 2 December 1943, the figures of those alleged gassed are listed in the "*Block*" column, as well as the number of the block where the registered inmates were housed. On the second page, starting with the last five entries (26 February to 5 March), the figure of those alleged gassed are no longer listed in the "*Block*" column but in the adjacent "*Stand*" column. From the third page on, these two columns disappear, and the figures

---

15 *Ibid*., p. 3.
16 I covered the issue of selections of registered inmates for alleged gassings in depth in Mattogno 2016a.
17 GARF, 7021-108-50, pp. 13-66. The list is on pages 64-66.
18 GARF, 7021-108-50, pp. 64-66.
19 APMO, D-AuII-3/1, *Quarantäne-Liste*, pp. 3-8.

for those alleged gassed are so faded as to be illegible, indeed barely discernible. This concerns the period from 5 March to 3 November 1944. These figures can therefore only be derived from the typescript version of the "*Quarantäne-Liste*."

Wolken does not explain on what basis he could ascertain

1. that a part of the deportees was indeed gassed;
2. the exact number of those alleged gassed;
3. the exact number of male deportees of each transport (which is obtained by adding the number of those registered and allegedly gassed).

Irena Strzelecka, a historian at the Auschwitz Museum, states (1997, p. 80):

> *"He compiled this figure on the basis of information given to him by inmates from the respective transports or who were accommodated in the Quarantine Camp."*

For obvious reasons, no deportee could know the exact number of men in his own transport, but even if we were to assume that this was possible, he should likewise have known the number of women and thus the total number of deportees, but Wolken never mentions either one or the other.

That the number of male deportees in the transports reported by Wolken is simply a figment of his imagination is demonstrated by Czech herself in cases where Wolken's data can be verified. I give the most-significant examples:

– O. Wolken: On 24 October 1943, 347 inmates were registered (157889-158235), and 1,116 were gassed; total number of men: 1,463.[20]
– Czech, entry for 21 October 1943 (p. 511):

> *"1,007 Jews from the Westerbork camp arrive with an RSHA transport from Holland. In the transport are 87 children, 407 men and 306 women under age 50, as well as 207 older people. Following the selection, 347 men, given Nos. 157889-158235, and 170 women, given Nos. 65493-65662, are admitted to the camp. The other 490 deportees are killed in the gas chambers."*

The number of men allegedly gassed according to Wolken (1,116) is therefore greater than the total number of deportees (1,007)!

– O. Wolken: on 18 November 1943, 243 prisoners were registered (163201-163443), and 778 were gassed; total number of men: 1,021.[20]
– Czech, entry for 17 November 1943 (p. 528):

> *"559 male and 589 female Jews transferred from Herzogenbusch are given Nos. 163201-163759 and 68090-68678."*

Therefore, this transport consisted of (559 + 589) 1,148 persons, all of whom were registered! Czech moreover neglects to inform her readers that in this transport there were 14 children up to 15 years old, 485 men and 526 women

[20] APMO, D-AuII-3/1, p. 3.

from 16 to 50 years old, and 124 persons over 50 years of age (of a total of 1,149 deportees).[21]

– O. Wolken: on 19 November 1943, 243 prisoners were registered (163800-164072), and 803 were gassed; total number of men: 1,078.[20]
– Czech, entry for 17 November 1943 (pp. 528f.):

> *"995 Jews arrive from Westerbork in an RSHA transport from Holland. In the transport are 166 children, 281 men and 291 women below the age of 50, and 257 old people. After the selection, 275 men and 189 women are admitted to the camp and receive Nos. 163798-164072 and 68724-68912. The remaining 531 people are killed in the gas chambers."*

Wolken's number of men allegedly contained in this mixed-gender transport is therefore higher than the total number of deportees (995)!

– O. Wolken: on 23 November 1943, 241 Jews from the Drancy Camp were registered (164427-164667), and 782 were gassed; total number of men: 1,023.[20]
– Czech, entry of 23 November 1943 (p. 532):

> *"1,200 Jewish men, women, and children arrive from Drancy with the sixty-second RSHA transport from France. After the selection, 241 men and 45 women are admitted to the camp and receive Nos. 164427-164667 and 69036- 69080. The remaining 914 people are killed in the gas chambers."*

Czech could not seriously believe that this transport contained 1,023 men and only 177 women. In fact, as Serge Klarsfeld informs us, it contained 634 men, 556 women and 10 undetermined persons.[22] The maximum number of male deportees is therefore 644, but for Wolken they numbered 1,023! Czech was familiar with Klarsfeld's work, since she mentions it in connection with the pre-selection of deportees at Cosel (entry of 28 August 1942, p. 228) and then twice more (20 September 1942, p. 242, and 11 November 1942, p. 267).

– O. Wolken: on 10 February 1944, 141 Jews from Westerbork were registered (173510-173650), and 587 were gassed; total number of men: 728.[23]
– Czech, entry for 10 February 1944 (p. 582):

> *"1,015 Jews from Westerbork camp arrive in an RSHA transport from Holland. 340 men, 454 women, and 221 children are in the transport. After the selection, 142 men and 73 women, given Nos. 173509-173650 and 75216-75288, are admitted to the camp. The remaining 800 people are killed in the gas chambers."*

---

[21] Het Nederlandse… 1953, p. 44. Transportation table from 24 August to 16 November 1943. Presumably, this is also the (unstated) source of Czech's statistical data.
[22] Klarsfeld, "*Le Convoi n° 62 en date du 20 November 1943*" (this book is unpaginated).
[23] APMO, D-AuII-3/1, p. 4.

Even if the children had all been male, the total number would have been (340 + 221 =) 561, much lower than that indicated by O. Wolken (728).

From these few examples it is already clear how reliable and serious Czech's claim of "strict source check" really is!

O. Wolken's career as a witness had begun with his statement to the Soviets of 18 February 1945.[24] Among other things, he handed the investigators a sheet on which only a portion of the transports recorded in the "*Quarantäne-Liste*" are listed. This is a handwritten sheet which bears the heading "Male transports through Quarantine Camp BIIa" ("*Männertransporte über Quarantänelager B.II.A*"). The back of this sheet contains the last four entries of this list plus another list with the heading "Selections in Camp BIIa" ("*Selektionen im Lager B.II.A*").

The transport list includes the columns: date (*am*), origin (*aus*), serial numbers (*Nummer*), number of inmates admitted to Camp BIIa (*ins Lager*) and the number of those allegedly annihilated (*vernichtet*).[25] In this list, the numbers of those alleged gassed almost always diverge from those of the "*Quarantäne-Liste*," as can be seen in the following table, in which I summarize the data of the two lists:

Date [d/m/y]	Origin	# registered	# gassed	
		Male Transports & Quarantine List	Male Transports	Quarantine List
21/10/1943	Westerbork	347	1,041	1,716
22/10/1943	Rome	149	447	446
28/10/1943	Posen	72	212	276

7/9/1944	Lion	32	39	71
		Totals:	16,337	18,520

As explained earlier, there is no dedicated column for those allegedly gassed in the "*Quarantäne-Liste*," which is inexplicable if Wolken had planned on accounting for those allegedly gassed right from the start when compiling this list. The document was compiled by him clandestinely, so if he had wanted to indicate the number of alleged gassing victims back then, he might have created a dedicated column of "gassed" or "annihilated." The fact, however, that the relevant figures are inserted wherever there was space available – first in the column "*Block*" (together with the Block Number), then in the column "Remarks" ("*Anmerkungen*"), which already contained other text entries – shows that these are later additions. This is confirmed by another fact already mentioned earlier: the digits of the alleged gassing victims, unlike all the others which are well written with a pen, are all written in pencil; they are faded and very-often illegible. Hence, these clearly are figures that were added later, probably in February 1945. In fact, the list "Male transports through Quarantine Camp BIIa" seems to be a first draft regarding the number of those allegedly gassed.

From these spurious sources, Czech draws a conspicuous number of alleged selections with subsequent gassings. In many other cases she transforms simple unconfirmable statements by Wolken, uttered only by him, into real events. Here she also forgets the principle "*testis unus, testis nullus*" – only one witness is no better than no witness at all.

Starting on 3 July 1942, Czech reports a long series of records concerning alleged killings of sick prisoners by phenol injections, purportedly attested by the "Morgue Register" (M), the "Occupancy Register" (O), the "Materials of the Camp Resistance Movement" (RO), or simply by nothing. Since all these instances are backed up with the same sources and follow the same method, it is not worthwhile to dwell on each one individually, so I summarize them in the following table and treat them, with a few exceptions, all together, setting forth the necessary general considerations on the notion of phenol injections:

[26] The camp named Fossoli di Carpi near Modena, Italy.

Block 20 housed the Department for Infectious Diseases; Block 21 the Surgical Department with an aseptic surgery room, and the dental ward; Block 28 was the Department for Internal Medicine and included the Clerk's Office, Outpatient Room, X-ray Room, Analytical Laboratory, Pharmacy, and Dietary Kitchen; Blocks 10 and 13 contained the Department for General Medicine.

As noted earlier, Czech testified at the Frankfurt Auschwitz Trial as a witness for the prosecution during the 138th Session (19 February 1965). Attorney Gerhard Göllner, who was defending Josef Klehr, who was accused of being responsible or co-responsible for killing inmates with phenol injections in his capacity as *Sanitätsdienstgrad* (medical orderly), asked her about the sources of these alleged killings. The editor of the *Auschwitz Chronicle* (during that trial, they were discussing the first German edition of this work) answered in Polish (Fritz Bauer…, p. 29519):

> *"Więc, do 15 grudnia w książce, tak zwanym Totenbuch, w książce [kostnicy], widniały przy selekcjach wpisy 'szpila'."*

This translates to:

> *"So, until December 15, in the book, the so-called Totenbuch, in the [morgue] book, there were entries 'szpila' next to the selections."*

In reality, in the register in question, which is the Morgue Register, the annotation "*szpila*"[27] is nowhere to be found. It is only found in transcriptions of

[27] There's no such thing as "szpila" in Polish, but rather "szpilka," which translates to "awl" or "pin." This term was interpreted by Czech as the needle of a syringe, and so presented as evidence

that document clandestinely prepared by members of the inmate resistance movement, such as the one reproduced by Czech herself with the following caption:[28]

> *"Material of the resistance movement. List of numbers of deceased inmates prepared by members of the resistance movement on the basis of the Morgue Register. The remark 'szpila = needle' near some numbers means that these inmates were killed as a result of a selection carried out on 13 August 1942 in the inmates' infirmary by phenol injections directly into the heart."*

A more-readable copy of this transcription can be found in the appendix of the iconographic book *Sterbebücher von Auschwitz* (Staatliches Museum…, p. 100, Document 31). It should be pointed out that in this list, under the date of 13 August 1942, there are 26 inmate numbers listed, 19 of which are from Block 20, none of which is marked with the annotation "szpila." Under the date of 14 August, 60 inmate numbers are listed, all from Block 20, but next to them appears a long brace with the word "szpila." It is therefore clear that Czech confused the dates, although to 14 August, she attributes 58 inmates killed by lethal injection (p. 216), so that the sequence: 13 August = 0 injections, 14 August = 60 injections, turned into: 13 August = 60 injections, 14 August = 58 injections.

In the 1960 edition of the "*Kalendarium*," the term "*szpila*" (in German "*Nadel*") occurs only in the above-mentioned document. In the 1989/1990 edition, no document bearing the annotation "szpila" is mentioned

Another page of these Morgue Register transcripts was published in Volume IV of the Auschwitz Museum's major work on that camp (Świebocki 2000); it includes the entries of August 11 and 12.

The entry for 11 August contains 34 inmate numbers from Block 20 marked with the annotation "szpila". The entry for 12 August contains 42 inmate numbers. This should therefore be the preceding page of the one mentioned above, which contains the data for 13 and 14 August. Inexplicably, however, Czech attributes 79 selections with subsequent phenol killings to 11 August (p. 214) and 50 to 12 August (p. 215).

Since the term "szpila" is only found in these clandestine transcripts and never appears in the Morgue Register, hence the original document, this manipulation of the original document by the resistance members proves nothing and has no historical value.

Returning to Czech's deposition, immediately after the aforementioned perjury, she added (Fritz Bauer…, p. 29520):

> *"Po 15 grudnia, po 12 grudnia, tych adnotacji nie ma."*

---

for lethal injections, even though the Polish term for needle in general is "igła" and for that of a syringe is "igła [do zastrzyków]."

[28] "Reproduktionen von Dokumenten zum Kalendarium," in: *Hefte von Auschwitz*. Państwowe Muzeum w Oświęcimiu, No. 3, 1960, p. 119.

"After December 15, after December 12, there are no such annotations."

Yet in the *Auschwitz Chronicle*, as shown in the summary table above, killings with lethal injections appear up to 30 March 1943. If Czech's testimony is true, then what is the source of these alleged selections? In fact, the source is a simple methodical trick. Based on the unproven assumption that inmate killings with phenol injection into the heart were perpetrated in Block 28, every time (or almost every time) when a larger number of bodies coming from Block 28 was recorded in the Morgue Register after 15 December 1942, the editor of the *Auschwitz Chronicle* considers them murdered based solely on that very fact!

In an article published in 1974, Czech wrote that, in the second half of 1942, 3,610 inmates suffering from typhus were selected at the Main Camp's hospital in August, September, November and December: 1,143 were killed in the gas chambers, and the remaining 2,467 were murdered with phenol injections (Czech 1974, p. 18, Note 27). This is not very credible. At the time inmates quartered in the Main Camp who were suffering from typhus were hospitalized in Block 20, the inmate infirmary's Department for Infectious Diseases. A logbook from Room No. 3 of this Block has been preserved and was analyzed by Stanisław Kłodziński in an article whose title translates as "Typhus at the Auschwitz Camp."[29] It shows that, during the period from 12 March to 30 November 1942, 4,167 typhus cases were registered. The number of registered deaths caused by typhus was 323. On 12 March, the number registered in this room was already 645, and rose to 717 on 30 March, to 867 on 30 April, and to 1,162 on 31 May; on 30 June, the number had reached 1,557; the final number, on 30 November, was 4,812 sick inmates (Kłodziński, pp. 51f.). According to Kłodziński, 90 patients were killed on 29 August 1942. In fact, from 30 August 1942 to 7 September 1942, Room No. 3 was closed for disinfestation,[30] and for this reason, the 90 patients previously lodged in that room were transferred elsewhere the day before, as a result of which the register for this room obviously recorded that on the following day the room was empty. On 8 September 1942, 62 patients arrived in Room 3, and on the next day, the occupancy increased to 93 patients, hence the 90 inmates who had been there on 29 September, plus three new admissions.

But even if we were to assume that these 90 sick inmates were indeed killed, this would represent just 1.9% of all the typhus patients recorded during 8½ months, which radically refutes Czech's delusions. I will return to this matter when discussing Czech's entry for 29 August 1942.

Another source which Czech abuses is the diary of Dr. Johann Paul Kremer, in which he famously speaks of his participation in 12 "special actions"

---

[29] I have dealt with this issue in depth in Mattogno 2016a, pp. 106-109.

[30] The disinfestation of the Main Camp is also mentioned by Czech in her entries for 31 August and 1 September 1942 (p. 231).

("*Sonderaktionen*"). I refer the interested reader to another study of mine for a general discussion of this issue (Mattogno 2016b, pp. 82-95).

This present study is subdivided into 172 instances where I analyze entries from the *Auschwitz Chronicle*. Some of these analyze multiple entries of the *Auschwitz Chronicle*, so that the number of Czech's entries analyzed actually exceeds 200. These are mostly alleged events concerning the extermination of Jews and Gypsies, which form the backbone of the orthodox narrative about Auschwitz still in vogue.

Regarding transportation, occupancy and mortality, which are also important aspects of the camp's history, I point to the relevant documents from time to time. For a general exposition of these issues, I refer the reader to a study of mine specifically focusing on these issues (Mattogno 2019).

Chronological Critique

1941

18 July 1941 (p. 74)

> *"A few hundred Russian prisoners of war are admitted and put in Block 11. They are put to work excavating sand in the gravel pit behind the camp kitchen, next to the SS Block Leader's room.*[31] *Within a few days the entire group is murdered during work. The SS Men kill them with shots from a short, small-caliber gun and the Capos beat them to death with shovels and picks."*

Sources: "APMO, Höss Trial, vol. 4, pp. 53-58; Kraków Auschwitz Trial, vol. 54, p. 207."

These are two testimonies, one by Ludwik Rajewski, the other by Bogdan Gliński. The former stated in this regard:[32]

> *"With this same fate over 10,000 Russian prisoners of war were sent to the Auschwitz Camp. They arrived at Auschwitz in the autumn* [*na jesieni*] *of 1941, and within five months, at the turn of 1941 and 1942, they were killed there. The first part was killed within three days at the gravel pit near the Blockführerstube of the Main Camp."*

The witness Gliński made the following statement:[33]

> *"Not only I but also other prisoners have the following event etched in their memories: a few weeks after the start of the German-Russian war, the first large transport of Russian prisoners of war arrived at Auschwitz in a group of several hundred people. These prisoners were housed in Block 11, and every day they went to work, which consisted of extracting sand from a large pit – the Kiesgrube* [gravel pit] *– which was located behind the camp kitchen, beyond the fence. Over the course of several consecutive days, the entire group was killed in the most vicious and shameful manner."*

Since the German attack on the Soviet Union dates to 22 June 1941, the chronological indication provided by the witness ("a few weeks later") undoubtedly refers to the month of July, but the date of July 18 cited by Czech is clearly invented. Moreover, the two testimonies are chronologically contradictory.

The truth about this alleged event was revealed by another witness, Kazimierz Hałgas:[34]

---

31 The "Block Leader" ("*Blockführer*") was an SS NCO in charge of a group of inmates housed together.

32 Höss Trial, Vol. 4, p. 56, testimony by L. Rajewski, 7 September 1946.

33 Trial of the Auschwitz Camp Garrison, Vol. 54b, p. 212, testimony by B. Gliński, 19 September 1947.

34 Hałgas, p. 167. The original article appeared in 1980 in the Polish periodical *Przegląd Lekarski* (*Medical Journal*).

"On 3 July [1941]*, also in the gravel pit, a large execution of about 70 prisoners, mostly from Krakow, took place, the last one involving a firing squad. At that time, there were no Soviet prisoners of war in Auschwitz. Reports of transports of Soviet prisoners of war in July 1941, who were allegedly incorporated into the PK (Penal Company) and then killed without being registered, cannot be proven in the light of the Auschwitz events; these were probably confused with the facts just mentioned."*

28 July 1941 (p. 75)

"A special commission created on Himmler's orders arrives at Auschwitz to select prisoners within the framework of the 'Euthanasia Program' for the incurably ill, extended in 1940 to Jews and in the middle of 1941 to prisoners of concentration camps. The committee inspects all invalids, cripples, and chronically ill who have been previously chosen by the camp administration under the pretext of shifting them to another camp for easier work. One member of this special doctors' committee is Dr. Horst Schumann, who has directed the Grafeneck Euthanasia Institute in Württemberg since August 1939 and, after its dissolution, served as director of a similar institution in Sonnenstein near Pima. Most of the selected prisoners come from what was then called Block 15, the convalescent block, where sick and exhausted prisoners and those incapable of working are sent when an SS Doctor no longer wants to let them remain in the prisoners' infirmary. […] *Altogether, 573 inmates, most of them Poles, are chosen.* […] *Following Dr. Schumann's orders, the transport is sent to Sonnenstein under the direction of Roll Call Leader Franz Hössler. A report to Höss that Hössler makes after his return states that the prisoners were gassed in a bathroom where carbon monoxide gas was introduced through the showerheads."*

Sources: "APMO, Höss Trial, vol. 21, pp. 137, 138; vol. 4, p. 99; vol. 7, pp. 180, 183; vol. 8, p. 109; Witnesses' Accounts; Mat.RO, vol. VII, p. 474, a transport of 575 prisoners to Dresden is recorded; Memoirs, vol. 20, p. 153, Memoir of Former Prisoner Tomasz Paczuła; Kowalski, Number 4410, pp. 183ff., 200-203."

No visit to Auschwitz by any "special commission" is documented. Czech draws her narrative from Höss's interrogation in Polish on 9 January 1947, where he stated with reference to Schumann:[35]

"He first came to Auschwitz in 1941 in the company of another doctor, whose name I do not remember. This special commission had been announced earlier by an order of Himmler. According to the contents of this order, professional criminals, hereditary patients and mentally ill inmates were to be selected from among all the inmates, and on the arrival of the special commission, they were to be handed over to the commissioner. To this commission were entrust-

[35] Höss Trial, Vol. 21, pp. 137f.

> *ed from Auschwitz, as far as I remember, 2 railway cars full of criminals selected according to Himmler's order; I remember that among them was, among others, the Oberkapo of the Construction Depot, the professional criminal von Sigurd /witness no. 26/. Following Schumann's order, Hössler brought these detainees to the mental-health institute at Königstein, Saxony, whose patients had already been liquidated previously. In this institution – as Hössler told me* [*jak mi zakomunikował*] *– detainees brought in from Auschwitz were put into a bath where they were poisoned with carbon monoxide /Kohlenoxyd/, which was fed into the bathroom through shower heads. Only these transports were sent from Auschwitz to Königstein."*

Czech therefore distorts the narrative of her source: first she does not mention that the alleged selection concerned only professional criminals, then replaces Königstein with Sonnenstein. Next, she lets it be understood that there is a written report by Hössler on the affair, but Höss was referring to a simple verbal information by Hössler, for which Höss was the only guarantor.

The number of those selected and the date of the transport were taken from information from the Auschwitz resistance movement. In fact, in a note titled "Transport" dated 28 July 1941, the following words appear "Dresden gazowania 575 [więźniów]" ("Dresden gassing 575 [inmates]"). [36]

However, another, much-more-circumstantial piece of information from the resistance movement describes the alleged event in completely different terms ("Obóz…," p. 47):

> *"The first* [*pierwsze*] *use of gas chambers took place in June 1941* [*w VI. 1941 r.*]. *A transport was formed of 1,700 'incurables,' which was* [allegedly] *sent to the sanatorium in Dresden, but actually to the building converted to a gas chamber* [*do budynku przebudowanego na komorę gazową*]*."*

According to this, those presumably selected (1,700 rather than 575) are said to have been gassed in June (rather than on 28 July 1941) and at Auschwitz, not at Königstein.

Furthermore, the number accepted by Czech (575) is clearly irreconcilable with the two railway cars of prisoners mentioned by Höss.

The other two sources she mentions are from a very-late date: The undated recollections of former inmate Tomasz Paczuła are part of the collection *Wspomnienia byłych więźniów obozu* (*Recollections of former inmates of the Auschwitz Camp*); Stanisław Kowalski's text was published in 1985 (p. 835).

29 July 1941 (p. 76)

> *"The Commandant of Auschwitz is called to Berlin by the SS Commander in Chief. Without any witnesses, Himmler discusses the technical aspects of the so-called 'Final Solution of the Jewish question' with him. As a result of the*

[36] AGK, NTN, 155 [= Mat. RO., Bd. VII], p. 474.

> *conversation, Höss receives from Himmler the order to carry out in Auschwitz the extermination of the Jews and to present construction plans for the extermination plants for killing people within four weeks. Himmler tells Höss that he will get more details from SS Major Adolf Eichmann of the RSHA, who will soon be coming to Auschwitz."*

Source: "APMO, Höss Trial, vol. 21, pp. 3f., 23; Höss, *Commandant in Auschwitz*, pp. 157, 181."

Czech explains in a footnote (*ibid.*):

> *"The date of July 29 for the meeting is probable on the basis of the document cited below, according to which Camp Commander Fritzsch selects hostages and signs documents in the absence of Höss."*

Such an inference is extremely weak, because an absence of Höss, about which nothing is known, proves nothing. Discussing Höss's alleged summons to Berlin, Richard Breitman notes that Himmler, according to his duty schedule, left Berlin for East Prussia on 25 June 1941, and returned on 13 July. Two days later, he left again for East Prussia, so the only days available for the alleged meeting were 13-15 July 1941 (Breitman, pp. 294f.). In practice, Czech relied on a date when Höss was absent from Auschwitz but did not bother to ascertain whether Himmler was actually in Berlin on that same date.

The first source given by Czech – Volume 21 of the Höss Trial – contains a long series of interrogations of the former Auschwitz commandant. It begins with the transcript of the interrogation of 14 March 1946 by the British. We read there:[37]

> *"In June 1941 I was summoned to Himmler in Berlin where he basically told me the following. The Fuehrer has ordered the solution of the Jewish question in Europe. Several so-called extermination camps already exist in the General Government (BELZEK near RAVA RUSKA eastern Poland, TREBLINKA near MALINA* [Małkinia] *on the River BUG, and WOLZEK near LUBLIN)"*

On p. 23 of Volume 21 of the Höss Trial files containing the text of an interrogation in Polish conducted on 28 September 1946, there is no mention of this matter. In his autobiographic texts, Höss wrote that the alleged meeting in Berlin took place in "the summer of 1941" (Höss, pp. 160, 178, 205). Czech thus turns June into July and, much-more-seriously, is completely silent about the absurdity of the existence in June 1941 of the camps at Bełżec, Treblinka and "Wolzek" (interpreted by orthodox Holocaust historians as Sobibór), since this blatant anachronism upsets her entire fictional extermination chronology (and even-more-so that of her key witness Höss).[38]

---

[37] Höss Trial, Vol. 21, p. 3.

[38] For a comprehensive analysis of the many contradictions, absurdities and impossibilities of Höss's various statements, testimonies and biographical texts see Mattogno 2020.

August 1941 (pp. 77f.)

Czech sets forth a lengthy summary of Höss's statements about Eichmann's alleged visit to Auschwitz. The source is precisely "*Commandant in Auschwitz*, pp. 206-207." Regarding the chronology of events, Höss recounts that "in the summer of 1941" he was summoned by Himmler to Berlin, after which he "returned forthwith to Auschwitz," and "shortly afterward Eichmann came to Auschwitz." Since the only month mentioned by Höss is June, Eichmann's alleged visit should have taken place in June or July. Czech opted for August because she arbitrarily dates the alleged summons to Berlin to July 29. Not the slightest documentary evidence exists confirming Eichmann's alleged visit to Auschwitz, hence it is impossible to affirm seriously its historical reality.

August 1941** (p. 83)

> *"Rudolf Höss takes part in a conference of the Jewish Section, IVB-4, of the RSHA in Berlin, whose director is Adolf Eichmann. At this conference, problems concerning the planned extermination of the Jews in Auschwitz are discussed. Eichmann's deputies in the individual regions report on the state of the operation and on difficulties in carrying it out, e.g., accommodations for prisoners, availability of trains for transports, scheduling, etc."*

Source: "Höss, *Commandant in Auschwitz*, pp. 158ff." The passage she quotes is in fact from a 1963 German edition. In the English edition (Höss 1959), it can be found on page 154.

Czech explains in a footnote:

> *"Höss writes in his memoirs that this discussion took place at the end of November: 'I didn't hear anything about the start-up of the operation. And Eichmann hadn't obtained any suitable gas.'* [Höss 1959, p. 154: "*I could not find out when a start was to be made, and Eichmann had not yet discovered a suitable kind of gas*."] *The discussion must have taken place before the gas Zyklon B was used in Auschwitz, thus the end of August."*

This only means that Höss's chronology is contradictory and that one must force it in every way to derive a somewhat-coherent picture.

This alleged "discussion" in August 1941 did not take place and could not have taken place, because at that time the Reich government irrefutably pursued a policy of emigration/evacuation of the Jews, sanctioned by Hermann Göring's letter to Reinhardt Heydrich of 31 July 1941, in which, as is known, he instructed Heydrich to make all preparations to bring the Jewish question to the best possible solution "in the form of emigration or evacuation" ("*in Form der Auswanderung oder Evakuierung*"; PS-710).

In practice, therefore, the alleged "discussion" could neither have taken place in August nor November 1941, which is precisely what this internal contradiction points at that Czech has revealed.

With this distortion, she aims at a twofold result: on the one hand, she eliminates the embarrassing contradiction, on the other hand, she creates a fictitious absence of Höss in order to give a fallacious semblance of reality to Fritzsch's claimed gassing experiment that she mentions in her subsequent entry.

August 1941* (p. 84)

> *"In Höss's absence, Camp Commander SS Captain Karl Fritzsch uses the gas Zyklon B to kill Russian POW's."*

Source: as before.

Czech adds two notes. The first concerns the date:

> *"This most likely happens at the end of August because Höss is present at the next killing of the Russian POW's and the Polish prisoners in the cellar of Block 11."*

The second note is very long; the central element is Höss's statement in his postwar narration regarding the alleged gassing of Russian prisoners of war:

> *"While I was away on duty, my deputy, Fritzsch, the Protective Custody Commander, first tried gas for these killings. It was a preparation of prussic acid, called Zyklon B, which was used in the camp as an insecticide and of which there was always a stock on hand. On my return, Fritzsch reported this to me, and the gas was used again for the next transport."*
>
> *"When I was absent on duty, my deputy, Captain Fritzsch, on his own initiative used gas for killing those Russian prisoners of war. He crammed the underground detention cells with Russians and, protected by a gas mask, discharged Zyklon B gas into the cells, killing the victims instantly."*

As sources she gives "Höss, *Commandant in Auschwitz*, pp. 125ff., 159," but again, these passages are translated quotes from the 1963 German edition. The page numbers for the English edition, with minor textual differences, are 162 and 207f.

Czech concluded:

> *"Höss mentions neither the number of the murdered Russian prisoners of war nor the place where Zyklon B is used."*

This is a blatant lie, which Czech can get away with only because she opportunistically cuts Höss's statements to fit her own preconceived thesis. In fact, the text continues as follows (Höss, p. 162):

> *"The gassing was carried out in the detention cells of block 11. Protected by a gas mask, I watched the killing myself. In the crowded cells death came instantaneously the moment the Cyclon B was thrown in. A short, almost smothered cry, and it was all over. During this first experience of gassing people, I did not fully realize what was happening, perhaps because I was too impressed by the whole procedure. I have a clearer recollection of the gassing of nine hun-*

> *dred Russians which took place shortly afterward in the old crematorium, since the use of block 11 for this purpose caused too much trouble."*

Czech's assertion that Höss mentioned "neither the number of the murdered Russian prisoners of war nor the place where Zyklon B is used" is therefore false, because he explicitly stated that the alleged event affected 900 Russians and occurred "in the detention cells of block 11."

Czech's deliberately ambiguous reasoning is that there was an earlier gassing than that of 3 September 1941 (see the respective later entry), because Höss (apparently) spoke of two gassings, one carried out in his absence by Fritzsch, and one which he personally witnessed and which, according to Czech's above-quoted footnote, involved "the Russian POW's *and the Polish prisoners*."

In reality, this is not about two gassings, but a blatant contradiction, as Czech herself and her colleague Jadwiga Bezwińska explained when commenting on the quoted text in an earlier publication (Bezwińska/Czech 2007, Note 112, p. 92):

> *"In the light of present research it appears that the first attempt to kill with gas took place in the cellars of Block 11. Another attempt at gassing prisoners in the cellars of that Block was not recorded. Although Höss in that sentence denied having been present at the first attempt to kill with gas, nevertheless a few sentences further he stated that he had been present when for the first time gas had been used. He wrote: 'During the first experience of gassing people* […continued as just quoted]*."*

Moreover, Höss speaks exclusively of Russian prisoners of war in this context, never of Polish prisoners.

In her August 1941** entry examined earlier, Czech states that this alleged gassing took place after the fictitious conference organized by Eichmann in Berlin at the end of August, but the camp documents do not show an absence of Höss: he signed all the official acts of the time: Headquarters Order No. 21/41 on 20 August, Garrison Order No. 6/41 on 25 August, a Headquarters Special Order on 29 August, and Headquarters Order No. 22/41 on 30 August (Frei, pp. 61-64). Therefore, not even the pretext of a documented absence of Höss exists for this period.

This alleged gassing is therefore a gross invention by Czech.

3-5 September 1941 (pp. 85-87)

In these entries, Czech presents an extensive account of the alleged first homicidal gassing at Auschwitz, which deserves a detailed critique.

3 September (pp. 85f.)

Czech lays out a lengthy narrative, of which I report the essential parts:

> *"After the success of the experiment of killing the small group of Russian prisoners of war with gas, ordered by Karl Fritzsch a few days earlier, the camp administration decides to repeat the experiment in the cellar of Block 11.* […] *In this connection, Camp Doctor SS Captain Dr. Siegfried Schwela orders a selection in the prisoners' infirmary, in which about 250 inmates are selected. The attendants are instructed to take the selected prisoners to the bunker of Block 11 and to bring a few of them there on stretchers. In the bunker they are crammed together in a few cells. The cellar windows are blocked up with earth. Then about 600 Russian POW's, officers, and people's commissars are driven into the cellar. They have been chosen in the camp's prisoner-of-war section by special Gestapo commandos. As soon as they are pushed into the cells and the SS men have thrown in the Zyklon B gas, the doors are locked and sealed. This operation takes place after evening roll call, after announcement of a so-called camp curfew,*[39] *during which prisoners are forbidden to leave the blocks and move around in the camp."*

Czech explains in a footnote:

> *"The date comes from an analysis of the statements of former prisoners and of the Bunker Register, in which between August 31 and September 5 no entries occur regarding admission of prisoners into the bunker."*

Source: "APMO, Höss Trial, vol. 2, p. 97; vol. 4, pp. 21, 34, 99, 128; vol. 54, p. 207; Vol. 78, p. 1, Statements of Former Prisoners."

Czech does not even deign to name these witnesses, which is certainly not helpful to anyone who wants to verify their statements. The references given by her concern, in her order:

a. the interrogation of Michał Kula of 11 June 1945 (Höss Trial, Vol. 2, pp. 60-103);
b. the interrogation of Jan Krokowski of 17 July 1945 (Höss Trial, Vol. 4, pp. 18-22);
c. the interrogation of Józef Koczorowski (Höss Trial, Vol. 4, pp. 31-35),
d. the interrogation of Roman Taul of 10 September 1946 (Höss Trial, Vol. 4, pp. 98-102);
e. the interrogation of Feliks Myłyk of 12 September 1946 (Höss Trial, Vol. 4, pp. 125-131);
f. the interrogation of Bogdan Gliński of 9 September 1947 (Garrison Trial, Vol. 54, pp. 207-215);
g. the interrogation of Zygmunt Smużewski of 5 February 1946 (Garrison Trial, Vol. 53, pp. 7f.).

---

[39] German term: *Lagersperre*; Czech actually meant a "*Blocksperre*," the curfew of some blocks affected by this measure.

We now will examine each of these testimonies. First, I will simply quote the pertinent part of each witness's testimony:

a. Michał Kula:[40]

> *"According to my information, the first gassing took place during the night of 14-15 and the day of 15 of August 1941 in the Bunkers of Block 11. I remember that very clearly because it coincided with the first anniversary of my arrival at the camp and because the first Russian prisoners of war were then gassed. In the evening of August 14 the paramedics took 250 sick inmates from the hospital blocks to Block 11. Then, into that block were herded several hundred Russian prisoners who – as we were told when they arrived at the camp – were political commissars. Both the sick inmates and the Russian POWs were lodged in the Bunker of Block 11.*
>
> *The little windows of those Bunkers were covered with fine earth to make them air-tight. An SS man, a* Blockführer, *whose name I do not know but who was called 'Tom Mix' by the detainees threw the gas into the Bunkers through the door to the corridor. After that, the door was closed. On August 15, around 4 p.m., Palitzsch walked across the roll-call yard directly to Block 11 with a gas mask. Because it was the Feast of the Assumption, we had the afternoon off and could thus observe the scene which I will now describe. Mietek Borek and Wacław Ruski, two assistants at Bunker 11, told me that Palitzsch put on his gas mask, opened the door of the Bunkers, and discovered that the people inside were still alive.*
>
> *Actually, they moved around only on all fours and were very weak, but they were still alive. So, Tom Mix was called and he threw in the contents of another can of gas. The Bunkers were reopened only in the evening of 16 August 1941. None of those who had entered were still alive. The paramedics from the hospital blocks took the gassed into the yard where they were undressed, loaded on carts, and taken away in the direction of Brzezinka* [Birkenau]. […]
>
> *The corpses of the sick inmates and of the Russians gassed in August of 1941 in the Bunkers of Block 11, as I have already stated, were not cremated in the crematorium but taken away towards Brzezinka where they were buried."*

b. Jan Krokowski:[41]

> *"I was an eyewitness one night in the autumn of 1941 when near Block 24, in which I was housed at the time, several hundred Russian inmates were herded towards Block 11. That they were Russians I could gather from the Russian words they uttered while they were pushed and beaten by the SS. The following day, I learned that 600 Russian POWs and 400 sick Poles had been gassed the night before in the basement of Block 11; at first they had used too little gas, and many were still alive when the chamber was opened, so that the dose was*

[40] Höss Trial, Vol. 2, pp. 96f.
[41] Höss Trial, Vol. 4, p. 21.

increased, and they were all killed in this way. As far as I know, that was the only gassing in Block 11."

c. Józef Koczorowski:[42]

"I wish to state that the first gassing at Auschwitz occurred in the cellars of Block 11. I think it was in October of 1941. At that time, some 600 Russian prisoners of war and about 200 Tbc-patients from the sickbay were gassed."

d. Roman Taul:[43]

"I remember that later in 1941, in August I think, Grabner told his staff after a meeting with Höss that a transport of Soviet commissars had arrived which would have to be gassed. That was the first action of this kind on the grounds of Auschwitz; in conformity with this announcement, they were led into the basement of Block 11. At that time, several hundred patients selected for this purpose at the camp sickbay were gassed as well besides this group of Russians. In his capacity as camp surgeon, Dr. Schwela was in charge of the event."

e. Feliks Myłyk:[44]

"In early autumn of 1941 the first transport of Russian prisoners of war arrived at Auschwitz. All were officers, about 600 of them. They were all pushed into Block 11 – at that time Block 13, according to the old numbering system – and were gassed there, together with a certain number of patients selected in the inmate sickbay. The corpses of those gassed were taken to the crematorium on trucks during the night and were burned there."

f. Bogdan Gliński:[45]

"When I was sick and was staying in the detainee sickbay in Block 21, I saw one night that a group of several hundred Russian prisoners were led into the yard of Block 11, which was on the other side of the street – some 600, if I remember correctly. While they were being moved in there, one could hear the screams, because the SS escorting them were hitting them with whips and kicking them. I distinctly saw – and other companions of mine did, too – that the SS escort was equipped with gas masks, which aroused our curiosity strongly. Among the SS men I saw Grabner, Plagge, and Lachmann. I could see clearly that they, too, were beating these men. From the way they behaved – I had never seen Grabner and Lachmann beating anyone in the camp – and also from the fact that they were screaming, I concluded that they had been drinking and were acting under the influence of alcohol. After the evening rollcall, before night-fall, all the detainee sickbay blocks were emptied of the sick and the convalescent, and those selected by a doctor were led, or, in the case of

43 *Ibid*., p. 99.
44 *Ibid*., pp. 127f.
45 Trial of the Auschwitz Camp Garrison, Vol. 54b, pp. 210f.

those who could not walk, were carried into the block and down into the cells. I know this from what I was told by companions who carried those patients. The convalescents were also taken downstairs. Two days earlier, this block had been completely cleared, and the detainees had been moved to another block. I didn't know anything, and I didn't know the purpose of it all."

g. Zygmunt Smużewski:[46]

"In September of 1941 the first transport of Russian prisoners arrived and at that time the first gassing test with detainees was carried out. It took place in the Bunker of barrack 11 [*w bunkrze 11 baraku*]. *On that occasion, 980 persons were gassed, mostly Russian POWs, but also other detainees – the sick and those unable to work: all through the following night the corpses were taken to the crematorium of Old Auschwitz*."

4 September, Morning (p. 86)

"In the morning Roll Call Leader Gerhard Palitzsch, protected by a gas mask, opens the doors and discovers that one[47] *of the POW's is still alive. More Zyklon B is poured and the doors are closed once more."*

Source: "APMO, Höss Trial, vol. 2, pp. 21, 97; Statements of Former Prisoners Jan Krokowski and Michał Kula."

These are the two testimonies quoted earlier.

4 September, Afternoon (p. 86)

"In the afternoon all the doors of the bunker in Block 11 are opened and unsealed after it is ascertained that the second dose of Zyklon B has killed the Russian POW's and the Polish prisoners. There is a wait until the gas has evaporated. After evening roll call, another camp curfew is ordered."

Source: "APMO, Höss Trial, vol. 2, p. 97; Statements of Former Prisoner Michał Kula; Kielar, *Anus Mundi*, p. 92."

Kula's statement mentioned by Czech is again the one quoted earlier. Wiesław Kielar, who was a nurse in Block 16 in 1941 (serial number 290), presents a somewhat verbose account of the alleged event in a book originally published in 1972. I quote the essentials and summarize the rest:

"One day, several hundred of the newly arrived Soviet prisoners of war were herded into Block 11. The same day, quite unexpectedly, camp surgeon Entress appeared and, as he had done a few weeks before, passed attentively through all three sickbay blocks, inspecting all rooms where there were patients. The seriously ill selected by him had to be taken to the yard in front of Block 16. Paramedics then took them to the penal company, the members of which had previously been moved to a different block. We had to carry most of

---

46 AGK, NTN, 135, p. 7.

47 The German edition has here "*einige*" = "some," Czech 1989, p. 118.

> *the patients on stretchers. Later, detainees from the penal company selected for this purpose took care of them. We went back to our job.*
>
> *After the evening roll call, curfew was ordered. Because of that, there was no more work in the out-patient section, and everyone went to bed earlier than usually.* […]
>
> *All illusions were to be shattered the next day. Teofil and Gienek were sure. All had been killed with gas.* […]
>
> *There was curfew again the following evening."*

Palitzsch suddenly burst into Kielar's block, and the nurses were taken to Block 11.

> *"In the yard, the whole crew of the SS was already there, with commander Fritzsch and camp surgeon Entress in charge."*

Palitzsch, some block leaders and the Block Eldests Obojski and Teofil [Banasiuk] went down into the basement wearing gas masks, and after a while they came out without masks, because the gas had dissipated. Then the nurses also went downstairs, took the corpses out of the basement, and brought them to the crematorium (Kielar, pp. 90-98).

4 September, Evening (pp. 86f.)

> *"In the evening Roll Call Leader Palitzsch summons 20 prisoners from the Penal Company in Block 5a as well as all the hospital orderlies and two prisoners, Eugeniusz Obojski and Teofil Bansiuk, who are to be put to work as corpse bearers. They are given two carts to transport the bodies to the morgue and the crematorium. All are taken to the courtyard of Block 11.* […] *Prisoners Obojski and Bansiuk receive gas masks and go with Palitzsch and the SS men, who also wear gas masks, to the cellar of Block 11. They return from the cellar without gas masks to show that the gas has evaporated. The prisoners are divided into four groups."*

The corpses are transported "to the crematorium."

Source: "APMO, Höss Trial, vol. 4, p. 21; vol. 54, pp. 208ff.; vol. 55, pp. 101ff.; Statement of Former Prisoners; Kielar, *Anus Mundi*, pp. 92-94."

The first two references concern the testimonies of Jan Krokowski and Bogdan Gliński as quoted earlier. The third reference is to the Krakow T rial and concerns the interrogation of Ludwik Banach on 18 July 1947, who had been deported to Auschwitz on 29 August 1941, and had been part of the penal squad:[48]

> *"While I was at work, I overheard an SS conversation from which it appeared that approximately 800 Russian NKWD officers* [*około 800 rosyjskich oficierów NKWD*] *had been brought to the camp. I also heard from older in-*

[48] Trial of the Auschwitz Camp Garrison, Vol. 55, pp. 101-102, testimony by Ludwik Banach, 18 July 1947.

mates of the penal squad that these officers were to die of starvation. On that same day, all those who occupied Block 11 were moved to Block 5a, which was still under construction. We stayed there three days, continuing to go to work. During that time, I was taken to Block 11 together with several tens of colleagues in order to clean the block of corpses. This work was supervised by Oberscharführer *Gehring – who resembles the man in the photograph shown to me.* […]

After we had entered the block, we saw a horrible sight. There were some 800 Russians in fatigue uniforms without insignia, but some of them had ID tags; I don't know any Russian, but among us there were some who did. They told me that from the tags one could see that they were officers – I remember ranks of lieutenant colonel etc. When we entered, we were given gas masks. The corpses were bluish,[49] *one could see traces of blood around their mouths and noses. On the floor, there was something like broken lumps of sugar, also something green the shape and size of sweets.*[50] *Lastly, on the floor there were tin cans or cartons with 'Gas' written on them. We carried the corpses into the yard, and then other detainees took them to the crematorium on carts. That was on 15 September 1941. After we had cleaned the block, the whole penal company moved back into that same block. I wish to add that among the 800 gassed there were 120 political detainees."*

5 September (p. 87)

"After evening roll call, a camp curfew is ordered. The same prisoners who were detailed the night before march into the courtyard of Block 11 to complete the transporting of the bodies to the crematorium. There, the corpses are laid in a big, long hall which is already half full. The crematorium unit cannot keep up with the cremation of the corpses. It is a few more days before all the bodies are incinerated."

Source: "Wiesław Kielar, *Anus Mundi*, pp. 95-98."

This is the account outlined earlier (entry for 4 September, afternoon).

Proceeding from the assumption that the first experimental gassing of August 1941 is purely imaginary (see entry August 1941*), of which the gassing discussed here would have been a subsequent development, an analysis of the sources adduced by Czech reveals the following:

1) The date of the beginning of the first homicidal gassing –3 September 1941 – is inferred from Banach's testimony, according to whom the removal of the corpses was carried out on 5 September 1941. But the witness Kula, who is Czech's main source, says explicitly and with certainty that this event

---

49 Claims about blue discolorations of Zyklon-B-gassing victims are a constant feature of witness delusions. As is known, the most-frequent discoloration of those poisoned by hydrogen cyanide is pinkish-red; Rudolf 2020, pp. 228-230.

50 The inert carrier material of the type of Zyklon B used at Auschwitz (Erco) consisted of "little bluish cubes" of gypsum not larger than 1 cm in length.

occurred on 14-15 August 1941. And it is again Kula who reports that this removal took place two days after the gassing, based on which Czech establishes the day of the gassing: 5 – 2 = 3 September!

During the Höss Trial, Expert Witness Roman Dawidowski declared to the best of his knowledge and not without reason that

> *"on 14-15 August 1941, 250 patients on stretchers from the hospital and 600 Russian prisoners were brought together to the prison at Block 11, and they began to experiment with Zyklon B, the poison that until then had been used at Auschwitz to disinfest clothes."*[51]

2) Czech's contention that this event must have occurred between 31 August and 5 September is based on the fact that during this period no inmates were imprisoned in the basement prison of Block 11, but this does not at all support Czech's claims. It would have some significance if the Bunker Register proved that all detainees in the arrest cells were transferred elsewhere during this period, but no document supports this.

3) Czech took the name of the SS doctor who carried out the selection (Dr. Schwela) from Taul's testimony, but Kielar states that the selecting doctor was Dr. Entress, who in the first German edition of the *Auschwitz Chronicle* appears precisely among the participants in the first homicidal gassing (Czech 1959, p. 109). In the meantime, Czech had learned that Dr. Entress was not yet stationed at Auschwitz in September 1941. In fact, in her entry for 11 December 1941, we read (p. 115):

> *"Camp Doctor SS Second Lieutenant Friedrich Entress comes from Gross-Rosen C. C. and assumes the same position in Auschwitz."*

Therefore, Kielar's "eyewitness" testimony about Dr. Entress is a lie, and Czech knew it perfectly well.

4) The number of selected sick inmates (250) is taken from Kula's testimony, that of the Russian inmates (600) from the testimonies of Krokowski, Koczorowski, Myłyk and Gliński; however, Krokowski stated that 400 sick prisoners were selected, Smużewski gives a total of 980 victims, and Banach speaks of 800 Russians, including 120 political prisoners.

5) On the morning after the gassing (4 September), Palitzsch opened the cell doors and found that "one" or, according to the German edition, "some" Russian prisoners of war were still alive. The source is Kula's testimony, but he stated that this happened the *afternoon* of the next day ("On August 15, around 4 p.m., Palitzsch walked […] to Block 11 with a gas mask").

6) On the night of September 4 to September 5, i.e. still the day after the gassing, "Palitzsch summons 20 prisoners from the Penal Company in Block 5a as well as all the hospital orderlies," plus two other inmates, who immediately began to remove the corpses. But according to Kula, the basement of

[51] Höss Trial, 14th Session, 26 March 1947, p. 1562.

Block 11 was reopened only on the evening of 16 August, hence *two days* after the gassing; Kielar also stated that the removal of the corpses began *two days* later, to be exact on the evening of the second day, while Gliński stated that it began three days later. This same witness further stated that this operation was performed by approximately 20 *doctors* and nurses, whom Czech turns into "20 prisoners from the Penal Company in Block 5 a," while Banach stated that it was performed by "a few dozen" inmates of the penal squad. Gliński, who was a nurse, asserted that the operation was performed only by nurses and doctors, while Banach, who was a member of the penal squad, stated that the operation was performed only by the inmates of the penal squad. Therefore, they were *either* nurses *or* inmates of the penal squad. Czech resolves the contradiction by asserting that *both* nurses *and* inmates of the penal squad did that job!

7) According to Czech, the corpses of the gassing victims were taken to the crematorium and cremated there, but Kula stated that they were "not cremated in the crematorium but taken away towards Brzezinka where they were buried."

8) Transporting the corpses to the crematorium lasted two nights, and it ended on the night of 5 September. But Myłyk and Smużewski stated that this work was performed in one night.

In the second footnote on p. 86, Czech quotes a passage from Höss's postwar writings which I quoted earlier, where he says:

> *"In the crowded cells death came instantaneously the moment the Zyklon B was thrown in."*

In the parallel passage similarly quoted earlier, Höss also specified that the gas killed "the victims instantly." This is in open contrast to any claim of a second administration of Zyklon B for the reason that some victims were allegedly still alive.

For Czech, as I have explained earlier, Höss was referring to the alleged gassing of 3 September 1941, so there is a further stark contradiction between the immediate death of the victims and the survival of all or part of them the next day, as recounted by Kula. Moreover, according to Höss, the alleged victims were exclusively Russian prisoners of war, no inmates, which is another jarring contradiction that Czech preferred to ignore, just like all the others.

The entries of 3 to 5 September 1941 are an emblematic case of Czech's fallacious method, consisting in the pretension of composing a coherent and consistent historical narrative from a jumble of contradictory testimonies, taking single pieces out of context and ignoring their glaring contradictions. The resulting historical mosaic is therefore inevitably fictitious.[52]

[52] For an in-depth study of claims about the alleged first gassing at Auschwitz see Mattogno 2016c.

16 September 1941 (p. 90)

> *"900 Russian POWs are killed with gas. This takes place in the morgue of the crematorium because the use of the cellar in Block 11 would be too complicated."*

Source: in a footnote, Czech quotes a translation of the relevant passage from Höss's postwar writing, p. 126 of the German edition, although she again cites the English edition "*Commandant in Auschwitz*." This alleged gassing, Höss claims, took place "shortly afterward," meaning after the "first gassing" in Block 11, which the editor of the *Auschwitz Chronicle* arbitrarily dates to 3-5 September 1941. From this, we do not know how, she deduces that the gassing of the 900 Russian prisoners took place exactly on 16 September!

However, the first transport of Russian prisoners of war (2,014 persons) arrived at Auschwitz only on 7 October 1941, as Czech herself informs us (p. 93). At that time, the Cartographic Library (*Kartei*) and the Death Register (*Totenbuch*) were established, which, together with the personal files (*Personalbogen*) of the prisoners, constitute all available documentary material. Any claims concerning alleged earlier transports of Russian prisoners of war therefore have no historical value.

In the course of his trial, Höss stated:[53]

> *"After the first gassing in Block No. 11 – this was the prison building – the gassings were transferred to the old crematorium, in the so-called morgue. The gassing was done this way: holes were made through the concrete ceiling, and the gas – it was a crystalline mass – was poured through these holes into the room. I only remember one transport. 900 prisoners of war were gassed in this way. From then on, the gassing was carried out outside the camp, in Bunker 1."*

And a while later:[54]

> *"Women were never gassed in Crematorium I. Exclusively those Russian prisoners were gassed there."*

In his essay "The find solution of the Jewish question in Auschwitz concentration camp" he explained (Höss, p. 208):

> *"I can however only recall one transport consisting of nine hundred Russian prisoners being gassed there* [in Crematorium I] *and I remember that it took several days to cremate their corpses. Russians were not gassed in the peasant farmstead which had now been converted for the extermination of the Jews."*

From the above it appears that the Russian prisoners of war were gassed exclusively in Crematorium I and never in "Bunker 1," the Jews exclusively in "Bunker 1" and never in Crematorium I. Nevertheless, Czech claims that Jews were also gassed in Crematorium I (see the entries of 15 February and 20

---

[53] Höss Trial, 2nd Session, pp. 110f.
[54] Höss Trial, 10th Session, p. 1070.

March 1942). This is explicitly stated by her in the introduction to the year 1942 (p. 123):

> *"The first transports of several hundred Jews are sent from Upper Silesia by the Kattowitz Stapo* [state police] *and received by the SS at the railroad platform of the camp siding. The people are killed with Zyklon B gas in the morgue, converted for this purpose, of the crematorium."*

1942

15 February 1942 (p. 135)

> *"The first transport of Jews who have been arrested by the Stapo and destined for death in Auschwitz arrives from Beuthen. They are unloaded on the platform of the camp siding. They have to leave their bags on the platform. The standby squad takes charge of the deportees from the Stapo and leads them to the gas chamber in the camp crematorium. There they are killed with Zyklon B gas."*

Here appears the following long explanatory footnote:

> *"In the first edition of the Calendar (HvA* [Hefte von Auschwitz], *no. 3, 1960), it was assumed, according to Höss's memoirs, that the gassing of the Jews of Upper Silesia began at the end of January 1942 and was carried out in Bunker 1 in Birkenau. This change of date to February 15 comes from information attained by Martin Broszat from the International Red Cross Search Service in Arolsen. From the memoirs of Pery Broad, an official of the Political Department in Auschwitz, it appears that the gassing of the Jews was begun in 1942 in the gas chamber of Crematorium l. The corpses of the gassed Jews are also incinerated there. This seems more probable, since burial of the corpses in the meadow near Bunker 1 in Birkenau would have caused great difficulties in the winter months."*

Sources: "Höss, *Commandant in Auschwitz*, p. 160; Pery Broad, "KZ Auschwitz: Erinnerungen eines SS-Mannes der Politischen Abteilung in dem Konzentrationslager Auschwitz" (Memoirs of an SS Man in the Political Department of Auschwitz Concentration Camp), HvA, no. 9 (1966): pp. 30ff."

In the Höss book quoted, we read (p. 164):

> *"In the spring of 1942 the first transports of Jews, all earmarked for extermination, arrived from Upper Silesia.*
>
> *They were taken from the detraining platform to the 'cottage' to bunker I across the meadows where later building site II was located.* […] *On arrival at the 'cottage,' they were told to undress. At first they went calmly into the rooms where they were supposed to be disinfected."*

This alleged event is described by him also in another passage (pp. 208f.):

> *"I cannot say on what date the extermination of the Jews began. Probably it was in September 1941, but it may not have been until January 1942. The Jews from Upper Silesia were the first to be dealt with. These Jews were arrested by the Kattowitz Police Unit and taken in drafts by train to a siding on the west side of the Auschwitz-Dziedzice railroad line where they were unloaded. So far as I can remember, these drafts never consisted of more than 1,000 prisoners.*

> *On the platform the Jews were taken over from the police by a detachment from the camp and were brought by the commander of the protective custody camp in two sections to the bunker, as the extermination building was called.*
>
> *Their luggage was left on the platform, whence it was taken to the sorting office called Canada situated between the DAW* [*Deutsche Ausrüstungswerke*, an SS handicraft enterprise] *and the lumberyard.*
>
> *The Jews were made to undress near the bunker, after they had been told that they had to go into the rooms (as they were also called) in order to be deloused."*

Precisely based on this passage, Czech noted in the first, German edition of her *Auschwitz Chronicle* (Czech 1960, p. 49):

> *"They began killing Jews from Upper Silesia with gas. This took place in the so-called Bunker No. 1, in a farmhouse converted for this purpose, which was located in the northwest corner of what was later to become Construction Sector B III in Birkenau. The bodies of those killed were buried in mass graves in a nearby meadow."*

In the two passages quoted above, Höss clearly contradicts himself, because he dates the beginning of the alleged extermination of the Jews to either January 1942 at the latest, or to the spring of 1942 (hence late March at the earliest), but in both cases he clearly states that the alleged gassing (as well as the subsequent ones) took place in "Bunker 1," while Czech claims they took place in the crematorium of the Main Camp, although, as she knew well, Höss had declared during the Warsaw Trial that only the 900 Russian PoWs were gassed in Crematorium I, therefore the Jews of Upper Silesia were not gassed there.

As Czech explained, the change of date in the second edition of her *Kalendarium* – and the subsequent English *Auschwitz Chronicle* – was based on information given in a footnote by Broszat:[55]

> *"The deportation of the Jews from Upper Silesia to Auschwitz took place at the beginning of 1942. For example, according to a communication from the International Tracing Service to the Institute for Contemporary History dated 27 March 1958, the Jews of Bytom were deported on 15 February 1942."*

But Broszat had misunderstood this communication, as Peter Longerich revealed in 2010 (Longerich, Note 169, pp. 551f.):

> *"It is generally accepted by scholars even today that the deportations from Upper Silesia had already begun on 15 February 1942 (see Czech,* Kalendarium, *or Steinbacher,* 'Musterstadt' Auschwitz, *277). This mistaken view is based on information from Martin Broszat, who referred to a letter to him*

[55] Broszat, FN 3, p. 123; this footnote is extremely terse in the English edition, Höss, FN 1, p. 164: *"One of the first, if not the very first, of these was a transport of Jews from Beuthen on February 15, 1942."*

> *from the International Tracing Service in Arolsen dated 27 Mar. 1958. A glance at the original of this letter shows, however, that in Arolsen at the time 'deportations of Jews from Beuthen could only be established from 15.5.1942'* [sic!]. *I should like to thank Klaus Lankheit of the Archive of the Institut für Zeitgeschichte in Munich for letting me have a copy of the original of this letter."*

In the source cited by Czech, Pery Broad describes a gassing of 300-400 Jews in the Main Camp crematorium, but he does not indicate the date (he only mentions 1942!), nor does he say that they came from Upper Silesia (Broad, pp. 30-32), so it is completely abusive to consider his narrative a confirmation of what Höss had said, who moreover in this context clearly mentioned "Bunker No. 1" in Birkenau.

It follows that no Jewish transports arrived at Auschwitz neither on 15 February 1942 nor in the period immediately following, and Höss's related account of any such gassings, and based on this, Czech's recounting of this first alleged gassing of Jews at Auschwitz, are purely fictitious.

4 March 1942 (p. 140)

> *"59 prisoners and 36 Russian POWs die in Auschwitz-Birkenau. Next to the numbers of 18 prisoners whose corpses are sent to the morgue the Corpse Bearer has entered an additional 'X,' which most likely means death by phenol injection."*

Source: "APMO, D-AuI-511, Morgue Register, pp. 5ff.; D-AuI-3/1I1, Occupancy Register, pp. 97-101."

Czech's conjecture is completely abusive: how can one infer "most likely" from a simple "x" placed next to the number of a dead inmate in the Morgue Register that the inmate in question was killed by an injection of phenol? If such a conjecture were true, the inmate entering the registration (not the corpse transporter) would have entered a mark of the killing with this "x": but how could this have escaped the SS chief of the crematorium who had to check the register?

Czech commits this abuse also in later entries: 6 March (p. 141), 16 inmates whose numbers have an "x" were "most likely" killed in the same way; 7 March (*ibid.*), ten numbers have a "x" and six a sign "†," but here Czech does not insinuate what these might mean; 23 March (p. 147), 14 inmates "probably have been killed with phenol injections," but she does not mention whether that is an "x" next to the respective numbers.

13 March 1942 (p. 143)

> *"1,200 convalescents and patients whose rapid recovery to the point of being able to work seems questionable are transferred to Birkenau and lodged in Barrack Number 4, later Number 7, the so-called isolation ward of Section B-*

> *Ib. The sick are unloaded in the courtyard of the barrack and are beaten to death with rods by SS men. The corpses of the murdered men are brought back to Auschwitz and incinerated in the crematorium."*

Source: "APMO, Höss Trial, vol. 4, p. 88, Account of Former Prisoner Stefan Wolny; D-AuI-5/2, Morgue Register, pp. 159ff.; DAuI-5/3, Infirmary Register of Block 28, pp. 485-494; Czeslaw Ostańkowicz, "Isolation Ward, 'Last' Block," HvA, no. 16 (1978): 159ff."

The trial reference is to Stefan Wolny's statement of 15 August 1946. He stated that he had been admitted to Block 21 of inmate infirmary for frostbite on his hands. On the morning of 13 March 1942, another inmate told him that he should leave the hospital immediately, which he did. That same day the sick were transported to Birkenau "by the hundreds," where the surviving Russian PoWs were. The sick inmates were tipped out of the trucks and dumped on the ground. The witness continues:[56]

> *"The Russian prisoners were ordered to finish off those lying in the piles. The SS did the same thing. This fact is known to me from the account of a comrade from Sosnowiec – I do not know his name – who survived this transfer and the stay in this sector of Birkenau. He succeeded because he was lying under other corpses and thanks to that he escaped death. The corpses of those who were killed were then cremated in the first crematorium in Auschwitz."*

It is therefore a second-hand account of unknown origin, and it is moreover highly implausible. Just consider that killing people with mere sticks (the original term used by this witness) is quite difficult and time-consuming. It is doubtful that any person could succeed in killing more than ten people this way before being utterly exhausted and sore. This means that, in order to kill 1,200 inmates this way, more than one hundred SS men, or a considerable part of the entire Auschwitz SS garrison, would have had to take part in this insane mass flogging.

The reference to the Morgue Register is completely unjustified, because on 13 March 1942 only 38 deaths were registered in it, and only 375 more for the rest of the month (14 to 31 March).[57] Czech herself informs us that 48 detainees and eight Russian PoWs died on 13 March, but with reference to the Occupancy Register (p. 143), which, unlike the Morgue Register, contains all the male deaths that were recorded at Auschwitz and Birkenau. The reference to the Morgue Register is therefore a simple subterfuge.

Ostańkowicz's article was published in 1978. He states there that he was one of 1,200 inmates selected from the inmate-infirmary block at Auschwitz who were sent to Birkenau, and he claims that, "after five weeks, forty of

---

[56] Höss Trial, Vol. 4, pp. 87f.

[57] AGK, NTN, 92, pp. 141f.; statistical evaluation of the Morgue Register by J. Sehn. For the relevant daily data see Mattogno 2019, pp. 232-235; the daily numbers of deaths according to the Occupancy Register are on pp. 229-232.

these 1200 were still alive" (Ostańkowicz, p. 159). On March 13 he walked to Birkenau in a column of hundreds of inmates; they were beaten, but there was no massacre. The witness stated: "We approached the barracks and lined up again by the hundreds" and, "The morning came with fog" (*ibid*, pp. 160-163). Therefore, Ostańkowicz's account does not support Czech's reconstruction of this alleged event at all.

This reconstruction is also based on another source not mentioned by Czech, the interrogation of Adolf Gawalewicz on 30 December 1946 (which Czech adduces in her entry for 4 May 1942 without naming the witness). The witness stated (Höss Trial, Vol. 17, pp. 98f.):

> *"On 13 March 1942, the entire staff of Block 19 of the Auschwitz Main Camp was taken away, which at that time was a block for convalescents who had been designated for lighter work by way of Schonung* [German in original] *and were working on repairing socks. The block leaders had announced to them that they would be sent to* [even] *lighter work and to a camp where the air was better. In fact, they were all sent to the Birkenau Camp then under construction. A week later, a couple of sick people from this group returned, including Wierzbicki, who told us that all* [*wszyscy*] *of those transferred lived in Birkenau in appalling conditions and were tormented in every way."*

On 20 April 1942, Gawalewicz, who was convalescing in Block 20, was sent with 200 convalescents to Birkenau:

> *"We were placed in Masonry Block 4, which was later named Block 7 and* Isolierstation. *In this Block, at the time of our arrival, there were approximately 200 Russian prisoners and 40 inmates, those who remained of the group of 1,200 convalescents transferred from the Main Camp to Birkenau on 13 March 1942."*

This account also belies the alleged massacre of the sick on 13 March 1942.

20 March 1942 (p. 146)

> *"Gas chambers are put into operation in a farmhouse in Birkenau renovated for this purpose; this is the so-called Bunker Number 1. The house is in the northwest corner of the later Section B-III in Birkenau. The transport of Polish Jews sent by the Gestapo from Upper Silesia are taken from the unloading platform at the freight depot in Auschwitz directly to the gas chambers or taken without undergoing a selection. The corpses of the murdered people are buried in mass graves in the nearby meadow. After each operation, the prisoners used in the burial are killed in the prisoners' infirmary with a phenol injection. Although the SS men responsible for the operations are sworn to strict secrecy, these operations become known to many prisoners."*

Sources: "State Auschwitz Museum (SAM), *KL Auschwitz in den Augen der SS* (Auschwitz in the Eyes of the SS: Höss, Broad, Kremer), Oświęcim, 1973, pp. 93, 110ff., 173, 179."

The book mentioned reprints the chapters "Kommandant von Auschwitz (1940-1943)" and "Die 'Endlösung der Judenfrage' im KL Auschwitz" from *Kommandant in Auschwitz*, as well as the "Report" ("*Bericht*") by Pery Broad first published in No. 9 of the *Hefte von Auschwitz*.[58] These are therefore the same sources used by Czech for the fictitious event of 15 February 1942 examined earlier. Here she completes her work of fiction by inventing a date – 20 March 1942 – which cannot be inferred in any way from her sources.

In a footnote, Czech returns to the issue she previously discussed (p. 146):

> *"Höss talks twice about the beginning of the extermination operation of the Jews from Upper Silesia, giving different dates: December 1941 or January 1942 and spring 1942. The extermination of the Jews was probably begun on February 15, 1942. At first the Jews are killed by gas in Crematorium 1 in Auschwitz. The process is described in detail by Pery Broad. In spring 1942, the killing by gas is carried out also in Birkenau, in Bunker 1, after gas chambers are erected there. Höss's descriptions of the course of extermination of the Jews of Upper Silesia refers to the gas chamber in Bunker 1; the killing could have taken place there by the spring since it would have been possible to bury corpses in the meadow near the bunker."*

In the two passages I quoted above, Höss mentions a time either between September 1941 and January 1942, or the spring of 1942, not December 1941 or February 1942. Since the Jewish transports from Upper Silesia are not real, all of Czech's explanations are fallacious on their face. She insists, however, that Pery Broad described precisely these gassings, which, as I noted above, is also false, because Broad did not refer to Jews from Upper Silesia and did not give any date for the alleged event. However, Broad mentioned a date in his interrogation of 2 March 1946 made in the course of the so-called Tesch Trial, where he stated that he had arrived in Auschwitz in June 1942 and had witnessed the alleged gassing in the Main Camp crematorium the following month, hence in July 1942 (NI-11954).

From Höss's contradictory statements, Czech draws similarly contradictory conclusions, because in her entry of 15 February 1942, she inferred from them that the Upper Silesian Jews were gassed in the Main Camp crematorium, while here she inferred that they happened in "Bunker 1." Since the evidence adduced for both is identical, in order to hide her contradictory scheming from the reader, Czech quotes a different book, although the contents are the same.

In her just-quoted footnote, she commits a further treachery by using the word "also," by which she gives the impression that the alleged gassings in "Bunker 1" took place at the same time as those in the Main Camp crematorium, although this clearly contradicts her source, Rudolf Höss, who insisted that only Russian PoWs had been gassed in Crematorium I.

---

[58] For English translations see Bezwińska/Czech 2007, pp. 33-137 (Höss) and 139-198 (Broad).

The claim that the inmates forced to bury the claimed gassing victims were killed with phenol injections afterwards is taken from Wiesław Kielar's memoir, which appeared in Polish only in 1972, as already noted!

This entry is moreover at odds with that of 16 March (pp. 144f.), where we read:

> *"During a meeting with the office director for the Ministry of Armaments and Munitions, Karl Otto Saur, a memorandum is made noting that on the basis of a discussion in the Fuhrer's headquarters, the concentration camps are to be deployed to a great extent in the armaments industry. Further, a large influx of prisoners is expected at the end of the month. Craftsmen and those of related professions will be classified and assigned to the camps that take over munitions production."*

The source given for this is "APMO, Pohl Trial, vol. 11, pp. 168ff. (NO-569)."

This document, a "Minutes of a Meeting in the Saur Office on 16 March 1942" with the subject "Transfer of armament production to concentration camps," which was attended by, among others, SS *Brigadeführer* Richard Glücks, the head of Office Group D of the SS Economic and Administrative Main Office (*Wirtschafts- und Verwaltungshauptamt*, WVHA), begins as follows (NO-569):

> *"On the basis of a discussion at the Führer's headquarters, the concentration camps are to be used to a greater extent for armaments production."*

Glücks reported that it was planned to deploy 5,000 inmates fit for labor from Buchenwald Camp, 6,000 from Sachsenhausen Camp, 2,000 from Neuengamme Camp, 6,000 from Auschwitz Camp, 6,000 inmates from Ravensbrück Camp, and a number of inmates from Lublin Camp (Majdanek) yet to be determined. The document further states:

> *"A larger influx of inmates is expected at the end of this month. From these, all craftsmen and related professions will be selected and assigned to those camps that will take on armaments manufacturing.*
>
> *According to a decree of the* Reichsführer, *the manufacturing plants must remain in the camps."*

Related to this is a letter by the "Administration Auschwitz Concentration Camp" to Office D IV of the WVHA dated 25 March 1942 (not mentioned by Czech) regarding the imminent arrival of 5,000 male and 11,000 female inmates at Auschwitz Camp (NO-2146).

On 31 March 1942, Glücks sent a circular to all concentration-camp commandants, including Auschwitz, in which he stated:[59]

[59] AGK, NTN, 172, p. 38.

> *"By order of the Reichsführer SS, in a number of camps work is being carried out inside these preventive detention camps on behalf of the arms industry. These works are of military importance and therefore particularly urgent. With newly-arrived inmates, I must first fill these camps; then, according to the level of urgency, the needs of other camps will be met* […]. *The Reichsführer SS further orders that the working hours of the inmates are to be increased to 11 hours."*

Previously, inmates had been working ten hours per day. Czech mentions this circular in her entry for 31 March (p. 151), but only in reference to the 11-hour work schedule.

Himmler's intention was clearly to procure manpower for the armaments industries, and this also applied to the Jews sent to the camps. In this context, attention must be given to the following teletype sent by Himmler to Glücks on 25 January 1942 (NG-500):

> *"As Russian PoWs cannot be counted on in the near future, I shall dispatch to the camps a large number of the Jews and Jewesses who are being emigrated* [sic] *from Germany. You should take measures, so as to be able to accept in the camps 100,000 male Jews and up to 50,000 Jewesses over the next 4 weeks. Major economic tasks and jobs will be entrusted to the concentration camps. SS Gruppenführer Pohl will supply you with details."*

In Czech's perspective, however, an alleged order to exterminate all Jews indiscriminately was in force at the time, which according to Czech was changed by Himmler only on 18 July 1942 (see her entry for that date).

From what I have stated earlier, it follows that the alleged extermination of entire Jewish transports in "Bunker 1" "without being subjected to selection" is historically nonsensical, as is the very institution of this "Bunker 1."[60]

22 March 1942 (p. 147)

> *"On this Sunday, drunken SS men abuse the prisoners in Birkenau so that before the noon roll call 106 prisoners die and between noon roll call and morning roll call the next day, another 97 die of exhaustion. Altogether, 219 prisoners and five Russian POWs lose their lives in the main camp and in Birkenau."*

Source: "*Ibid*. [Occupancy Register], pp. 165-172; Ostańkowicz, "Isolation Ward," pp. 163-166."

In his already-mentioned paper, Ostańkowicz states:

> *"On the second Sunday of our presence in Birkenau, we were driven to the announced 'sport.'"*

The 13th of March 1942, the day Ostańkowicz walked to Birkenau Camp, was a Friday, and the second following Sunday was March 22. The "sport" alleg-

[60] For a general critique of claims about "Bunker1" and "Bunker 2," see Mattogno 2016d.

edly consisted of an intense beating by the SS. Ostańkowicz does not mention, how many inmates died that day (Ostańkowicz, pp. 159, 166). How trustworthy his "recollections" are may be assessed from what he writes in relation to the alleged event of 12 March 1942: "We knew about the house that had been converted into a gas chamber" (*ibid*, p. 161), which is an anachronism, since that house – "Bunker 1" – is said to have become operational only on 20 March 1942, hence eight days later, according to Czech's second edition of her *Chronicle*.

Czech used this at-best-dubious narrative, written 36 years after the alleged events, to "explain" the inmate mortality at Auschwitz on 22 March 1942, but in 1978, Ostańkowicz provided that chronological indication precisely on the basis of an entry in the first edition of Czech's *Auschwitz Chronicle*, where Czech still claimed that "Bunker I" had become operational in January of that year (Czech 1960, pp. 49). In that issue of the *Hefte von Auschwitz*, Czech wrote in her entry for 22 March 1942 (*ibid*., p. 53):

> *"On this Sunday, 196 inmates were murdered in Birkenau."*

In a footnote she explained:

> *"On Sundays, drunken SS men rushed into the Birkenau Camp and murdered prisoners en masse. The number of deaths on Sundays during the months of March and April was twice as high as on weekdays (Trial against Rudolf Höss – Testimonies – Occupancy Register)."*

This is thus an obvious vicious circle, in which Ostańkowicz used Czech's 1960 remark and elaborated on it, and then, in 1989/1990, Czech in turn used Ostańkowicz's narrative to support her own subsequent entry.

The fable of the atrocious mistreatment of prisoners by drunken SS men is not supported by any document. On the contrary, both the camp regulations, the post orders of the sentries, and the written pledge that they all had to sign strictly forbade any mistreatment of inmates. The following "Pledge" ("*Verpflichtung*") applied to all SS men:[61]

> *"I am aware that only the Führer may decide upon the life and death of an enemy of the state. I may not physically harm or kill any opponent of the state (inmate). Any killing of an inmate in a concentration camp requires the personal authorization of Reichsführer SS* [Himmler].
>
> *I am also aware that any violation of this pledge will be inexorably accounted for"*

I may also add that Himmler had ordered the death penalty for SS men for simply pilfering a food parcel intended for a prisoner (see my comments on Czech's entry for 29 October 1942).

---

[61] GARF, 7021-107-11, p. 30. See in this regard Mattogno 2016a, pp. 22-28, and Documents 3-9, pp. 303-310.

26 April 1942 (p. 159)

> *"On this Sunday 11 prisoners selected from the prisoners' infirmary in the main camp are killed with phenol injections. Altogether, 73 prisoners and three Russian POWs die in Auschwitz-Birkenau."*

Source: "APMO, D-AuI-5/1, Morgue Register, p. 70; D-AuI-3/1/2, Occupancy Register, pp. 282-285."

As of this date, alleged killings of sick people with phenol injections, which were previously merely "probable" or "highly probable," become "certainty." Czech invents imaginary selections at the prisoners' hospital and automatically considers inmates who died there to be victims of phenol killings. In practice, for Czech, inmates admitted to the hospital for serious diseases could not die a natural death as a result of these diseases, meaning she decided *ex cathedra* that this did not happen.

4 May 1942 (p. 162)

> *"In Birkenau the first selection takes place among the prisoners. An SS Medical Officer (Sanitätsdienstgrad) carried out the selection in the isolation ward. The selected prisoners are loaded onto a truck and taken to the bunker put into operation the previous spring, and there they are killed with gas."*

Sources: "APMO, Höss Trial, vol. 17, p. 100; Ostańkowicz, 'Isolation Ward,' pp. 175ff."

The first reference concerns the already-mentioned testimony of Adolf Gawalewicz. The passage in question reads as follows:[62]

> *"In the first days of May, I think on May 4, there was the first selection of people for the gas. This was then called selection of prisoners for light work. The selection was carried out by an SS-SDG together with prisoners who were carrying out an assignment. Trucks were waiting for the selectees, who were loaded onto them and taken, as it turned out later* [*jak się później okazało*]*, to the gas chambers. At that time, the block was surrounded by a wall, and the survivors destined for death by gassing were transported there from all over the camp. It was therefore the reservoir and the antechamber to the crematorium. The block was constantly crowded; periodically, trucks arrived and took away up to 90 percent of the occupants, which more than once amounted to as many as 1,200 inmates. I calculate* [*obliczam*] *that from May to September about 40,000 people passed through this block, and were taken from it to the gas chambers. In this figure, I include only those who were taken out of the Block alive* [and not those who died there]*."*

Therefore, the witness learned "afterwards" about the alleged gassing, evidently from hearsay. It is not known how, when nor from whom he learned it. The story of the 40,000 gassing victims from the isolation block "calculated"

---

62 Höss Trial, Vol. 17, p. 100.

by Gawalewicz is so absurd that it alone suffices to undermine the reliability of his testimony and the credibility of this "witness."

Czech's second reference is the already-mentioned article by Ostańkowicz, in which we read, among other things (Ostańkowicz, p. 176):

> *"On May 4 and 5, the first transports left the 'death block,' and their destination was hidden behind a secret name. It was clear to us. We knew: into the gas."*

The "isolation station" was Block 4 (later renamed Block 7) of the Main Camp (*ibid*., p. 175). Since the witness had been transferred from it to Block 6 on 3 May (*ibid.*, pp. 174f.), he could not know the destination of those selected a day or two later, if a selection had indeed taken place, which he couldn't have known either. Furthermore, Czech inexplicably ignores the alleged selection of May 5.

Also under the date of 4 May 1942, she writes (p. 162):

> *"89 prisoners and one Russian POW die in Auschwitz-Birkenau, 31 of them in the main camp."*

The source for this claim is "APMO, D-AuI-3/1I2, Occupancy Register, pp. 311-314." But this Occupancy Register lists only those prisoners who died between the morning roll call (*Morgenappell*) and the evening roll call (*Abendappell*), without any distinction between Auschwitz and Birkenau. Czech took the number of deaths at Auschwitz from the Morgue Register, which records precisely 31 deaths.[63] However, none of these inmates came from Block 4, the alleged "Death Block." In practice, the Morgue Register and the Occupancy Register not only do *not* confirm, but decisively *refute* the claimed selection of inmates with their subsequent killing.

5 May 1942 (p. 163)

> *"An SS Camp Doctor orders 6½ pounds of phenol from the camp pharmacy. This is used in the prisoners' infirmary to kill prisoners with phenol injections in the heart."*

Source: "APMO, D-AuI-5/1, Pharmaceutical Order, p. 381."

This request, like the one of 14 August (see my comments on that entry), is entirely innocuous and contains no mention of the use of phenol to kill prisoners. Czech's wording is purposely ambiguous to suggest that this use is indicated in the request. She hides from her readers that phenol is a powerful disinfectant that was commonly used to sterilize wounds and surgery equipment.[64]

---

[63] APMO, D-Au-5/3, 1942, p. 80.

[64] See Giua/Giua-Lollini 1949, Vol. II, p. 238; cf. https://en.wikipedia.org/wiki/Phenol: "Phenol is widely used as an antiseptic".

5-11 May 1942 (p. 165)

> *"In the gas chamber of Bunker 1, approximately 5,200 Polish Jews from the ghettos of Dombrowa (Dąbrowa Gornicza), Bendsburg (Bedzin), Warthenau (Zawiercie), and Gleiwitz (Gliwice) die."*

Source: "Martin Gilbert, *Endlösung: Die Vertreibung und Vernichtung der Juden – Ein Atlas* (*Final Solution: The Expulsion and Destruction of the Jews*; originally published in the U.S. as *Atlas of the Holocaust* – see Bibliography), Reinbek/Hamburg, 1982, pp. 100, 102."

This is a simple map on which Gilbert has written the figures mentioned by Czech next to the respective locations (Gilbert 1988, Map 122, p. 100); as his somewhat peculiar source, Gilbert cites this one (*ibid*., p. 248):

> *"30 May 1942, Dr Clauberg proposes medical experiments at Auschwitz, NO-211 (map 122)."*

In reality, Document NO-211, which is a letter from Carl Clauberg to Himmler dated 30 May 1942 concerning sterilization experiments that he wanted to carry out "here in Upper Silesia" and precisely "in the Auschwitz Concentration Camp," contains no mention of alleged transports to Auschwitz (neither from the above-mentioned locations, nor from any other), which must therefore be considered purely fictitious.

Could the editor of the *Auschwitz Chronicle* seriously believe that Gilbert had documents on this subject, unmentioned by him, that are unknown to the Auschwitz Museum? She must have been aware that such transports are mentioned neither in any German wartime documents, nor in any testimonies, nor in the reports of the camp's resistance movement. These transports are therefore purely imaginary. I will return to Gilbert's reliability later.

12 May; 2, 17 and 20 June 1942

All these entries concern alleged deportations from Sosnowitz and Ilkenau that share a common source, so I treat them together.

– 12 May (p. 166)

> *"In Bunker 1 in Birkenau, 1,500 Jewish men, women, and children sent from Sosnowitz are killed with Zyklon B gas."*

Source: "Natan Eliasz Szternfinkiel, *Zagłada Żydów Sosnowca* (*The Extermination of the Jews of Sosnowitz*), Katowice, 1946, p. 34."

– 2 June (p. 173)

> *"In Bunker 1 in Birkenau, men, women, and children sent from Ilkenau are killed with Zyklon B gas."*

Source: "Szternfinkiel, *Jews of Sosnowitz*, p. 35."

– 17 June (p. 182)

> *"In Bunker 1 in Birkenau, about 2,000 men, women, and children are killed with Zyklon B gas. They were sent from the ghetto of Sosnowitz."*

Source: "Szternfinkiel, *Jews of Sosnowitz*, p. 35."

– 20 June (p. 183)

> *"In Bunker 1 in Birkenau, approximately 2,000 Jewish men, women, and children are gassed. They came from the ghetto of Sosnowitz."*

Source: "Szternfinkiel, *Jews of Sosnowitz*, p. 35."

In this book, a kind of chronicle devoid of any notes and source references, we read the following (Szternfinkiel, pp. 33-35):

> *"In May 1942, on 10 May at 10 a.m., the Jewish community* [of Sosnowitz], *by order of the Gestapo, sent out about 5,000 summonses to show up at the school building at 13 Dęblińska Street with 10 kg of luggage for a so-called 'resettlement.'*[65] *The summonses were first received by people resettled from other towns, poor people, old people, women and children, people who were a burden to the community.* […]
>
> *They were loaded onto railway cars, but they were not sent to Theresienstadt for resettlement purposes, as they had been told earlier, but to Auschwitz, to* [their] *extermination. Of this transport, which numbered about 1,500 people, not one remained alive. They all perished in the gas chambers* [*w komorach gazowych*].
>
> *On 12 May, the day of the first transfer, the process of the systematic action of total extermination of the Jews of Sosnowitz began, which ended in January 1944.* […]
>
> *After this 'action,' the community assured that this would not be repeated. But soon it was realized that the 'transfer action' was getting bigger and bigger. At the beginning of June, the 'transfer' to* [from] *Ilkenau took place. All the local Jews were deported to Auschwitz, only a handful of privileged survivors were taken to Sosnowitz. Soon afterwards, a train arrived in Sosnowitz. In the second half of June 1942, there was the second 'transfer.'* […] *This entire transport, numbering about 2,000 people, was sent like the previous one to Auschwitz for extermination."*

Leaving aside the fact that Szternfinkiel's statements are not confirmed by any document, so they are already questionable as such, it should be noted that Czech has also misrepresented them. According to Szternfinkiel, the first transport to Auschwitz is said to have taken place on 12 May and involved 1,500 Jews. The second presumably took place "in the second half of June" and included 2,000 people. Czech doubled this number by turning this one

---

[65] Meaning that the 5.000 Jews received the order to assemble at the school building with 10 kg of luggage each.

claimed transport into two with 2,000 deportees each, and then invented the dates: June 17 and 20!

As for the transport from Ilkenau, Szternfinkiel states that it took place "at the beginning of June," a phrase that Czech ordained to mean 2 June!

11 June 1942 (pp. 177f.)

> *"After morning roll call, more than 100 prisoners marked with a black dot and several marked with a red dot are taken to work at the Königsgraben pit.* [main drainage ditch at Birkenau]*"*

Czech then tells of a group of 320 registered non-Jewish inmates marked with a red dot who were taken to "Bunker No. 1" and gassed there, and adds that 20 inmates of the penal squad were shot that day as well. In a note she informs us (pp. 177f.):

> *"The names and numbers of the prisoners killed on this day are listed in the Occupancy Register on following days."*

Source: "APMO, Höss Trial, vol, 4, pp. 32, 79; vol. 8, p. 97; Kraków Auschwitz Trial, vol. 7, pp. 60ff., Accounts of Former Prisoners."

The first reference is to the interrogation of Józef Koczorowski of 6 August 1946,[66] but it does not contain anything relating to what Czech claims. The second page number concerns the following statements made by Tadeusz Wąsowicz in the interrogation of 8 August 1946:[67]

> *"At the turn of May and June 1942, a group of these prisoners* [from the penal squad] *numbering a few hundred was selected and transferred to Birkenau, to the local penal squad. At that time, this squad was working on the construction of the* Königsgraben. *Following an attempted escape from this* Kommando, *some of the prisoners were shot on the spot, the rest were sent to the penal-squad block in the women's camp and murdered there."*

At the Trial of the Auschwitz Camp Garrison, this witness returned to the issue, asserting:[68]

> *"Let me remind you of a fact from June 1942, when the political section rounded up all these 'Nicht überstellen,'* [sic] *who numbered over 200. All of them were assigned to the Strafkompanie* [penal squad] *in Birkenau, which was located in the area of the future women's camp. They were housed in a shack, from where they went to work at the Königsgrube* [sic]. *I want to talk about that. I witnessed something completely different, namely the way this story turned out on paper in the card index. It happened after the escape of a Pole, as a result of which all the prisoners who had red squares on their backs*

---

66 Höss Trial, Vol. 4, pp. 31-35.
67 *Ibid*., p. 79.
68 Trial of the Auschwitz Camp Garrison, 4th Session, 27 November 1947 (my photocopy has no page number).

perished. They were taken to the block of the penal squad, and they were all shot there."

This testimony openly contradicts Czech's account already because the alleged victims were not gassed but shot.

The editor of the *Auschwitz Chronicle* next cites the interrogation of Jan Dziopek on 16 September 1946. He made a lengthy statement which I summarize. On 10 June 1942, a group of prisoners from the penal squad company attempted to escape. Some were killed, about fifteen were captured, and 20 managed to escape. The next day, the inmates with the red dot, about 330, were left in the yard, while the remaining 160 (including the witness), who had a black dot, went to work. At noon, they were unexpectedly led back into their block, where they found the bodies of 20 inmates who had recently been killed. The witness then continued his narration as follows:[69]

"They pushed us into the block by beating us, but these 330, who were weakened by the beatings and the heat, with their hands tied behind them with wire and amidst the roars of the furious Kapos, were led barefoot to their deaths. We did not know whether they were gassed or shot. Only afterwards [*później dopiero*] *did we learn that they had ended their lives in the nearby gas chamber* [*w pobliskiej komorze gazowej*]*."*

Only "afterwards" (it is not known when and from whom) did the witness "learn" – evidently from hearsay – of an alleged gassing in a "nearby gas chamber."

Czech's last witness, Tadeusz Chróścicki, recounted in his interrogation on 13 September 1947 that he was a member of the penal squad in Auschwitz, which numbered 400 inmates. On 8 June 1942, he escaped with a group of 50 prisoners and was never caught again, so he stated:[70]

"I do not know what the further fate of the penal squad in Birkenau was after our escape."

This certainly cannot corroborate Czech's account, who moreover did not bother to mention the numerical inconsistency of the testimonies she adduced (according to Dziopek, the inmates of the penal squad numbered at least: 20 + 330 + 160 = 510).

17 June 1942 (p. 182)

"The number of prisoners with typhus increases in Auschwitz. Every day the SS Camp Doctor, who decides on admissions to the prisoners' infirmary, selects some prisoners who register and stipulates that they be killed with phenol injections."

In a footnote, Czech writes:

---

[69] Höss Trial, Vol. 8, pp. 96f.
[70] Trial of the Auschwitz Camp Garrison, Vol. 7, pp. 60f.

"The number of selected prisoners will later amount to several hundred."

Source: "APMO, Höss Trial, vol. 4, pp. 175-177, Account of Former Prisoner Dr. Władysław Tondos."

This is the interrogation of 1 October 1946, in which Tondos asserted:[71]

"In 1942 and 1943, killing began to be practiced on a larger scale, meaning that every day, on the orders of the German doctor, several hundred prisoners came to the clinic as sick persons, were stripped naked, and then the same German doctor selected them and assigned a few hundred to death by phenol. Sometimes the number reached 700 per day. The German camp chiefs made an effort to keep this mass killing of inmates with phenol a certain secret, and [this] *could be deduced from the fact that, during the transport of the corpses killed in this way, they ordered the so-called Lagerspeere* [*Lagersperre,* lock-down]*, counting on the fact that the inmates could not leave their barracks. The corpses were taken to the crematorium."*

The witness's claim that sometimes up to 700 inmates were killed with phenol injection per day (*dziennie*) is clearly absurd, even in Czech's fallacious perspective. Czech invented the precise date of the alleged decision, but the choice is not a very happy one, because the Auschwitz commandant and the Bielitz Public Health Office (*Gesundheitsamt*) began to be alarmed at the escalating typhus case count in the camp on 1 July 1942 (see Mattogno 2021, pp. 46-95). There had already been many typhus cases among the inmates as well as the SS staff before that, but the situation was not yet considered extremely serious. For instance, on 9 June 1942, SS *Obersturmführer* Franz von Bodmann, who at that time was the camp's acting garrison physician as a temporary replacement for Dr. Siegfried Schwela – who had died of typhus on 10 May 1942 – sent a radio message that was partially intercepted and deciphered by the British. This message communicated that in early June of 1942 "typhus is raging in this camp." A week later, on 16 June 1942, von Bodmann sent to the WVHA a radio message that also was intercepted and deciphered by the British. The text reads:[72]

"Status of typhus cases on 16 June 1942: zero sick positive and 150 suspected cases (since 8 June 1942 106 admissions, 95 discharged as cured, and 18 departures by death)"

18 June 1942 (p. 182)

"The Polish Government in Exile in London receives news of what is going on in Auschwitz. It is reported that 'in various places in the country, numerous reports of the death of Auschwitz prisoners are cropping up simultaneously.

---

[71] Höss Trial, Vol. 4, p. 175. This matter is not mentioned on page 176. I quote the passage from page 177 when discussing the entry for 29 August 1942.

[72] TNA, HW 16-19. German Police Decodes Nr 3 Traffic: 16.6.42. ZIP/ GPDD 126/19.6.42, No. 4.

News then follows soon after of the shootings of several hundred prisoners because of alleged preparations for an uprising in the camp.'"

Source: "CA KC PZPR, 202/I-31, Documents of the Delegation of the Polish Government in Exile, p. 6."

This is the "Memorandum on the Situation in the Country over the Period from 1 June to 15 July 1942." First it states that at the beginning of June there were about 14,000 inmates living at the camp, 11,500 of whom were Poles, and it mentions the new method of punishment by locking up inmates in the "*bunkier*," which was a "windowless concrete cell, 90 cm high" located in the basement of Block 11. This is followed by Czech's quote, which begins with the word "Around June 18" ("*Koło 18-go czerwca*"; "Obóz…," p. 35).

One may wonder for what reason Czech reported this information, from which her readers can only assume that on 18 June 1942 the "Polish Government in Exile in London" was being informed of events that had nothing to do with the claimed extermination of the Jews, and that they evidently knew nothing about the alleged gassings in "Bunker 1," which by then is said to have been in operation for almost three months.

23 June 1942 (p. 185)

"In Bunker 1 in Birkenau, 566 people are killed with Zyklon B gas. They were sent from a mental hospital in Kobierzyn near Krakow."

Sources: "APMO, Krakow Auschwitz Trial, vol. 38, p. 56; Wroński, p. 211; *Biuletyn Głównej Komisij Badańia Zbrodni Hitlerowskich w Polsce* (Bulletin of the High Commission for the Investigation of Nazi Crimes in Poland), Vol. 3, Warsaw, 1947, p. 102 (hereafter cited as Bulletin of the High Commission)."

Hence, she gives three sources for this alleged transport of mental patients:

1. A page from the Kraków Trial records. Volume 38 of that record contains analyses of documents and records of the Auschwitz Camp Garrison, but unfortunately, I do not know this specific reference.
2. The book *Kronika okupowanego Krakowa* (*Chronicle of Occupied Krakow*) by Tadeusz Wroński, where we read on page 211:

   "23 VI [1942] *– The SS and the Gestapo liquidate the Kobierzyn Psychiatric Institute. 531 patients are sent to Auschwitz Concentration Camp."*

3. Vol. 3, p. 102, of the Bulletin mentioned, which is a page from an article titled "The Extermination of the Mentally Ill" by Prof. Stanisław Batawia. We read there (Batawia, p. 102):

   "The fact of the deportation of 566 patients to Auschwitz is beyond doubt. One of the witnesses, an employee of the Institute, saw in the autumn of 1942 an invoice from the Ostbahn [Eastern Railway] *for the transport of patients on 23 June 1942 from Swoszowica Station to Auschwitz. It is also beyond*

> *doubt that all of these patients were killed immediately in the gas chamber* [*w komorze gazowej*] *in Auschwitz, because so far it has not been possible to find traces of any of these 566 patients."*

The deportation of 566 persons (but Wroński speaks of 531) to Auschwitz on 23 June 1942 would perhaps be an indubitable fact if Batawia had published a copy of the "Ostbahn invoice" for the transport and the list of names of the deportees, which would have been indispensable for anyone trying to verify whether any of these patients could be traced after the war. But from the way Prof. Batawia expressed himself, it is clear that he had no knowledge of either of these documents. His hearsay reference to what an unnamed employee claims to have seen in this context is worth nothing.

Of this and the other phantom transports of 5 May through 20 June examined earlier exists no documentary trace. The claim that they were killed "in Bunker 1" and "with Zyklon B gas" is a simple artifact of Czech's obsession.

30 June 1942 (p. 189)

> *"In connection with the announced delivery of additional transports of Jews to Auschwitz by the RSHA for extermination, more gas chambers are built in a farmhouse similar to Bunker Number 1. It is west of the later site of Crematoriums IV and V and is designated Bunker Number 2. Next to it, three barracks are built to serve as undressing rooms for people condemned to be gassed."*

Source: "Höss, *Commandant in Auschwitz*, pp. 127ff., 158-161."

Only the second page range contains any mention of "Bunker 2" (the first is only about "Bunker 1"); Höss wrote there (Höss, p. 210):

> *"During the spring of 1942 the actions were comparatively small, but the transports increased in the summer, and we were compelled to construct a further extermination building. The peasant farmstead west of the future site of crematoriums III and IV* [IV and V in today's nomenclature] *was selected and made ready. Two huts near bunker I and three near bunker II were erected, in which the victims undressed. Bunker II was the larger and could hold about 1,200 people."*

A few lines later Höss states that "Bunker II" was inspected by Himmler during his visit in the summer of 1942 (*ibid.*), which orthodox historians claim took place on 17-18 July 1942. From Höss's statements can be deduced merely that "Bunker 2" was made operational in the summer of 1942, before July 17, if we take that date for Himmler's claimed visit, but Czech deduces from this that it came into operation exactly on 30 June!

The alleged establishment of this "Bunker" is also contradictory and inexplicable. As I pointed out in the Introduction, all deportees transported with the first 18 *real*, documented Jewish transports to Auschwitz until 30 June 1942 were fully registered and admitted to the camp, meaning that none of these Jews was murdered on arrival, hence there cannot have been any order

from anyone to kill these deportees, and according to Czech, Himmler ordered Höss to murder all the Jews unfit for work only during his claimed visit on 18 July 1942. If that is so, how could the former Auschwitz commandant have seen to it that "Bunker 2" was made operational more than two weeks earlier? For what purpose? In order to gas whom? Of course, the same reasoning is also true for "Bunker 1," which allegedly went into operation already on 20 March 1942, but cannot have been used to kill anyone deported with those first 18 *real*, documented transports.

In this context, it is worth examining Höss's claim that the alleged establishment of "Bunker 2" was due to the intensification of Jewish transports, implying that the killing capacity of "Bunker 1" was insufficient. According to Polish historian Franciszek Piper, the monthly numbers of deportees arriving at Auschwitz from June to December 1942 were as follows:[73]

June	21,496	October	22,841
July	19,465	November	28,000
August	41,960	December	18,025
September	26,591		

The month with the greatest influx of deportees was therefore August, with 41,960 deportees, 10,188 of whom were registered according to the *Auschwitz Chronicle*, and the remaining 31,772 were allegedly gassed,[74] an average of 1,025 per day. Höss wrote that "Bunker 1" had a capacity of 800 people (Höss, p. 207), but for Szlama Dragon, the quintessential witness to the "Bunkers," the figure was "less than 2,000 undressed people."[75] For the former Auschwitz commandant, therefore, two gassings per day in "Bunker 1" would have been enough to meet the claimed peak demand of all of 1942, for Dragon even less than one gassing per day.

Hence, the establishment of "Bunker 2" makes no sense from this point of view as well.

1-30 June 1942 (pp. 189f.)

> *"2,289 Jews, 1,203 Poles, including 100 reeducation prisoners, 149 Czechs, 49 Germans, and one Gypsy die in Auschwitz-Birkenau. A total of 3,683 prisoners have lost their lives. Most of the 2,289 Jewish prisoners were killed in the gas chamber. After intensive exploitation of their labor, they are declared incapable of working by SS Doctors during the selections carried out in Birkenau. Most of the 1,203 Polish prisoners are executed, over 500 prisoners are shot, and over 300 are gassed."*

---

[73] Piper, unpaginated "Tabelle D" titled "*Die Transporte mit Juden nach Auschwitz aus den einzelnen Ländern von 1940 bis 1945*."

[74] But the tally shows 30,672; see the chapter "Death-Toll Statistics" at the end of this study.

[75] AGK, NTN 93, Höss Trial, Vol. 1, p. 104, statement made by Szlama Dragon to Investigating Judge Jan Sehn on 10 and 11 May 1945, p. 104.

Source: "APMO, D-AuI-3/1/3/4/5, Occupancy Register, pp. 433-636."

Czech explains in a note: "The figures are based on the Occupancy Register." This should be considered in light of what she writes in a footnote on p. 178 regarding the alleged gassing of 320 registered inmates:

> *"Like the other concentration camp Commandants, the Commandant of Auschwitz is required to send a report of the number of deceased prisoners to Branch* [Office Group] *D* [of the WVHA]*."*

This means that registered inmates could not disappear into thin air. Their deaths had to be documented and reported to Berlin. Czech then adds toward the end of that same footnote:

> *"To wipe out the traces of the crimes, the names of the prisoners killed in mass executions are crossed out in the Occupancy Register on a few successive days. Despite the intensified terror in June and the next few months, the Occupancy Register does not indicate the actual higher number of victims.* [Therefore, in the *Auschwitz Chronicle*] *The number of victims is not indicated on the individual days but rather in the monthly totals."*

Hence, Czech claims that the victims of the alleged killings were not recorded in the Occupancy Register daily, but distributed throughout the month, so that one could derive the total death toll only from the total monthly figure of the dead.

In general, this "explanation" is completely inconsistent, already because it is not clear why the SS would have had such scruples in an "extermination camp" that is said to have been established as such by Himmler's order. Furthermore, it is not clear how it would have been possible to distinguish from a mere monthly total number of deaths those who were murdered from those who died a non-violent death.

In particular, the Occupancy Register keeps precise records of "deceased inmates" ("*Verstorbene Häftlinge*") and "deceased prisoners of war" ("*Verstorbene Kriegsgefangene*") between the morning and evening roll calls, indicating for the former their nationality, registration number, first and last name as well as their date of birth, but for the PoWs only the registration number. The cause of death, however, is not given at all, so that it is impossible to determine from the entries in the Occupancy Register who of them was killed, and if so, how. Czech's claim that most of the 2,289 Jews who died in June 1942 were killed "in the gas chambers" because of selections of inmates unfit for labor is therefore not only arbitrary, but also inconsistent with her own record-keeping efforts, because in addition to the alleged selection of 320 non-Jewish inmates discussed earlier, no selection of Jews is mentioned at all in the *Auschwitz Chronicle* for the entire month of June 1942!

3 July 1942 (p. 191)

> *"A typhus epidemic breaks out in Auschwitz-Birkenau. 56 numbers, including those of 24 prisoners in the Buna plant squad, are entered in the Morgue Register. They were probably killed with phenol injections after registering with the SS Doctor in the infirmary admissions room. In the men's camps of Auschwitz and Birkenau, 184 deceased prisoners are listed."*

Source: "APMO, D-AuI-5/1, Morgue Register, pp. 156-158; D-AuI-3/1/5, Occupancy Register, pp. 465-650."

In the Morgue Register, the deaths were recorded daily with an indication of the prisoner's registration number and origin (camp block or satellite camp). In the Occupancy Register, as explained earlier, deaths were recorded by name, without giving the cause of death. All that can be deduced from these two registers is that the inmates in question died on 3 July 1942. What Czech considers "probable" is therefore a completely arbitrary insinuation, hence simply the fruit of her exterminationist fantasies. In this way, she also misrepresents the historical context, making it appear that 56 inmates, among them 24 inmates from the "Buna plant squad," had fallen ill with typhus, and for this reason, following her usual obsession, she alleges they were killed with phenol injections. The facts are, however, that we don't know these prisoners' causes of death, that the epidemic was still in its infancy on 3 July 1942, and that no document confirms that it had also spread to Monowitz Camp, where the inmate work crews deployed at the Buna Plant were lodged. Finally and for exactitude's sake, the total number of deaths in the Male Camp on 3 July 1942 was 166, not 184.[76]

4 July 1942 (pp. 191f.)

> *"For the first time, the camp administration carries out a selection among the Jews sent to the camp; these are in an RSHA transport from Slovakia. During the selection, 264 men from the transport are chosen as able-bodied and admitted to the camp as registered prisoners. They receive Nos. 44727-44990. In addition, 108 women are selected and given Nos. 8389-8496. The rest of the people are taken to the bunker and killed with gas."*

She adds this footnote about the 264 registered men:

> *"On August 15, 1942, only 69 of them are still alive; i.e., within six weeks, more than two-thirds of the men die."*

Source: "APMO, Höss Trial, vol. 6, p. 115."

This is the first of over 400 similar entries. Since this is said to have been the first selection of deportees from a transport with the subsequent gassing of those deemed unfit for labor, it must have been an extraordinary event in the life of Auschwitz Camp. Therefore, it should have struck the inmates very

[76] AGK, NTN, 92, p. 81; statistical evaluation of the Occupancy Register by J. Sehn.

hard, and should have fixed itself indelibly in their memories. However, Czech does not cite any testimony in this regard.

As mentioned earlier, Volume 6 of the Höss Trial contains statements, statistics and transcripts of documents by former inmate Otto Wolken. Among other things, he compiled two statistics on the *registered* inmates of 15 Jewish transports that arrived at Auschwitz between 15 April and 17 July 1942. The first statistics shows the daily mortality of the inmates of each transport, the second the weekly mortality (*i.e.* during the 1st, 2nd, …, until the 17th week). A special "Commentary" explains in detail the meaning of the two statistics. From this source, Czech only takes the number of survivors (69 prisoners) of the registered inmates who came with the 13th transport (the one that arrived on 4 July 1942).[77] The transport of 4 July 1942 contained 1,000 deportees,[78] so that Czech's "rest" would have comprised 628 gassing victims.

This first selection with subsequent gassing is therefore not supported by anything, just like all the later ones. This alleged event, which should have been so incisive, was unknown even to the camp's resistance movement; hence, Czech presents it as true as a blunt act of faith.[79]

4 July 1942 (p. 192)

> *"The so-called Sonderkommando (Special Squad) is formed, consisting of several dozen Jewish prisoners. They must dig pits near the bunker and bury those who are killed in the gas chambers. The squad is housed in the barracks in the men's camp in Birkenau. It is completely isolated from the other prisoners."*

Sources: "CA KC PZPR 202/I-31, Documents of the Delegation of the Polish Government in Exile, p. 27."

These documents were published by the Auschwitz Museum in a Special Issue back in 1968. The "Memorandum on the Situation in the Country over the Period from 16 July to 25 August 1942" reports ("Obóz…," p. 37):

> *"A few dozen of the most-physically fit inmates are selected from each group of new arrivals. These inmates formed a special unit* [*kompania specjalna*] *who dug graves and buried the dead, at night. This unit – which was strictly isolated – was exterminated after a certain time in the gas chamber* [*w komorze gazowej*] *and replaced by another unit. Some of the dead inmates were burnt in the crematorium."*

This story was repeated by a report published in No. 31 of the *Informacja Bieżąca* (*Current Information*) of 26 August 1942 (*ibid.*, pp. 39f.):

---

77 AGK, NTN, 88 [= Vol. 6 of the Höss Trial], p. 115 (only the percentage of the dead is mentioned here: 70%; the number of survivors – 69 – is given on p. 117).

78 Tóth, p. 149 (list of transports from Slovakia to Auschwitz in 1942).

79 Regarding the actual fate of unregistered inmates see Mattogno 2021, pp. 76-87.

> *"From the groups of new arrivals, the 100 most physically robust people are chosen. This is a special company that digs pits at night and buries the dead. This company is strictly isolated, and after a short time it is exterminated in the gas chamber, and another one takes over."*

From these two messages of the Auschwitz resistance, Czech abusively draws first of all the date (4 July 1942), which is a simple contrivance of hers; then the term "*Sonderkommando*," which is certainly not a translation of "*kompania specjalna*" – in German "*Sonderkompanie*." Finally, she introduces the "Bunkers" (i.e. "Bunkers" 1 and 2), while the source speaks only very generically of a "*komora gazowa*," "gas chamber," moreover in the singular. It should also be kept in mind that at the time the resistance movement firmly believed that the "gas chambers" functioned as follows:

> *"They contain baths with showers, which unfortunately produce gas instead of water* [*zamiast wody wydobywa gaz*]*."*[80]

> *"The inside of the chambers was laid out so as to resemble a shower bath. They only differed from real shower baths in that poison gas came out of the shower heads instead of water* [*zamiast wody, z pryszniców wydobywa się trujący gaz*]*."*[81]

Zyklon B, as a killing medium, was not introduced (meaning invented) by the resistance movement into their reports until late of May 1944.[82] On the various implausible, even at times ludicrous claims of the resistance movement, see Mattogno 2021 (pp. 119-217).

17 July 1942 (p. 198)

> *"In two transports of the RSHA, 2,000 Jews arrive from Westerbork and Amersfoort camps in Holland. 1,303 men and boys and 697 women and girls arrive. After the selection, 1,251 men and 300 women are admitted to the camp. The men receive Nos. 47088-47687, the women, Nos. 8801-8999 and 9027- 9127. The other 449 deportees are killed in the gas chambers."*

Source: "APMO, Höss Trial, vol. 6, p. 115."

This source reference is to the transport mortality statistics compiled by Otto Wolken (see the entry for 4 July 1942). For the transport of 17 July (the 15th on the list, the only one from the Netherlands), the number of registered deportees is given (651), of whom 225 had died by 15 August 1942, and 426 remained alive.[83] There is no reference to the data provided by Czech. These

[81] AGK, NTN, 155, p. 299. Anonymous report (by Jerzy Tabeau) of December 1942 or January 1943.

[82] In the "Periodic Report for the Period between 5 and 25 May 1944" dated 26 May 1944; APMO, D-RO/91. Vol. VII, pp. 436f.; see Mattogno 2021, pp. 183-185.

[83] AGK, NTN, 88, pp. 114-122.

are also clearly wrong: the serial numbers assigned to the men (47088-47687) number 600, while she mentions 1,251 registered men.

The Dutch Red Cross has published a fragment of a register of changes in the census of the men's camp at Auschwitz which, unlike the known Occupancy Register, records "*Abgänge*" (departures = loss of inmates) and "*Zugänge*" (admissions = new arrivals) with an indication of the origin of the transports and the registration numbers assigned to the deportees (see the next entry for 17 and 18 July 1942). There are two transports from Westerbork, with departure dates of 15 and 16 July 1942. The deportees of the first were assigned the numbers 47087-47687 = 601, those of the second the numbers 47843-48493 = 651 (Het Nederlandse…, 1952a, p. 11). The total number of persons registered was therefore 1,252.

The transport of 15 July had 1,137 deportees, 663 males and 472 females. The transport of 16 July consisted of 895 deportees (of whom 309 were from Amersfoort), with 640 males and 255 females. The age groups of the male deportees were as follow (*ibid*, p. 5):

Date 1942	Totals	0-12	13-15	16-17	18-35	36-50	51-60	> 60
15 July	663	41	9	85	356	157	11	4
16 July	331	32	7	36	155	90	10	1
16 July	309	0	0	5	130	103	52	19
Totals	1,303	73	16	126	641	350	73	24

The number of unregistered deportees was therefore (1,303 – 1,252 =) 51. Since there were 73 children up to 12 years of age in that train, and only a maximum of 51 of them can possibly have remained unregistered, that means that at least the remaining 22 children were properly registered, hence certainly – and for the orthodoxy inexplicably – not gassed; and that requires that all the 24 inmates over 60 years of age were all registered as well (and also not gassed, as the orthodox dogma would have it).

Two important documents that have been preserved allow for a more-thorough analysis of this issue. The first is a list of names headlined "Transport of Jews from Holland – Westerbork Camp –16 July 1942,"[84] which has 586 names. It also includes 312 names of deportees from Amersfoort, of which there is also a separate list headlined "Transport from Amersfoort to Westerbork Camp on 16 July 1942."[84] Then there is the list that includes the names of the deportees of this transport registered at Auschwitz, which is headlined "Concentration Camp – Auschwitz Section II – New arrivals on 17 July 1942, committed by the RSHA."[85] This list records the inmates by giving their registration number, first and last name, date of birth, place of birth and

[84] ROD, 250i, doos 50.
[85] ROD, CR 26918.

date of death.[86] The last names (with a few exceptions) are arranged in alphabetical order, and the numbering is consecutive: from 47843 to 48493: 651 registered deportees. An analysis of these records shows that 18 inmates were over 60 years old (dates of birth: 1874-1881). As for the boys, 24 were 17 years old (1925), 13 were 16 years old (1926), 2 were 15 years old (1927), one was 13 years old (Abrahamson Willy, born 24 July 1929, no. 47860) and one was 11 years old (Beek Lion, 13 April 1931, no. 47952).

The oddity of this list is that it has 78 names that are not included in the transport list of 16 July 1942. On the one hand, this transport had 640 deportees, but on the other hand, there were 651 registered inmates. Another oddity is the fact that a comparison of the lists shows that there were 70 non-registered deportees, whereas there should have been 51.

The age ranges of the non-registered deportees were as follows:

– 0-12 years: 30
– 18-35 years: 16
– 36-50 years: 12
– 51-60 years: 8
– 60-67 years: 4

All of these inconsistencies, which are impossible to resolve without the registration list of the transport of July 15, demonstrate the complexity of the issue,[87] which cannot be reduced to the simple count proposed by Czech.

17 and 18 July 1942 (pp. 198f.)

In these two entries, Czech presents a lengthy narration about Himmler's visit to Auschwitz. Both are based exclusively on postwar statements of Rudolf Höss, although for the second entry she cites two other, completely irrelevant sources.

I reproduce the essential part of the entry for 17 July:

> *"After touring Birkenau, he* [Himmler] *takes part in the killing of one of the newly entered transports of Jews. He attends the unloading, the selection of the able-bodied, the killing by gas in Bunker 2, and the clearing of the bunker. At this time, the corpses are not yet being burned but are piled up in pits and buried."*

Source: "Höss, Commandant in Auschwitz, pp. 233-236."

Himmler's service diary records the events which the *Reichsführer* SS attended on 17 July 1942:[88]

---

[86] This is the list used by Wolken for his statistic relating to the transport of 16 July 1942, as mentioned earlier.

[87] The Dutch Red Cross searched for Dutch prisoners registered as deceased in the Occupancy Register (where all deceased inmates were registered by name under the column "*Verstorbene Häftlinge,*" giving the nationality, registration number, first and last name as well as the date of birth, as explained earlier); there were 241 Dutch Jews among the inmates registered with registration Numbers 47088 to 47687. ROD, c(21)314.

Trip Auschwitz-Kattowitz to the apartment of Gauleiter Bracht
Evening at the home of Gauleiter Bracht

In the transcript of the fragment of the 1942 register of changes in the census of the men's camp as published by the Dutch Red Cross and mentioned earlier, for 16-18 July 1942, the following entries are shown:[89]

Roll Call	July 1942	Count	Deaths	Reg. Arrivals	Released/ Escaped	Origin	Reg. Nos.
morning	16	16246					
evening	16	16277	100	131			
morning	17	16848	30	601		Westerbork 15 July 42	47087-47687
evening	17	16950	83	185		various nationalities	47688-47842
morning	18	17902	25	977		Westerbork 16 July 42 Slovaks	48494-48819 47843-48493
evening	18	17846	101	46		various nationalities	48820-48901
morning	19	17852	18	24	1		

From this it appears that the transport that left Westerbork on 15 July arrived at Auschwitz after the evening roll call of the 16th and before the morning roll call of the 17th. The 601 deportees registered from this transport were added to the camp's census precisely at this roll call, as can be deduced from the relative variation in force: 16277 – 30 (deaths) + 601 (registered) = 16,848 (morning roll call of 17 July).

---

88 *Dienstkalender*, NARA, RG 242, T-581/R 39A, 17-18 July 1942; reproduced in Mattogno 2016b, Doc.1, p. 118.

89 Het Nederlandse… 1948, p. 11; reproduced in Mattogno 2016b, Doc. 2, p. 119.

The transport that left Westerbork on 16 July and the one that left Žilina in north-western Slovakia on the same day arrived at Auschwitz after the evening roll call of 17 July and before the morning roll call of 18 July, when they were added to the camp's census: 16950 – 25 (deaths) + 977 (registered) = 17,902 (morning roll call of 18 July).

The 977 registered inmates consisted of 651 Dutch Jews and 329 Slovakian Jews. The registration of the Dutch deportees took place on the 17th, as attested by the list of names of the new arrivals of 17 July 1942 mentioned earlier.[90] From this it can be deduced that the transport in question arrived at Auschwitz on 17 July 1942 after the evening roll call.

Himmler landed at Kattowitz Airport at 3:15 pm on 17 July, so he could not have seen the first transport of Dutch Jews, which must have arrived well before the morning roll call, hence the unregistered Jews of that transport who were allegedly killed on arrival would have been gassed before 6 am.

On the 17th of July, Himmler's visit to Auschwitz ended with a dinner at the officers' club, most-likely at 8 p.m.[91] After dinner, Himmler was accompanied to Kattowitz, where he was accommodated for the night by Gauleiter Bracht. On the morning of the 18th, at 9 o'clock, he was still at Bracht's house and went back to Auschwitz only after breakfast. Therefore, he could not even have seen the second transport of Dutch and Slovakian Jews, who arrived some time between 8 p.m. on the 17th and 6 a.m. on the 18th, hence the Jews from that transport who remained unregistered would have been gassed sometime during the night or early morning. In conclusion, on 17 and 18 July 1942, Himmler did not witness any homicidal gassings at Auschwitz.

In her entry for 18 July 1942, Czech writes, among other things, that Himmler "orders Höss to proceed faster with the construction of the Birkenau camp, to kill the Jewish prisoners who are unfit for work."
Source: "*Ibid.* [*Commandant in Auschwitz*], pp. 237-238; APMO, Höss Trial, vol. 6, p. 85; Julia Skodowa, *Tri roky bez mena* (*Three Years Without a Name*), Bratislava, 1962, p. 35."

The trial reference contains no mention of Himmler's visit to Auschwitz. The pages 79 through 100 of Volume 6 contain the protocol of the interrogation of Otto Wolken of 22 June 1945 by Judge Jan Sehn, in which the witness recounts camp events from July 1943 (he was interned at Auschwitz on 20 June 1943).[92] Juliá Škodová's book, which Czech cited several more times,[93] is a typical witness memoir filled with imaginary and in-any-case-unverifiable

93 See the entries for 5 December 1942 and 2-26 November 1944.

claims about alleged events taking place at an undefined point in time. This becomes evident by the passage cited by Czech (Škodová, p. 35):

> *"Himmler arrived the next evening. The naked women paraded in front of him, then he dismissed them. Nothing happened to them. Who would take care of their mental state, their humiliation? And in this hell could one possibly speak of humiliation? It seems that Himmler's visit had brought a change to the women's camp."*

Himmler's alleged order "to kill the Jewish prisoners who are unfit for work" after allegedly witnessing a gassing of Jews unfit for work the day before, is blatant nonsense and is also obviously in contradiction with the first selection with subsequent gassing of a Jewish transport that allegedly took place on 4 July, and also with the establishment of "Bunker 2," as I noted earlier. Czech is also silent about the context of Höss's statements, which clearly show the absurdity of the alleged order (Höss, p. 139):

> *"In July 1942 the Reichsführer SS visited the camp. I took him all over the gypsy camp.* […] *He saw it all, in detail, and as it really was and he ordered me to destroy them. Those capable of work were first to be separated from the others, as with the Jews."*

On the page quoted by the editor of the *Auschwitz Chronicle*, Himmler, who also visited the Gypsy Camp, ordered Höss (Höss, p. 238):

> *"The Jews who are unfit for work are to be destroyed with the same ruthlessness."*

Himmler's alleged order is therefore nonsensical, as is Czech's "historical" reconstruction. She herself writes that the Gypsy Camp was established in Camp Sector BIIe of Birkenau Camp only toward the end of February 1943 with the first transport of Gypsies arriving at Auschwitz (her entry for February 26, pp. 338f.), so it did not yet exist in July 1942. Hence, Himmler could neither have visited it, nor could he have given the order for the extermination of the Gypsies, which in turn is in contradiction to the establishment of the Gypsy Camp itself, to which all deported Gypsies were indeed consigned, even those unfit for work, who, according to this phantom order, should have been exterminated on arrival. But that did evidently not happen.

Czech omitted these absurdities and contradictions, demonstrating that her approach was not historical in nature.

29 July 1942 (p. 206)

> *"Eduard Schulte, a German industrialist and antifascist from Breslau, visits Zurich and informs the Allies that during Himmler's visit to Auschwitz in July, he attended the killing of 499 Jews by gas, which took place in so-called Bunker Number 2. This is the first precise information the Allies receive from a*

> *German source about the extermination of the Jews carried out in the gas chambers of Auschwitz."*

Source: "Walter Laqueur and Richard Breitman, *Der Mann, der das Schweigen brach: Wie die Welt vom Holocaust erfuhr* (*The Man Who Broke the Silence: How the World Learned of the Holocaust*), Frankfurt/Main, 1986."

This is the German translation of the book *Breaking the Silence*. This book does not justify Czech's claims at all. The authors state that on 17 July 1942 Otto Fitzner, who was director of production at the Giesche Mining Company, told Schulte about Himmler's visit to Auschwitz, and they add:

> *"On the evening of July 17, Schulte already knew a little more about the visit, for on that evening, Himmler attended a dinner party given by Bracht, the Nazi Gauleiter, or party chief, of Upper Silesia. After dinner in Auschwitz the party moved on to the Gauleiter's villa in a forest near Kattowitz. The villa happened to belong to the company of which Schulte was general manager."* (Laqueur/Breitman, pp. 12f.)

A few lines later we read there:

> *"On July 17, a transport of Jews arrived in Auschwitz (from Holland), and Himmler witnessed the gassing of 449 persons in Bunker 2, his first such experience. He then visited the experimental plant and laboratory and inspected the building of a dam. That evening Himmler had dinner in Auschwitz and later dropped into Bracht's villa in Gieschewald. Some of the details of Himmler's inspection tour were not discussed in front of the ladies at the villa. Himmler, against his habit, had some red wine and smoked a cigar."* (*Ibid.*, p. 14)

This "information" was not recorded in some mysterious way and transmitted to the Allies by Schulte, as Czech claims. Rather, these are simple explanations of the authors taken from orthodox Holocaust literature they cite on p. 275. In other words, there is obviously no "Schulte Report" that reached the Allies. As for the alleged gassing of 449 Dutch Jews, it was invented by Czech in her first edition of the *Auschwitz Chronicle* (1960), where she wrote in her entry for 17 July 1942 that two Jewish transports from Holland had arrived at Auschwitz with 2,000 people, of which 1,251 men and 300 women were registered, so that the number of alleged gassing victims was precisely (2,000 – [1,251 + 300] =) 449. On the same page, she wrote that Himmler had witnessed this gassing, which had taken place "in Bunker No. 2." (Czech 1960, p. 71), and it is clear that this information came to Laqueur and Breitman not from Schulte, but from one of the books they cited in the notes on pages 11-16.

The "first precise information the Allies receive from a German source about the extermination of the Jews" at Auschwitz is therefore simply another one of Czech's fabrications.

1-3 August 1942 (p. 210)

> *"In the gas chambers of Bunkers 1 and 2, almost 5,000 Jewish men, women, and children from Bendsburg* [German name for Będzin] *are killed. They were deported to Auschwitz for extermination by the RSHA."*

Source: "Martin Gilbert, *Final Solution*, p. 112."

This is once more a reference to Gilbert's *Atlas*, which on Map 137 shows under "Będzin" "5,000 1 August [1942]" with an arrow in the direction of Auschwitz (Gilbert 1988, p. 112). No source is given.

Here too one cannot believe that the Auschwitz Museum did not have the slightest clue about this alleged deportation from a location as close as a mere 40 km from the camp, so much so that it had to resort to citing Gilbert's *Atlas*. It is therefore another purely fictitious deportation.

In a work of over 950 pages that appeared three years after his *Atlas*, Gilbert limited himself to the following brief remark about the deportations to Auschwitz from Będzin and Sosnowiec in August 1942 (Gilbert 1985, p. 418):

> *"At Auschwitz, thirteen thousand Jews were brought from the two nearby towns of Bedzin and Sosnowiec, as well as more than twenty-two thousand from Holland, Belgium, Luxembourg and France."*

The note added to back this up, however, refers to Czech's first, German edition of the *Auschwitz Chronicle*! (*Ibid*, Note 42, p. 863.) Czech had written there (Czech 1960, p. 81):

> *"15-17* [August 1942] *Transport from Sosnowiec, about 8000 – Jews, men, women and children – who were gassed in Birkenau in Bunkers No. 1 and 2."*

In this edition, Czech does not mention any of the deportations of 5-11 May 1942 listed in Gilbert's *Atlas* as discussed earlier, which confirms that there was no trace of them at all in the entire documental, trial and testimonial material in the possession of the Auschwitz Museum.

Czech again relies on Gilbert's *Atlas* in the entry for 27 August 1942 (p. 228), where she explains in a footnote in reference to the registration of 82 inmates (61754-61835):

> *"This probably refers to a transport of 723 Jews from Luxembourg sent to Auschwitz in August 1942 (Martin Gilbert,* Final Solution*, pp. 109, 133)."*

This refers to a map in Gilbert's *Atlas* titled "Distant Deportations, August 1942," where arrows indicate the route from "Luxembourg 723" Jews deported to Auschwitz via Cottbus (Gilbert 1988, p. 109). This transport is also purely fictitious; it is neither mentioned in Benz's seminal work on the *Dimension of Genocide* (Benz, p. 103) nor in Richard Korherr's report.[94]

---

[94] NO-5193, p. 6. Listed here are evacuations from France, Holland, Belgium, Norway (532 deportees), Greece, Slovakia, Croatia and Bulgaria, but none from Luxembourg.

3 August 1942 (p. 210)

> *"The SS Camp Doctor carries out a selection in the prisoners' infirmary. He selects 193 prisoners recuperating from typhus. They are taken to Birkenau and killed in the gas chambers."*

Czech explains in a footnote:

> *"In the Prisoners' Infirmary register of Block 28, 'moved to Birkenau' is entered next to the names of the 193 sick prisoners. In the Occupancy Register, on the other hand, the names of these prisoners are entered in the list of the deceased, the entries divided among three successive days. 30 of them are entered on August 10, 100 on August 11, and 63 on August 12."*

Source: "APMO, Höss Trial, vol. 7, p. 155; D-AuI-513, Prisoners' Infirmary Register of Block 28, pp. 172- 178; D-AuI-3/1/6, Occupancy Register."

I do not have access to the documents cited by Czech, but I assume that 193 inmates from Block 28 were indeed transferred to Birkenau on 3 August, and that they are listed as having died in the Occupancy Register on 10, 11 and 12 August.

This raises two questions: 1) were these inmates murdered? 2) If so, were they gassed?

That they were murdered as patients suffering from typhus is certainly possible, but this is in contrast to the data in the register of Room No. 3 of Block 20 which I examined already in connection with the entry for 4 July 1942. On the other hand, if, according to Czech, up to 98 inmates could be killed at the Main Camp's infirmary on a single day (17 September 1942), it is unclear why these 193 inmates, who could have been killed within two days, were sent to Birkenau. There may therefore also be an alternative explanation, namely that the 193 inmates were terminally ill and were transferred to Birkenau to make room for new patients, and that they died there in the following days due to their conditions. This assumption is supported by the fact that the first registration of the deaths took place a week later, on 10 August. This delay, presumably for "camouflage" purposes as Czech might insinuate here, was not as insignificant as she believed, because the daily variations in the inmate occupancy affected multiple official documents, beginning with the monthly report (containing the daily census variations of the male and female camps) that the Auschwitz headquarters were required to report to the WVHA, as confirmed by British radio intercepts, and ending with the reports used to calculate the number of meals to be prepared and issued to the inmates, as well as the roll calls of the individual blocks.

The gassing claim is based on the testimony by Kazimierz Frączek (Czech's trial reference), who asserted in his statement of 14 November 1946:[95]

---

[95] Höss Trial, Vol. 7, p. 157.

> *"On 3 August 1942, one hundred and a few dozen* [*stu kilkudziesięciu*] *inmates cured of typhus were sent to Birkenau who, it was said, were to die in a special camp, the so-called post-typhus quarantine, however, as we later learned, they were all 'gassed.'"*

Hence, this is just another testimony from hearsay based on the Auschwitz rumor mill. If we were to assume, however, that these inmates were indeed gassed, this would have repercussions for the *Auschwitz Chronicle*, because it establishes the principle that terminally sick inmates of the Main Camp who were gassed (or killed with phenol injections) must be listed as dead in the Occupancy Register and the Morgue Register, but then, for example, the gassing of 746 sick inmates on 29 August 1942 cannot be claimed, since Czech's entry for that alleged event contains no reference to the Morgue Register, meaning that there aren't any entries about these allegedly killed inmates in that register.

In the light of this, other references to selections in Block 28 with subsequent gassing without the words "moved to Birkenau" and without any reference to the Morgue Register become doubly dubious (see the entry for 8 December 1942).

14 August 1942 (p. 216)

> *"Medical Officer SS Staff Sergeant Josef Klehr orders 4½ pounds of phenol for the camp pharmacy to be used for killing prisoners with injections to the heart."*

Source: "APMO, D-AuI-5/1, Pharmaceutical Order, p. 412."

This order, like every such order, does not indicate the use for which the phenol was intended. However, given that it comes from the Main Camp's inmate infirmary, is it so unlikely that it was used as an antiseptic at the hospital? As mentioned before, phenol was in fact also used as a powerful disinfectant in surgical operations:[96]

> *"E. Bottini, a surgeon in Pavia, claimed in 1866 that phenolic acid, in 5‰ aqueous solution, is a 'sovereign disinfectant' and advocated its use in practical surgery. In the same year, pure phenol, as indicated by J. Lister, was used for disinfection in the operating rooms of the London Hospital. This knowledge, together with Pasteur's and Koch's studies on pathogenic microorganisms, had a practical application when in 1867 Lister announced in* [the medical journal] *'Lancet' the use of phenol to kill germs wherever they were; in wounds, on surgical instruments, on suture and dressing materials, on surgeon's hands, in the air of the operating room where phenol was nebulized. The results were surprising and allowed the first great advances in surgery."*

[96] *Enciclopedia…*, Vol. II, entry "Antisepsi," p. 369.

In this context, it is worth mentioning what the Auschwitz Museum's historian Henryk Świebocki wrote. After the war, two registers of the surgical department of the Auschwitz inmate infirmary were found (Block 21; Świebocki 2000, p. 265):

> *"The books contained prisoners' names and camp* [registration] *numbers, dates, diagnosis, and treatment for a period from September 10, 1942 to February 23, 1944. The registers indicate that 11,246 surgical procedures of various sorts were carried out during this period."*

Returning to phenol, there is also a request for various medicinal supplies placed by the inmate infirmary of the Golleschau Satellite Camp "to the pharmacy of K.L. Auschwitz Upper Silesia" dated 26 February 1943, which, among the various "wound-dressing materials and medicines" listed, includes "5 liters of phenol." The document, reproduced by Jerzy Frąckiewicz in an article that appeared in 1966 (Frąckiewicz, p. 72), is not mentioned by Czech in her entry for that date,[97] evidently because it was an overtly sanitary request that would have cast doubt on her obsessions with lethal injections.

This is not her only omission, though. When discussing her entry for 3 July 1942, I noted that, according to Czech, the alleged series of lethal injections with the annotation "szpila" ended on 15 December 1942 (although in the *Auschwitz Chronicle*, she mentions such alleged killings until 30 March). However, there are at least three other requests for phenol from the Auschwitz inmate infirmary not mentioned by Czech: one of 5 kg dated 1 December 1942,[98] the second of 1 kg dated 24 March 1943,[99] and the last of 1 kg dated 19 April 1943,[100] after the end of the alleged practice of lethal injections of phenol, the last of which Czech lists for 30 March (see my summary list starting on p. 41).

A photograph in the Auschwitz Museum shows the request of 1 December 1942 with a syringe placed on top of the documents.[101] This is an ignoble and at once silly expedient to create a pathetically fictitious "proof".

15, 16, 17 and 18 August 1942

I treat these four entries together because they all refer to the same source.

15 August (p. 217)

> *"About 2,000 Jewish men, women, and children arrive from Sosnowitz with an RSHA transport. After the selection, 27 men and 75 women are admitted to the*

---

[97] The document has the page number 457, and undoubtedly comes from the collection cited by Czech as "Pharmaceutical Order."

camp and receive Nos. 59018-59044 and 17147-17221. The other 1,898 people are killed in the gas chambers."

16 August (p. 219)

"About 2,000 Jewish men, women, and children, including old people and those without any occupation, arrive with a transport of the RSHA. All of them are killed in the gas chambers."

17 August (p. 220)

"Another RSHA transport from Sosnowitz of 2,000 Jewish men, women, and children is killed in the gas chambers." The German original edition adds here: *"of Bunkers Nos. 1 and 2"* (Czech 1989, p. 227)

18 August (p. 221)

"A fourth RSHA transport from Sosnowitz arrives with 2,000 Jewish men, women, and children, who are killed in the gas chambers of Bunkers 1 and 2."

The source is the same for all: "Szternfinkiel, *Jews of Sosnowitz*, pp. 36-39."

I already pointed out earlier that the book in question by Nathan Szternfinkiel is merely a repetition of hearsay without any historical value and that it has also been misrepresented by Czech. In these entries, she continues her work of distortion. The pages she cites make up Szternfinkiel's Chapter 5 titled "'Action' of 12 August 1942 ('Gathering Place')." Szternfinkiel writes that several thousand Jews from Sosnowitz were arrested on 12 August 1942, and on the evening of the next day, they were housed in some houses on Targowa Street, from where they were deported to Auschwitz. He is rather vague in this regard, however (Szternfinkiel, p. 39):

"The victims designated for 'resettlement' and huddled in the aforementioned houses endured terrible times. These people knew that they were condemned to death and awaited transportation. For the majority [of them], *these houses were the antechamber to the gas chambers of Auschwitz. Dantean scenes took place. There was a great narrowness* [of space]. *People suffocated for lack of air.* […] *In the following three days, transports of people who were already half dead were sent from these houses. They were all loaded into railway cars and taken to Auschwitz. The 'resettlement action' lasted until 18 August. Of the 8,000 people 'resettled' in these tragic days, only ashes* [*popioły*] *remained. This was the third 'resettlement' – the third act in the tragedy of the Jews of Sosnowitz."*

Szternfinkiel states that 8,000 Jews were deported to Auschwitz within three days until 18 August, therefore on 16, 17 and 18 August. From this, Czech deduces that there were four transports of 2,000 deportees each on 15, 16, 17 and 18 August. For the transport on the 15th she has apparent documentary support, because 27 prisoners – allegedly from Sosnowitz – were registered on

that day with Reg. Nos. 59018-59044, and 75 prisoners with Reg. Nos. 17147-17221.

Czech gives no source for these assigned registration numbers, which is probably the so-called "Smoleń List" (transport lists compiled by inmates). This list records a set of 27 inmates and another of 75 inmates with the above-mentioned two sets of registration numbers on 15 August 1942, but without giving the deportees' origin.[102] Therefore, Czech distorted the document by improperly introducing the origin "Sosnowitz" not indicated in it.

Of course, she had no documentary evidence, no testimony and no report from the camp resistance about the arrival of these 8,000 Jews at Auschwitz. Yet despite this, she wrote that the Jews who supposedly arrived on 17 and 18 August were killed "in the gas chambers of Bunkers 1 and 2," as if this were a documented fact. Szternfinkiel, who wrote in 1946, knew even less than Czech, who wrote this many years later. According to propaganda rumors prevailing at the time, Szternfinkiel believed that the alleged deportees were killed in some kind of "gas chambers" and were later cremated, so that only "ashes" remained of them, evidently ignorant of the fact that, according to the orthodox Holocaust lore, the corpses of the allegedly gassed victims were then still buried rather than burned.

That Czech's entries are mere fabrications is indisputably shown by a document titled "Statistical data on the situation of the Jewish population [in] the government district of Kattowitz," compiled on 24 August 1942 by "The head of the councils of elders of the Jewish communities in East and Upper Silesia." It lists 25 localities in this governmental district, the first of which is Sosnowitz. For each locality are indicated, among other things, "situation on 1 May 1942," "relocated," "settled," "resettled" and "situation on 20 August 1942." According to this, 27,456 Jews were present in Sosnowitz on 1 May, while on 20 August of that year, 20,936 Jews were still present, with 7,377 having been relocated, and 857 settled in.[103]

According to this, 7,377 Jews were indeed relocated from Sosnowitz, but there is no evidence that they were deported to Auschwitz. However, Czech claims that 13,500 Jews arrived at Auschwitz from Sosnowitz during this same period.

The inconsistency of Czech's and the Auschwitz Museum's theses is further shown by an article by Andrzej Strzelecki, whose title translates to: "The initial stage of the deportation of the Jews from the Zagłębie Region to Auschwitz in the light of Hitler documents." Although the only real German document cited in this paper concerns the just-mentioned statistics, the author abusively interprets those relocated ("*Ausgesiedelte*" in the original, translated as Polish "*Wysiedleni*") as deportees to Auschwitz! Then, in a special table, he

[102] NOKW-2824, p. 11 (list of males) and p. 3 (list of females).
[103] APK, RK 2779.

compares these alleged Auschwitz deportees with Franciszek Piper's fanciful data, thus coming to the inflated conclusion that, up to 24 August 1942, no less than 15,790 Jews were deported to Auschwitz from the above-mentioned origin (and obviously all allegedly gassed on arrival). Not unsatisfied with this more-than doubling of the deportee figure, he then rounds this up to a whopping 20,000![104] These alleged additional deportations are not supported by any evidence.

In 1943, the testimony of "a refugee from Sosnowiec" was published which describes the fate of the local Jews. According to this, 1,200 unemployed Jews were deported on 12 May 1942 with 10 kg of luggage and 10 *Reichsmarks* to an unknown destination. On 12 August 1942, there was another deportation of 6,000 Jews, also to an unknown destination. In October "also began the large-scale deportation of many Jews guilty of alleged violations of numerous regulations to the terrible concentration camp Oswiecim [Auschwitz]" (Apenszlak, p. 158). It is thus clear that the "unknown destination" could not have been Auschwitz, a camp which the witness knew well, so he refutes Czech's speculation.

28 August 1942 (pp. 228f.)

> *"1,000 Jews from Drancy arrive with the twenty-fourth RSHA transport from France, which includes 320 children below the age of 12. A first selection of this transport is probably carried out at the railroad junction of Cosel (Kózle), where 200 able-bodied men are selected and exchanged for unfit or dead prisoners. A second selection takes place at the unloading platform in Auschwitz, called the Jew Platform. 27 men and 36 women are admitted to the camp and receive Nos. 62093-62119 and 18609-18644. The other 737 deportees are killed in the gas chambers."*

Czech explains in a footnote that, following Serge Klarsfeld's book *Memorial to the Jews Deported from France 1942-1944*, the deportation trains nos. 24-35, 37-38 and 44 with Jews from France stopped at the railway station at Cosel (today's Kędzierzyn-Koźle, a town located about 40 km west of Gleiwitz/Gliwice), where the deportees were subjected to a first selection in order to send certain deportees fit for work to the Blechhammer Labor Camp outside of Cosel, and to other camps in Upper Silesia. 3,056 of the Blechhammer inmates were transferred to Auschwitz Camp on 1 April 1944, where they were registered with the numbers 176512-179567.

In the following table, I list Czech's related entries, which also extend to deportation trains originating in Belgium and the Netherlands, compared with

[104] Strzelecki, pp. 7-50, esp. pp. 27, 44f. The document reproduced on p. 49 is the personal file of a Jew from Bendsburg (Będzin) who was deported to Auschwitz on 5 August 1943! These "Hitler documents," as he calls them, do not shed any "light" on these imaginary transports.

known data for France (Klarsfeld), the Netherlands (Dutch Red Cross) and Belgium (Klarsfeld/Steinberg):

	Totals:	6,088		4,140	1,480	1,373

Klarsfeld calculates the deportees selected at Cosel according to the age range of 17 to 47 years; his data shows a total of 4,140 selected deportees.[107] Steinberg states that the Belgian Jews selected (between 15 and 50 years of age) were just under 1,400, starting with the transport of 29 August 1942 (date of departure) until 10 October (Klarsfeld/Steinberg 1982, pp. 23-27). The Dutch

[105] Number in brackets gives the serial number of transports from France.
[106] See my comments on the entry for 5 September 1942.
[107] Klarsfeld, "Notes se rapportant au tableau chronologique des convois de déportation."

Red Cross lists 18 transports that underwent selection at Cosel, but many of these deportation rains did not have Auschwitz as their destination. The total number of selected deportees (aged 15 to 50) was at least 3,540 (Het Nederlandse… 1952a, pp. 12-15).

Therefore, the withdrawal of deportees at Cosel is not a mere hypothesis, but a real fact that also aroused the protests of the Auschwitz commandant. On 7 October 1942, the British intercepted the following message sent by Höss to Office IV B 4 of the RSHA (Eichmann) and to Office Group D of the WVHA (Liebehenschel):[108]

> *"RSHA IV B 4, BERLIN, to the attention of SS Obersturmbannführer EICHMANN, for information to Office Group D, ORANIENBURG, to the attention of SS Obersturmbannführer LIEBEHENSCHEL.*
>
> *Re: Deportation of Jews from Polish-Czech-Dutch areas to AUSCHWITZ. Reference: Your teletype from 5 October 1942, No. 181212, 1755 o'clock…*
>
> *Secret. Regarding the transports of Jews sent from HOLLAND, we further ask to give the train numbers and the expected arrival times by radio in order to be able to arrange with the National Railway Administration OPPELN, based on these documents, that these transports do not stop in KOSEL but drive through to AUSCHWITZ, to prevent access by those responsible for Operation Schmelt, as agreed.*
>
> *Signed HOESS, SS Obersturmbannführer."*

In the list of prisoners compiled by Investigating Judge Jan Sehn based on the inmates' personal files (*Personalbogen*) that were found at Auschwitz, 758 names are recorded of the 3,056 inmates of the Blechhammer Camp transferred to the Auschwitz Camp on 1 April 1944. Among them are at least 492 Polish, 69 Dutch, 21 French, 8 Belgian, 83 German and 19 Austrian Jews. The remainder belonged to various nationalities (Hungarians, Yugoslavs, Swiss, Romanians, Czechs, Slovaks, Egyptians, Russians, Belarusians, Lithuanians).

That these deportees had departed with transports from 1942 is a certain fact, as is clear from Klarsfeld's *Memorial* of the French Jews. For example, Joseph Grünfeld (No. 177363), born 15 Nov. 1925, was part of the transport of 28 September 1942; Philip Halphen (No. 177461), born 17 Aug. 1920, belonged to the transport of 16 September 1942; Josef Wasserberger (No. 178987), born 2 Mar. 1899, left with the transport of 18 September 1942; Friedrich Hillmann's name (No. 177447), born 2 June 1919 in Vienna, is on the transport manifest of 7 September 1942.

It is likely that most of the Jews who were not French, Dutch or Belgian citizens came to Cosel with transports from France (and to a small extent from the Netherlands), because these transports contained Jews of all the above na-

---

[108] TNA, HW 16-21. German Police Decodes Nr 3 Traffic: 7.10.42. ZIP/GPDD 259b/25.10.42, No. 1/4.

tionalities, including 6,222 Germans, 14,459 Poles and 2,217 Austrians.[109] However, also on the basis of the above-mentioned message from Höss (which refers to Polish, Czech and Dutch Jews), it can be assumed that other transports, precisely of Polish and Czech Jews, were also pre-selected at Cosel.

It is also possible that not only inmates capable of working, but also at least some of those unable to work were unloaded at Cosel. The entry about Cosel in the *Encyclopedic Informer* of the Main Commission for the Investigation of Hitlerite Crimes in Poland testifies in favor of this possibility (Główna…, p. 225):

> *"Jews from Poland, Czechoslovakia, France and Holland came to the camp, including women and children. Average strength – 4,000 people; in all, about 29,000 people passed through the camp."*

An examination of 984 personal files of Blechhammer inmates revealed an age range of 14 to 58 years (Piper 1967, p. 29), which broadens the criteria used by the Dutch Red Cross to calculate the number of deportees selected at Cosel, which contained nine fewer ages (15-50 years). It is therefore likely that deportees from Polish and Czech transports were also pre-selected at Cosel, and that their number is considerably higher than that stated in the *Auschwitz Chronicle* (6,088), all-the-more-so when one considers that in Silesia there was a dense network of 120 labor camps, listed by the Dutch Red Cross as early as 1952.[110]

Czech was forced to consider events in Cosel as a result of Serge Klarsfeld's strong criticism of the first, German edition of the *Auschwitz Chronicle*, in which all inmates of the above-mentioned transports not immediately registered at Auschwitz were considered gassed on arrival. Yet Czech was familiar with the list of prisoners compiled by Jan Sehn, as well as with the original documents he had used. She also knew that the 758 names recorded on 1 April 1944 were part of the 3,056 inmates of Blechhammer Camp transferred and admitted to Auschwitz Camp on that day (Czech 1964a, p. 85). But if that is so, did she not wonder where the French, Dutch, and Belgian inmates on that list came from?

The answer to this question had already been given in 1945 by former inmate Elbert Hori, whom she ignored:[111]

> *"On 1 September 1942, I was arrested as a Jew by agents of the Gestapo in Avenue Louise in Brussels. I was immediately taken to Malines Concentration Camp, from where I was sent to Germany seven days later. We made the trip to Cosel in prison cars. After the train stop in Cosel, we had to leave our lug-*

[109] Klarsfeld, "Tableau des nationalités des déportés juifs de France."
[110] Het Nederlandse… 1952a, Bijlage II, "Situation map showing forced labour and concentration camps in Silesia."
[111] Trial of the Auschwitz Camp Garrison, Vol. 65, minutes of 27 June 1945.

> *gage in the cars and get off; the SS 'took care' of us, hit us with clubs and kicked us. We were separated from the men who were over 45 years old already at the station, and our group of young men was taken to the Sakrau Transit Camp. After arriving there, we were again divided into two groups: one for Kommando Fürstengrube, the other for Kommando Laurahütte, which were part of Auschwitz."*

Already as early as 1943, a Jew who was deported from Drancy in 1942 managed to escape after eight months and return to France, had his testimony published about his experience. In it, he recalled his pre-selection in Cosel, here spelled "Koziel (Upper Silesia)":[112]

> *"All Jews from 16 to 50 years of age were taken for hard labor to the mines of the surrounding area. The others, children, old men, weak women and the sick, were taken to Oschevitz* [Auschwitz], *the camp for the 'useless,' the 'camp to croak in.'"*

29 August 1942 (p. 229)

This is a lengthy narrative regarding an alleged selection of registered inmates suffering from typhus; it is broken into two parts. The first reads as follows:

> *"On the pretext of fighting typhus in Auschwitz, Garrison Doctor Uhlenbrock orders a selection among sick and convalescent prisoners. The selected are to be killed in the gas chambers in order to destroy the carriers of typhus, both the lice and the patients. The prisoner doctors in the prisoners' infirmary of the main camp receive instructions to release the convalescent to the camp that day. The news spreads among the staff that a major delousing operation is to be carried out the next day in which the sick prisoners are to be brought to Birkenau. From previous experience, the prisoners know that this means a transport to the gas chamber."*

Source: "Kielar, *Anus Mundi*, pp. 155ff."

In this book, published originally in Polish in 1972, Kielar recounts that, when he was sick at the inmate infirmary (without giving any chronological reference, not even of the year), a certain Czesiek informed him that the next day there would be "a big delousing action," and all the sick would be taken to Birkenau, because in reality, this was actually a "selection." And that is all he writes about this (Kielar, pp. 154-156). In his long-winded account of the event itself, he carefully avoids indicating the date and the number of victims of the alleged event (*ibid*., pp. 157-160).

The date of the alleged event and Dr. Uhlenbrock's involvement are Czech's inventions.

In the second part of the narrative, she writes that the selection was carried out by Camp Physician Dr. Entress and Medical Orderly SS *Oberscharführer*

---

[112] *Notre Voix*, 1. August 1943, in: Courtois/Rayski, pp. 201-203, here p. 202.

Josef Klehr. The selectees were taken to the gas chambers of Birkenau and killed there. The total number of victims was 746.

Source: "APMO, Höss Trial, vol. 2, p. 155; vol. 4, p. 177; vol. 7, pp. 17, 116, 156, 175, Statements of Former Prisoners; Mat.RO, vol. 1, p. 6, Kielar, *Anus Mundi*, pp. 155-160. Wiesław Kielar is one of the few prisoners who succeeded in surviving this selection."

The references to the trial records concern persons who are practically unknown:

– Oskar Tadeusz Stuhr's statement of 18 June 1945: on the page indicated, but also on the preceding and subsequent pages, there are no references to the alleged event of 29 August 1942, but events of 1940 are mentioned.[113]

– The statement of Władysław Tondos of 1 October 1946. On the page in question, the witness merely reported the following:[114]

> *"In 1942, a terrible typhus epidemic broke out at the camp. At first, the Germans did not fight it, but when the German doctor Dr. Schwehla* [Schwela] *died and some other SS men began to fall ill, the camp was disinfested (deloused). The sick and convalescents of the typhus block, about 1,500 in number, were loaded onto trucks and gassed in the chambers."*

Here the alleged event is very vague; the witness mentions 1,500 victims (instead of 746) and gives no date, although Dr. Schwela died on 10 May 1942, so any delousing action related to this death should have occurred shortly thereafter rather than more than three months later, as Czech suggests here.

Tondos appeared as a witness during the 9th Session of the Höss Trial (20 March 1947), where he was equally vague. The SS carried out a disinfestation of the hospital, after which[115]

> *"all the sick, even those who were recovering and had to go to work the next day, were loaded onto trucks at Block 20, which was the typhus block, and taken to the gas chambers. On this occasion, a German doctor carried out an examination of the weak patients in all the hospital buildings for the longest time, because the sick were not allowed to be sick for more than 6 weeks, and they were selected for the gas chamber."*

– Władysław Fejkiel's statement of 10 October 1946, in which he stated:[116]

> *"In 1942, under the pretext of fighting typhus, the camp headquarters decided to destroy the typhus vector /lice/ along with the sick. At that time, Camp Commandant Höss, through his Political Department and the SS doctor, gave general authorization for the extermination of all the sick people in the hospital and of the hospital staff. About 800 patients were selected from the block*

[113] Höss Trial, Vol. 2, pp. 154-156.
[114] *Ibid.*, Vol. 4, p. 177.
[115] *Ibid.*, 2nd Session, 12 March 1943, p. 991.
[116] *Ibid.*, Vol. 7, p. 17.

for infectious diseases and gassed. Only the patients excluded by the SS doctor remained at the hospital."

– Edward Błotnicki's statement of 9 November 1946. The witness stated:[117]

"In 1942, typhus was raging in the camp. Up to a hundred people a day were dying. To control the disease, the blocks were disinfested. I know that from Block 20 KB (Hospital Barracks No. 20) all sick people and those suspected of typhus were taken away, or were taken to the courtyard under the supervision of the chief physician, loaded onto trucks and taken to the gas chambers in Birkenau. From scribe Czubaka of the KB [*Krankenbau*, infirmary] *I learned that later the inmates taken to Birkenau were all written off as dead, and that there were 520 that day."*

The number of alleged victims contradicts the number given by Czech, and the alleged event has no date.

– Kazimierz Frączek's statement of 14 November 1946. Here is his account:[118]

"Beginning in mid-1942, the systematic /mass/ killing of patients in the gas chambers was introduced. The transports of sick people destined for the gas chambers were picked up at Block No. 20, into which were admitted both sick people selected immediately upon receipt at the hospital and those selected during the so-called sick reviews carried out periodically by Dr. Entress or his assistants, NCOs. Such a review was conducted in this way: all the sick, regardless of their condition, were rounded up, or were pulled from their beds, and escorted before the SS who made the selection, who, according to the outward appearance or length of the sick man's fever card, either left them in the hospital or destined them 'for the gas.' Every two to three weeks, the sick persons destined 'for the gas' were taken by truck to Brzezinki (Birkenau) to the gas chambers."

This generic account in no way confirms what Czech writes.

The last court reference (Vol. 7, p. 175) is unknown to me.

Czech drew the number (746) and date (29 August 1943) from a message from the camp resistance, apparently a fragment of a letter, which reads:[119]

"On August 29, I survived the day when 746 typhus patients were poisoned (I am referring to 1942). I was among the sick – only destiny gave me the chance of escaping death."

Hence, we are dealing here with spurious, contradictory and inconsistent sources, on the basis of which Czech creates an event in support of which there is not the slightest documentary evidence.

Significantly, she makes no mention of the Morgue Register, in which the registration numbers of the alleged 746 victims should have been recorded on

[117] *Ibid.*, Vol. 17, p. 118.
[118] *Ibid.*, Vol. 7, pp. 156f.
[119] "Obóz…," p. 70.

29 August 1942, which instead contains only 46 entries (then 19 on 30 Aug., 34 on 31 Aug., and 236 entries during the first seven days of September).[120] The number for 29 August is also at odds with the alleged killing of 90 typhus patients as advocated by Kłodziński (see my Introduction, p. 44).

31 August 1942 (p. 231)

> *"1,000 Jews from Malines arrive with the sixth RSHA transport from Belgium. There are 322 men and 90 boys in the transport and 489 women and 89 girls, none of whom are admitted to the camp. About 200 men were probably taken in Cosel for the work camps in Upper Silesia, while the remaining 800 people in Auschwitz are sent directly from the unloading platform to the gas chambers."*

Source: (in footnote): "Klarsfeld and Steinberg, *Memorial*, statistical section."

Czech mentions the first edition of this work (1982); in the pertinent statistics, it is indicated that the 6th transport left Malines on 29 August, and arrived at Auschwitz on 3 September (not 31 August). The composition of the transport is as cited by Czech. The number of inmates allegedly gassed on arrival were either 961 ("not registered") or 947 ("not identified").[121] In the second edition of that book (1994), the transport arrives at Auschwitz on 30 August. The authors explain (Klarsfeld/Steinberg 1994, p. 23):

> *"It is the first transport from Belgium that, during the stopover in Kozel, drops off men older than 15 and younger than 50 years of age. These are at most 280 men."*

Therefore, there would have been 720 gassing victims. The estimate for the 280 prisoners taken off at Cosel is based on analysis of the age range of the deportees, but the age limits – 15 to 50 years – are themselves a simple guess, at least for the upper limit. The authors provide a table titled "Distribution of Deportees by Date of Birth and Convoy" (*ibid*., pp. 59-65) from which it can be deduced that 268 male deportees belonged to the 15-50 age bracket (293 males to the 15-51 age bracket) and as many as 437 female deportees. It is therefore not credible that practically all male deportees of that age bracket were selected for work at Cosel, while all female deportees of that bracket were gassed at Birkenau.

The gassing is assumed by Czech from the fact that no deportee from this transport was registered at Auschwitz, but there is no evidence that it ever arrived there. It is far more plausible that it was diverted to other camps in Upper Silesia, similar to various other transports originating in Westerbork.

---

[120] AGK, NTN, 92, p. 141; statistical evaluation of the Morgue Register by J. Sehn.
[121] Klarsfeld/Steinberg 1982, "Tableau statistique," unpaginated.

1 September 1942 (p. 231)

> *"560 Jews arrive from Westerbork with a RSHA transport from Holland. None of the people arriving in this transport is admitted to the camp."*

Czech adds in a footnote: " The men are probably selected in Cosel and sent to labor camps." Source: "Kempner, *Edith Stein and Anne Frank*, p. 76."

On the page indicated by Czech, there is a list of transports from Westerbork, but without any reference to Cosel.

The transport that left Westerbork on 31 August 1942 had 560 deportees, about 200 of whom were removed from the train in Cosel. The destination of the others was: "Niederkirch-Fürstengrube – Gräditz and other places in the sphere of responsibility of Gross Rosen, and finally Langenbielau/Reichenbach" (Het Nederlandse… 1952a, p. 13).

Hence, this transport did not arrive at Auschwitz.

5 September 1942 (p. 234)

> *"714 Jewish men, women, and children from Westerbork arrive in an RSHA transport from Holland. After the selection, 53 women are admitted to the camp and receive Nos. 19117-19169. The other 661 deportees are killed in the gas chambers. Dr. Kremer is present and writes in his diary: 'This evening at 8 o'clock again at a special operation from Holland. Because of the special ration that comes with it, consisting of a fifth of a liter of liquor, five cigarettes, 100 grams of sausage, and bread, the men are eager for such operations.'"*

Source: "SAM, *Auschwitz in the Eyes of the SS*, Kremer's Diary, p. 218."

Kremer neither mentions the number of deportees on that transport, nor the number of any alleged gassing victims.

The transport train with Jewish deportees that left Westerbork on 4 September 1942 counted 714 people. The Dutch Red Cross describes its destination as follows (*ibid*.):

> *"St. Annaberg – Anhalt/Fürstengrube – Gräditz and other places in the sphere of responsibility of Gross Rosen, and finally Langenbielau/Reichenbach."*

The column "Estimated number of persons detrained at Cosel (15-50 years old)" shows "200." Czech was well aware of the pre-selection of inmates at Cosel (see her entry for 28 August 1942), but for this transport she neglected to consider it.

It is therefore possible that no men were ever sent to Auschwitz at all. The presence in Auschwitz of inmates from this transport is documented by Volume 22 of the Auschwitz Death Books (Death Reg. Nos. 31501-33000), which was in the possession of the Dutch Red Cross and was analyzed with regard to the Dutch inmates. From the transport of 4 September, five female inmates were registered in that Death Book, but no men. However, there were

five men "repatriated," meaning they returned home after the war (Het Nederlandse… 1947, p. 11), while for Czech the men were all gassed. In the "Smoleń List," the origin of the inmates registered with the numbers 19117-19169 is not given, but it is probable that they were indeed Jews from this transport. It is unknown, however, how many were sent to Auschwitz.

Given this inconclusive state of the sources, it is completely irresponsible to claim that 661 deportees were gassed.

16 September 1942 (pp. 238f.)

> *"Commandant Höss, SS Second Lieutenant Hössler, and SS Second Lieutenant Dejaco, who is employed in the Central Construction Administration, go to Kulmhof (Chełmno), where SS Colonel Blobel demonstrates the machinery for incinerating bodies. The purpose of the inspection is to find a process to empty the mass graves in Birkenau, burn the bodies, and get rid of the ashes so that all traces of the crime can be wiped out."*

Source: "APMO, Central Construction Administration/KGL, BW 30/25/6, Memorandum of September 17, 1942, on the Official Trip to Litzmannstadt (Lodz) (No. 4467), reproduced in HvA, No. 3, 1960, p. 122; SAM, *Auschwitz in the Eyes of the SS*, pp. 166ff. [recte: 116f.]"

I have dealt with this issue at length in other studies, to which I refer (Mattogno/Kues/Graf, pp, 1192-1212; Mattogno 2017, pp. 73-81). Here I examine it from the *Auschwitz Chronicle's* specific perspective. It should be noted, however, that the document cited by Czech is headed "Report on the Mission to Litzmannstadt [=Łódź]," thus "Łódź," not "Kulmhof/Chełmno," a location that is never mentioned. It should also be noted that attached to this document was a "sketch," the whereabouts of which are unknown to this day.

That the destination of the visit was Kulmhof/Chełmno was claimed by Höss only after the war, but here I will focus on what he stated about the alleged reason for the visit (Bezwińska/Czech 2007, pp. 116f.; Höss, pp. 210f.):

> *"During his visit to the camp in the summer of 1942, the Reichsführer SS watched every detail of the whole process of destruction from the time when the prisoners were unloaded to the emptying of bunker II. At that time the bodies were not being burned.*
>
> *He had no criticisms to make, nor did he discuss the matter. Gauleiter Bracht and the Obergruppenführer Schmauser were present with him.*
>
> *Shortly after the visit of the Reichsführer SS, Standartenführer Blobel arrived from Eichmann's office with an order from the Reichsführer SS stating that all the mass graves were to be opened and the corpses burned. In addition the ashes were to be disposed of in such a way that it would be impossible at some future time to calculate the number of corpses burned."*

Since Himmler inspected the camp on 17 and 18 July 1942, Blobel would have gone to Auschwitz between the end of July and the beginning of August.

However, the *Auschwitz Chronicle* does not mention this fictitious visit at all – which is a fundamental element in the story under discussion, because it constitutes the reason for Höss's business trip to Łódź (and presumably to Chełmno). No document mentions this trip; none of the 581 trial witnesses mentioned it; there is not the slightest allusion to it in any of the many messages of the resistance movement; and finally, it is not mentioned by Blobel in any of his postwar statements either. It is therefore a purely fictitious event, and that alone undermines Czech's reconstruction.

In this regard the reader of the *Auschwitz Chronicle* is also faced with an inconsistency that Czech tried to mitigate by way of serious omissions.

Czech's entry of 19 August 1942 (p. 222), which summarizes the well-known file memo by SS *Untersturmführer* Fritz Ertl of 21 August 1941,[122] begins as follows:

> *"The representative of J. A. Topf and Sons of Erfurt, Head Engineer Prüfer, arrives at Auschwitz to conduct discussions with the Central Construction Administration about the construction of the crematorium ovens for incinerating corpses."*

One must therefore believe that Höss, having received Himmler's alleged order to cremate the remains of the claimed mass extermination in early August at the latest, waited a month and a half before going to see how he could carry it out. And although he had Kurt Prüfer, the chief engineer of the then-most-important German company building cremation equipment, at his disposal in Auschwitz on 19 August, he is said to have turned to an untrained layman, Blobel, who at that time is said to have been conducting outdoor cremation experiments at Kulmhof!

And in fact, when in the first months of 1943 the camp administration needed real mass-cremation facilities due to the escalating typhus epidemic, it turned to the Topf Company, not to Blobel. In particular, on 12 February 1943, SS *Sturmbannführer* Karl Bischoff, head of the Central Construction Office, informed Höss about his conversation with Kurt Prüfer on 29 January about a "6th crematorium," which was to have "an open cremation chamber" with dimensions of 48.75 m × 376 m," an "open cremation site." It was therefore envisioned as an open-air-cremation facility. But if Höss had already adopted burning pits for mass cremations in 21 September 1942 (see the respective entry), why was a sixth, open-air crematorium discussed four months later, at the end of January 1943?

A letter from the Topf Company to the Central Construction Office dated 5 February 1943 mentions a "cost estimate for a large circular cremation furnace," and finally on 1 April 1943, this company prepared another cost estimate for Auschwitz Camp for a huge furnace (probably the one designed by Engineer Fritz Sander on 4 November 1942; see Mattogno 2020a, pp. 17-33).

---

[122] RGVA, 502-1-313, p. 159.

The first two documents mentioned above are kept in the archives of the Auschwitz Museum (12 February 1943: APMO, BW 30/34, p. 80; 5 February 1943: APMO, BW AuII 30/4/34, D-Z-Bau/2544/2, illegible page number), the third is reported by Reimund Schnabel in his book *Macht ohne Moral* (p. 351), which Czech cited often.

As early as 1956, Jan Sehn, in his authoritative summary of the conclusions of the Warsaw and Krakow Trials, had drawn attention to these various projects that never came to fruition, although he erroneously thought these two distinct projects were one and the same, and he wrongly attributed their planning to the summer of 1944 (Sehn, p. 119):

> *"In the correspondence of the Topf Company it was called 'large circular cremation furnace,' as well as 'open cremation chamber' and 'open cremation site'."*

Therefore, Czech must have been familiar with these documents, but she never mentions them in her *Auschwitz Chronicle*. The most-logical explanation for this is that, by these omissions, she might avoid making a laughingstock out of her narrative about the alleged beginnings of open-air cremations at Auschwitz that she had outlined based on Höss's delirious fantasies.

21 September 1942 (p. 242)

> *"Burning the corpses of the dead in the open is begun in Birkenau. At first the bodies are burned on wood piles on which 2,000 bodies are stacked at a time, and later in pits with earlier buried and again uncovered bodies. To burn the bodies faster, they are first drenched with oil residue and then with wood alcohol. The pits burn ceaselessly, day and night."*

Source: " SAM, *Auschwitz in the Eyes of the SS*, Comments by Höss, p. 115."

Czech, who cites the page number of the German edition of this book, refers to the following statements made by the former camp commandant (Bezwińska/Czech 2007, p. 116):

> *"Towards the end of the summer, however, we started to burn them, at first on wood pyres bearing some 2,000 corpses, and later in pits together with bodies previously buried."*

The date of September 21 is therefore fictitious, another one of Czech's inventions. I will return to this issue when discussing her entry for 30 November 1942, at which the open-air cremation of corpses exhumed from older mass graves is said to have ended.

This description confirms the total nonsense of the fable of Höss's visit to Chełmno: Blobel's cremation experiments had led to the ingenious "discovery" of — wood pyres!

11 October 1942 (p. 252)

> *"1,703 Jewish men, women, and children arrive from Westerbork in an RSHA transport from Holland. After the selection on the unloading platform in Auschwitz, 334 men and 108 women are admitted to the camp and receive Nos. 67362-67705 and 22282-22389. The remaining 1,251* [recte: 1,261] *people are killed in the gas chambers. The operation takes place in the night of October 11-12. SS Camp Doctor Kremer writes in his diary: 'present at night at a special operation from Holland (1600 people). Ghastly scenes in front of the last bunker! That was the 10th special operation. (Hössler!)'"*

Source: "*Ibid*. [SAM, *Auschwitz in the Eyes of the SS*], p. 225"

Her page number is from the German edition. In the published English translation of this work, we read in the entry for 12 October 1942 (Bezwińska/Czech 2007, p. 223):

> *"The second inoculation against typhus and strong reaction in the evening (fever). In spite of that was present at night at another special action with a draft from Holland (1,600 persons). Horrible scene in front of the last bunker! This was the 10th special action. (Hössler!)"*

Hössler's name, who was the head of the Protective-Custody Section of Birkenau Women's Camp, is written in the margin below the date. A footnote by Bezwińska and Czech on that page informs us that on that day, 12 October 1942, a transport of 1,703 Jews from Holland arrived at Auschwitz. In the *Auschwitz Chronicle*, the following entry appears on 12 October (pp. 252f.):

> *"At 7:40 P.M., the SS standby squad is called to the unloading platform. The twelfth and thirteenth RSHA transports from Belgium bring 995 and 675 Jews, respectively, from Malines Camp* [total: 1,670]. *Altogether, there are 1,674 people, 534 men and 237 boys and 653 women and 250 girls. After the selection, 28 men and 88 women are admitted to the camp and receive Nos. 67726-67753 and 22397-22484. The remaining 1,558 deportees are killed in the gas chambers."*

Source: "APMO, D-AuI-1/3, FvD, p. 112."

This is the daily report of the officer of the day (*Führer vom Dienst*) that usually covers the afternoon of the day before and the morning of the day after. Evidently, the previous officer of the day had given the same indication concerning the SS standby squad also for the transport of 11 October, but Czech does not mention this.

It is not clear why she linked Kremer's diary entry of October 12 to the two transports from Belgium instead of the one from the Netherlands, since Kremer explicitly mentions "a draft from Holland."

Kremer's diary entry contains two elements whose meaning Czech took for granted: that "special action" was the alleged gassing of new arrivals, and that the "bunker" was one of the two alleged gassing installations just outside the perimeter of the Birkenau Camp. However, each alleged gassing presupposed

a selection of inmates who were unfit for work, and when Kremer, as a doctor, was on duty at the unloading ramp, selecting the deportees would have been his task. But for none of the twelve "special actions" he mentions in his diary, does he ever mention any selections. As is clear from two entries (5 September and 7 October 1942), where he mentions "special actions from the women's concentration camp ('muslim men')," and "special action (foreigners and muslim women)" (Bezwińska/Czech2007, pp. 215, 222), the term "special action" itself meant selections, here among inmates already admitted and registered in the camp who were emaciated (the term "muslim" was camp vernacular for emaciated inmates). This meaning is also evident in his entry for 5 September: "special action from Holland," meaning a selection of deportees from Holland; and since these selections could also be carried out indoors, e.g., in hospitals, Kremer twice specifies that the "special actions" took place "*draußen*" (outdoors) (2 and 6 September).[123] Gassings, on the other hand, most certainly could not be carried out outdoors.

Interpreting the term "last bunker" as meaning one of the two claimed gassing bunkers makes no sense, since there were only two alleged gassing "bunkers". The fact that Kremer (leaving aside his "confessions" during the Krakow Trial, which were made to save his own skin, as in fact they did; see the footnote *ibid*., pp. 223f.) was not referring to any alleged gassing facilities is indicated by two other circumstances.

First, until January 1945, the term "Bunker" for the phantom gassing installations at Birkenau was unknown not only to the SS, but even to the Auschwitz resistance movement (see Mattogno 2021, pp. 105-217), and there is not a single wartime document about Auschwitz that uses the term as such. Rather, at that time the term was always used according to its actual possible meanings in the German language: as a designation for air-raid shelters, for storage locations for bulk goods or for prison premises.

On the other hand, the outdoor cremation of the corpses of those allegedly gassed began on 21 September 1942 according to Czech (p. 242). After this date, Kremer attended five more "special actions," beginning on 23 September (Bezwińska/Czech 2007, p. 220). A detainee highly regarded by Czech, Szlama Dragon, described "Bunker 2" in the following way during his interrogation on 10 and 11 May 1945:[124]

> *"At about 30 to 40 meters from this cottage stood two wooden barracks. On the other side of the house* [*po drugiej stronie domu*] *there were four trenches, 30 m long, 7 m wide, and 3 m deep."*

In those trenches, hundreds and thousands of corpses are said to have been burning while Kremer presumably was on duty nearby. Not just for Kremer,

---

[123] Bezwińska/Czech 2007, pp. 214, 217; the first entry omits the word "outdoors," which is present in the German original (Bezwińska/Czech 1973, p. 215).

[124] Höss Trial, Vol. 11, p. 103.

the inferno of the cremation pits should have been a much-more-hellish and terrible sight to behold than the selections, but throughout his entire diary, there appears not the slightest reference of even annoyance at the smoke and stench that would have accompanied these fires!

Czech also overlooks an essential testimony in this regard. The Dutch Red Cross reported that a witness of the transport departing from the Netherlands on 9 October 1942 (which arrived at Auschwitz three days later) stated that a group of young women "selected" ("*geselecteerd*") for work at the Auschwitz Railway Station were sent on foot in the direction of Auschwitz I Camp (Main Camp), and that "the group of women and children and older men were loaded onto three large trucks with trailers, and were likewise taken away in the direction of Auschwitz I [*in de richting Auschwitz I*]." (Het Nederlandse… 1952a, p. 72). Hence, according to this testimony, Kremer's "last Bunker" was not located at Birkenau Camp, but at the Auschwitz Railway Station or Auschwitz Main Camp.

18 October 1942 (p. 255)

> *"1,710 Jewish men, women, and children arrive. After the selection, 116 women are admitted to the camp and receive Nos. 22669-22784. The remaining 1,594 deportees are killed in the gas chambers. SS Camp Doctor Kremer participates in the gassing. In his diary he writes: 'Present in raw, cold weather, today Sunday morning at the 11th special operation (Dutch people). Horrible scenes with three women, who beseech us for bare survival.'"*

In footnote, Czech quotes an excerpt from Kremer's interrogation of 18 July 1947 for the Krakow Trial, during which he stated:

> *"Three women from Holland didn't want to go to the gas chamber and begged for their lives. They were young and healthy women and yet their pleas weren't heard; instead, the SS men participating in the operation shot them right on the spot."*

Source for both: "*Auschwitz in the Eyes of the SS*, Kremer's Diary, pp. 226ff." She once more gives the page numbers of the German edition. In the English edition, this is on pp. 225f.

Czech quotes only few lines of Kremer's remarks. The interrogation of 18 July 1947 was recorded only in a Polish translation. The relevant passage reads:[125]

> *"During the special action which I recorded in my diary on 18 October 1942, three women from Holland did not want to enter the gas chamber* [*do komory gazowej*] *and begged for their lives. These women were young, healthy, despite this, their prayer was not heard, but the SS who participated in the action shot them on the spot."*

[125] Trial of the Auschwitz Camp Garrison, Vol. 59, p. 21.

The number of deportees – 1,710 – comes from Dutch documents, but with one essential difference: this transport did not go to Auschwitz, but to several satellite camps: St. Annaberg, Sakrau, Blechhammer, Bismarckhütte, Monowitz, Gross-Rosen (Het Nederlandse… 1952a, p. 13). Another list of transports from Westerbork compiled by the Dutch Red Cross also confirms that this transport, which departed on 16 October 1942 (the next one left only on 19 October), contained 1,710 people and went indeed to Sakrau, Blechhammer, Cosel[126] and Sakrau/Blechhammer.[127]

The "Smoleń List" for male deportees has no entry on 18 October 1942, but the female list has an entry with the assigned registration numbers 22669 through 22784, although it does not indicate the origin of the transport,[128] so here too Czech forces the document, making it arbitrarily say what it does not say.

According to the statistics of the Dutch Red Cross, the transports to Auschwitz from Westerbork during the period 15 July to 24 August 1942 (departure dates) contained a total of 11,075 deportees, of whom 4,507 were men and 3,560 were women between the ages of 18 and 50 (Het Nederlandse… 1948, p. 5), for a total of 8,067 deportees in that age bracket. From these transports, according to the *Auschwitz Chronicle*, 5,176 male deportees and 2,444 female deportees were registered, a total of 7,620, or about 94.5% of the Red-Cross figure given above, which can therefore be taken as a general criterion for selections regarding this age bracket, although (5,176 ÷ 4,507 =) 15% more men were registered than belonged to that age bracket, meaning that a considerable number of boys younger than 18 and/or men older than 50 years was registered as well. Registered inmates in general constituted 68.8% of the total number of deportees.

From the manifest of the transport that left Westerbork on 16 October 1942 it appears that at least 836 deportees, almost 49%, were in the 18-50 age group.[129] Therefore, they (plus maybe up to 15% older men) should have been selected for labor and registered. How can one seriously believe that, if this train had really arrived at Auschwitz, not a single man out of 1,710 people would have been registered, and only 116 women, hence just 6.8% of the total number of deportees?

25 October 1942 (p. 258)

> *"988 Jewish men, women, and children arrive with a RSHA transport from Holland. After the selection, 21 men and 32 women are admitted to the camp*

[126] "Treinlijst Westerbork." ROD, c[64]312.1, p. 4.
[127] Het Nederlandse…, Afwikkelingsbureau Concentratiekampen. ROD, c[64]312.1.
[128] NOKW-2824, p. 6.
[129] ROD, 250i, doos 50. This list with the title "*Judentransport aus den Niederlanden – Lager Westerbork – am 16. Oktober 1942*," has 50 typewritten pages. For 35 names listed in it, the date of birth is not given.

and receive Nos. 70333-70353 and 22917-22948. The remaining 935 people are killed in the gas chambers."

Source: none.

According to the Dutch Red Cross, the transport that left Westerbork on 23 October (the next left on 26 October) consisted of 988 prisoners, of whom about 170 got off the train in Cosel, and the others were routed to St. Annaberg and various satellite camps (Niederkirch, Sakrau, Eichtal, Ottmuth, Klein Mangersdorf, Blechhammer), and some ("*enkelen*") to Bismarckhütte and Auschwitz (Het Nederlandse… 1952a, p. 14).

This is consistent with the registration of 53 deportees of this transport, so it is unreasonable to state that there was a selection, and that 935 Jews were gassed.

29 October 1942 (p. 260)

"SS Commander in Chief Heinrich Himmler permits the prisoners to receive a food package the size of a daily ration from their families."

Source: "APMO, D-RF-9, WVHA, 8, p. 52, Edict Collection."

This Himmler order states:[130]

"1) Effective immediately, I authorize inmates to receive food packages from their relatives.

2.) There is no limit to the number of packages an inmate may receive. However, the contents must be consumed by the detainee on the day of arrival or the following day. If this is not possible, distribution will be made to other inmates as well.

3.) This order of mine applies not only to German inmates, but also to all other inmates who have the opportunity to have food packages sent to them.

4) Any SS member who lays hands on an inmate's food package will be punished by death."

The use of parcels for illegal activities (e.g. smuggling messages) was punished with the death of the detainee, and a three-months' ban on receiving parcels for the entire barracks in which he was lodged.

It is revealing that Czech did not mention the very important fact that any SS man stealing food from inmates was threatened with the death penalty.

4 November 1942 (p. 264)

"954 Jewish men, women, and children arrive from Westerbork in Holland with an RSHA transport. After the selection, 50 women are admitted to the camp and receive Nos. 23534-23583. The remaining 904 are killed in the gas chambers."

[130] NARA, Record Group 242/338, Roll 6, Frame 000556.

Source: none.

The reference is to the transport that left Westerbork on 2 November 1942 (the next left on 6 November). According to the Dutch Red Cross, it was routed to "St. Annaberg – Gleiwitz, Oderberg and Seibersdorf, Niederkirch and Ottmuth – Blechhammer, some also to Bismarckhütte/Monowitz." About 260 deportees were taken off at Cosel (Het Nederlandse… 1952a, p. 14).

Therefore, this deportation train was not headed for Auschwitz Camp, and as a consequence, there was neither selection nor gassing of 954 deportees.

7 November 1942 (p. 265)

> *"465 Jewish men, women, and children arrive from Westerbork in Holland with an RSHA transport. At the selection, all those unfit to work are classified and led to the gas bunker."*

Source: "Kempner, *Edith Stein and Anne Frank*, p. 76."

The Dutch Red Cross ascertained the fate of this deportation train, which left Westerbork on 6 November 1942: about 110 deportees were taken to Cosel, the others went to "Ottmuth – (Neukirch, St. Annaberg) – Blechhammer" (*ibid*.). Therefore, this train did not go to Auschwitz Camp either, hence neither selection nor gassing of 465 Jews.

12 November 1942 (p. 267)

> *"758 Jewish men, women, and children arrive from Westerbork with an RSHA transport from Holland. After the selection, three men and 48 women are admitted to the camp and receive Nos. 74425-74427 and 24354-24401. The remaining 707 people are killed in the gas chambers."*

Source: none.

The registration numbers mentioned by Czech derive from the "Smoleń List," but the origin of the male and female deportees is not given. According to the database on the website of the Auschwitz Museum, numbers 74425, 74426 and 74427 were assigned to three Dutch Jews, the first interestingly to Joseph Abasch, born in Amsterdam in 1879, who was 63 years old at the time.

The Dutch Red Cross ascertained that this deportation train, which departed from Westerbork on 10 November 1942, had about 180 deportees taken off at Cosel, and the remainder went to "St. Annaberg-Johannsdorf, Klein Mangersdorf, Oderberg-Malapane, Seibersdorf-Blechhammer (some in the sphere of responsibility of Gross-Rosen)" (*ibid*.). Evidently some deportees also ended up in Auschwitz, but nothing shows that there was a selection among them, and the claim of the 707 gassing victims is unfounded in any case.

30 November 1942 (p. 275)

> *"The Special Squad formed by Hössler to wipe out the traces of the crimes – empty the mass graves in Birkenau and burn the corpses – completes its work. As Commandant Höss reports, 107,000 corpses are buried in the mass graves. These were Jews killed with gas who were brought to Auschwitz in transports from Upper Silesia since the beginning of the transport operation and Jews who arrived with transports before September 21, 1942, i.e., before the incineration of corpses began. In addition, the corpses of the Russian POWs and of prisoners who died in the winter of 1941-42, when the crematorium in the main camp was not operational, and the corpses of prisoners who died in Bunkers Number 1 and 2 in Birkenau are also burned."*

Source: "SAM, *Auschwitz in the Eyes of the SS*, pp. 114ff., 165-168."

Czech cites Höss (from the German edition of the book), who wrote (Bezwińska/Czech 2007, p. 116):

> *"By the end of November all the mass graves had been emptied. The number of corpses in the mass graves amounted to 107,000. This figure not only included the transports of Jews gassed up to the time when cremation was first employed, but also the bodies of those prisoners in Auschwitz who died during the winter of 1941-2, when the crematorium near the hospital building was out of action for a considerable time. It also included all the prisoners who died in the Birkenau camp."*

The date of 30 November is therefore Czech's interpretation. The figure of 107,000 dead, being a simple claim by Höss, has little probative value. He invented it when he was confronted with Otto Moll on the afternoon of 16 April 1945 in the presence of a U.S. military officer. On that occasion, Höss answered the question as follows (see Mattogno 2020, p. 97):

> *"The people buried in the two big mass graves of the so-called dugouts, one and two, amounted to 106,000 or 107,000 people"*

At that time, Höss believed that only two mass graves existed, one at each "dugout" ("Bunker"), and that the alleged [106,000 to] 107,000 all came from these two alleged gassing installations.

The claim that SS *Hauptsturmführer* Hössler had established a "Special Squad" for exhuming and cremating the corpses is explained by Czech in her entry for 19 October 1942 (p. 255), where she writes:

> *"Commandant Höss orders the closing of the Birkenau area to civilians. The Birkenau area may be entered only by holders of a special pass who come on official business."*

Source: "APMO, D-AuI-1/97, Commandant's Office Order of October that was not fully transmitted."

In a long footnote, of which I quote the initial part, Czech explains (*ibid.*):

> *"This order is probably connected with Hössler's being assigned to get rid of the traces of the crimes – to dig up and burn the bodies in the mass graves, which have not decomposed and, in fact, even surface again. For this work Hössler forms a new Special Squad of several hundred Jews of various nationalities."*

The Headquarters Order in question is No. 21 of 1942 and is dated 24 October 1942. Item 2, titled "Restricted Area," reads (Frei *et al.*, p. 190):

> *"Effective immediately, the area around Birkenau is declared a Restricted Area for civilians. Entry into this area is permitted only on official business.*
>
> *The patrols are to be instructed to arrest any civilian who is in this area without authorization, and to report this immediately to the commandant's office. This order shall be made known to all dependents, civilian employees and workers."*

Czech's deduction is clearly unfounded and moreover incongruous, because, from her perspective, the alleged "Special Squad" would have been formed on 24 October, rather than on 21 September when – according to her – its exhumation and cremation activities are said to have begun. Not to mention that she misinterprets the meaning of the term "Restricted Area," which in the documents always appears exclusively in relation to the typhus epidemic (see Mattogno 2021, pp. 56f.).

No-less-serious is the inconsistency concerning the other fictitious "Special Squad," the one allegedly established on 4 July 1942, which I examined when discussing the respective entry. After this squad had dug the mass graves and buried the corpses of those presumably gassed in the "bunkers," it disappears from the scene without Czech explaining what happened to it and why. But evidently it could not also be assigned to do the exhumation and cremation work that is said to have started on 21 September, since "a new Special Squad" had to be formed.

This is therefore mere fable that has nothing to do with historical fact.

3 December 1942 (pp. 277f.)

> *"The approximately 300 Jewish prisoners in the special squad who dig up and burn the 107,000 bodies buried in mass graves are taken from Birkenau to the main camp by the SS. There they are led to the gas chamber in Crematorium I and killed with gas. Thus the witnesses to the corpse burning are disposed of."*

Source: "APMO, Höss Trial, vol. 1, p. 17; vol. 4, p. 76; Krakow Auschwitz Trial, vol. 7, pp. 7, 113."

The source of the last reference is unknown to me. The first reference is to the deposition of Stanisław Jankowski made on 13 April 1945. I quote the relevant passage:[131]

[131] Höss Trial, Vol. 1, p. 16.

> *"I declare that at the time, it was the end of 1942, there were still no gas chambers in Auschwitz* [*nie było jeszcze komór gazowych*]. *The only gassing of that period known to me took place in November or December 1942. At that time, 390 people were gassed, only Jews of various nationalities, employed in the Sonderkommando of Birkenau. This gassing was then carried out in the Leichenhalle* [*morgue*]*"*

The second reference is to the interrogation of Reinhold Puchała on 9 August 1946, in which we read the following:[132]

> *"After the Katyn Affair became known worldwide, Auschwitz was also ordered to reopen the mass graves in which those gassed in the temporary gas chamber* [*gazowni*] *at Birkenau had been buried. The members of the Sonderkommando team, together with the entire block personnel, who, although going to work, only had duties in the block, were taken to the Main Camp and were gassed in the chamber of Crematorium 1. Back then, the Sonderkommando numbered about 300 inmates. This took place in December 1942 after the completion of the removal of the corpses from the pits at the two temporary gas chambers at Birkenau."*

Since the discovery of the mass graves near Katyn was announced only in April 1943, the witness anachronistically reported simple atrocity-propaganda stories.

Finally, Czech also refers to the statement by Arnošt Rosin, who at the 16th Session of the Trial of the Auschwitz Camp Garrison stated:[133]

> *"On December 3, the Sonderkommando, consisting of 300 persons, was gassed at Auschwitz for preparing to escape. The rest of the Sonderkommando, 10-12 persons, remained in the block and was then taken to the so-called 'death chambers'* [*komory śmierci*] *– this was the place set aside for the bodies – and the defendant Plagge shot them personally."*

This is another event that is not supported by any document and therefore cannot be considered a historical fact. Leaving aside the contradiction on the number of alleged victims – 390 and 300[134] – Czech introduces a "gas chamber at crematorium I" that for Jankowski did not exist.

It should also be noted that this "*Sonderkommando,*" in Czech's imaginary reconstruction of events, was the one allegedly set up by Hössler on October 19 (!) for the exhumation-cremation work, after the mysterious disappearance of the "*Sonderkommando*" purportedly formed on 4 July 1942. However, in the statement mentioned above, a few lines earlier, Rosin stated:[135]

---

[132] *Ibid.*, Vol. 4, pp. 75f.
[133] Trial of the Auschwitz Camp Garrison, Vol. 7, p. 7.
[134] The persons mentioned were both self-proclaimed "eyewitnesses": Rosin was part of the "*Sonderkommando,*" and it is not known how he managed to escape death; Jankowski "saw" the inmates of the "*Sonderkommando*" arrive at the Main Camp crematorium, where he worked.
[135] Trial of the Auschwitz Camp Garrison, Vol. 7, p. 6.

> *"I was an inmate from Auschwitz and Birkenau Concentration Camp. In 1942, I was deported to Auschwitz Concentration Camp, where I remained 3 days before being transferred to Birkenau. The next week, I was assigned to the so-called 'Sonderkommando'. At first, our work consisted of digging pits."*

Since the witness arrived at Auschwitz on 17 April 1942, stayed there for three days, and after a week was assigned to the Birkenau "*Sonderkommando*," this must have taken place on 27 April. Rosin had already testified during the Höss Trial, where he gave further details:[136]

> *"14 persons were selected for a certain Sonderkommando, as I have said. We had to go outside the camp, into the woods, where we dug a few trenches* [*okopy*] *70-80 meters long and 5 wide. There we remained for 14 days.* […] *Later on, from the trenches, a narrow-gauge rail line was laid to the cottages. 30 inmates were then selected for Sonderkommando II.* […]
>
> *When we returned by another road, we saw children's shoes, shoes, hair, there were wigs, and so on. It went like this for about three months.*
>
> *Then these 30-100 persons from the Kommandos were combined in one single Kommando. This was the special Kommando* [*specjalne komando*]*, and no inmate could enter into contact with it. This Kommando grew continually, because the crematorium did not exist yet.*
>
> *The job of removing these bodies again began in September 1942. We formed a big circle using these bodies, normally they were burned, the smoke and stench of the burning of these bodies extended for several kilometers.*[137]
>
> *The Kommandos arriving at our camp, when we became aware of what was going on, attempted to escape. This escape was revealed by an inmate. The entire Sonderkommando, consisting of 300 persons, was taken to Auschwitz and were all exterminated. And this occurred immediately, I think that this was not an order issued by Berlin, but was a direct order from Commandant Höss, who ordered their destruction.*
>
> *There was a transport of Polish Jews from around Mława, the numbers* [assigned to them were around] *82000. These Jews were supposed to burn the persons who arrived after them."*

This "eyewitness testimony" upsets Czech's fictitious chronology, because according to Rosin, the "Special Squad" was established already at the end of April, not on 4 July, and it was this squad, with its incomprehensible variation of the number of its members (14 people, then 30, then 30-100, so if we add them all up at most 142, which then became 300), that is said to have carried out the exhumations and cremations starting in late September 1942, rather than the one later allegedly created by Hössler.

---

[136] Höss Trial, 11th Session, 22 March 1947, testimony by Arnold [*sic*] Rosin, pp. 1164-1167.

[137] As I noted earlier, Kremer knew nothing about these (alleged) unpleasant facts, which could not have gone unnoticed.

5 December 1942 (p. 279)

> *"In the women's camp in Birkenau, the SS carries out a large-scale selection, which lasts the entire day. Afterward, approximately 2,000 young, healthy, and able-bodied women are brought to the gas chambers in the bunkers."*

Source: "Škodowa, *Three Years*, p. 79."

Czech explains in a footnote:

> *"In their accounts, the surviving female prisoners remember that selection clearly because they connected the date with St. Nicholas Day* [6 December], *which is celebrated in many countries."*

If this were true, it is not clear why none of the former prisoners who testified in 1947 at the Warsaw and Krakow Trials "remembered" this alleged event, so much so that Czech was forced to resort to a book published in 1962. Moreover, she embroiders the meager statements contained therein. In fact, the author speaks of a selection in the women's camp of Birkenau (without mentioning Sector BIa or the "Bunkers") that had the following outcome (Škodová, p. 79):

> *"That day alone they brought to the gas about ten thousand* [*okolo desaťtisíc*] *women, young, healthy, skilled at work."*

This propaganda figure of 10,000 women was too high even for Czech, who decided *ex cathedra* to reduce it to 2,000.

It should be noted that here an inverted selection was made: only young, healthy and able-bodied inmates were gassed!

6, 7, 9 and 10 December 1942

I examine together Czech's entries regarding the formation of "*Sonderkommando* II," which in her "reconstruction" means that the one allegedly exterminated on 3 December was "*Sonderkommando* I."

– 6 December 1942 (p. 280):

> *"A new Special Squad is formed to which several dozen Jewish prisoners, selected from Section B-Ib, are assigned. It is probably called Special Squad II; some of those assigned to it are Meilech (Milton) Buki (No. 80312) and Szlama Dragon (No. 80359), who will work in the Special Squad until the end. During the evacuation of the camp in January 1945, Szlama Dragon succeeds in escaping to the vicinity of Pless (Pszczyna). In the trial against Rudolf Höss, he appears as a witness and charges that the group of Jewish prisoners was sent to the Special Squad on December 9 and employed in incinerating corpses for several days thereafter. On the other hand, the camp documents indicate that the Special Squad must have already been in existence when prisoners who were working in it made attempts to escape on December 7 and 9."*

Source: "APMO, Höss Trial, vol. 11, pp. 102-121."

The information is taken from Szlama Dragon's deposition of 10-11 May 1945, in which the witness stated that he arrived at Auschwitz on 7 December 1942 with a transport of 2,500 Jews from the Mława Ghetto, from which 400 inmates were registered. That same evening, these 400 deportees were taken to Block 22 and then to Block 14, where, on 9 December, 200 inmates were chosen for the "*Sonderkommando*," who the next day went to work for the first time at the alleged "Bunkers."[138] Among other things, Czech derives from this source also the alleged arrival of 2,500 Jews from the Mława Ghetto on 6 December, of whom 2,094 were allegedly gassed (p. 280), but the number of deportees is a mere assertion without any documentary evidence. I have devoted half a monograph to analyzing the various mendacious statements by Szlama Dragon (Mattogno 2022).

Milton Buki, another witness mentioned by Czech, made two statements that were introduced as evidence during the Krakow Trial. In the first, which is written in English and dated 4 January 1946, he laconically said that he had been part of a "special unit" that had worked "mainly in the crematorium."[139] The second statement, written in German, is dated 7 January 1946 and is a bit more-detailed:[140]

> *"*[I] *Was deported to Birkenau Camp in 1942 as protective-custody detainee, and within a few days of my arrival at the camp,* [I] *was assigned to the special unit that had to do work in and around the crematorium.*
>
> *My work consisted of moving the corpses from the gas chambers to the various incineration sites (crematorium, cremation pits). This I did until November 1944* [when] *the gassings were stopped."*

In the context of a "special squad" allegedly deployed at the Birkenau "bunkers," Buki's tales about his alleged activities at the Main Camp crematorium are utterly meaningless, as Czech well knew.

– 7 December 1942 (pp. 280f.):

> *"Two Jewish prisoners with the Nos. 36816 and 38313 escape from Special Squad II in Birkenau.*
>
> *It turns out that the two escapees from the special squad are the Slovak Jew Ladislaus Knopp (No. 36816), born May 6, 1912, in Topolčany, and the Rumanian Jew Samuel Culea, born May 4, 1901, in Jassy. In the teletype message to the RSHA and other headquarters about the escape, P.C. Commander Aumeier admits that the prisoners escaped in the early morning and it is very important to capture them for official police reasons."*

[139] Trial of the Auschwitz Camp Garrison, Vol. 45a, p. 64.
[140] *Ibid.*, p. 79.

– 9 December 1942 (p. 282):

> *"At 12:25 P.M., the Guard Commander receives the report that six prisoners have escaped from the Special Squad. The search is unsuccessful and is called off at 5:00 P.M. because of a heavy fog.*
>
> *The two Jewish prisoners, Nos. 36816 and 38313, who escaped from Special Squad II on December 7, are captured at 8:30 P.M. in Harmense and brought to the main guardhouse."*

Source: "APMO, D-AuI-1/3, FvD, p. 158."

– 10 December 1942 (p. 282):

> *"Two Jewish prisoners who escaped from the Special Squad the previous day are captured and sent to the bunker of Block 11. They are Bar Borenstein (No. 74858), born February 10, 1920; and Nojech Borenstein (No. 74859), born March 25, 1925, in Szrensk. They were sent to the camp from the Zichenau ghetto in an RSHA transport on November 14, 1942. The two of them are probably executed publicly on December 17 in the presence of the Special Squad to terrorize the other prisoners."*

Czech explains in a footnote:

> *"Next to the names of the two prisoners and the entry 'released' is the letter 'Ü.'"*

Source: "APMO, D-AuI-3/1b, Bunker Register, p. 91."

Sz. Dragon asserted that the new "*Sonderkommando*" was chosen from among the deportees of his deportation train from the Mława Ghetto, who were registered with the numbers 80262 through 80667. As I demonstrated when discussing the entry for 3 December 1942, this was confirmed by A. Rosin, and it was subsequently repeated by Franciszek Piper as follows (Długoborski/Piper, Vol. III, p. 183):

> *"A new Sonderkommando was formed to replace the one that had been liquidated. It consisted originally of Polish Jews, and Jews from other countries were added later. The former, who would remain its core, were 200 Jews from Maków Mazowiecki. They were selected from a transport that reached Auschwitz on December 6 in a transport from the transit ghetto at Mława."*

He asserts that Rosin was "the only survivor" of the previous "*Sonderkommando*" (*ibid*, p. 182, FN 540). Therefore, apart from Rosin (who had the ID 29858 assigned to him), the members of the new "*Sonderkommando*" had to have numbers form the range 80262-80667. For Czech, however, at least four inmates outside this range belonged to it: Ladislaus Knopp (36816), Samuel Culea (38313), Bar Borenstein (74858) and Nojech Borenstein (74859).

Of all the sources cited by Czech, the most-important is "APMO, D-AuI-1/3, FvD, p. 158," which is the report of the officer of the shift stretching from 9 to 10 December 1942, which says (I quote the most important parts):

> *"At 12:25 it was reported that 6 inmates had fled from Sonderkommande* [sic] *I* [sic…]. *At 20:30 Harmenze* [sic] *called that 2 inmates were apprehended.* […] *These were the two Jewish inmates No. 36816 + 38313 who had fled early on 7 Dec. 42 from Sonderkom. II."*

To recap, the *Sonderkommando* allegedly exterminated on 3 December 1942 is said to have been replaced by a "*Sonderkommando* II" on 6 December. Following that logic, this first special squad would have been called "*Sonderkommando* I." Czech states that the inmates who escaped on 7 and 9 December were all from "*Sonderkommando* II," but the report by the officer of the day explicitly states that the six inmates in question were from "*Sonderkommando* I." By omitting the number "I" in her entry for 9 December, and by falsely asserting that all of the inmates had escaped from "*Sonderkommando* II" in her entry for 6 December, Czech conceals the fact that both special squads, "*Sonderkommando* I" and "*Sonderkommando* II," existed side by side on 9 December 1942, which upsets her fallacious reconstruction. It is in fact all too obvious that, if the two *Sonderkommandos* existed simultaneously, the first squad could not have been exterminated days earlier, and the second squad could not have taken its place days later. Moreover Rosin asserted that a "*Sonderkommando* II" of 30 men already existed in May-June 1942 (see the entry for 3 December 1942).

Finally, Czech's entire reconstruction is radically undermined by the unsubstantiated assumption that the "*Sonderkommandos*" I and II mentioned in the document cited were those deployed at the alleged "bunkers. This is based on the categorically wrong notion that there was one and only one "*Sonderkommando*" at Auschwitz, and that it had to do exclusively with gassings, burials, exhumations and cremations. Hence, whatever document contains that term, in the eyes of the orthodoxy, it must refer to this Holocaust "*Sonderkommando*." But as can be inferred from a plethora of wartime documents, a broad variety of "*Sonderkommandos*" existed at Auschwitz, none of which had anything to do with what the orthodoxy claims (for details see Mattogno 2016b).

As for the inmates Bar and Nojech Borenstein, it is not clear from what Czech deduces that they were executed, since "released" clearly means that they were set free, and "Ü" is usually an abbreviation for "*überstellt*" – transferred. And in fact, the numbers of these two inmates appear neither in the entries for 9 December 1942 of the Morgue Register (the death register of the mortuary in Block 28 at the Main Camp), nor in those of the following days.[141]

The alleged difference in treatment between these two pairs of escaped Jewish inmates is also unclear: the first (Knopp and Culea) would have been sent back to the camp, the second (the Borenstein brothers) killed. As for the first pair, the names of Ladislav Knapp [sic] and Samul Culer [sic] are record-

[141] AGK, *Leichenhallenbuch*, Collection "OB," 385, pp. 42ff.

ed in a fragment of the camp's card index copied by inmate Otto Wolken; the first belonged to *Sonderkommando II* (*Sonderkdo II*), the other to *Sonderkommando* (*Sonderkdo*); for both, the changes column states: "15 Dec. 42 dropped / dropped on 10 Dec. 1942 /escapee/" ("*am 15.12.42 abg. / am 10.12.42 abgesetzt /Flüchtling/*").[142] The term "*abgesetzt*" means that the two detainees' entries had been dropped/suspended from the card index. It is certain, however, that the two detainees were not killed, because the words "*verstorben*" ("deceased") are missing, as occurs for instance for the two prisoners preceding the entry of Knapp: the Slovak Jews Eduard Tintner, No. 36682, "deceased 22 June 1942," and Alfred Timföld, No. 36810, "deceased 16 June 1942."[143]

This is confirmed by the list "New arrivals on 23 May 1942 transferred from KL Lublin," which includes 1,000 inmates with serial number, first and last name, date and place of birth, and also the date of death. The vast majority of these inmates had died by August 1942, but Ladislav Knopp [sic] was one of the very few survivors ("36816 Knopp Ladislav 5.6.12 Topocany"), while Alfred Timföld is reported to have died on 16 June 1942.[144]

Had Knopp and Culea or the Borenstein brothers really been part of any *Sonderkommando* linked to the any mass-murder activities at the "bunkers," from an orthodox point of view, these inmates who dared to escape would have been killed without mercy.

8 December 1942 (p. 281)

> *"The S5 Camp Doctor carries out a selection in the prisoners' infirmary. He selects 94 sick prisoners with poor prospects for a quick recovery. They are sent to Birkenau and killed there with gas."*

Source: "APMO, D-AuI-5/3, Prisoners' Infirmary Register of Block 28, pp. 232-235."

Here, as I noted earlier (entry for 3 August 1942), the expression "transferred to Birkenau" and the corresponding reference to the Morgue Register are missing, without which the statement is completely arbitrary even from Czech's fallacious perspective. In the Morgue Register, of the 53 dead inmates entered on 8 December 1942, only 30 were from Block 28.[145] Here too, therefore, a merely *alleged* transfer to Birkenau turns into a homicidal gassing.

10 and 12 December 1942

These two entries pertain to the alleged "Małkinia Transit Camp."

– 10 December (p. 283):

---

[142] AGK, NTN, 149, pp. 142f., serial numbers 2083 and 2092.
[143] *Ibid.*, p. 142, serial numbers 2081 and 2082.
[144] APMO, Fot. 423, pp. 142f.
[145] AGK, OB, 385, p. 42

"Approximately 2,500 Jewish men, women, and children from Poland arrive from the transit camp Małkinia in an RSHA transport. After the selection, 524 men are admitted to the camp and receive Nos. 81400-81923. The remaining 1,976 people are killed in the gas chambers."

Source: none.

– 12 December (p. 284):

"416 Polish Jewish men and six Polish Jewish women receive Nos. 82047-82462 and 26800-26805. They are selected from an RSHA transport that arrived the previous day from the transit camp Małkinia. The transport consisted of approximately 2,000 Jewish men, women, and children. After the selection of 422 men and women, the remaining 1,578 people are killed in the gas chambers."

Source: none.

The aforementioned *Encyclopedic Informer* of the Main Commission for the Investigation of Hitlerite Crimes in Poland lists in alphabetical order all localities in Poland that were the place of such crimes according to documents, testimonies and trial findings as indicated at the end of each entry. In this work, Małkinia is not even mentioned, and the names of the localities go straight from "Małki," which is another name for Sztutowo (Stutthof), to "Małomice," where a PoW camp and two labor camps existed (Główna…, p. 314).

For 10 December 1942, the "Smoleń List" has as many as four sets of prisoner registration numbers without indication of their origin, in order:

– 81224-81262
– 81263-81399
– 81400-81923
– 82860-82865.

The set of numbers mentioned by Czech ranging from 82047 to 82462 is dated 11 December,[146] not 12 December, as Czech claims, so she improperly linked this set to the set of six women dated 12 December (Nos. 26800-26805), whose origin is not given.[147]

In the prisoner list compiled by Judge Jan Sehn on the basis of the prisoners' records that had been found, there are 30 prisoners in the range 81400-81923[148] and 19 in the range 82047-82462.[149] The list gives a serial number, the inmate's first and last name, their registration number, date of birth,[150] nationality[151] and date of arrival at the camp. For the first set of numbers, the ar-

[146] NOKW-2824, p. 14 (list of males).
[147] *Ibid.*, p. 7 (list of females).
[148] Serial numbers 901-930, non-consecutive registration numbers from 81433 to 81920.
[149] Serial numbers 931-949, non-consecutive registration numbers from 82049 to 82447.
[150] The birth years range from 1900 to 1925.
[151] All deportees had Polish nationality.

rival date is 10 December, for the second it is 11 December. From the names it can be deduced that they were all Jews.[152]

There is no evidence that these registered inmates were related to two transports containing a total of 4,500 Jews, and that 3,554 of them were gassed. This is a simple another one of Czech's inventions. Since the number of deportees who arrived is unknown, one cannot legitimately speak of a selection either. Czech herself attributes two sets of registration numbers listed in the "Smoleń List" – 81924 through 81989 of 11 December (p. 283) and 83633 through 83746 of 15 December (p. 286) – which have no indication of their origin, to "group transports" without claiming any selection for them. The same procedure should have applied to the deportees who allegedly arrived from Małkinia.

10 December 1942 (p. 283)

> *"927 Jewish men, women, and children arrive with an RSHA transport from Holland. After the selection, 39 men and three women are admitted to the camp and receive Nos. 81224-81262 and 26618-26620. The remaining 885 people are killed in the gas chambers."*

Source: none.

According to the findings of the Dutch Red Cross, the Jewish transport that left Westerbork on 8 December 1942, consisting of 927 persons, was routed to "Sakrau-Gleiwitz-Blechhammer (part of the able-bodied directly to Birkenau, 38 registered there)." The column "Estimated number of persons taken off at Cosel (15-50 years old)" has 60 listed (Het Nederlandse… 1952a, p. 15).

It must be assumed that, in addition to these 60 deportees taken off at Cosel, more detainees remained in the Sakrau, Gleiwitz and Blechhammer Satellite Camps, so it cannot be true that 885 Jews from this deportation train, if any at all, were gassed at Birkenau on 10 December 1942.

[152] AGK, NTN, 156, pp. 33f.

1943

5 January 1943 (p. 300)

> *"The SS Camp Doctor carries out a selection in the prison infirmary, Block 28 in the main camp, during which he selects 56 prisoners who are not expected to be able to work again soon. These prisoners are killed the same day with phenol injections."*

Source: "*Ibid*. [APMO, D-AuI-5/2, Morgue Register,], pp. 25-27."

The only thing that is certain is that the Morgue Register, as of 5 January 1943, records 56 prisoner numbers from Block 28 (Serial Numbers 18-73). That the respective inmate patients were murdered is only based on Czech's lurid fantasy. It should be noted that there are another 23 deaths recorded originating from Block 7 and Block 28, but Czech does not consider them murdered. This further confirms that her conjectures are arbitrary and unfounded.

7 January 1943 (p. 302)

> *"Approximately 2,000 Jews arrive from the Augustów ghetto in an RSHA transport. Following the selection, 296 men, who are assigned Nos. 85525-85820, and 215 women, assigned Nos. 28069-28283, are admitted to the camp as prisoners. The other approximately 1,489 people are killed in the gas chambers."*

Source: none.

In the first, German edition of her *Auschwitz Chronicle*, Czech had the same entry, but without the number of deportees (Czech 1961, p. 65), meaning that she could not infer it from any source. The origin of the transport is as unfounded as the number of deportees. The *Encyclopedic Informer* says that the Augustów Ghetto was established in August 1941, and liquidated on 2 November 1942. A total of about 3,500 people passed through the ghetto. We read there (Główna…, p. 89):

> *"During the liquidation of the ghetto, they* [the inhabitants] *were directed to the transit camp in the locality of Prostki, near Grajewo."*

Prostki is located 50 km southwest of Augustów and about 80 km northwest of Białystok, about 500 km from Auschwitz (as the crow flies).

Czech arbitrarily "completed" the "Smoleń List," which does not give the origin of the Jewish transports, but by so doing, she committed a double abuse: while the male list indeed records the registration numbers 85525-85820 on 7 January 1943,[153] the female numbers 28069-28283 were assigned

[153] NOKW-2824, p. 27 (list of males).

on 8 January[154] to deportees of unknown origin. Czech put the two distinct sets together, and in order to create a fictitious transport of 2,000 people, she invented 1,489 more deportees out of thin air, which she then sends to the equally fictitious gas chambers, sending them back into thin air, so to speak. Since nothing is known about these two sets of deportees, there is nothing, not even from an orthodox point of view, that supports the claim that a selection with subsequent gassing was performed on these deportees.

13, 15, 16, 18 and 19 January 1943

These five entries all refer to alleged deportation trains coming from the Zambrów Ghetto, and none of these entries have any source reference:

– 13 January (p. 305)

> *"Approximately 2,000 Jewish men, women, and children arrive in an RSHA transport from the Zambrów ghetto. Following a selection, 148 men, Nos. 86785-86932, and 50 women, Nos. 28634- 28683, are admitted to the camp. The other approximately 1,802 people are killed in the gas chambers."*

– 15 January (p. 306)

> *"At 5:30 P.M. the entire standby squad is ordered to the unloading ramp to take over an RSHA transport from the Zambrów ghetto of approximately 2,000 Polish Jews – men, women, and children. Following the selection, 217 men, given Nos. 87492- 87708, as well as 21 women, Nos. 28838-28858, are admitted to the camp. The other approximately 1,762 deportees are killed in the gas chambers."*

– 16 January (p. 306)

> *"At midnight the entire standby squad is ordered to the unloading ramp. Approximately 2,000 Jewish men, women, and children from Zambrów have arrived in an RSHA transport. Following the selection, 211 men, assigned Nos. 87168-87378, are admitted to the camp as prisoners. The other approximately 1,789 deportees are killed in the gas chambers."*

– 18 January (p. 308)

> *"Approximately 2,000 Polish Jews – men, women, and children – arrive from the Zambrów ghetto in an RSHA transport. Following the selection, 130 men, assigned Nos. 89463-89592 are admitted to the camp as prisoners. The other 1,870 people are killed in the gas chambers."*

– 19 January (p. 308)

> *"Approximately 2,000 Polish Jews – men, women, and children – arrive from the Zambrów ghetto in an RSHA transport. Following the selection, 164 men,*

[154] *Ibid.*, p. 8 (list of females).

> *given Nos. 89845-90008, and 134 women, given Nos. 29451-29584, are admitted to the camp as prisoners. The other approximately 1,702 people are killed in the gas chambers."*

Hence, these five transports resulted in 10,000 deportees and 8,925 gassing victims according to Czech. In the first, German, edition of the *Auschwitz Chronicle*, the number of deportees is never indicated, the deportation trains of 15 and 18 January are not mentioned (not even the respective registration numbers), and the deportation train of 19 January is attributed to 18 January (Czech 1961, pp. 66f.). This suggests that Czech's sources were lacking even then. In the 1989/1990 editions, in addition to the number of deportees and the two additional transports, she made two references to the activity of the SS standby squad, but without documenting that either. Finally, in the "Smoleń List," the set of registration numbers from 28634 through 28683 is not assigned to the 13th, but to the 14th of January.[155] In the two other cases where the numbers reported by Czech were assigned on the same day, there is no certainty that they were on the same transport.

According to the *Encyclopedic Informer*, the Zambrów Ghetto was created in August 1941 and liquidated in November 1942 or January 1943. About 4,000 people passed through it. We furthermore read there (Główna…, p. 582):

> *"During the liquidation of the ghetto, 70 sick Jews were shot, about 2,000 were housed in the Zambrów Transit Camp, from where they were taken to the Treblinka Extermination Center; the remaining ghetto inhabitants escaped."*

Keep in mind that the *Encyclopedic Informer* was published in 1979 (10 years before the 1989/1990 edition of the *Auschwitz Chronicle* under review), and is based on Polish judicial and historical findings, which are duly noted at the end of each entry.

This authoritative work for Polish historiography thus belies Czech's conjecture. In practice, it is not known to which transports the above-mentioned sets of registration numbers correspond; both the number of deportees in these transports and their origin are unknown. Moreover and strictly speaking, it cannot be verified whether the transports also contained children, whether the transports corresponding to sets of registration numbers exclusively assigned to male deportees (16 and 18 January) also contained any female deportees, and in general in these cases, one cannot seriously speak – even from an orthodox perspective – of any selection with subsequent gassings.

16 January 1943 (p. 307)

> *"Approximately 2,000 Polish Jewish men, women, and children arrive from the Łomża transit camp in a transport of the RSHA. Following the selection,*

[155] NOKW-2824, p. 8 (list of females).

> *170 men, assigned Nos. 88581-88750, are admitted to the camp. The other approximately 1,830 people are killed in the gas chambers."*

Source: none.

In the first, German, edition of the *Auschwitz Chronicle*, the number of deportees is not given (Czech 1961, p. 66), which means that this is yet another one of Czech's habitual arbitrary additions.

The *Encyclopedic Informer* does not know any "Durchgangslager Łomża" "Łomża transit camp." According to this work, a ghetto existed in this locality, established in August 1941 and liquidated in November 1942 (Główna…, p. 291):

> *"During the liquidation of the ghetto, its inhabitants were transferred to the transit camp in Zambrów."*

Thus, the origin, number of deportees and alleged gassings of this transport are mere conjecture by Czech.

17 January 1943 (p. 307)

> *"The camp management carries out a selection among the prisoners in the quarantine Blocks 2 and 8 of the main camp, during which approximately 500 prisoners are selected. They are brought to Birkenau the same day and killed in the gas chambers there."*

Source: "Brandhuber, 'Vergessene Erde' (Forgotten Ground), HvA, no. 5 (1962): 84ff."

Brandhuber's article is not a historical paper based on documents, but a memoir in the form of a novel. We read in it that on an unspecified day – not even the year is mentioned – a selection was conducted in the quarantine camp with the following claimed outcome: "These five hundred [went] to the gas, to the crematorium" (Brandhuber 1961b, p. 76). This is all one can find in this paper about this alleged event. Therefore, this "source" is absolutely irrelevant.

The Morgue Register, not mentioned by Czech for obvious reasons, records a total of 1,605 deaths for the entire month of January 1943, an average of about 52 per day. Until 16 January, there were 1,027 deaths, an average of 64 per day. On 17 January, 10 deaths were recorded, and from that day to the 31st of January, there were altogether 578 deaths, an average of 38 per day.[156]

The tale of 500 gassings on that day has therefore no documentary basis, and is indeed refuted by the Morgue Register.

[156] AGK, NTN, 92, pp. 141f.; statistical evaluation of the Morgue Register by J. Sehn.

20, 21, 22, 23 and 24 January 1943

These five entries concern alleged transports of Jews from the Grodno Ghetto. Except for one, they are all devoid of references to any source.

– 20 January (p. 309)

> *"Approximately 2,000 Jewish men, women, and children arrive from the Grodno ghetto in an RSHA transport. Following the selection, 155 men, assigned Nos. 90822-90976, as well as 101 women, assigned Nos. 30035-30135, are admitted to the camp. The other approximately 1,744 people are killed in the gas chambers."*

– 21 January (p. 309)

> *"Approximately 2,000 Jewish men, women, and children arrive from the Grodno ghetto in an RSHA transport. Following the selection, 175 men, given Nos. 91115-91289, and 112 women, with Nos. 30136-30247, are admitted to the camp as prisoners. The other approximately 1,713 people are killed in the gas chambers."*

– 22 January (p. 310)

> *"Approximately 3,650 Jewish men, women, and children from the Grodno ghetto arrive in an RSHA transport. After the selection, 365 men, who get Nos. 92544-92908, as well as 229 women, who get Nos. 30771-30999, are admitted to the camp as prisoners. The other approximately 3,056 people are killed in the gas chambers."*

Source: "APMO, Höss Trial, vol. 8, p. 14."

– 23 January (p. 311)

> *"Approximately 2,000 Jewish men, women, and children arrive from the Grodno ghetto with an RSHA transport. After the selection, 235 men, given Nos. 92902-93143, as well as 191 women, Nos. 31000-31190, are admitted to the camp. The other 1,574 are killed in the gas chambers."*

– 24 January (p. 312)

> *"Approximately 2,000 Jewish men, women, and children arrive from the Grodno ghetto in an RSHA transport. After the selection, 166 men and 60 women are admitted to the camp and are assigned Nos. 93313-93478 and Nos. 31362-31421. The other approximately 1,774 people are killed in the gas chambers."*

In the first, German, edition of the *Auschwitz Chronicle* only the strength of the transport of 22 January is indicated (Czech 1961, pp. 67f.), so that the other indications are later arbitrary conjectures of Czech.

The rail transports of this period are known thanks to a very-important document, which is divided into two parts: a "List of Special Trains Agreed

upon in Berlin on 15 January 1943 for Vd, Rm, Po, Pj and Da Resettlers,[157] Sorted by Days of Departure" and a "Circulation Plan for Railway Cars to Be Reused Several Times for Servicing the Special Trains for Vd, Rm, Po, Pj and Da Resettlers in the Period from 20 January to 18 February 1943," drawn up by the German Railways, General Directorate East (*Deutsche Reichsbahn Generalbetriebsleitung Ost*).[158] The document was reproduced by Raul Hilberg (1981, pp. 207-215), and first quoted by Czech in her entry for 30 January 1943 (p. 318; see also the entry for 5 February 1943, p. 323).

This document does not contain any entry of deportation trains of Jews from Grodno to Auschwitz. Instead, a train carrying 2,000 Polish Jews from Grodno to Treblinka on 14 February 1943 appears there. Czech knew this perfectly well, so her entries are deliberately misleading.

Her source reference "APMO, Höss Trial, vol. 8, p. 14" is moreover incorrect. During the interrogation of 17 May 1945, the former detainee Jakub Gordon stated that the liquidation of the Grodno Ghetto began on 19 January 1943 and lasted five days. Transports of 3,000 people each were sent to Auschwitz. He himself was deported on 21 January and arrived in Birkenau on the night of the 22nd. Upon arrival, the transport was divided into four groups: 1) young and healthy men, 2) young and healthy women, 3) old men and children, 4) old women and women with children. The last two groups were allegedly gassed immediately. Gordon then specifies:[159]

> *"From the entire transport, which numbered 3,650 people, 265 men and 80 women were assigned to the camp."*

Even apart from the fact that no such deportation train is documented, Czech's method is fallacious in any case, because she would have us believe the witness about the number of deportees on that train, even though she knew that the witness had gotten the number of registered inmates conspicuously wrong (265 men and 80 women according to Gordon, yet 365 men and 229 women according to Czech). That being so, how could she consider the figure of 3,650 deportees reliable?

It is furthermore clear that the editor of the *Auschwitz Chronicle* also drew from this testimony the other four alleged transports from Grodno, interpreting the five days of deportation mentioned by Gordon as five transports, reducing the number of deportees on each train from 3,000 to 2,000, and attributing to these four alleged transports the invented dates as indicated.

---

25 January 1943 (p. 313)

> *"22 members of the Polish Home Army (Armia Krajowa-AK) of the Bielsko Inspectorate in the Silesia District, condemned to death by court-martial in Kattowitz, are brought from the prison in Myslowitz to Auschwitz and shot."*

In a footnote, Czech adds:

> *"The shooting probably occurs in the gas chamber of Crematorium I, since according to a report of the information service of the Silesia District of the AK, the executed were poisoned in the gas chambers."*

Source: "CA KC PZPR, 202/III-146, Documents of the Delegation of the Polish Government in Exile, pp. 38ff."

This "Supplementary Report to the First Report of 933,"[160] prepared by "Stanisław" on 14 February 1943, contains a list of 22 names of Poles who had been sentenced to death by the Kattowitz Court-Martial on 25 January 1943, and who were "poisoned in the gas chambers [*zatrutych w komorach gazowych*]."[161] No document supports that these 22 Poles were sentenced to death and were taken to Auschwitz for execution, and no document shows that such an execution took place, either by gassing or by shooting. In their reports, the resistance movement often spoke in a very-general way of "*komory gazowe*" – "gas chambers" – without ever specifying where they were located. How could Czech conclude from this that the alleged gassing was in fact a shooting in the Main Camp crematorium?

26 January 1943 (p. 314)

> *"Approximately 2,300 Jewish men, women, and children arrive from the ghettos in Sokółka and Jasionówka with an RSHA transport. After the selection, 161 men, assigned Nos. 93755-93915, and 32 women, assigned Nos. 31559-31590, are admitted to the camp as prisoners. The other approximately 2,107 deportees are killed in the gas chambers."*

Source: none.

The "Circulation Plan" of deportation trains from 20 January to 18 February 1943 mentioned earlier does not contain any trains departing from these two locations, so this transport, just as its alleged 2,300 deportees and 2,107 gassing victims, is not a historical event, but merely another one of Czech's inventions.

---

[160] The editors of "Obóz…" (see note below) explain that "933" means 1943, so it should be understood as "Supplementary report to the first [*I-szy = pierwszy*] report of 1943."

28-29 January, 6 February 1943

These three entries pertain to the "*Sonderkommando* Zeppelin."

– 28 January (pp. 315f.)

> *"The SS Special Commando Zeppelin in Breslau notifies its SS Special Unit Auschwitz that, in keeping with an RSHA order of December 1, 1942, it is transferring the activists Yakov Semionov, born on September 30, 1916, and Vasili Gachkov, born on October 20, 1918, who are ill with third-degree tuberculosis, for 'special treatment.'"*

Source: "APMO, IZ-13/89, Various Documents of the Third Reich, p. 52."

– 29 January 1943 (p. 316)

> *"The SS Special Commando Zeppelin of the Sipo and SD in Auschwitz conveys to Grabner, Director of the Political Department, the request for " special treatment" of the two activists transferred there, Yakov Semionov and Vasili Gachkov, and for transmission of a report of execution."*

Source: "APMO, IZ-13/89, Various Documents of the Third Reich, p. 53 (original in BA Koblenz)."

– 6 February 1943 (pp. 324f.)

> *"The Director of the Political Department, Grabner, signs a communication informing the SS Special Commando Zeppelin of the Sipo and SD in Auschwitz that the activists Semionov and Gachkov, who had been transferred to Auschwitz, have been executed. The communication uses the camouflage designation, 'lodged separately,' which means that they have been killed."*

Source: "APMO, IZ-13/89, Various Documents of the Third Reich, p. 54 (original in BA Koblenz)."

Czech calls the two subjects in question "activists," without explaining what activities they undertook, in order to make it appear that they were Russian anti-German agitators. In reality, as I will make clear, they were in the service of the Germans.

The German news magazine *Der Spiegel* summarizes in the following way the documents in question ("Unternehmen Zeppelin," p. 115):

> *"The medical diagnosis of 28 January 1943 sounded serious enough: 'Pulmonary Tbc, Stage II-III ' – pulmonary tuberculosis. But the patient in Breslau's All Saints Hospital, Soviet Prisoner of War Yakov Semiono, v, 26, could not have known that this diagnosis was a death sentence.*
>
> *On the same day, however, an SS Hauptsturmführer named Walter Weissgerber wrote to the 'SS Special Unit Auschwitz' that for Semionov, as well as for another sick Russian, 'further in-patient treatment here is no-longer-feasible'; therefore, he was 'requested to be given special treatment.'*

> *The guard who accompanied the sick to Auschwitz later described how the patients were led into a washroom. Then an SS member appeared with a special rifle and shot them both."*

Operation Zeppelin was established on 10 March 1942 in Office VI C of the RSHA. It aimed at recruiting opponents of the Soviet regime who were to disrupt the Soviet population's urge to resist behind the front lines. The documents in question were introduced as evidence, in English translation, during the Ministries Case of the U.S.'s Nuremberg Trials as Documents NG-5220 through 5223 (TWC, Vol. 13, pp. 571-573).

Document NG-5221 is a letter from SS *Hauptsturmführer* Weissgerber of *Sonderkommando* Zeppelin in Breslau to Auschwitz Camp dated 28 January 1943, in which he asked "to give them [the two Russians] special treatment," referring to an "order of the RSHA VI C 1 of 1 December 1942, regarding the delivery of sick agents," according to which the two aforementioned Russians were to receive "special treatment." This letter, indispensable for understanding the events summarized by Czech, is hardly unknown.

During the Ministries Case, Walter Schellenberg, who had been head of the RSHA's Secret Service and head of Operation Zeppelin, was questioned about the documents under discussion. He stated that the "activists" "were treated excellently" (*ibid*., p. 590), and to the question, "Well, was it the policy or did an order ever issue from the RSHA Amt VI or Amt VI-C, or anyone of your subordinate offices, that sick agents, not traitors or spies but sick activists, should be exterminated?" he replied, "Any such directive or order issued by me is not known to me." Then he was shown Document NG-5221 with the question, "And the document refers to an order of the RSHA, Office VI-C-Z, of 1 December 1942, regarding the delivery of sick agents, doesn't it, for special treatment?" To which he replied, "I don't know. I was never given any knowledge of such a directive and I never saw it in my office either." (*ibid*., pp. 593f.).

From Czech's perspective, once these previously "excellently treated" soldiers had become incurably ill, they were to be killed, but since they were recruited on a voluntary basis, this was certainly not the best reward for their services. The murder of these two "activists" at Auschwitz is all-the-more-improbable in that even Jewish prisoners suffering from tuberculosis were normally admitted to the hospital and, in the most-serious cases, died there after several months of care and treatment. For example, Greek-Jewish prisoner Isaak Attas (115899) was admitted on 22 May 1943 and died on 25 February 1944.[162] In September 1944, at the hospital of Birkenau Quarantine Camp alone, there were an average of 186 patients per day with positive, clinical, suspected (48 patients), pleuritic, and glandular tuberculosis.[163]

---

[162] NARA, Microfilm M892, Roll 68, "Hoerlein Document No. 215." See Mattogno 2020b, pp. 293-295.

[163] AGK, Zbiór "OB," 383, p. 10.

Several inmates suffering from tuberculosis were transferred on 15 September 1944 by order of the representative of the SS garrison physician at the Gleiwitz Satellite Camp (SS *Rottenführer* Albein Voigt) to the inmate infirmary of Auschwitz Main Camp, such as Jews Hartog de Vries (175546), Armin Lebowits (A-4295) and Judka Altmann (B-6454).[164] SS *Oberscharführer* Josef Klehr, accused by Czech of requisitioning phenol to be used to kill detainees, signed at least two requests for bacteriological examination of sputum "for the analysis of tuberculosis bacilli" for Jewish detainees Schlama Altaman (A-17959, 17 August 1944)[165] and the inmate registered under No. 187346 (20 September 1944).[166]

Czech herself writes in her entry for 14 March 1943 (p. 352):

> *"Nos. 108413-108454 are given to 42 prisoners ill with tuberculosis, who, under a directive of the Head of Branch D, dated March 1, 1943, have been transferred from Ravensbrück to Auschwitz."*

In her entry for 17 March 1944, she asserts (p. 598):

> *"22 prisoners transferred from a house of correction in Mirau, Czechoslovakia, received the Nos. 175134-175155. In the transport are 21 tubercular prisoners."*

Finally, the Auschwitz Death Books record at least 997 deaths of inmates from "pulmonary tuberculosis" (Staatliches Museum…, p. 245), which means that not even the incurably ill were killed.

Returning to the two Russian "activists," their "special treatment" could have meant favorable treatment in the sense that they were allowed to die in peace, if not cured (since they were incurably ill), then at least cared-for. In this context, it must be remembered that the only known document from Auschwitz in which the term "special treatment" has a clear and unequivocal meaning is the "Cost Estimate for the Construction Project POW Camp Auschwitz (Carrying out of Special Treatment)," drawn up by Karl Bischoff on 29 October 1942 in the midst of the raging typhus epidemic. This estimate mentions, as Building 16a, a "Disinfestation Plant, 1. for Special Treatment," which was none other than the *Zentralsauna*, the main bathing, disinfection and disinfestation facility of Birkenau Camp (Mattogno 2016b, pp. 39-42). This means that the term "special treatment" had a close relationship precisely to the disinfection and disinfestation of the inmates, so the goal was to save their lives, not to murder them.

The disinfestation plant for special treatment is also mentioned in other documents, such as the construction list of the Central Construction Office for

---

[164] Reproduced in Strzelecka 1972, p. 81.
[165] *Ibid.*, p. 126.
[166] *Ibid.*, p. 111.

the 3rd financial year of the war,[167] and in a list of construction projects of Auschwitz dated 15 November 1942.[168]

The expression "lodged separately" simply means that the two inmates in question had to be isolated, which was the case for all the tuberculosis patients in the Quarantine Camp.[169] The officer who reported that the two prisoners had been "lodged separately," SS *Sturmbannführer* Guntram Pflaum, was in fact the head of pest control. Furthermore, the protocol number of his letter was "KL 14 k 4/2. 43/Ki." The number "14" stood for deaths in all its forms, including execution, which was "14 f," not "14 k." The only other document known to me in which the abbreviation "14 k" appears is the letter headed "Waffen-SS Headquarters Auschwitz Camp III Ref.: KL 14 k 1/8.44/Schw.-Mi.-Monowitz, 18 August 1944" with the subject line "Elimination of various defects in the individual labor camps."[170]

The *Spiegel* article quoted earlier does not explain who the "guard" was who accompanied the two Russian soldiers to Auschwitz, and it does not say on which occasion he described their killing. SS *Hauptsturmführer* Weissgerber is mentioned in this context, but only as the one who had requested "special treatment." Weissgerber had been the subject of a criminal investigation in Germany during the 1960s by the prosecutor's office of the Stade District Court, which evidently acquitted him, because it had recognized that from the text of the note one could "'not infer conclusively that the author knew the real meaning of the writing'" ("Unternehmen Zeppelin," p. 115), so he was not the "guard."

That the guard had accompanied the two Russian prisoners to the spot where they were to be executed – in a "washroom"(!) rather than to the infamous "Black Wall" in the courtyard of Block 11, to the morgue of Crematorium I, or to the "gravel pit" – is nothing but fiction, because the task of any guard escorting anyone to the Auschwitz Camp ended the moment the escorted person was handed over to the Auschwitz authorities at the entry gate.

The *Spiegel* article mentions other cases of Russians from SS *Sonderkommando* Zeppelin being sent to Auschwitz, but these are extrapolations taken from unknown documents. The most-important case is this one (*ibid*., p. 116):

> *"Once 200 Russians had been shot in Auschwitz – the SS had brought them in unregistered; in the transport order, there was only the note 'Zeppelin, Carrier of Secrets."*

The source, which *Der Spiegel* did not indicate, is an affidavit by Kazimierz Smoleń of 27 February 1948, in which he stated that between 1942 and 1944 about 200 Zeppelin Russians were brought to Auschwitz, individually or in

[167] RGVA, 502-1-85, pp. 19, 104.
[168] RGVA, 502-1-85, p. 119.
[169] See in this regard the entry for 21 August 1943.
[170] Reproduced in Strzelecka 1972, p. 92.

groups of up to 10 persons, to be executed there, evidently without leaving any trace in the records.[171] As a result of this tracelessness, the Zeppelin Russians are mentioned in the *Auschwitz Chronicle* only in the three entries quoted here!

The British intercepted and deciphered the following German radio message of 27 October 1942:[172]

> *"Subject: Transfer of 200 Soviet prisoners of war suffering from TB. Reference: AUSCHWITZ CC Teletype No. 3598 of 26 Oct. 1942. The camp commandant of SACHSENHAUSEN CC immediately transfers 200 Soviet prisoners of war suffering from TB to AUSCHWITZ CC. During the transfer of these sick prisoners, I draw special attention to the railroad police regulations. The camp physician of SACHSENHAUSEN CC is responsible for the implementation of hygienic measures during the transport. The camp commandants will regulate transport matters among themselves. The regulations issued for prisoner transfers are to be observed. I am to be notified by both camps of the implementation. Sgnd. LIEBEHENSCHEL."*

The *Auschwitz Chronicle* reflects nothing about this fact, but it probably inspired Smoleń's fable about the 200 "Zeppelin Russians" allegedly murdered at Auschwitz. As I have pointed out several times, prisoners who were transferred from one camp to another were registered and listed in the documentation and statistics of the camp of departure, so when arriving at the camp of destination, they could not disappear without a trace.

This applied even to persons who were executed in Auschwitz after having been sentenced to death by special courts, as is evident from the letter of the "Head of the Council of Elders of the Jewish Communities of Eastern Upper Silesia" to the Council of Elders in Bendsburg dated 22 April 1943:

> *"According to information from the secret state police, field office Sosnowitz – the following persons were sentenced to death for high treason by shooting. The sentence was carried out in Auschwitz on 29 March 1943.* […] *The death certificates can be obtained from the Auschwitz Registry Office, providing all necessary data."*

This is followed by a list of eight Jews, recorded with first and last name, the compulsory middle name "Isr.[ael]" for Jews, date and place of birth, and last residence.[173]

A trivial observation may be added, but it is also the most-stringent one to make. The two Russians, being incurably ill, allegedly had to be killed as an act of euthanasia, and for this purpose they were transported 230 km from Breslau to Auschwitz. From the perspective that Czech attributes to the Ger-

---

[171] NG-4726.
[172] TNA, HW 16-21. German Police Decodes Nr 3 Traffic: 27.10.42. ZIP/GPDD 279b/19.11.42, No. 34/36.
[173] GFHA, Collection 4304.

mans, would it not have been much easier for them to kill the two activists right there in Breslau with a phenol injection? What need was there to transport them to Auschwitz?

Czech's explanation is therefore not only *not* the only possible; it is also not the most likely one by a long shot.

28 January 1943 (p. 315)

> *"Approximately 2,000 Jewish men, women, and children from the Golkovysk ghetto arrive with an RSHA transport. Following the selection, 280 men, given Nos. 94196* [to 94475, as well as 79 women, given Nos. 31948 to 32026[174]], *are admitted to the camp. The other approximately 1,641 people are killed in the gas chambers."*

Source: none.

Wołkowysk, a town currently located in Belarus and named Vaŭkavysk, is located about 90 km east of Białystok and about 70 km southeast of Grodno. In the "Circulation Plan" of deportation trains from 20 January to 18 February 1943 mentioned earlier, which records transports from Białystok to Auschwitz and from Grodno to Treblinka, there is no transport from Volkovysk/Wołkowysk, so this transport, with its alleged 2,000 deportees and its claimed 1,641 gassing victims, is not a historical event, but a Czechian delusion.

5 February 1943 (p. 323)

> *"A transport of Poles and Jews who had been evacuated from the Zamość region has arrived with Special Train Po 65, which departed from Zamość on February 3, 1943, at 11:00 A.M. Included are 1,000 people. Following the selection, 282 men, given Nos. 100096-100337* [recte: 100377], *and 301 women, given Nos. 34289-34589, are admitted to the camp. The other 417 people are killed in the gas chambers."*

Source: "Hilberg, Special Trains, pp. 209, 212; CA KC PZPR, 202/I, Documents of the Delegation of the Polish Government in Exile, p. 23."

Hilberg reproduces the "List of Special Trains Agreed upon in Berlin on 15 January 1943…," which I have already discussed in the entry for 20-24 January 1943. The transport in question here is marked with the initials "Po" (Hilberg 1981, pp. 209, 212), which was used for Polish deportees (the Polish Jews were marked with the initials "Pj"). It is therefore wrong to claim it was "a transport of Poles and Jews" – a subterfuge used by Czech in order to introduce her customary fictitious selection with subsequent gassing.

The collection "Files of the Delegation of the Polish Government in Exile," edited by the Auschwitz Museum, contains four references to this alleged

[174] The text in brackets is contained in Czech 1989, p. 395, but was accidentally omitted in Czech 1990.

event. The first, which I quote below, is repeated in the same words twice more ("Obóz…," pp. 96-98):

> *"Reports of the execution in January 1943 of two transports of Poles from the Zamość Region are confirmed."*

The last reference is an imaginative reworking of the first three (*ibid.*, p. 99):

> *"In January* [1943], *two transports of Poles deported from the Lublin and Zamość Regions were executed in the gas chamber* [*w komorze gazowej*], *and 65 people were shot for minor infractions of camp discipline."*

It is patently nonsensical to invoke this transparent atrocity propaganda concerning two alleged gassings that presumably took place in January 1943 in support of an alleged selection with subsequent gassing that supposedly took place on 5 February.

18 February 1943 (p. 333)

> *"1,000 Jews are deported from a labor camp in Chrzanów to Auschwitz. All the deportees are killed in the gas chambers."*

Source: "Gilbert, *Final Solution*, p. 149, Map 193."

This is yet another of Czech's completely inconsistent references, because in "Map 193," Gilbert merely writes, without giving any source: "Chrzanow (slave labor camp) 1,000" with an arrow pointing to Auschwitz and the date 18 February (1943; Gilbert 1988, p. 149). As the source for this map in general, Gilbert gives: "18 February 1934, report of 86,632 Jews murdered at Minsk, NO 3339 (map 193)" (*ibid.*, p. 248). The document in question is none other than Event Report on the Situation in the Soviet Union No. 170 of 18 February 1943, which obviously contains no mention of either Chrzanów or Auschwitz.

A message from the Auschwitz resistance movement dated 31 August 1943 says that in August (!) 1943 the ghettos in Silesia, mainly in Sosnowiec/Sosnowitz, Bendsburg/Będzin, Strzemieszyce, and Dąbrowa Górnica, had been liquidated, and that "on 19 August the rest were deported to Auschwitz, i.e., about 5,000 Jews from Chrzanów" ("Obóz…," p. 122).

Therefore, not even the camp's resistance movement was aware of the alleged deportation train of 18 February 1943, which remains without documentary source. Therefore, the arrival and extermination of these fictitious deportees cannot be considered a historical event either.

23 February and 1 March 1943

These two entries have nearly identical sources, so I examine them together.

– 23 February (p. 336)

> *"39 prisoners 13 to 17 years of age are brought from Birkenau to the main camp and housed there in Block 20, in a room prepared for them in the prisoners' infirmary. The boys are moved to the main camp on the pretext that they should participate in a nursing course. In the evening of this day they are killed with phenol injections. The injections are administered by SS Corporal Scherpe, the Second Medical Officer. The boys arrived with their parents on December 13 and 16 and February 5, 1943, in transports used to deport to Auschwitz Poles who had been evacuated from the Zamość region. The boys killed with phenol injections had the following numbers: 82560, 82587, 82597, 82636, 82662, 82678, 82745, 82771, 82793, 82811, 82842, 82843, 84454, 84457, 84850, 100096, 100124, 100159, 100162, 100166, 100173, 100181, 100182, 100217, 100219, 100221, 100228, 100231, 100244, 100273, 100277, 100279, 100281, 100285, 100291, 100310, 100321, 100338, and 100343."*

Source: "APMO, D-AuI-5/2, Morgue Register, pp. 77ff; Mat.RO, vol. V, p. 319; vol. VI, p. 49; vol. VII, p. 468; Höss Trial, vol. 1, p. 172; vol. 4, p. 177; vol. 5, p. 82; vol. 7, p. 155; vol. 8, p. 111, Eyewitness Testimony of Former Prisoner of Auschwitz-Birkenau."

– 1 March 1943 (p. 340)

> *"Roll Call Leader Palitzsch brings 80 prisoners 13 to 17 years of age from Birkenau to the main camp. The boys are housed in a room prepared for them in the prisoners' infirmary, Block 20. They are Polish and Jewish youths who, with their families, were sent in transports from various Polish towns. In the evening of that day they are killed with phenol injections by SS Corporal Scherpe."*

This is followed by 80 registration numbers. Czech explains in a footnote (p. 341):

> *"The names of the youths are not mentioned in surviving camp documents in the archive of the Auschwitz Memorial."*

Source: "APMO, D-AuI-5/2, Morgue Register, pp. 83-85; Mat.RO, vol. V, pp. 49ff.; Höss Trial, vol. 1, p. 172; vol. 4, pp. 163, 177; vol. 5, p. 82; vol. 7, pp. 18, 155; vol. 8, p. 11, Eyewitness Testimony of Former Prisoner of Auschwitz-Birkenau."

I underscore the pages that are not mentioned in the sources of the entry for February 23.

Volume VI of the Materials of the Resistance Movement contains transcripts from the Morgue Register, but Czech correctly does *not* assert that the

39 numbers mentioned above were marked with the remark "szpila" (see entry for 3 July 1942).

For 23 February 1943, the Morgue Register has 66 deaths, including 39 consecutive numbers with the remark "Birkenau," plus two other numbers separately (94720 and 90508), in addition to 11 with the remark "[Block] 20."[175] For 1 March 1943, 115 deaths are listed, of which 81 bear the remark "[Block] 20"; 11 have the remark "Birkenau."[176]

Although the two groups of teenage boys were purportedly transferred from Birkenau to Block 20 of Auschwitz, in the first case Czech's "proof" that they were killed is the remark "Birkenau," although they came from Birkenau, while in the second set the remark "[Block] 20" is her "proof," because they were purportedly killed in Block 20 of Auschwitz! She chooses one or the other remark as her "proof" according to the number of deaths: when the highest number bears the remark "Birkenau," she declares the respective prisoners murdered with phenol injection; when the highest number has the remark "[Block] 20" instead, the murder location becomes that infirmary block. In fact, for this period, the Morgue Register regularly records deaths with the remark "Birkenau," and Czech mentions them quite frequently,[177] and entries with the remark "[Block] 20" she also mentions occasionally,[178] without ever implying that these inmates were murdered.

From an analysis of the Auschwitz Death Books, the Auschwitz Museum database and the registration numbers given by Czech, it appears that there were 35 deaths in the age group ranging from 13-17 years of age on 23 February 1943, broken down as follows: four aged 17, four aged 16, thirteen aged 15, thirteen aged 14 and one aged 13. Of the 39 numbers listed by Czech, fifteen belonged to unknown inmates and four to inmates beyond the age range mentioned above, namely:

1. 82636 Janowski Władysław, born on 1 Apr. 1914, Death-Book Number 10543
2. 82811 Szozda Bolesław, born on 20 Apr. 1903, No. 10687
3. 100096 Adamczyk Jan, born on 24 Dec. 1924, No. 11345
4. 100219 Hałasa Jan, born on 6 Oct. 1889, No. 10701.

In fact, of the 35 prisoners recorded in the Death Books, only 20 had registration numbers mentioned by Czech.

As for 1 March 1943, there are 65 entries of deceased inmates in the age group 13 to 17 years: 14 aged 17, 35 aged 16, eleven aged 15 and five aged 14, but, as in the previous case, it is likely that only a portion of them had the

---

[175] *Leichenhallenbuch*, AGK, OB, 385, pp. 122f.
[176] *Ibid.*, pp. 128-130.
[177] For instance, 16 on 29 January 1943 (p. 316), 30 on 8 February (p. 326), 17 on 17 February (p. 332), 20 on 26 February (p. 339).
[178] For instance, for 22 February 1943, Czech mentions 83 deceased inmates "[coming] from the infections department of the prisoner infirmary, Block 20" (p. 336).

registration numbers listed by Czech. Since she herself states that the names (and therefore also the dates of birth) of these 80 inmates are unknown, her claim that these were 80 boys aged 13-17 is unsubstantiated. The two records are therefore not based on documents, but on testimony.

I do not have access to Czech's references to Volumes V and VII of "Materials of the Resistance Movement," but two texts from the same collection, not cited by Czech, clearly show the historical inconsistency of her claims:[179]

> *"The aforementioned* [Höss] *directed and tolerated the system of additional extermination of prisoners in the form of administering phenol injections to the heart and veins or in the form of gassing prisoners. Men, women as well as children brought to the camp with their parents were victims. (Forty-eight Polish children from the vicinity of Zamość were injected – this is one of many examples)."*

The other example is provided by Henryk Świebocki:[180]

> *"And so, first of all, 40 boys between the ages of 8 and 14 were sent from the camp's Krankenbau* [infirmary] *for 'punctures' [lethal injections of phenol – HŚ]. The inmates who had previously administered these injections flatly refused to give them when they saw these Polish boys, saying that they had already given 3,000 injections and could not continue to perform this task. A regular SS corpsman administered the injections, but when another eighty children were brought in the next day, most of them Jewish, and they too were to be put to death, he had a nervous breakdown and also said that he would not give any more injections. Why they would look for another way to kill the children, I cannot understand. The fact is, however, that those two groups were put to death in that way, and the first group were Poles, and in the second group there were also Poles."*

The following testimonies were adduced by Czech:

– Interview of Jakub Gordon of 17 May 1945:[181]

> *"I learned from fellow doctors who worked in Block 20 that they were killing typhus patients and patients with other diseases by intracardiac injections of phenol. Once, in 1943, I do not remember the exact date, some 167 boys under the age of 16 arrived and were also killed with phenol."*

– Interview of Stanisław Główa on 30 September 1946. The witness stated that the the lethal injections were administered by the inmates Dr. Doering [Dering], Mieczysław Pańszczykn, Alfred Stessel [Stössel], Jerzy Szymkowiak and the French Jew Dr. Landau. He then continued:[182]

---

[179] "Obóz…„" p. XXVI. This is a report dated 16 September 1944 headlined "*Kacy Oświęcimia*" ("The executioners of Auschwitz"). D-RO, vol. VII, p. 462.
[180] Świebocki 2000, pp. 350f.; APMO, Mat. RO, Vol. 5b, pp. 126f.
[181] Höss Trial, Vol. 1, pp. 168f. The page number given by Czech is incorrect.
[182] *Ibid.*, Vol. 4, pp. 162f.

"Pańszczyk himself reported that he had killed 15,600 people with an injection of phenol. For Stessel we ascertained the number of about 4,000, for Szymkowiak about 6,000, for Landau about 5,000-6,000, for Doering about 1,000. Jews constituted the majority of those killed with injections. However, Aryans of all nationalities were also killed in this way. In the winter of 1942-1943, Rapportführer Palitsch [Palitzsch] *had two boys brought from Birkenau Camp who had arrived with a transport from the Zamość Region. At first, he placed them in Block 11, and the next day, he took them to Block 20, where Pańszczyk 'syringed'* [*zaszpilował*] *them both. These boys were: Mieczysław Rycaj and Tadeusz Rycyk. The parents of these two boys were gassed together with all the younger brothers and sisters. From the entire transport, only 90 boys between the ages of 8 and 14 were selected. Rycyk and Rycaj came from this group. The remainder, i.e. approximately 90 children, were taken by Palitsch to Block 20, and they were killed there with injections by Corpsman Scherp."*

– Interview of Władysław Tondos on 1 October 1946:[183]

"I remember that in 1943 they transferred twice, from Birkenau to the Block where I was, 80 boys aged 12 to 16, good-looking and well-fed, of peasant origin, and there they were injected with phenol. One of these boys said to me, 'I know why they do it – they want to take over our beautiful land.' These boys were from the Lublin and Zamość Regions."

– Interview of Jakub Wolman on 13-14 April 1945:[184]

"One time, all the children from Birkenau were selected, claiming that they were to join a course for Pfleger [*Pflegerski*, nurses] *in Auschwitz. There were 163 of them, just boys. They were sent to Auschwitz in the afternoon. They were put in the courtyard between Block 20 and 21. They were taken one at a time into Block 20, where they were given injections.*

Delegate Boguszewska: Were they Jewish children?

Witness: Some, it seems, were also Jewish. I remember that some transports of Polish children arrived at Birkenau, but no more children were seen at the camp."

– Interview of Władysław Fejkiel on 10 October 1946:[185]

"I remember a similar action carried out by the camp commando in the early months of 1943. At that time, several dozen boys were killed, as far as I remember about 80 from the Lublin Region and various other Polish localities. These boys, aged from 10 to 14 years, were transferred to Block 20, and housed in a special room prepared for them. […] *It turned out that this assumption* [that the boys would be liberated] *was wrong, because that same day in the afternoon, the second corpsman, SS Scherpe, arrived at Block 20 to-*

[183] *Ibid.*, Vol. 4, p. 176.
[184] *Ibid.*, Vol. 5, pp. 44f.
[185] *Ibid.*, Vol. 7, p. 20.

gether with Pańszczyk, called the boys to the doctor's office, and gave them injections, one after the other."

– Interview of Kazimierz Frączek on 14 November 1946:[186]

"In the first days of March 1943, two groups of children were brought to Auschwitz, the first group numbering over 40, the second 81. They were the children of resettled families from the Zamość Area who had been killed at Birkenau, Polish and Jewish nationals, aged between 8 and 14. All of these children were killed with injections. Schörpe [sic] *administered the injections. I remember that it was the 3rd of March, and for us it was a frightening day, because some of us heard the screams of the children who were being killed, calling: 'Mama!', etc., etc."*

– Interview of Jan Dziopek on 16 September 1946:[187]

"The news that in February 1943 two transports of boys under 16 years of age were killed by injection had a terrible effect on us. They were transferred from Birkenau, once 96, and a week later 85."

Of the sources cited above, seven do not indicate the date of the alleged event. Frączek mentions the date of 3 March, but on that day for him two groups of 40 and 81 boys were killed. Dziopek says that the first group of 96 boys was killed in February 1943, the second group of 85 boys a week later, but he does not specify that this happened in March. Six sources knew of the killing of only one group of boys, which contained either 40, 48, 80, 90, 163 or 167 persons, with age groups of 8-14 years or nonspecifically less than 16 years, all of whom were either Poles or Poles and Jews. The sources that mention two groups claim that they consisted of 80 + 80, 40 + 81 or 96 + 85 boys, with age groups of either 12-16 years or 8-14 years.

It is evident that from these contradictory statements one cannot reconstruct any coherent notion of historical fact, one cannot establish how it happened or even that it really happened in the first place, so that Czech's references are historically incommensurate. She does not even explain why "good-looking and well-fed" boys, after having been regularly registered, would have been killed.

28 February 1943 (p. 340)

"On this Sunday, a general roll call is ordered in the women's camp in Birkenau. Included in this roll call is the prisoners' infirmary; the sick women remain on their plank-beds, but the female prisoner doctors and orderlies as well as the assistants must line up for the roll call. The women are lined up in numerical order; then the identity of each prisoner is checked. The roll call lasts the entire day. At the same time a selection takes place at which approx-

[186] *Ibid.*, Vol. 7, p. 157.
[187] *Ibid.*, Vol. 8, p. 111.

> *imately 1,000 Jewish women are selected. The selected prisoners are brought to Block 25 and wait there until they are brought to the gas chambers."*

Source: "APMO, Höss Trial, vol. 3, p. 110."

The reference is to the interrogation of Stanisława Rachwał[owa] on 25 July 1945, in which this witness said that she had participated in three general camp roll calls: on 9 February 1943, at the end of February, and again in mid-March of that year. She recounted the second one, to which Czech refers, as follows:[188]

> *"At the second roll call, towards the end of February* [*pod koniec lutego*] *of 1943, a selection of Jews was carried out, during which about 1,000 people were sent to the gas. The Aryans, who returned to the camp after the roll call, had to run, pursued by the SS men and the SS-Frauen* [so in original], *and those who fell or did not run fast enough were set aside and then* [were led] *to Block No. 25, i.e. the Death Block. All nationalities were subjected to this selection, including the German* [inmates]. *The number of Aryan female prisoners selected during the roll call amounted to over one hundred persons."*

Czech invents the precise date of 28 February and the inclusion of sick inmates in the infirmary. She also misrepresents the reference to Block 25, because his witness did not state that the 1,000 selected Jews were brought there, but the 100 Aryans.

There is no need to point out that this account is not confirmed by anything of substance, so it is historically unfounded. It is also exposed as a delirious fantasy by the claim that, as a selection method, SS men and women chased "Aryan" inmates until they were exhausted.

1-28 February 1943 (p. 340)

> *"3,049 female prisoners have died in the women's camp in Birkenau; 1,690 of them were selected and subsequently killed in the gas chambers. Not included in the number are the female Jews who were brought from the unloading ramp directly to the gas chambers."*

Source: "APMO, Mat.RO, vol. VII, p. 485."

Czech refers to a note drafted by the camp's resistance movement. She refers to that source eleven times. Hence, the considerations laid out here also apply to the respective subsequent entries.

This is a handwritten table about deaths and alleged gassings in the Women's Camp of Auschwitz. It is divided into six columns: "Month," "Total" (of the following three columns), "Poles," "Jews," "Aryans without Poles," "Only Jews gassed" (*Tylko Żydzi gaz*).[189] In the following table I add two columns for the totals (7 and 8). The source of these figures is not indicated:

Totals	19766	4283	8008	7475	11930	19938	31696

Considering that the mortality indicated in this table refers to registered inmates, it is easy to demonstrate its fictitious nature:[190] in all of 1943, slightly less than 38,000 male and female inmates died at Auschwitz, so it is not possible that from February to December, 29,035 female inmates died, because in that case much fewer than 9,000 male inmates would have to have died during the 12 months of 1943 (since the female figure would also include the female inmates who died in January). The most that can be conceded is that Column 2 (17,805 deaths up to 31 December) comes close to reality: it is known for certain that 938 female inmates died at Auschwitz in August 1943,[191] and the list has 935 for that month, although the sum of Columns 3-5 actually yields 1,035. I will return to this issue when discussing the entry for 21 August 1943. The column of gassed Jews, however, is pure fiction.

5 March 1943 (pp. 345f.)

> *"During a test heating of the ovens in Crematorium II in Birkenau, the Capo August Bruck, who has just been transferred from Buchenwald, explains the construction of the ovens to the prisoners in the Special Squads and familiarizes them with the instructions for use. The generators run from the morning until 4:00 P.M. In the course of the day, a commission arrives made up of higher-level SS people from Berlin, members of the camp management, func-*

[190] See my detailed analysis of the list in Mattogno 2019, pp. 261-264.
[191] PS-1469.

> *tionaries of the camp's Political Department, as well as engineers and employees of the firm of]. A. Topf and Sons in Erfurt, which built the crematorium ovens. In their presence, the members of the Special Squad stoke the 15 retorts of the five crematorium ovens with 45 corpses. With clock in hand, the members of the commission time the cremation of the corpses, which at 40 minutes takes an unexpectedly long time. The Special Squad is therefore ordered to let the generators run constantly for several days so the ovens get heated up. Participating at the trial start-up of the crematorium ovens, which lasts from March 4 to March 6, is the Head Capo August Brück and Mieczyslaw Morawa (No. 5730), the Capo of Crematorium I who was ordered to Birkenau for the test. Afterward he returns to the main camp."*

Source: "APMO, D-Mau-3a/16408, Personal-Information Card for Mieczysaw Morawa; D-AuI-sa[recte: 3a]/101, Confirmation of Brück's Arrival."

The first reference is to Mieczysław Morawa's "Personal-Information Card," which was published in a book of the Auschwitz Museum in 1972. On its back, the card is divided into four columns: 1) "employed 1. from June 1941"; 2) "until…" with illegible numbers, but Czech claims it is 15 July 1943; then 3) "*Kapo*"; 4) "at the crematorium.". The third and fourth lines have the dates 4 March 43 and 6 March 43; those relating to the crematorium are illegible (Bezwińska/Czech 1972, pp. 50f.).

The second reference is identical to that mentioned earlier in that entry concerning the arrival of Kapo August Brück at Auschwitz.

These two sources in no way justify what Czech writes, who in fact took the basics of her narrative from Henryk Tauber's interrogation of 24 May 1945. Tauber's narrative begins as follows:[192]

> *"On March 4* [*w dniu 4 marca* (1943)] *we were in charge of lighting the* [furnaces' coke-]*gas generators. We kept them going from morning until 4 o'clock in the afternoon. In the meantime, a commission from the Political Department and senior SS officers from Berlin arrived at the crematorium. In addition to them, civilians and engineers from the Topf Company were also part of the committee."*

On that day, the alleged testing of the furnaces took place with the cremation of 45 corpses. It is all-too-clear why Czech moved this claimed event to March 5: Foreman Brück, who was to direct the alleged testing,[193] arrived at Auschwitz only a day later, on March 5!

Tauber furthermore stated:[194]

---

[192] Höss Trial, Vol. 11, p. 134.

[193] Brück came from Buchenwald Camp, whose crematorium already had two Topf triple-muffle cremation furnaces, one of which was practically identical to those at Birkenau (the other one was also equipped for heating with oil).

[194] Höss Trial, Vol. 11, p. 135.

> *"Oberkapo August explained to us that, according to the calculations and plans of the crematorium, 5-7 minutes* [sic!] *were expected for the cremation of a corpse in one muffle."*

He ended his narrative by asserting the following (*ibid*.):

> *"After the cremation of this first test load, the commission left, we tidied up the crematorium, cleaned it, and were taken to Block 2 of the BIb Camp. For the next 10 days, we went every day under SS escort to the crematorium and turned on the gas generators. During these 10 days, no transports arrived, we did not cremate any corpses, but kept the gas generators running only to heat the furnaces."*

I will ignore the clamorous thermo-technical absurdities of this story – including that of the cremation of three corpses in each muffle of the five triple-muffle furnaces of Crematorium II (15 × 3 = 45 corpses) in 40 minutes – which I have examined at length elsewhere (Mattogno 2019b, pp. 331-375; Mattogno 2022), and I will dwell on the historical aspect, emphasizing that the arrival of the alleged commission from Berlin to witness the testing of the furnaces is a mere fantasy, since in its support there is not the slightest documentary evidence. It would have been senseless without the presence of the designer of the furnaces, Chief Engineer Kurt Prüfer, but Czech, from the dense correspondence of the Topf company with the Central Construction Office of Auschwitz, knew very well that he, at that time, went to Auschwitz only on March 24 and 25 to ascertain the damage suffered by the three draught systems "after the first full use" of the furnaces of the crematorium.[195] With a modicum of critical sense, Czech should also have had serious doubts about the reality of such a visit, since, had it taken place, Prüfer would have brought with him the "3 copies of the operating instructions for the Topf three-muffle crematory furnaces heated with coke," two copies of which were to be hung in the crematorium,[196] and explained by Topf engineers or Kapo Brück to the stokers of the "*Sonderkommando*." Prüfer would also have brought with him the "Estimate of Coke Consumption for Crematorium II POW Camp according to the data of Topf & Söhne Company, manufacturer of the furnaces of 11 March 1943" ("*Schätzung des Koksverbrauches für Krematorium II KGL nach Angaben der Fa. Topf u. Söhne (Erbauer der Öfen) vom 11.3.43*"), which Topf sent to the Central Construction Office on March 11,[197] and which does not contain the slightest allusion to the alleged test of 5 March 1943.

---

[195] File memo of SS *Unterscharführer* Hans Kirschnek dated 25 March 1943. APMO, BW 30/25, p. 8.

[196] Letter by the head of the Central Construction Office to the administration of the Auschwitz Camp dated 11 March 1943. APMO, BW 30/34, p. 56.

[197] APMO, BW 30/34, p. 67. This estimate was corrected on March 17; APMO, 30/7/34, p. 68.

On the other hand, Czech also knew that the "test heating" of the furnaces had already taken place more than a month earlier, as Bischoff wrote to his superior SS *Brigadeführer* Hans Kammler on 29 January 1943:[198]

> *"Crematorium II was completed with the use of all available forces despite unspeakable difficulties and freezing weather during day and night shifts, except for minor constructional details. The furnaces were fired up in the presence of Chief Engineer Prüfer of the executing company, Topf u. Söhne, Erfurt, and are functioning perfectly."*

And according to the report of SS *Untersturmführer* Hans Kirschnek of 29 March 1943, Crematorium II "went into operation on 20 February 1943."[199]

No document, as I have already noted, mentions another later test of the furnaces. Therefore, also in this case, Czech transforms the absurd and fictitious narration of a self-proclaimed eyewitness into a "historical event."

13 March 1943 (p. 352)

> *"Approximately 2,000 Jewish men, women, and children from Ghetto B in Krakau arrive with an RSHA transport. Following the selection, 484 men, given Nos. 107990-108409 and Nos. 108467-108530, and 24 women, given Nos. 38307-38330, are interned in the camp as prisoners. The other approximately 1,492 people are killed in the gas chambers of Crematorium II."* [Note that the German original has here the singular *"in der Gaskammer"* – "in the gas chamber"; Czech 1989, p. 440]

Source: "APMO, Dpr.-Hd/64, p. 71; Dpr.-ZOd/56, p. 151."

On 24 November 1989 I wrote to the Auschwitz Museum asking for clarification of some points in Czech's *Auschwitz Chronicle*, including the source for the transport of 13 March 1943. In his reply of 16 February 1990, Andrzej Strzelecki explained the following to me:[200]

> *"There are no known Hitlerite documents confirming that about 2,000 Jews from the Krakow Ghetto arrived at Auschwitz on 14 March 1943. On the other hand, numerous original camp documents have been preserved concerning the fate of about half of the inmates of this transport, who were interned at the camp and identified by their serial numbers /107990-108409, 108467-108530 – men, 38307-38330 – women/. In the case* [in question], *in the Archives of the State Museum of Oświęcim /APMO/ are stored the personnel files /*Personalbogen*/ of over sixty inmates of this transport /identified for example by the numbers 108248, 108263, 108268, 108270, 108522, 108527, 108528, 108530/. In these cards, for each of the more than sixty prisoners mentioned above, an in-*

[198] APMO, BW 30/34, p. 100.
[199] RGVA, 502-1-26, p. 61.
[200] Letter from the Auschwitz Museum addressed to the author, dated "*Oświęcim, dnia 16 lutego 1990 r.*" and signed by A. Strzelecki as "*Starszy kustosz Państowowego Muzeum w Oświęcimiu*" – "Senior Curator of the State Museum in Auschwitz."

*scription appears that reads: '*Verhaftet am 14.03.1943 – wo: Krakau. Eingeliefert */to the Auschwitz concentration camp – remark by AS/* am 14.03.1943. Einweisende Dienststelle: RSHA*'* [Arrested on 14 March 1943 – where: Krakow. Interned… on 14 March 1943. Office ordering internment: RSHA]. *In presenting the above-mentioned transport in the 'Calendar,' Czech relied on the documentation mentioned above, as well as on the reports mentioned in the 'Kalendarium' published by Rowohlt-Verlag on p. 440, in the right margin. These are trial testimonies made by former prisoners: Norbert Moskowitz /APMO. Zespól Proces Hössa* [Höss Trial Section], *volume 64, p. 41/ and Luba Reiss /APMO, Proces załogi obozu* [Camp Garrison Trial], *volume 56, p. 151."*

From this it can be deduced that the deportation took place on 14 March, not on 13 March. The number of deportees, however, remains enigmatic, because the two witnesses made conflicting statements in this regard:

– Norbert Moskowicz (sic):[201]

"On 14 March 1943, I was deported to Birkenau (Auschwitz) Camp with a group of about 500 Jews selected in Krakow at Concordia Square in Ghetto B. I remained in Birkenau until 18 January 1945, after which, as part of the evacuation of this camp, we were taken to the Sachsenhausen Camp near Berlin, where I remained until the end."

– Luba Reiss:[202]

"On 14 March 1943, I was deported to Auschwitz Concentration Camp in a liquidation transport from the Krakow Ghetto, and stayed there until November 1944, as Inmate No. 38327 (with triangle). After spending six weeks in quarantine in Block 1, I worked in one Kommando after another, staying permanently in the Birkenau Women's Camp. The transport with which I arrived at Birkenau numbered approximately 7,000 women of various ages and children of both sexes. This figure was given to us by Jewish policemen (OD men [*Ordnungsdienst*, Order Service]*). This transport was destined entirely for gassing, because with it were deported women and children from Ghetto B, and thus those who had already been selected in the ghetto as unfit for work. Only by chance, as a result of the prayer of a young Jewish woman who had passed herself off as a dentist (I do not know her name) and by lowering her age* [by declaring a lower age]*, were 24 women from our transport saved, who did not go to the gas. We were admitted to the camp, tattooed and employed in various Kommandos."*

The first witness spoke of a transport of about 500 inmates, who were practically all registered, the second of about 7,000 deportees, who were almost all

[201] Höss Trial, Vol. 64, p. 71.
[202] Trial of the Auschwitz Camp Garrison, Vol. 56, p. 151.

gassed. This absurd figure is reminiscent of that given by Alfred Wetzler and Rudolf Vrba in their well-known 1944 report:[203]

> *"Prominent guests from BERLIN were present at the inauguration of the first crematorium in March, 1943. The 'program' consisted of the gassing and burning of 8,000 Cracow Jews."*

The number of 2,000 deportees in this transport is therefore not attested by Czech sources. Instead, it may originate from the following statement by Abusch Wachsman in 1945 (Borwicz *et al*., p. 111):

> *"In Sector B* [of the Krakow Ghetto] *there were about 2,000 Jews, young, old and children. Tagesheim counted about 250 children, who were taken to Concordia Square. Then about 700 Jews were shot on the spot, about 2,000 were sent to Auschwitz."*

But what about the alleged gassing in Crematorium II? Czech explains in a footnote (p. 352):

> *"Henryk Tauber reports that the Special Squad for the first time cremated the corpses of Jews who had been killed in the gas chamber of Crematorium II. The members of the Special Squad did not see how the gassing itself was carried out, because they were locked in the autopsy room for two hours (APMO, Höss trial, vol. 11, p. 135ff.)."*

The summary of Tauber's claims is quite correct, but the witness mentioned neither the number of deportees, nor their origin, and did not even specify that they were Jews. Czech relied only on Tauber's chronological indication "*około połowy marca 1943 r.*," – "towards the middle of March 1943,"[204] but from an orthodox point of view, this can also be applied to the transport of 964 Jews from Berlin who arrived at Auschwitz on 13 March 1943, 599 of whom were allegedly "killed in the gas chambers," as Czech asserts earlier in that same entry (*ibid.*). So how could Czech "ascertain" that these Jews had been gassed "in the gas chambers" (presumably in one of the two "bunkers") while those from Krakow were killed "in the gas chamber of Crematorium II"?

It follows that the number and origin of those allegedly gassed, and the date of this gassing are purely imaginary. I continue the discussion of this entry's issues with the next entry for 16 March 1943:

16 March 1943 (p. 354)

> *"Approximately 1,000 Jewish men, women, and children from the dissolved Ghetto B in Krakow arrive in an RSHA transport. Following the selection, 15*

[203] "The Extermination Camps of Auschwitz (Oswiecim) and Birkenau in Upper Silesia." FDRL, WRB, Box n. 6, p. 13.

[204] Höss Trial, Vol. 11, p. 135. In Tauber's chronology, we get to 14 March by adding 10 days to March 4, whose presumed events Czech shifted to 5 March. See entry for 5 March 1943.

> *men, given Nos. 108664-108678, and 26 women, given Nos. 38426-38451, are admitted to the camp. The other approximately 959 deportees are killed in the gas chambers."*

Source: none.

Here, too, Czech's use of the plural, "in the gas chambers," is a subtle reference to one of the "bunkers," which is evidently a simple subterfuge to cover up the fact that Tauber did not mention this alleged gassing: according to him, the gassing immediately following the one summarized by Czech in her entry for 13 March 1943 supposedly involved Greek Jews, and at that time the two "bunkers" were still in operation:[205]

> *"During the cremation of the corpses of that first transport in the middle of March 1943, we worked non-stop for 48 hours, but we were not able to cremate all the corpses, because in the meantime a Greek transport arrived which was also gassed. But since we were tired and completely exhausted, we were taken to the Block, and the work was taken over by another shift of the Sonderkommando, which at that time also served in the two Bunkers* [and] *numbered about 400 prisoners."*

But according to Czech, the Greek transport in question arrived on 20 March (p. 356). Hence, if the Greek transport arrived after "48 hours" of non-stop work while handling the alleged 1,492 gassing victims of the Krakow transport, then this Krakow transport would have arrived on March 18, not on the 14th. On the other hand, Tauber states that Crematorium II was unable to cremate 1,492 corpses within 48 hours, while at the same time he maintains that, during the alleged test cremations, three corpses were cremated in each muffle within 40 minutes, which for the 15 muffles of this crematorium corresponds to a theoretical capacity of 1,620 corpses within 24 hours! This shows not only one of the many glaring inconsistencies in Tauber's testimony, but also Czech's lack of critical acumen (or honesty).

As I noted in the Introduction, she surreptitiously makes the embarrassing "bunkers" disappear. Also mysteriously disappearing from the Auschwitz Museum's historiography are the 400 inmates of the "*Sonderkommando*" deployed at the "bunkers," which presumably merged into the "*Sonderkommando*" of the Birkenau crematoria, even though, in the logic of the *Auschwitz Chronicle*, after fulfilling their task at the "bunkers," they should have been exterminated like the previous "*Sonderkommando*" assigned to exhuming mass graves and cremating their contents. The members of this unit are said to have been gassed on 3 December 1942 (see that entry).

The transports of 14 and 16 March 1943 also raise many questions regarding the number of deportees and their presumed gassing.

---

[205] Höss Trial, Vol. 11, pp. 138f.

The indictment against Amon Goeth, former commandant of Płaszów Camp, contains a section on the "Liquidation of the Krakow Ghetto," where we read that the ghetto's Sector "A" had Jews who were fit for work, whereas Sector "B" housed those unfit for work. On 13 March 1943, Goeth carried out the liquidation of the ghetto with the help of SS *Sturmbannführer* Willi Haaseg (*Proces ludobójcy…*, pp. 33f.):

> *"At that time, about 4,000 Jews perished, and about 8,000-10,000 were interned by Goeth in Płaszów Camp.* […] *In the course of this action, the defendant Goeth liquidated almost completely Ghetto 'B,' which contained persons unfit for work, and throughout the day, after the liquidation, several trucks transported the corpses of those murdered from the streets to the area of the Płaszów Camp, where they were buried in mass graves, and still on Monday, 15 March 1943, uncleared corpses were lying in the houses in Ghetto 'B.' They were later collected and brought to the camp area for burial. The living Jews were taken to Płaszów Camp, and in this way, the ghetto ceased to exist."*

The "Smoleń List" lists the sets of registration numbers mentioned by Czech as follows:[206]

– 14 March 1943:	107990-108409	RSHA	38307-38330	origin: ?
– 15 March 1943:	108467-108530	RSHA	/	″ ?
– 16 March 1943:	108664-108678	RSHA	38426-38451	″ ?

Therefore, nothing can be deduced from it about the origin of the transports, but the personnel files of the prisoners do show that at least 47 prisoners (non-consecutive numbers between 108263 and 108468) arrived at Auschwitz on 14 March 1943, and at least 14 the next day (non-consecutive numbers between 108502 and 108530).[207] Their origin is not indicated, but the list includes the numbers of those prisoners mentioned by A. Strzelecki in his letter of 16 February 1990 (see the entry for 13 March 1943), for whom the place of origin is Krakow. These are the only data that can be considered real and historical.

The number of deportees and their selection with subsequent gassing are only Czech's fictions.

23 March 1943 (pp. 358f.)

> *"In the evening, after curfew has been ordered in the Gypsy camp in Birkenau, the approximately 1,700 men, women, and children housed in barracks No. 20 and 22 who were not registered during the census of the Gypsy camp are led*

---

[206] NOKW-2824, p. 17 (list of males) and 11 (list of females).

[207] AGK, NTN, 156, pp. 60-62. This is a list of the names of 5,271 inmates obtained by Jan Sehn from the personnel files (*Personalbogen*) of inmates found at Auschwitz. He was obviously forced to simplify the data contained therein, giving a serial number, first and last name, registration number, date of birth, nationality and date of arrival at Auschwitz.

> *from their barracks, brought to the gas chambers, and killed there. These Gypsies were deported from the Bialystok region and isolated in Barracks 20 and 22 on suspicion of having typhus. They were not registered in the camp, got no numbers, and were in the camp only a few days."*

Source: "APMO, Depositions, vol. 13, pp. 57ff., Account of former prisoner Tadeusz Joachimowski. He was at this time the 'scribe' of the Gypsy camp."

The reference is to a post-war testimony that is inaccessible to me and whose date is not even indicated. It is a fact that Tadeusz Joachimowski testified neither during the Warsaw nor the Krakow Trial, both of which could have profited from his extensive knowledge of the Gypsy Camp.[208]

Czech does not prove that this transport of 1,700 Gypsies actually arrived at Auschwitz, and her witness cannot have been very precise, since in the first, German, edition of the *Auschwitz Chronicle* (1961) she positioned the entry about this alleged gassing, described in almost the same words, after her entry for 23 March, but with a question mark for the day ("?.3"; Czech 1961, p. 85), so Joachimowski probably did not give the date 23 March 1943. This gassing, based solely on unverifiable anecdotal chatter, cannot be considered a historical event.

In his article "The Sinti and Roma in Auschwitz Camp in the Account of the Polish Resistance Movement," H. Świebocki demonstrated that the resistance movement was well-informed since April 1943 about the typhus epidemic that raged in the Gypsy Camp during the first months of 1943, but they knew nothing about this alleged gassing of 1,700 Gypsies, an "event" that certainly would have been significant (Świebocki 1998, pp. 332f.).

30 March 1943 (p. 364)

> *"Four Jewish prisoners from the Special Squad are killed, probably with phenol injections. The prisoners, who have been brought for this purpose from Camp BI-b to the prisoners' infirmary in the main camp, have Nos. 106106, 106143, 106154, and 106165."*

Czech explains in a footnote:

> *"This is practiced as long as the Special Squad exists (APMO, Höss Trial, vol. 1, pp. 4-28, Statement by the Former Prisoner Alter Feinsilber (a.k.a. Stanislaw Jankowski); SAM,* Amid Unspeakable Crimes, *p. 52)."*

Source: "APMO, D-AuI-5/2, Morgue Register, p. 108, Items 25-28."

That these four inmates had been killed with phenol injections is an arbitrary conjecture, because in the Morgue Register, next to the first number (106156), appears the remark "(Birk.)," which also applies to the other

---

[208] Hermann Langbein mentions two unpublished sources concerning this witness: "*Schilderung über die Zustände im Zigeunerlager, 13. September 1967*" and "*Protokoll einer Zeugenvernehmung, Krakau, 2. Juli 1968*." (Langbein 1987, p. 594).

three.[209] Czech's claim that they came from Sector BIb is merely a malicious insinuation in order to lend a semblance of credibility to her claim that the four inmates were members of the "*Sonderkommando*."

In the passage of Alter Feinsilber's (aka Stanisław Jankowski) statement adduced by Czech, this witness stated that Block 13 of Camp Sector BIId, where the "*Sonderkommando*" was housed, had "its own sickquarters from which every week 20 persons were taken to be injected. About 395 persons lived in it but the number varied in connection with selecting for 'injections'" (Bezwińska/Czech 1992, pp. 47, 50).

But Jankowski was transferred to Birkenau only in July 1943 (*ibid*, p. 47), so his statement cannot apply to the beginning of March 1943. But even if these regular selections happened before that time, *and if the witness had told the truth*, then Czech should have reported every week until 31 August (the Morgue Register ends on this date) that about 20 inmates of the "*Sonderkommando*" were killed with lethal injections. Within 20 weeks, this would have amounted to about 400 inmates. But the entry for 30 March is unique in this regard.

31 March 1943 (p. 365)

> *"Approximately 3,000 Jewish men, women, and children arrive from the ghetto and labor camp in Ostrowiec-Świętokrzyski in an RSHA transport. They are all most likely killed in the gas chamber of the newly constructed Crematorium II."*

Source: "AGKBZH, Inquiry of the District Court, Province of Kielce, Camps-Ghettos, vol. 1, pp. 118-119."

I have not gained access to this judicial source, but the *Encyclopedic Informer* says that the Ostrowiec-Świętokrzyski Ghetto was established in April 1941 and liquidated in the first half of 1943. It contained up to 16,000 Jews, of whom 11,000 were sent to Treblinka on 11 and 12 December 1942, and 2,000 were shot.

> *"In the reduced area of the ghetto, about 3,000 people remained, a part of whom were taken to Sandomierz and Bliżyn in January 1943; for the rest – about 2,000 people – a Jewish labor camp was created in April 1943."*

Among the sources adduced is this one: "AGK[BZH], ASG, sygn. 47, k. [pages] 116-119" (Główna…, p. 355).

The first abbreviation means Archiwum Glówna Komisja Badania Zbrodni Hitlerowskich (Central Archive of the Commission of Inquiry into Hitlerite Crimes), the second Ankieta Sądów Grodzkich (Inquiry of the Municipal Courts). This is presumably the same source adduced by Czech, as can also be inferred from the subject dealt with and from the page numbers referred to.

---

[209] AGK, NTN, OB, 385, p. 153, *Leichenhallenbuch*.

The *Encyclopedia of Camps and Ghettos, 1933-1945* states in this regard:[210]

> *"At the end of March 1943, there was a further deportation Aktion to Treblinka, which marked the final liquidation of the small ghetto."*

This transport to Auschwitz mentioned by Czech is therefore purely fictitious, as are its alleged 3,000 gassing victims.

1-31 March 1943 (p. 365)

> *"3,391 registered prisoners have died in the women's camp in Birkenau; 1,802 women have been killed in the gas chambers."*

Source: "APMO, Mat.RO., vol, VII, p. 485."

The source, propaganda material of the resistance movement, is unreliable and therefore worthless (see the entry for 1-28 February 1943). In this specific case, the figure is absurd. The overall death toll during March 1943 was 4,492 (Mattogno 2019, pp. 255f.). If 3,391 women died that month, only 1,101 men would have died. The average occupancy of the male camp during that month was 29,967 inmates, and the average female occupancy was 13,135 (*ibid*., pp. 207f.). It is therefore impossible that 3,391 female inmates died during that month, because if that were so, they would account for 75.5% of the total death cases, even though female inmates made up only 30.5% of all inmates. In practice, the monthly female mortality would have been a stunning 25.8%, while the monthly male mortality would have amounted to only 3.7%!

14 April 1943 (p. 376)

> *"80 people who were arrested in Chełmek, in Libiąż, and in the vicinity of Auschwitz are shot in the gas chamber of Crematorium I at the main camp."*

Source: "CA KC PZPR, 202/III-146, Documents of the Polish Government in Exile, pp. 61, 259."

In this source, we read ("Obóz…," pp. 100f.):

> *"On 14. IV* [1943] *in Chełmek, Libiąż and in the immediate vicinity of Auschwitz 80 people were arrested – they were taken immediately by truck to Auschwitz. The trucks immediately entered the crematorium, where* [the deportees] *were cremated* [*spaleni*] *immediately. At Auschwitz Camp, there is a shortage of gas to poison the inmates; to save gas, the people are only being semi-poisoned* [*półzatrute*], *and are later burned. The walls in the crematorium* [furnaces] *are blood-stained – because the persons stunned by the gas regain consciousness in the furnace – they scratch the concrete with their fingernails to defend themselves before dying. The same thing also occurs during the open-air cremations, where the poisoned victims remain conscious for a little*

[210] The United States…, entry "Ostrowiec-Świętokrzyski," p. 271.

> *while in the cremation pits. Legends are going around concerning these burning pits – they are known as the 'Eternal Flame' because they burn day and night."*

The source neither mentions a gas chamber nor any shootings, which are simply Czech's inventions. The overall context of the message is an absurd fiction: deportees stunned by the gas recover in an 800°C cremation furnace and scratch its glowing walls with their fingernails!

If we follow the orthodox chronology, the cremation pits, in which an equally absurd scene is set, no longer existed on 14 April 1943, because the alleged "bunkers" had ceased their activity in mid-March 1943, the day on which the gassing of those selected to die on arrival were moved to Crematorium II, then, from March 22, also to Crematorium IV.

In spite of all this, Czech presents the dying agonies of these 80 alleged victims as historical fact!

1-30 April 1943 (p. 387)

> *"1,859 registered prisoners have died in the women's camp in Auschwitz-Birkenau; following a selection in the camp, 277 of these women were killed in the gas chambers."*

Source: "APMO, Mat.RO., vol. VII, p. 485."

Similar observations as for the entry for 1-31 March 1943 are due here. The source, propaganda emanations of the resistance movement, is unreliable and therefore worthless (see the entry for 1-28 February 1943). The overall death toll during April 1943 was 2,151 (Mattogno 2019, pp. 255f.). If 1,859 women died that month, only 292 men would have died. The average occupancy of the male camp during that month was 32,592 inmates, and the average female-camp occupancy was 16,600 inmates (*ibid*., pp. 207f.). It is therefore impossible that 1,859 female inmates died during that month, because if that were so, they would account for 86.4% of the total death cases, even though female inmates made up only 33.7% of all inmates. The monthly female mortality would have amounted to 11.2%, while the monthly male mortality would have amounted to only 0.9%!

As for the alleged gassing of 277 Jews, Czech makes no reference to any selection with subsequent gassing for the entire month of April 1943, which means that, despite her enormous apparatus of anecdotal sources, she found nothing to support it.

7 and 13 May 1943

These two entries, which are both without any source reference, concern two alleged deportation trains from the Agram Ghetto (Zagreb).

– 7 May (p. 392)

> *"Approximately 1,000 Jewish men, women, and children from the ghetto in Agram arrive in an RSHA transport from Yugoslavia. After the selection 40 men are admitted to the camp; the next day they are given Nos. 120596-120635. The other people are killed in the gas chambers."*

– 13 May (p. 396)

> *"Approximately 1,000 Jewish men, women, and children from the ghetto in Agram arrive in an RSHA transport from Yugoslavia. After the selection, 30 men, given Nos. 121704-121733, and 25 women, given Nos. 44669-44693, are admitted to the camp as prisoners. The other approximately 945 people are killed in the gas chambers."*

The source for these two alleged transports, not stated by Czech, is Martin Gilbert's *Atlas*" which in "Map 205" next to "Zagreb" writes: "at least 1,000 7 May/at least 1,000 13 May," with an arrow pointing toward Auschwitz (Gilbert 1988, p. 160). The source is Nuremberg Document NG-2348 (*ibid.*, p. 248).

From this document, which was admitted by the Jerusalem Tribunal (Eichmann Trial) as T/908, we learn that on 4 March 1943, preparations for the deportation of the last 2,000 Jews from Croatia had ended. The precise destination is not indicated, but it was undoubtedly German territory, because "at the German border station Brückel" were to be made available "4 members of the protective police as transport escorts."[211]

No information is known to me about the deportation itself, but in a letter from the German Foreign Office of 26 May 1943 we read that the Jew Mario Sasson "was arrested by the Croatian police on 11 May 1943 on the occasion of an action against the Jews, and was included in the transport to Auschwitz."[212] This transport may be the one Czech mentions in her entry for 13 May. If the other transport was also sent to Auschwitz, then assuming that each contained 1,000 people would have its own logic, but Czech was unaware of the above documents, as is evident from the fact that, in the first, German, edition of the *Auschwitz Chronicle*, she did not indicate the number of deportees at all (Czech 1961, pp. 97f.), nor did she cite the documents in the 1989/1990 editions. Since it is not known how many deportees were on the transport with which Sasson was deported, and whether there was really another one, Czech's statements are mere conjecture.

---

[211] T/908 and 909: Two consecutive messages from Siegfried Kasche, German ambassador in Zagreb, to the German Foreign Office, dated 4 March 1943.

[212] T/913.

6 June 1943 (p. 413)

> *"Approximately 1,000 Jews are delivered with an RSHA transport from labor camps that have been shut down in the so-called Wartheland Gau ('Gau' is a Nazi Party administrative district)*[213] *in occupied Poland. After the selection, 238 men are admitted to the camp and given Nos. 124044-124281. The others, more than 700 people, are killed in the gas chambers."*

Source: none.

In 1961, Czech had written that these were "Jews from the labor camps from Pomerania," without giving the number of deportees (*ibid*., p. 104). This entry is patently conjectural.

24 and 25 June 1943

These are two alleged transports for which Czech uses the same source.

– 24 June (p. 424)

> *"Approximately 1,600 Jewish men, women, and children from the ghetto in Środula, the hospital in Sosnowitz, and the Kamionka ghetto in Bendin* [=Bendsburg] *have arrived in an RSHA transport. Following the selection, 19 men, given Nos. 125419-125437, and six women, given Nos. 46425-46430, are admitted to the camp. The other 1,575 deportees are killed in the gas chambers."*

Source: "Szternfinkiel, Jews of Sosnowitz, pp. 52ff.; CA KC PZPR, 202/III-148, Documents of the Delegation of the Polish Government in Exile, p. 402."

– 25 June (p. 426)

> *"2,500 Jewish men, women, and children from the ghetto in Bendin arrive in an RSHA transport. All are killed in the gas chambers."*

Source: "CA KC PZPR, 202/III-148, Documents of the Delegation of Polish Government in Exile, p. 402."

With this reference, Czech points to a "Radio dispatch for the BBC and the world" of 15 July 1943, where we read ("Obóz…," p. 107):

> *"The ghetto of Będzin was liquidated in the days between June 24 and 27. 2,500 Jews were taken to Auschwitz camp in a heavily guarded transport.* […] *Transports full of people arrived at Auschwitz between June 25 of this year* [and July 15]*: 870 from Nice (France), over 500 from Berlin, 900 from Salonica, 1,600 from Sosnowiec, 391 from Lublin, and two transports from Będzin"*

A "Description of the Auschwitz Concentration Camp" dated "Auschwitz, 10 July 1943" provides different data, however:[214]

---

213 "*Gau*" is an ancient German term for a distinct area. Except for the NS era, it has never been used for administrative purposes.

214 APMO, Au D-RO/192, Vol. XXX, p. 54.

> *"Since 20 June, mass transports have been arriving at the Auschwitz Concentration Camp (Birkenau), namely: 1 transport of 870 persons from Nice (southern France), 1 transport of over 500 persons from Berlin, 1 transport of 900 persons from Thessaloniki, 2 transports of 1,600 persons from Bendsburg, 1 transport from Sosnowitz, and 1 transport of 391 persons from Lublin."*

The first source says that the transport from Będzin/Bendsburg was sent to Auschwitz with 2,500 Jews between 24 and 27 June 1943 and one from Sosnowiec/Sosnowitz with 1,600 Jews not before 25 June. The second says that there were two transports from Będzin, each with 1,600 Jews, which left no earlier than 20 June, and there was also a transport from Sosnowiec without indication of the number of deportees.

From these sources it is rather difficult to deduce what Czech writes.

From 20 June to 16 July 1943, as the *Auschwitz Chronicle* itself attests, no transport arrived at Auschwitz from Nice (one arrived from Drancy on 26 June with 1,018 deportees), none from Berlin, and none from Salonika. Hence, if the reports of the Polish resistance movement are that unreliable regarding these transports, it is hard to see why they should be any more reliable regarding those from Będzin and Sosnowiec, which are not substantiated by any other source. The transport from Będzin is moreover demonstrably false. A report by the camp doctor of Auschwitz to the camp commandant of 28 June 1943 on the inmates registered from 21 to 25 June explicitly states that the registration numbers 125385-125437, which include those of the alleged deportees from Bendsburg, were instead assigned to a transport from Kattowitz.[215]

28 July 1943 (p. 449)

> *"Of the women and children who were evacuated from Auschwitz and the vicinity, some were sent to the General Government and the rest to camps in Oderberg (Bohumin), Czechoslovakia, and Ratibor (Raciborz). The aged, feeble, and crippled whose addresses were previously determined·' are picked up separately and brought to Auschwitz c.c. They are killed in the gas chambers."*

Source: "CA KC PZPR, 202/III-7, Documents of the Delegation of the Polish Government in Exile, p. 170."

With this, Czech refers to a report on Auschwitz in which "Mass executions from 15 July to 8 August. 43" are described; in the section devoted to the Poles, the following text appears ("Obóz…," p. 128):

> *"On 28 July, a resettlement of Poles took place in Auschwitz. Mostly old people were deported, as well as wives with children whose husbands or fathers had gone to war or were prisoners of war or in concentration camps or had been executed. A part of them went to Oderberg, a part to the General Gov-*

[215] RGVA, 502-1-71, p. 71.

ernment, a small part [*mała część*], *all old people, remained at the camp; they probably* [*prawdopodobnie*] *were gassed and then cremated, because we had absolutely no news about them."*

The editor of the *Auschwitz Chronicle* therefore forces her source, apodictically claiming that these "aged" people (she does not specify that they were Poles), to which she adds on her own initiative also the "feeble, and crippled," were gassed, while the source expresses only a suspicion of such.

In an article whose title translates to "Resettlements from Auschwitz Camp's Area of Interest," Piotr Setkiewicz documents the reduction of the Jewish and Polish population of the aforementioned area, including the city of Auschwitz, but only until the beginning of January 1943 (Setkiewicz). There were no evacuations after that date, so Czech's entry does not correspond to a real event.

1-12 August 1943 (pp. 452-460)

Czech lists a number of deportation trains from Bendsburg (Będzin) and Sosnowitz (Sosnowiec). Some of the Jewish deportees on these trains were registered, while the majority was allegedly "killed in the gas chambers." I summarize all the relevant data in the following table:

	Aug. 1943	#	Origin	Reg. Men	Registration Numbers	Reg. Women	Registration Numbers	Gassed
1	1	2,000	Bendsburg	208	132253-132460	141	50837-50977	1,600
2	1	2,000	Bendsburg	210	132461-132670	260	50978-51237	1,500
3	1	2,000	Bendsburg	183	132671-132853	269	51238-51506	1,500
4	1	2,000	Sosnowitz	155	132854-133008	263	51507-51769	1,500
5	1	2,000	Sosnowitz	241	133009-133249	207	51981-52187	1,500
6	2	2,000	Bendsburg	276	133505-133780	109	52188-52296	1,600
7	3	3,000	Sosnowitz	404	134096-134499	448	52374-52821	2,100
8	3	3,000	Sosnowitz	264	134500-134763	390	52822-53211	2,300
9	3	3,000	Sosnowitz	434	134764-135197	332	53212-53543	2,200
10	5	3,000	Sosnowitz	265	135373-135637	249	53572-53820	2,600
11	5	1,000	Sosnowitz	0	0	26	53821-53846	974
12	6	3,000	Sosnowitz	211	135773-135983	275	53923-54197	2,500
13	10	3,000	Sosnowitz	110	136303-136412	195	54332-54526	2,700
14	12	1,000	Sosnowitz	46	136510-136555	0	0	954
	Totals:	32,000		3,007		3,164		~25,500

These entries are all without any source reference, except for the 11th transport of 5 August, for which Czech refers to Szternfinkiel's book (p. 456).

In this regard, the only known document is a letter from the police superintendent of Sosnowitz to the police inspector of Military District VIII located in Breslau, from which we learn that from 1 to 7 August about 30,000 Jews were "deported" from the Jewish ghettos in Sosnowitz and Bendsburg, but at

that time, the operation was not yet completed.[216] The destination of these transports is not indicated, and it is not certain that all of these Jews were transported to Auschwitz. Polish-Jewish historian Artur Eisenbach wrote that about 20,000 Jews were sent to Auschwitz, while some groups were transferred to the Annaberg Labor Camp and assigned to the Schmelt Organization (Eisenbach 1961, p. 540), but Józef Kermisz stated in a book published in 1946 that Jews from Będzin and Sosnowiec were loaded onto trains in groups of 1,000 to 2,000 and transported to Auschwitz (Kermisz, p. LX):

> *"Altogether more than 20,000 Jews arrived at this extermination camp and were immediately directed to the gas chambers. Only about 1,000 remained in the camp."*

In the first, German, edition of the *Auschwitz Chronicle*, Czech did not provide any figures regarding the deportees. For example, the first transport is described as follows (Czech 1962, p. 51):

> *"1 Aug.* [1943]. *RSHA transport, Jews from the ghetto in Będzin. After the selection, 208 men were admitted to the camp as inmates, they were given the numbers 132253-132460; 141 women were given the numbers 50837-50977. The rest were gassed."*

The final sentence is monotonously repeated for all transports.

The total figure of 32,000 deportees was therefore unjustified even according to Polish sources.

Czech took the registration numbers given from the "Smoleń List," but as I stated before, this list does not normally give the origin of the registered inmates. From 1 to 12 August 1943, the list contains a total of 6,367 registered inmates, 3,380 male and 2,987 female inmates, of whom 466 were Belgian Jews and 273 were French Jews according to the French and Belgian transport lists as published by Klarsfeld, Klarsfeld/Steinberg and Het Nederlandse… The fact remains that the sum of registered Polish inmates given by Czech (6,171) is higher than that resulting from the "Smoleń List" (6,367 – 466 – 273 = 5,628). The difference (543) could correspond to the registered deportees of an entire transport; in that case, and if the "Smoleń List" is correct, there would have been only 13 transports, not 14.

A report by the resistance movement titled "Mass Executions from 15 July to 8 August 1943" says in reference to the "resettlement of all Jews from Sosnowiec and Będzin" that "15 full trains arrived, about 15,000 people. In addition, for nights on end trucks made round trips."[217]

If, therefore, there were really 14 transports from these localities, and if each transport contained 1,000 Jews, the total of those sent to Auschwitz would have been precisely 14,000. As a maximum figure, there may have

---

[216] YVA, O.53-10, pp. 367f.
[217] APMO, Au D-RO/192, Vol. XXX, p. 56.

been as many as 20,000. Obviously, there is nothing to demonstrate that the unregistered deportees were "killed in the gas chambers."

3 and 5 August 1943

Two non-existent transports are recorded here with the same source:

– 3 August (p. 454)

> *"200 Jews from Berlin arrive in an RSHA transport. Following the selection, all are killed in the gas chambers."*

– 5 August (p. 456)

> *"125 Jews from the prison in Dresden are sent in an RSHA transport. They are all killed in the gas chambers."*

Source for both entries: "CA KC PZPR, 202/III-146, Documents of the Delegation of the Polish Government in Exile, p. 154."

This is a list of transports that presumably arrived at Auschwitz from 3 to 27 August 1943, compiled by a certain "Tadeusz" on 18 October 1944. The first three transports are as follows ("Obóz…," p. 135):

– 3 August: 200 Jews from Berlin
– 5 August: 100 Jews from Berlin
– 5 August: 125 Jews from Dresden (prisoners).

According to Microfilm Publication A3355 of the U.S. National Archives in Washington, D.C., there were only two transports from Berlin to Auschwitz in August 1943, one departed on the 4th (with 99 deportees), the other on the 28th (with 50 deportees). Therefore, the alleged transport of August 3rd together with its alleged 200 gassing victims never existed. Regarding the alleged transport of 5 August from Dresden, the report of the camp physician of the Auschwitz Camp to the camp commandant of 6 September 1943 on the prisoners registered from 26 to 31 August shows that two prisoners were registered from Dresden with the numbers 141804-141805.[218] Following the "Smoleń List" of men's transports, the author of the *Auschwitz Chronicle* considers these two numbers assigned to two inmates of a "group transport" which arrived in Auschwitz on 27 August, and whose male deportees received the registration numbers 141743-141816 (p. 471).[219] The report of the just-mentioned camp physician instead gives the individual locations from which the members of this "group transport" came, which clearly should not be considered a single transport: Kattowitz, Troppau, Oppeln, Heydebreck, Koblenz, Bielefeld, Dresden, Prague. Therefore, even the transport from Dresden and its 125 gassing victims is a simple fabrication.

---

[218] RGVA, 502-1-71, pp. 42-42a.
[219] See also NOKW-2824, p. 25.

21 August 1943 (p. 467)

> *"The camp management carries out a selection in the women's camp of Auschwitz-Birkenau. 498 female Jewish prisoners are selected who, in the opinion of the camp management and the SS Camp Doctor, cannot be used for work. They are condemned to death in the gas chambers. They are brought to Block 25, considered the waiting block for the gas chambers and also called the death block. Among those selected are 438 Greek women. The list of selected women is marked with 'G.U.,' which stands for 'gesonderte Unterbringung,' or 'separate accommodation,' a euphemism for the death sentence. The list is signed by Camp Commander, Head Supervisor Maria Mandel."*

The following explanation follows in a footnote:

> *"A carbon copy of the original list with the names of the 498 Jewish women selected and the signature of the Head Supervisor Mandel is stolen and smuggled out of the camp by a member of the resistance movement in the camp, Stanisław Kłodziński, and is brought to Teresa Lasocka in Krakow; from there the information was to be conveyed to London."*

Sources: "APMO, Mat.RO., vol. I, p. 41; vol. IV, pp. 262-266."

In fact, there is only one list headed "*Frauen-Lager Birkenau. F.L. 8.43. Ma. Krt.*" and dated 21 August („*Birkenau, den 21. August 1943*") which bears the inscription "*Die Lagerführerin: /-/ Mandl Oberaufseherin*" at the end. Below the header is the inscription "*Betr.: G.U. v. 21.8.43*," meaning "*Subject: G.U. of 21 Aug. 1943*," where "G.U." stands for "*gesonderte Unterbringung*" = "separate lodging".[220] On this document are listed 498 women with serial number, first and last name as well as registration number.

However, there is no evidence that these inmates were actually killed. Czech invents a purely fictitious context, into which she then inserts the list in question. The selection at the Women's Camp is simply Czech's invention, as is her claim that the 498 inmates in question were unfit for work and had passed through Block 25. Furthermore, the editor of the *Auschwitz Chronicle* evidently could not find a single witness (for what that might be worth) who reported anything about it!

Her fantasies about "G.U." are moreover belied by the documents. The terms *gesonderte Unterbringung*, *Sonderunterbringung* (separate lodging) and *gesondert untergebracht* (lodged separately) were used for inmates who arrived at Auschwitz (from locations other than concentration camps) and who, before being admitted to the camp, were "lodged separately" as a quarantine measure to prevent the introduction of contagious diseases into the camp, foremost those transmitted by lice and fleas (see Mattogno 2016b, pp. 54-60).

But this also applied to inmates who were to be released or transferred from the camp, when they entered the category "preparation for transport"

[220] AGK, NTN 155, pp. 262-266.

("*Vorbereitung zum Transport*") and especially after disinfestation. This was standard practice. In fact, the concentration-camp regulations stipulated that, prior to release, inmates to be released were to be "separated from other inmates" ("*Absonderung von den anderen Häftlinge*"), meaning exactly lodged separately. Inmates to be transferred also had to be "lodged separately /cell building/ until transferred" ("*bis zum Abtransport separat /Zellenbau/ untergebracht*"). They were in fact first taken to the bathroom, examined by the camp physician, and then dressed in clean clothes.[221]

For example, the transport list of 500 Hungarian Jews who were transferred to Dachau Camp in July 1944 (the day is not indicated) is preceded by an attestation of the camp physician stating:[222]

> *"The Jewish inmates of the transport to Dachau were examined by the camp physician and found to be healthy. They were deloused, provided with fresh underwear and clothing."*

This practice was observed even-more-strictly during epidemics that raged in the concentration camps. For example, the SS garrison physician of the Stutthof Camp reported on 24 November 1944 about the transfer of 500 Jewish inmates to Flossenbürg Camp:[223]

> *"It is pointed out that these prisoners come from a camp where typhus typhoid fever, diphtheria and scarlet fever are currently prevalent. Quarantine is therefore to be imposed, or these prisoners are to be put to work in closed units. The prisoners will be bathed and deloused before being transported."*

And it is obvious that this also involved a "separate lodging."

Documents demonstrate that these 498 inmates were not killed. The death certificates for August 1943 are incomplete. The Auschwitz Death Books contain 811 certificates, but on the basis of other documents, I have found 1,253 names of dead inmates, 272 of them from 21 to 31 August.[224]

Pohl's letter to Himmler of 30 September 1943 states that in the month of August a total of 2,380 deaths occurred at Auschwitz, 1,442 of them in the Men's Camp, and 938 in the Women's Camp.[225] The number of deaths I found is therefore 52.6% of the total. One can legitimately assume that the 981 deaths I found up to 20 August corresponded to approximately 1,860 real deaths, and the 272 cases identified for the period from 21 to 31 August correspond to approximately 520 actual cases. It is therefore impossible that there were 498 deaths just on one day, the 21st of August. Moreover, among the 272 names of male and female inmates who died from 21 to 31 August (according to Czech, in these cases the deaths would have been recorded a few at

[225] PS-1469, p. 4.

a time on the following days), there is not a single name of the 498 prisoners mentioned above, and it would be absurd to believe that this is a simple coincidence.

27, 28 and 29 August 1943

Czech reports four more transports with the same source:

– 27 August (p. 471, 2 entries)

> *"205 Jews from the labor camp near the Märkische Stahlform-Werke in Eberswalde arrive in an RSHA transport. They are killed the same day in the gas chambers.*
>
> *1,026 Jews from the labor camp in Wolsztyn in the province of Posen arrive in an RSHA transport. Following the selection, 1,016 men, given Nos. 140721-141736, are admitted to the camp. The other 10 men are killed in the gas chambers."*

– 28 August (p. 473)

> *"800 Jews from the labor camp in Küstrin (Kostrzyń) arrive in an RSHA transport. Following the selection, 667 men, given Nos. 141903-142569, are admitted to the camp. The other 133 men are killed in the gas chambers."*

– 29 August (p. 474)

> *"Approximately 2,000 Jewish men, women, and children arrive from the labor camp in Rawicz in an RSHA transport. Following the selection, 1,392 men given Nos. 142570-143961, are admitted to the camp. The others, more than 600 people, are killed in the gas chambers."*

Source: "CA KC PZPR, 202/III-146, Documents of the Delegation of the Polish Government in Exile, p. 154."

The previously mentioned list compiled by "Tadeusz" has these four transports as follows ("Obóz…," p. 135):

– 26 August: 1,026 Jews from Wosztyn (Wohlstein)
– 27 August: 205 Jews from Eberswald[e], *"Markische Stahlform-Werke*"
– 28 August: 800 political prisoners from Kitstryn (sic; Küstrin)
– 28 August: 1,600 Jews resettled from Rawicz.

Nothing is known about the transport from Eberswalde, so it cannot be sensibly asserted that it is real, especially in view of the fact that the list in question contains demonstrably false data.

The transport from Wolsztyn, of which Czech shifted the arrival date to 27 August, contained 1,026 deportees according to her, of whom 1,016 were registered with Nos. 140721-141736, the remaining 10 were presumably gassed. The camp-physician report attributes the numbers in question to a transport from Posen (camp). In this document, Jewish transports are not reported, and the numbers of deportees are not mentioned. The first gap concerns Nos.

139708-139885, 178 registered inmates of a documented transport from Holland that arrived on 26 August. Then there is another gap ranging from Nos. 139897 to 140720, which the male-transport list splits into 139897-140333 and 140334-140720, dated 26 and 27 August.[226] Czech arbitrarily assigns the two series to two Jewish transports from Zawierć that allegedly arrived at Auschwitz on 26 and 27 August (p. 470f.), of which a total of 1,200 deportees were allegedly gassed, but they do not even appear on the list of "Tadeusz," who certainly would not have omitted two such important transports.[227]

The transport from Küstrin, according to the list in question, did not include Jews, but ordinary political prisoners: "*800 więźniów politycznych z Kistrzinia*" – "800 political prisoners from Küstrin."

Finally, Czech increases *ex cathedra* the number of deportees of the 28-August transport from Rawicz from 1,600 to 2,000 deportees, moves it to the 29th of August, and thus gets 600 more gassing victims!

29 August 1943 (p. 474)

This entry has two cases with different sources, so I will treat them separately. Here is the first text:

> *"An SS Camp Doctor carries out a selection in Men's Quarantine Camp B-IIa in Birkenau. He selects 462 Jewish prisoners. They are killed the same day in the gas chambers."*

Source: "APMO, Dpr.-Hd/6, p. 4."

Czech refers to Otto Wolken's statement of 24 April 1945, of which there is also a German translation.[228] The reference to page 4 is incorrect, because it contains no mention of "selection." Wolken explains that the figures he gave in an essay titled "Camp Pictures" ("*Lager-Bilder*"), which he had handed over to the Investigating Judge Jan Sehn, concern only the Quarantine Camp in Camp Sector BIIa, and he adds:[229]

> *"The first figure, i.e., 462, I got after I arrived at the administrative office of this camp."*

Czech should have referred to the German version, which has an "Appendix 1" and appears a few pages later.[230] It contains precisely a list of alleged selections beginning with 29 August 1943, to which "462 victims" are attributed.[231] However, this claim is not supported by anything and has therefore no historical value.

The second text reads as follows:

---

[226] NOKW-2824, p. 25.
[227] In the list, the Jews who presumably arrived at Auschwitz total 3,356.
[228] GARF, 7021-108-50, pp. 13-66.
[229] AGK, NTN, 88, p. 4.
[230] *Ibid.*, pp. 37-47.
[231] *Ibid.*, p. 43.

> *"An SS Camp Doctor carries out a selection in Men's Camp B-IId in Birkenau. He selects approximately 4,000 Jewish prisoners. They are killed the same day in the gas chambers."*

Source: "*Ibid.* [APMO, Dpr.-Hd/6], pp. 51, 222."

Czech again refers to the statements of Otto Wolken. The first reference, however, concerns the alleged gassing of the Jews of Theresienstadt on 11 July 1944:[232]

> *"At the end of July 1944, the rest of Theresienstadt Camp was liquidated.* […] *On 10 July, the mothers and children were led to the chimney at night; on 11 July, the rest of the men and women who were still in the camp, a total of about 4,000."*

For more on this, see the discussion of the entries for 2, 10 and 11 July 1944.

The second reference points to this text:[233]

> *"On the last Sunday of August 1943, I took part in the first selection by the camp doctor. 4000 Jews were selected from Camp BIId at that time, and were sent to be gassed."*

The last Sunday of August 1943 fell on the 29th, hence Czech's date for this entry. For the editor of the *Auschwitz Chronicle*, therefore, a simple sentence of a witness is enough to consider the claimed massive gassing operation of 4,000 people as a historical event, about which neither any other trial witnesses nor any members of the camp resistance knew anything. On the contrary, this alleged gassing operation of registered inmates is categorically refuted by the Auschwitz Death Books, which attest that 7,500 inmates died from 26 May to 29 September 1943, of whom 2,380 died in August, as I already mentioned. If we subtract the alleged 4,000 gassing victims and the death cases of August from the total of 7,500 death cases recorded in that time period, only (7,500 – 2,380 – 4,000 =) 1,120 deaths remain for the periods of 26 May to 31 July and 1 through 29 September, which is absurd, because already 2,204 deaths are documented for the month of June, 1,758 for July and at least 644 for September (this is only a partial figure; see Mattogno 2019, pp. 254, 256f.).

1-31 August 1943 (p. 476)

> *"1,433 female prisoners have died in the women's camp in Auschwitz-Birkenau; 498 of them were killed with gas."*

Source: "APMO, Mat.RO., vol. VII, p. 585."

Similar observations as for the entries for 1-31 March and 1-30 April 1943 are due here. The source, propaganda material of the resistance movement, is unreliable and therefore worthless (see the entry for 1-28 February 1943). I al-

---

[232] *Ibid.*, p. 51.
[233] *Ibid.*, p. 221.

ready pointed out that in the month of August there were a total of 2,380 death cases at Auschwitz, 1,442 of them in the Men's Camp and 938 in the Women's Camp (see entry of 21 August 1943), therefore, the figure of 1,433 dead female inmates has no basis.

The alleged 498 gassed women are those on the list of 21 August 1943, which I discussed in that entry.

3 September 1943 (p. 479)

> *"A selection is carried out in the women's camp in Birkenau during which several female Jewish prisoners are selected. They are killed in the gas chambers the same day."*

Source: "Gerald Reitlinger, *Die Endlösung: Hitler's Versuch der Ausrottung der Juden Europas 1939-1940* (The Final Solution: Hitler's Attempt to Extirpate Europe's Jews 1939-1945), Berlin, 1956, p. 131."

With reference to "Dr. Albert Menasche, *Birkenau (Auschwitz II)*, New York, 1947, page 84," Reitlinger writes in the original English edition of his book (1953, p. 118):

> *"After the deportations from Greece in the spring of 1943 came the typhus epidemic in the autumn and the two huge selections on September 3rd and October 22nd."*

Czech decides *ex cathedra* that the alleged selection concerned the Women's Camp and involved "several hundred" inmates. But she does not adduce anything in support of this. In fact, it is clear that neither the Auschwitz resistance fighters nor the trial witnesses knew anything about these selections.

7 September 1943 (p. 482)

> *"Nos. 61184-61215 are given to 23 women and nine girls from Bromberg (Bydgoszcz). They are killed the same day in the gas chambers."*

Czech then lists the names, registration numbers as well as dates and towns of birth of these 32 female inmates.

Source: "APMO, Mat.RO., vol. IV, p. 261; Dpr.-Zod/3, p. 136."

Czech explains in a footnote (p. 483):

> *"According to a notation the camp resistance movement makes on a copy of the list, the Commandant's Office receives the command in 1944 to release 23 women and nine children from the camp. It cannot carry out this order, as the persons named have been gassed."*

With reference to the same source, Henryk Świebocki summarizes the matter as follows (Świebocki 2000, p. 279):

> *"Prisoners drew up a list of the names of 32 Polish women and girls from Bydgoszcz* [Bromberg] *(the youngest of whom was three years and one month old), who arrived in Birkenau on September 7, 1943, were registered, and*

> *were then killed in the gas chambers. A note was added to it: 'Attention! For propaganda.'"*

Therefore, this was admittedly mere atrocity propaganda! And only a foolish propagandist of the resistance movement could have hoped to make anyone believe that the camp administration, after having these Polish inmates properly registered, had them gassed later. Czech's explanation is even-more-grotesque, because from her point of view these women, whose accompanying documentation rules out that they were slated for being killed (so much so that it was ordered from higher-up to release them), would have been gassed completely arbitrarily and at random, and no one knows on whose orders or why.

The reference "Dpr.-Zod/3" refers to Volume 3 of the Krakow Trial. Pages 87 through 152 contain a very-long interrogation of Stanisława Rachwałowa dated 25 July 1945, but on p. 136 there is no mention of the event. Her take on this piece of propaganda can instead be found many pages earlier:[234]

> *"In the spring of 1944, a transport of 22 Aryan women and children aged 10 years, of Polish nationality, arrived at Auschwitz from Bromberg. Of this transport, I remember only one name, Sierżant, mother of a one-and-a-half-year-old daughter. All we learned about this transport was that they were sent to us from Auschwitz with the Zugangsliste* [list of new arrivals]. *We were very surprised because this transport did not go through our political office. After asking questions, we ascertained that this entire transport had gone directly into the gas three days earlier at night. We assumed that this was an order from the Gestapo. Only a month later, the head of our office, Houstek-Erber, brought a release list of 22 people, ordering us to send them, after a medical examination, to quarantine for release. We then determined, based on the list brought by Houstek, that this was indeed the transport from Bromberg, and explained to the chief that this transport had not passed through our office. Houstek made a scene in front of us, saying that this was not possible, and he personally searched for this transport in the area of our camp, as well as the Auschwitz camp, because he assumed that this transport could be found in the KA (Komendantur* [sic] *Arrest). Then it turned out with all certainty that the entire transport from Bromberg had been gassed by a mistake of drunken SS men."*

The name mentioned by the witness (Sierżant) is phonetically similar to two names mentioned by Czech (Zophie and Rozalia Szerszant), but the former was born in 1911, the latter in 1939, hence in 1943 they were 32 and 4 years old, not one-and-a-half. But even if they were the same people, this would certainly not prove that they were gassed. In fact, Stanisława Rachwałowa dated this alleged event to the spring of 1944, but the above-mentioned transport –

[234] AGK, NTN, 84, Vol. 3, p. 107.

which is regularly recorded in the "Smoleń List"[235] – was the last one from Bygdoszcz/Bromberg.

The fable of drunken SS men carrying out gassings at random and by mistake is typical of the transparent and puerile mentality of the witnesses. This witness dared to assert, among other things, that the Auschwitz Camp "officially [*oficjalnie*] had the name *Vernichtungslager*"[236] (extermination camp; in German in the text).

– 19 September 1943 (p. 491):

> *"Approximately 1,300 Jews from the ghetto in Dąbrowa Tarnowska arrive in an RSHA transport. They are killed the same day in the gas chambers."*

Source: "AGKBZH, *Camps, Ghettos*, vol. I, f. 70."

The *Encyclopedic Informer* reported that the Dąbrowa-Tarnowska Ghetto was established on 10 October 1942 and liquidated on 19 September 1943. About 3,000 Jews passed through it.

> *"In June 1942, 50 people were shot, 450 were deported to the Bełżec Extermination Center. On July 17 and in the second half of September 1942, successive deportations to the Bełżec Extermination Center were carried out."*

The source for this information is the same as the one given by Czech: "Ankieta [= Inquiry] GKBZHwP,[237] g.[etto], woj.[ewództwo] krakowskie [= Krakow voivodeship]" (Główna…, p. 151).

The *Encyclopedia of Camps and Ghettos 1933-1945* specifies, based on the same source (GKBZHwP):[238]

> *"Although the ghetto was officially liquidated in 1942, between July and August 1943, more than 250 Jews were killed by the Gestapo in and around Dabrowa. From October to December 1943, members of the Gestapo and the SS shot another 228 Jews in Dabrowa Tarnowska, who had been in hiding. In 1944, there were at least two documented incidents in which members of the Gendarmerie and the SS shot Polish women and the Jewish families they had been hiding."*

The deportation train of 19 September 1943 with its 1,300 gassing victims is therefore not a historical event, but merely one more of Czech's conjectures.

1-30 September 1943 (p. 496)

> *"1,871 women in the Auschwitz-Birkenau women's camp who are included in the camp registers have died; 1,181 were killed with gas."*

Source: "APMO, Mat.RO., vol. VII., p. 485."

---

[235] NOKW-2824, list of females, p. 19: for 7 September 1943, the registration numbers 61184-61215 are assigned to inmates from "Bromb.[erg]."

[236] AGK, NTN, 84, Vol. 3, p. 110.

[237] *Ankieta Głównej Komisji Badania Zbrodni Hitlerowskich w Polsce*, Survey of the Central Commission for the Investigation of Hitlerite Crimes in Poland.

[238] The United States…, entry "Dabrowa Tarnowska," p. 497, and Note 5, p. 498.

Similar observations as for the entries for 1-31 March, 1-30 April and 1-31 August 1943 are due here. The source, propaganda material of the resistance movement, is unreliable and therefore worthless (see the entry for 1-28 February 1943). The alleged gassing of 1,181 inmates is also incomprehensible to the reader of the *Auschwitz Chronicle*, because apart from the fictitious gassing on 3 September, for which Czech could not even appeal to the omniscient Otto Wolken, she does not claim any other selection of registered inmates with subsequent gassing.

3 October 1943 (p. 498)

> *"An SS Camp Doctor carries out a selection among the prisoners in Quarantine Camp B-IIa, during which he selects 139 prisoners. They are killed the same day in the gas chambers."*

Source: "APMO, Dpr.-Hd/6, p. 4." (this page number is incorrect).

The source is Otto Wolken's "Daily Reports" ("*Tägliche Meldungen*"), about which I have already provided the necessary explanations in the Introduction. Wolken's reasoning is simplistic and even puerile, as is clear from his first conjecture:[239]

> *"On 2 October 1943, the inmate census of Camp Sector BIIa*
> *amounted to* *5,971* *persons*
> *On 3 October 1943, the inmate census sank to* *5,832* *"*
> *Difference* *139*
> *Since both the sick sent to the hospital and the two dead of that day have already been subtracted from the inmate census of 2 October 1943, and on 3 October 1943 no detainees were taken away* [*odtransportowano*] *anywhere, the figure of 139 is therefore the number of detainees who were selected and sent to the gas* [*do gazu*]*."*

His conclusion is patently fallacious, because if these 139 detainees were absent on October 3, they had obviously been "taken away" somewhere, but Wolken does not explain how he could possibly know that they went "to the gas" instead of merely being transferred to another camp sector.

The Quarantine Camp was by its nature a type of "transit camp." Irena Strzelecka, author of a well-documented article on that camp, writes in this regard (Strzelecka 1997, p. 106):

> *"Altogether about 32000 female and male inmates were registered in the card-index of the infirmary office of the Quarantine Camp. The majority was inmates destined for quarantine. The rest consisted other prisoners, e.g. evacuees from Majdanek. As mentioned above, the group of Dutch Jews in the Quarantine Camp was not admitted to the camp population. There were probably several such groups. For instance, the so-called depot prisoners were not*

[239] AGK, NTN, 88, p. 5.

> *registered either. Consequently, the number of approximately 32000 prisoners who passed through quarantine according to the preserved documents must be considered as a minimum."*

The Birkenau labor-deployment reports show in several cases even substantial decreases in the inmate occupancy of the "admission quarantine" of Camp Sector BIIa. For example, it dropped from 965 on 2 August to 805 on 3 August 1944; from 2,452 (14 August) to 2,147 (15 August); from 2,638 (16 August) to 1,695 (17 August); from 3,828 (21 August) to 2,311 (22 August).[240] Neither Otto Wolken nor Danuta Czech cried "bloody murder" – by selection followed by gassings – in any of these cases.

Various documents published by I. Strzelecka show that, in the Quarantine Camp, "selections" of patients were made in the form of lists titled with the names of certain diseases. For example, she reports on a letter from the SS garrison physician dated 25 November 1942 requiring all camp physicians to compile lists of malaria patients, and she mentions a "List of malaria patients in Block 16" dated 16 June 1944 (Strzelecka 1997, p. 113). However, these malaria patients were not gassed, but transferred to Majdanek Camp, as Czech also acknowledges in her entry for 3 June 1943 (p. 411):

> *"542 male prisoners and 302 female prisoners who are ill with malaria are transferred to the Lublin (Majdanek) C.C."*

And then again in her entry for 25 November 1943 (p. 534):

> *"All prisoners suffering from malaria in the prisoners' infirmary and convalescent blocks are ordered to be registered. Prisoners with malaria are transferred to Majdanek."*

Otto Wolken's claimed selections with subsequent gassings are therefore merely inconsistent and fictitious conjectures.

7 October 1943 (p. 501)

> *"1,260 Jewish children and their 53 care givers are transferred from Theresienstadt in an RSHA transport. They are killed the same day in the gas chambers."*

Czech explains in a footnote:

> *"The children are from the ghetto in Białystok. Their parents were shot during the uprising in the ghetto August 16-20, 1943. On August 24, 1943, the authorities initially assigned 1,260 children from Białystok to the Theresienstadt ghetto."*

Sources: "APMO, D-RF-3/93, Transport Dn/a; Adler's *Theresienstadt 1941-1945* contains a list with the names of the care givers, pp. 54, 151."

---

[240] APMO, D-AuII-3a/34, pp. 36b, 38b, 59, 61, 63, 65, 71, 73.

In the first, German, edition of her *Auschwitz Chronicle*, Czech had substantiated her gassing claim with an identical reference to Adler's book (Czech 1962, p. 69). In Adler's book, the arrival of a transport of 1,260 children at Theresienstadt is described, and after a couple of pages of long-winded rambling, the following simple sentence appears, which no one could seriously consider a historical source (Adler, pp. 154-156, here p. 156):

"The transport left on 5 October 1943 – to Auschwitz into the gas chamber."

The list in question is headlined "Deportation Dn/a, 'Special Services' departed from Theresienstadt on 5 October 1943." Nothing in this text suggests that the transport was destined for Auschwitz. Bronka Klibanski, who published an excerpt with the above-mentioned heading (Klibanski, p. 103), writes about it (*ibid.*, p. 94):

> *"Only after the war did we learn that they were all transported to Auschwitz and immediately killed in the gas chambers."*

In a footnote, she refers to a statement by a certain Noah Zabludowitsch preserved in the Yad Vashem Archives in Jerusalem (*ibid.*, p. 106, Note 8).

Anna Buchowska, who also authored an article on the affair, summarized Zabludowitsch's testimony in these terms: he recalled "two trucks of children with guardians singing German songs, which went in the direction of the crematoria in 1944. After half an hour, men from the *Sonderkommando* informed him that they were children from Bialystok brought from the Theresienstadt Ghetto, where they had been well-fed and -clothed. All the children (about 80) were thrown alive into burning cremation pits" (Buchowska, pp. 203f.).

This is evidently the nucleus of atrocity propaganda that later developed into the story told by Czech, in support of which, after all, she could neither adduce a single witness from the two great Polish show trials of 1947, nor a simple allusion in the messages of the camp resistance.

The grotesque tale of the children burned alive in cremation pits was repeated in all seriousness by Otto Wolken. It is worth quoting his statements in full, which show that he was a gullible man who did not know what he was saying (or an impostor who knew very well what he was saying):[241]

> *"Pits were dug and covered with tarps, which served as provisional gas chambers; furthermore 2 huge pits were dug to burn the corpses outdoors. Day and night, the 4 chimneys of the crematoria smoked; day and night a thick smoke from the incineration pits lay over the camp, and at night the sky was tinged glowing red for miles around. The work at that time had to be done so quickly that not even the so-called safety time, i.e. the waiting time added to determine death by gas with absolute certainty, was observed, and so it happened that often still-living people were thrown into the flames."*

[241] AGK, NTN, 88, pp. 236f.

In his essay "Chronicle of the Auschwitz II Camp /BIIa," he added the following to this topic:[242]

> *"This was at the time of the large transports from Hungary. The crematoria proved to be too small to incinerate so many thousands of people, and therefore two large trenches were dug in which 5000 and more corpses could be burned concurrently every day. Day and night the stinking smoke covered the whole camp. At night, the sky was dark red for miles around. To collect the fat from the corpses, trenches were dug, and if the fire burned too badly, the fire was revived by pouring on the fat."*

He described ludicrous gassing trenches, mentioned two cremation pits (although just in the northern courtyard of Crematorium V there were supposedly five of them; see the entry for 9 May 1944) where human fat was recovered(!), spoke of the four crematoria chimneys, although there were actually six of them (Crematoria IV and V had two chimneys each), evoked nightly flames of the pyres discoloring the night sky, although Höss stated that "[b]ecause of enemy air attacks, no further cremations were permitted during the night after [=as of] 1944" (Höss, p. 215), and finally told the tall tale of children being burned alive, claiming that this was common practice.

Otto Wolken further stated that Crematoria II and III each had a gas chamber for 4,000 persons (= 19 persons per square meter), and that the furnaces could cremate 3-5 corpses within 20-25 minutes:[243]

> *"The capacity of all 4 crematoria at accelerated operation was thus 11000 per day."*

Despite this, two more "cremation pits" were needed for another 5,000 corpses per day. This madness has its own logic, as it presupposes another madness:[244]

> *"On 16 May 1944, the first transports of Hungarian Jews arrived, 5 to 6 daily, sometimes even 10 transports."*

What credibility can possibly be attributed to such a witness?

8 October 1943 (p. 502)

> *"An SS Camp Doctor carries out a selection in the barracks of the prisoners' infirmary in Women's Camp B-la in Birkenau, during which he selects 156 female prisoners. They are killed in the gas chambers that same day. Afterward, the number of ill female prisoners is 6,261."*

Source: "APMO, D-AuI-3a/370/6, p. 377, Monthly Labor Deployment List."

The reference is misleading, because the monthly labor-deployment lists do not contain death cases, and Czech's deduction is doubly abusive, because

---

[242] "*Chronik des Lagers Auschwitz II /BIIa*," *ibid.*, here p. 61.
[243] *Ibid.*, p. 197.
[244] *Ibid..*, p. 236; see the entries for 24 and 25 May 1944.

she is unable to adduce even one testimony or message by the camp resistance in support of this alleged gassing.

In this specific case of 8 October 1943, the number of inmates belonging to the category "unable to work and undeployable" was 6,417, that of the next day was 6,261, therefore, according to Czech's one-dimensional logic, 6,417 minus 6,261 inmates equals 156 gassed inmates. However, the number of inmates in the category "fit for work and deployable" increased from 26,584 inmates on 8 October to 26,654 on 9 October, hence 70 gassed inmates were resurrected from the dead! Therefore, the census decrease was only (156 – 70 =) 86 inmates, which is the difference between the total census of 8 October (33,001 inmates) and that of 9 October (32,915 inmates).[245] On 8 October 1943, however, seven inmates from a mixed transport were registered (Nos. 64670-64706), so that the actual reduction in census was (86 + 7 =) 93 inmates. Obviously, there is no proof that these 93 missing inmates were gassed. In fact, it is entirely possible that some of them died, some were transferred, and some were released.

Based on a simple subtraction, Czech creates a fictitious event that is also at odds with other data in her *Auschwitz Chronicle*, such as malaria patients transferred to Lublin.

10 October 1943 (p. 504)

> *"An SS Camp Doctor carries out a selection in Quarantine Camp B-IIa, during which he selects 327 prisoners. Among them are the 270 Russian prisoners from Vitebsk. The prisoners selected are killed the same day in the gas chambers."*

Source: "APMO, Dpr.-Hd/6, pp. 4, 5."

Otto Wolken, whom Czech cites, states that on 9 October the census of Camp Sector BIIa was 7,356 inmates, and that a transport with 270 Russians from Vitebsk arrived the next day, bringing the census up to 7,626 inmates. On the evening of 10 October, the census was 7,298 inmates; considering one detainee who had died, this leaves a shortfall of (7,626 – 7,298 – 1 =) 327 inmates, which in Wolken's one-dimensional world were "selected and sent to the gas [*do gazu*] that day."[246]

This is another inconsistent conjecture. I refer back to my Introduction and the discussion of the entry for 3 October 1943.

---

[245] AGK, NTN, 134, p. 285; statistical evaluation by Jan Sehn of the series of reports titled "*Übersicht über den Häftlingseinsatz im K.L. Auschwitz O/S."*

[246] AGK, NTN, 88, p. 5.

20 October 1943 (p. 510)

> *"An SS Camp Doctor carries out a selection in Quarantine Camp B-IIa in Birkenau, during which he selects 293 prisoners. They are killed the same day in the gas chambers."*

Source: "APMO, Dpr.-Hd/6, p. 4."

Otto Wolken states here that the census on 19 October 1943 was 6,205, yet on the next day it dropped to 5,909; since three inmates had died, (6,205 – 5,909 – 3 =) 293 inmates were "selected and gassed" in Wolken's one-dimensional world.[246]

As before, this, too, is just another inconsistent conjecture. I once more refer to my Introduction and the discussion of the entry for 3 October 1943.

22 October 1943 (pp. 511f.)

> *"The occupancy level of the women's camp of Auschwitz-Birkenau, including the prisoners in the auxiliary camps, the headquarters building and the experimental station of Dr. Clauberg, is 33,649. After a selection made on this day, the number is decreased by 1,260 female inmates, including 394 women from the prisoners' infirmary. The selected prisoners are killed in the gas chambers the same day."*

In a footnote, Czech adds:

> *"On the following day, 32,389 female prisoners are accounted for; 6,210 of them are sick or incapable of working (APMO, D-AuI-3a/370/6/377)."*

Sources: "APMO, D-AuI-3a/370/6/377, Monthly Labor Deployment List; Reitlinger, *Final Solution*, p. 131." (She quotes the 1956 German edition of Reitlinger's book)

Czech again claims arbitrarily a gassing event based on a decrease in the inmate census with the derisory support of Reitlinger (see the entry for 3 September 1943), who wrote of a large selection on 22 October 1943 without even specifying whether it concerned the male or female camp (Reitlinger 1953, p. 118).

In the "Monthly Labor Deployment List" of October 1943, the census of the Women's Camp is given as 33,649 inmates for the 22nd, that of the next day is 32,389 inmates, with a difference of 1,260 inmates, whom Czech writes off as having been gassed. It is true that on 23 October the number of inmates belonging to the category "unfit for work and undeployable" was 6,210, but on the previous day there were 6,604, so that the decrease between those two days is 394 inmates. An even-greater decrease was seen in the category "able to work and deployable," which fell from 27,045 on 22 October to 26,179 on the following day, hence 866 inmates less, broken down as follows: 276 in the category "employed" and 580 in the category "unemployed." In conclusion, of the 1,260 missing inmates, 394 were "unable to work and undeployable," and

866 were "able to work and deployable." Following the orthodoxy's logic that inmates unfit for labor were murdered, only the 394 inmates "unfit for work and undeployable" should have been gassed rather than all 1,260 missing inmates.

It goes without saying, however, that there is no evidence that these unfit inmates were indeed murdered. As I pointed out when discussing the entry for 8 October 1943, a decrease of the census by a certain number of sick female inmates does not necessarily mean that they were killed. One may also ask what sense it would have made to gas 394 inmates "unfit for work and undeployable," yet leave the other 6,210 sick inmates alive in the camp. This is all-the-more-absurd since already the next day, on 24 October, the number of these unfit inmates had risen again to 6,299, and kept rising over the following days to reach 6,733 undeployable inmates on 31 October (see Mattogno 2019, Table 34, pp. 204f.).

23 October 1943 (p. 513)

Czech starts a long entry with the following words:

> *"1,800 Polish Jews – men, women and children – arrive in an RSHA transport from Bergen-Belsen. They had received passports for departure to Latin American countries."*

I summarize the rest of Czech's narration: These deportees were "exchange Jews." On arrival at Auschwitz, the women were taken to Crematorium III, the men to Crematorium II. A woman snatched the pistol from SS *Oberscharführer* Josef Schillinger and shot him. SS *Unterscharführer* Wilhelm Emmerich was also shot. Schillinger died while being transported to the hospital.

Sources: "APMO, Dpr.-Hd/1, p. 20; Dpr.-Hd/6, p. 28; D-RO/88, vol. 5a, p. 324. Manuscript of the account of escapee Jerzy Tabeau, who was registered in the camp under the name Wesołoski […]. Eberhard Kolb, *Bergen-Belsen, Vom 'Aufenthaltslager' zum Konzentrationslager* (Bergen-Belsen: From 'Transit' Camp to Concentration Camp), Hanover, 1962, p. 47."

In the first, German, edition of the *Auschwitz Chronicle*, Czech wrote much-more-succinctly, also under the date of 23 October 1943 (Czech 1962, pp. 72f.):

> *"RSHA transport, 1700 Jews (of various nationalities) from Bergen-Belsen Concentration Camp. The prisoners were told that they were going to Switzerland. However, at the unloading ramp in Birkenau, they learned that they had been lied to and that they were in the extermination camp. Then one woman snatched the revolver from an SS man and shot Oberscharführer Schillinger and Unterscharführer Emmerich. Other women threw themselves at the SS men with their bare hands. The SS men called for help. After reinforcement ar-*

rived, some of the prisoners were shot and killed with grenades, the rest were gassed in Crematorium III. The bodies were burned in Crematoria II and III."

This account was based on the Polish sources later indicated by Czech in the 1989 edition. The first one is S. Jankowski's deposition of 13 April 1945 (Höss Trial, Vol. I, p. 20). The passage in question begins with these words:

"In the winter of 1943/1944, a transport of 1,750 American citizens from Warsaw arrived at Birkenau, including men, women and children. These people were told that they were going to Switzerland."

The rest of the story is almost identical to the one told by Czech in 1962 (Bezwińska/Czech 1992, pp. 55f.):

"The whole transport was brought in front of crematoria II and III. Here they learnt from someone that they were destined to die and then a certain woman from the transport snatched the revolver from Quakernack and shot down Rapportführer Schillinger. Other women hurled themselves upon the SS men. The SS men demanded assistance. When it came the majority of the people from that transport were shot down and killed with grenades, the remainder were gassed in crematorium III. The corpses were cremated in crematoria II and III."

The reference to Vol. 6, p. 28, of the Höss Trial points to the interrogation of Otto Wolken on 24 April 1945, but the page reference is incorrect. In this matter, the witness stated:[247]

"On 24 October 1943, a transport of so-called American Jews from Warsaw arrived in Birkenau. Whether they were real Americans or Jews who had obtained a false American passport, I do not know. These people were told that they had to go to Switzerland. From an indiscretion of someone from the Sonderkommando in whose hands this transport found itself in Birkenau, they learned that they were going to die in the crematorium. This transport included 1,700 men and women. A woman snatched the pistol from an SS man and shot Lagerführer Schillinger and another SS man in his entourage – I do not know his name – and also wounded 3 SS men and among them Schillinger's successor, the future Lagerführer Schwarzhuber."

Jerzy Tabeau's report was published in 1945 in German by Abraham Silberschein. Here is his account (Silberschein, pp. 67f.):

"In one single case, the reflex of self-defense was fully successful. This was in September or October 1943. At night, a woman transport came into the crematorium. The escorting SS men swooped among the arrivals, ordered them to undress, and drove them into the chamber. This was the best opportunity to steal: to pilfer rings, wedding bands, watches and other jewelry. Those who do this have to maltreat their victims in order to have an explanation for their presence there and to maintain the appearance that they only perform an offi-

[247] AGK, NTN, 88, pp. 26f.

> *cial function. In the ensuing turmoil, a woman snatched the revolver from Scharführer Schillinger, and wounded him with three bullets, so that he died the next day. This was the signal for the rest of the women to lunge for the SS men. They bit off the nose of one of them; another one had his head bashed in. Not one managed to get away."*

From these narratives (which exist in multiple variations), Czech wove a story by taking an element from here and another from there. According to her sources, this alleged transport had arrived in September-October 1943, or in the winter of 1943/1944, or on 24 October 1943, and it contained 1,700 or 1,750 men or women, or an indeterminate number of women only. In the 1989/1990 editions of her *Auschwitz Chronicle*, Czech assumed none of these conflicting claims, but created her own, new version of the event.

There are, in fact, completely different versions of this event. One of them was laid out in an interrogation of 25 July 1945 by a certain Stanisława Rachwałowa, who insisted that "Schyllinger" [*sic*][248]

> *"died in his service room at the hands of a Polish Jewess who had arrived with a transport from France. This Jewess, alerted to Schillinger's intentions, found herself alone with him in the service room, probably taking advantage of his inattention, shot him with a pistol, then committed suicide."*

I do not have access to Eberhard Kolb's book, but in a parallel essay that appeared in 1970 he mentioned a transport of "about 1700 members of the Polish group – without exception owners of so-called promesas" who were supposed to go to the camp of "Bergau," near Dresden, but instead were sent to Auschwitz on 23 October 1943. However his source is none other than the first, German, edition of the *Auschwitz Chronicle* (Kolb, p. 135).

No such transport is substantiated by any document, and the related accounts are more-or-less-edifying anecdotes rather than actual history (see Mattogno 2020, pp. 312-316).

1-31 October 1943 (p. 517)

> *"2,274 female prisoners die in the women's camp of Auschwitz-Birkenau Concentration Camp; 1,545 are killed with gas."*

Source: "APMO, Mat.RO., vol. VII, p. 485."

Similar observations as for the entries for 1-31 March, 1-30 April, 1-31 August and 1-30 September 1943 are due here. The source, propaganda material of the resistance movement, is unreliable and therefore worthless (see the entry for 1-28 February 1943).

In this specific case, the figure is also absurd, because the total number of death cases in October 1943 was 1,442 (Mattogno 2019, Table 23, pp. 256f.),

[248] Höss Trial, Vol. 3, p. 115.

so the number of registered female inmates allegedly gassed during that month would have been higher than all the death cases, men and women, combined!

5 November 1943 (p. 520)

> *"4,237 Jewish men, women, and children from the Szebnie labor camp arrive in an RSHA transport. After the selection, 952 men and 396 women are admitted to the camp and given Nos. 160879-161830 and 66702-67097. The remaining 2,889 people are killed in the gas chambers."*

Sources: "APMO, Dpr.-Hd/6, p. 79 ; D. AuII-3/1, p. 15, Quarantine List."

I have discussed the "*Quarantäne-Liste*" at length in the Introduction. This list records the arrival of 396 women on 5 November 1943, and a day later, on 6 November, the arrival of 952 men from "Trzebinia" (Reg. Nos. 160879-161830), as well as the gassing of 2,889 male inmates.[249]

Czech added up the indicated figures (952 + 396 + 2,889), and thus obtained a transport of 4,237 deportees, which is illogical and fallacious. In fact, she considered the transport to be composed of 3,841 men, of whom 952, or 24.8%, were registered, and of 396 women, of whom 100%, hence all, were registered!

In order to conjure up this mammoth transport, she arbitrarily moved the arrival of the male transport from "Schebnia" (written like this in the handwritten report) from the 6th to 5th of November in order to make it coincide with the assignment of the set of female registration numbers 66702-67097.[250]

Finally, Czech, who is otherwise always ready to take at face value any witness statement that serves her agenda, forgets the 1945 statements of the brothers Witold and Jan Jakubowicz, at that time 13 and 17 years of age, who stated (Borwicz *et al.*, p. 187):

> *"We stayed in Szebnia eight days. On November 4* [1943], *there was a* [transfer] *action. A transport of 2,650 people, including our parents, went to Auschwitz."*

The two brothers said nothing about the fate of the deportees.

Immediately following the entry of 6 November, the "*Quarantäne-Liste*" contains another entry concerning "Schebnia": 48 alleged gassing victims as well as the registration of nine inmates (161866-161874),[251] but in her entry for that day, Czech merely writes (p. 520):

> *"10 prisoners sent in a group transport receive Nos. 161866-161875."*

She evidently did not want to mention a second transport from Szebnia of merely (48 + 9 =) 57 prisoners after the first one of 4,237! These nine regis-

---

[249] GARF, 7021-108-50, p. 64.
[250] NOKW-2824, list of females, p. 32. The origin of these inmates is not indicated.
[251] APMO, D-AuII-3/1, p. 3.

tered detainees were undoubtedly part of the aforementioned transport, so that there were a total of (952 + 9 =) 961 registered detainees.

The claimed number of deportees in that transport, and the claimed gassing with the number of gassing victims are therefore purely fictitious.

14 November 1943 (p. 526)

> *"An SS Camp Doctor makes a selection in Quarantine Camp B-IIa in Birkenau. He selects 219 prisoners. They are killed in the gas chamber the same day."*

Source: "APMO, Dpr.-Hd/6, p. 5."

Otto Wolken states that on 14 November 1943 the census of Camp Sector BIIa was 4,707 inmates, which increased to 5,146 due to the arrival of 75 Soviet PoWs and 364 Poles from Radom. On that day, 200 prisoners were transferred, 34 were sent to the infirmary, and three died, so the new occupancy stood at [(4,707 + 75 + 364) – (200 + 34 + 3)] = 4,909. In his warped mind, Wolken throws all these 237 inmates into the gas chamber and declares them as murdered: "selected and went to gas [*w gaz*]."[252]

This is another inconsistent conjecture. See my Introduction and my discussion of the entry for 3 October 1943. But we also have a disconnect here. According to the "*Quarantäne-Liste*," compiled by Wolken himself, the 75 PoWs are said to have arrived on 13 November, but the transport from Radom of 364 Poles arrived on the 12th,[253] so it is included in the census of the 13th, not that of the 14th. Consequently, the 364 Poles are already included in the census of 13 November, and the variation from the 13th to the 14th of November was in fact: [4,909 – (4,707 + 75) =] +127 inmates – were they perhaps resurrected from the gas chamber? Of course not, but this shows that the variations calculated by Wolken do not reliably reflect the real increases and losses of the inmate census of Camp Sector BIIa, and are therefore generally unreliable.

Czech should have been aware of this problem, because she records the arrival of the Polish inmates precisely on November 12 (p. 525).[254]

19 November 1943 (p. 530)

This is a long entry, of which I report the essential points:

> *"A selection takes place in the women's camp in Birkenau and 394 Jewish prisoners are selected. As they are transported to the gas chambers in vehicles, Bina Braun (No. 62390) and Rosa Thieberger (No. 66462), who have tried to escape and hide in the camp, are shot. The rest are killed in the gas*

[252] AGK, NTN, 88, pp. 5f.
[253] APMO, D-AuII-3/1, p. 3.
[254] Czech mentions 362 inmates instead of 364, because she overlooks the two additional inmate numbers (beyond the 162220-162581 series) 123661 and 123665.

chambers. […] *The list of 394 selected female prisoners is signed by Camp Commander SS Second Lieutenant Hössler. A copy of the typewritten list, stolen in the women's camp and turned over to a cell of the resistance organization in the main camp, is sent by Stanisław Kłod*[z]*iński to Krakow on November 21, 1943, for use and transmission of the original to London."*

Source: "APMO, Mat.RO, vol. 1, p. 41, vol. IV, pp. 267-271. The date of the selection is confirmed by the enumeration in the monthly labor deployment list."

First of all, it should be noted that this presumed selection with subsequent gassing is in contrast to the list of presumed gassings from February 1943 to 15 January 1944 that I presented when discussing the entry for 1-28 February 1943. In fact, no gassings are reported in that list for the months of May, June, July and November.

That a selection took place on 19 November 1943, and that the two inmates Braun and Thieberger were killed while being taken to the gas chambers is based entirely on Czech's lurid fantasy, who also invented the date. It is untrue that this is confirmed by the "monthly labor-deployment list." In fact, this list records the following changes in the camp's inmate occupancy:[255]

November	Occupancy	*Inmates unfit for work/undeployable*
18	33,428	7,405
19	34,201	7,582
20	34,176	7,673

Therefore, the number of inmates whose unfitness is said to have made them candidates for gassing *increased* rather than decreased!

The document invoked by Czech is a simple list of female inmates starting at number 101 (the first page is missing) and ending at number 394. The list contains a serial number, the first and last name, the registration number, the remark "Jüdin" (for all of them), the date and place of birth. The list is ordered by ascending registration numbers. The last two inmates are:[256]

"393. Braun Bina 62390 Jewess, shot while fleeing

394. Thieberger Rosa 65462 " " " ."

In order to somehow justify her delusions, Czech does not even have the pretext of the initials "G.U." for her habitual misinterpretations, since the first page is precisely unknown. Judging by its nature, however, this is clearly a transfer list.

---

[255] AGK, NTN, 134, p. 286.

[256] AGK, NTN, 155, pp. 267-271. The preceding page (266) is the last page of the list of female inmates of 21 August 1943.

In November 1943, a total of 1,832 inmates died at Auschwitz (of which only 1,728 are recorded in the Death Books, which have certain gaps).[257] From the 19th to end of the month, there were 748 death cases (Mattogno 2019, Table 23, pp. 256f.). By cross-referencing the inmates' dates of death with the (continuous and progressive) registration numbers of the Death Books, I ascertained that for this period only 26 inmates' names are missing in the Death Books. If, therefore, 394 inmates had been killed on 19 November, they would be among the (748 – 26 =) 722 known names (96.5% of the total). The fact is that among all those inmates who died between 19 and 30 November and throughout the month of December, only two names appear that are also on the list cited by Czech:

– Braun, Bina, born 21.9.1910 in Jedrzejow, died 4.12.1943, Death Book No. 33663.
– Thieberger, Rosa Sara, born 26.5.1915 in Mährisch Ostrau, died 4.12.1943, Death Book No. 33614.

These two inmates, allegedly killed while being transported to the gas chambers together with 392 other Jews on *19 November* 1943, actually died on *4 December*, and none of the other 392 women who Czech claims died in the "gas chambers" appear on the death list.

Therefore, this alleged selection with subsequent gassing is also purely imaginary.

1-30 November 1943 (p. 537)

> *"In Auschwitz I, Auschwitz II, and Auschwitz III, 2,018 registered male prisoners died."*

Source: "APMO, D-AuI-3a/370/7/424," Czech's calculation based on the labor-deployment list.

> *"In the women's camp of Auschwitz-Birkenau, 1,603 registered female prisoners died; 394 female prisoners were killed in the gas chambers."*

Sources: "APMO, Mat. RO., vol. VII, p. 486; vol. IV, pp. 267-271 [women's camp]."

The total mortality for November 1943 would therefore be 3,621 inmates, but it was actually 1,832 (see the previous entry). As for the female inmates, similar observations as for the entries for 1-31 March, 1-30 April, 1-31 August, 1-30 September and 1-31 October 1943 are due here. The sources, propaganda emanations of the resistance movement, is unreliable and therefore worthless (see the entry for 1-28 February 1943). Moreover, Czech's source does not mention any gassing of female prisoners for November 1943.

---

[257] In Mattogno 2019, pp. 277-365, I have listed 3,452 identified names of inmates who died at Auschwitz according to a variety of documents whose names are not contained in the Death Books – not even in the published version (Staatliches Museum…).

The Czech procedure is patently arbitrary and fallacious.

9 December 1943 (p. 543)

> *"13 Jewish prisoners transferred from Vienna on December 2 are taken out of Quarantine Camp B-IIa in Birkenau and killed in the gas chamber."*

Source: "APMO, Dpr.-Hd/6, p. 24; DauII-3/1, p. 4, Quarantine List." (The pages numbers are incorrect).

The "*Quarantäne-Liste*" merely records the arrival of 13 "D.J." [*deutsche Juden*, German Jews] from Vienna on 2 December 1943, who received the registration numbers 165331 through 165343.[258] The other source refers to a sentence uttered by Wolken. After mentioning the arrival of the aforementioned 13 inmates, he comments:[259]

> *"After a week, they were presumably taken to the Sauna and have not returned since."*

The handwritten "*Quarantäne-Liste*" has a note in the margin that says "transferred on 9 December to the sauna" ("*ab. Am 9./XII nach Sauna*"), so the 13 prisoners were really sent to the Sauna, which probably refers to the so-called *Zentralsauna*, the camp's main shower and disinfestation facility. But how can one deduce from this fact that they were killed, and exactly with poison gas?

Wolken himself states in another context that some of the detainees had to "go through the sauna /bathing facility/; after all, this has always been common procedure when being transferred from one camp sector to another" (see the entry for 2, 10 and 11 July 1944). This was indeed standard practice.

10 December 1943 (p. 544)

> *"Late in the evening, 334 Russian POWs are chosen from the Quarantine Camp B-IIa in Birkenau. These are prisoners wounded in the war and transferred from Viljandi on November 28. They are taken to the gas chambers and killed. To cover up killing the POWs, the camp administration circulates the story that the prisoners were transferred to Majdanek."*

Source: "APMO, Dpr.-Hd/6, p. 24; D-AuII-3/1, p. 4, Quarantine List." (The pages numbers are incorrect).

In his statement of 24 April 1945, to which Czech refers, Wolken mentioned the arrival of these 334 POWs, and he explained:[259]

> *"On 10 December 1943, late in the evening, trucks arrived and took away this entire group, i.e. 334 Russians, to transport them directly to Lublin."*

---

[258] APMO, D-AuII-3/1, p. 3.
[259] AGK, NTN, 88, p. 23.

These PoWs do not even appear among those "selected" in his essay "Camp Pictures" ("*Lager-Bilder*").

It is known that during that time a "Military Hospital for Soviet-Russian War Invalids" existed at the Majdanek Camp, which was opened on 21 May 1943 with the first transport of 299 Soviet invalids. On 31 December 1943, this hospital accommodated 2,184 invalids, and by 1 January 1944, this number had risen to 2,527. During the period from 26 April to 25 May 1944, the mortality rate of these invalids was 116 out of 2,450, hence 4.7%. At the beginning of July 1944, when the evacuation of the Lublin-Majdanek Camp began, 1,250 Russian soldiers, unfit for work (sic), were transferred to other camps inside the Reich. 480 Soviet PoWs unfit for labor were left behind at the Majdanek Camp, which were taken over by the Soviets.[260]

Therefore, a real transfer of these PoWs to the Majdanek Camp is much more likely than a very random gassing.

12 December 1943 (p. 546)

> *"In the women's camp in Birkenau, 9,324 female prisoners are sick and unable to work. An SS Camp Doctor along with SS men and female overseers carries out a selection and selects 2,106 prisoners. They are killed in the gas chambers the same day. The next day, 7,418 female prisoners are sick and unable to work."*

Source: "APMO, D-AuI-3a/370/7/438, Monthly Labor Deployment List; Mat.RO, vol. I, pp. 50ff.: Seweryna Szmaglewska, *Dymy nad Birkenau* (Smoke over Birkenau), Warsaw, 1946, p. 199."

I do not have access to this message of the resistance movement (Mat.RO.). In the aforementioned book, Seweryna Szmaglewska presents a long-winded and fuming narrative in relation to a "*Sortierung*" (German in the text = sorting), of which she does not indicate the date, and whose outcome she describes as follows (Szmaglewska, pp. 199f.):

> *"As a result of fall selection, completely healthy, well-fed, young Jews are on the list of those destined for gassing.* […] *Thousands* [of female detainees] *wandering among the latrines and blocks of 'Muslims,' thousands of sick and healthy* [female detainees] *disappear from the camp area like mayflies that someone was trying to entrap in the palm of their hand."*

This novelistic reference is therefore entirely specious and insignificant.

The "monthly labor-deployment list" does indeed record 9,324 inmates in the category "unable to work and undeployable" on December 12, and 7,418 the next day, which is a difference of 1,906 inmates rather than 2,106. However, the category "able to work and deployable" shows 21,939 on 12 December and 23,057 the next day, an increase of 1,118 inmates. In practice (since

[260] Siwek-Ciuapak, pp. 14, 19, 22f.; cf. Kranz 2008, p. 40; 2007, p. 16.

there were no new admissions), 1,118 previously "unfit for work and undeployable" inmates were reclassified as "fit for work and deployable." The actual decrease of the camp's occupancy was 788 inmates, sinking from 31,263 on 12 December to 30,475 the next day.[261] Mortality was known to be very high at that time, even among female inmates. A list of deaths on 6 December records 296,[262] but the total number of deaths was 372. During the following two days, there were 318 and 359 death cases, respectively, and 80 cases on 12 December. In the following week, 942 male and female inmates died (Mattogno 2019, Table 23, pp. 256f.). It is therefore impossible that the missing 788 inmates were killed and recorded as dead the following days, because that would mean that during that one week just (942 – 788 =) 154 inmates would have died a natural death, an average of 22 per day.

The number of sick or incapacitated female inmates, which numbered 7,418 on 13 December, rose steadily over the next few days until it exceeded 8,000 on 22 December and reached 8,388 on 30 December (*ibid*., Table 36, pp. 206f.).

The average total occupancy (males and females) was 35,520 inmates in January 1943, of whom those unfit for work and undeployable numbered 4,826, 14.8%. In December 1943, the occupancy was 86,800 inmates, of whom 18,741 belonged to the above category, 21.6%. Therefore, throughout the year 1943, the number of inmates unable to work and undeployable increased both in percentage and in absolute number. This fact alone should be a relief for Czech's gas pains: inmates unfit for work evidently were not killed.

1-31 December 1943 (p. 557)

> *"8,931 female prisoners die in the women's camp in Auschwitz II; 4,247 of them are killed with gas after selections in the camp and in the prisoners' infirmary."*

Source: "APMO, Mat.RO., vol. VII, p. 486."

> *"5,748 male prisoners die in Auschwitz I, II, and III."*

Source: "APMO, D-AuI-3a/370/7/448, Monthly Labor Deployment List." Czech's calculations.

The total number of dead would therefore be 14,679. This is sheer madness, because the real number, attested by documents, is 4,635! (Długoborski/Piper, Vol. II, pp. 190f.)

The number of those allegedly gassed is also of great embarrassment to Czech, because she "documents" less than half of them (2,106 out of 4,247) with the fictitious gassing of 12 December. But even if one were to take this

[261] AGK, NTN, 134, p. 260.
[262] The first and last pages of this list are published in Długoborski/Piper, Vol. II, pp. 190f.

sham gassing seriously, how can the remaining 2,141 be justified? When and under what circumstances were these detainees gassed?

1944

2 January 1944 (p. 566)

> *"An SS Camp Doctor conducts a selection in Men's Quarantine Camp B-IIa in Birkenau, during which he selects 141 prisoners. They are all killed the same day in the gas chambers."*

Source: "APMO, Dpr.-Hd/6, p. 5."

Otto Wolken states that the occupancy of Camp Sector BIIa was 3,924 inmates on 1 January 1944, and 3,759 the following day. 12 inmates went to the hospital, and another 12 to the "Convalescence" Block, so the difference is [3,924 – 12 – 12 – 3,759 =] 141 inmates. Wolken then states:[263]

> *"In the notebook, under the heading Abgang, I indicated 144 persons, pointing out in the note that they were selected. However, only 141 people went to the gas* [*do gazu*]*, because 3 prisoners were withdrawn from the group destined for the gas at the request of the Political Department."*

In the entry for 2 January 1944 of Wolken's "Daily Reports" (the "notebook" mentioned in the above quote), the number 144 actually appears in the column "*Abgang*," which lists reductions in the occupancy, and in the next column ("*Bemerkungen*" – "remarks") is written "*Selektion*". But this does not prove anything, both because "*Selektion*" was written by Wolken himself (who could write whatever he wanted in his notebook), and because the word "*Selektion*" does not prove that it was a selection "for the gas" instead of, for example, for a transfer to a different camp sector or a different camp altogether. The argument is, moreover, a double-edged sword, for one can legitimately ask why Wolken, while having listed 14 selections with subsequent gassings as such, felt the need to enter only the word "*Selektion*" for this entry.

12 January 1944 (p. 569)

> *"Nearly 1,000 male and female Jewish prisoners are transferred from Stutthof Concentration Camp, near Danzig. After the selection, 120 men, given Nos. 171795-171914, and 134 women, Nos. 74177-74310, are admitted as prisoners to the camp. The remaining 746 people are killed in the gas chambers. Among those killed are 386 men."*

Source: "APMO, D-AuII-3/1, p. 5, Quarantine List"

For 13 January 1944, the "*Quarantäne-Liste*" shows the entry of "P.J." (Polish Jews) from Stutthof, registration numbers 171795-171914, and the

[263] AGK, NTN, 88, p. 6.

column "*Stand*" (situation, strength) has the number 386,[264] which Czech interprets as number of gassing victims, probably because, in the typewritten and expanded version of the "*Quarantäne-Liste*" contained in the protocol of Wolken's interrogation by J. Sehn on 24 April 1945, they have the added remark "gassed" ("*vergast*").[265]

On 10 January 1944, the Political Department of the Stutthof Camp compiled two lists of inmates who were to be transferred to Auschwitz, one for males, the other for females. The male list is headed "Transport list concerning male Jewish inmates to be transferred on 10 October 1944 to Auschwitz Camp" and contains 121 names, but one (Abraham Zwillineg, No. 77 on the list, born 10 August 1912, Registration Number 26734) turns out to be "struck out" ("*gestrichen*"), therefore only 120 male inmates were transferred.[266]

The "Transport list of Jewish female prisoners to be transferred on 10.1.1944 to KL Auschwitz" lists 138 female prisoners, but three are also "struck out,"[267] therefore only 135 female inmates were transferred.[268]

The entire transport thus numbered 255 inmates, 120 men and 135 women. The gassing of 746 Jews is therefore another one of Czech's pure inventions.

13 January 1944 (p. 569)

> *"Approximately 2,000 Jewish men and women from Bendin* [=Bendsburg] *and Sosnowitz arrive in an RSHA transport. After the selection, 221 men and 136 women are admitted to the camp, where they are assigned Nos. 171915-172135 and 74313-74448, respectively. The approximately 1,643 remaining people, among them 896 men, are killed in the gas chambers."*

Source: "APMO, D-AuII-3/1, f. 5, Quarantine List."

Here, too, Czech refers to Wolken's "*Quarantäne-Liste*." According to Wolken, the transport contained (221 + 896 =) 1,117 men and 883 women, but this is unsubstantiated and arbitrary.

The set of female registration numbers ranging from 74313 to 74448 was indeed assigned on 13 January 1944,[269] but it is unknown how many female inmates arrived at Auschwitz or even from where, and there is no certainty that they came from Bendsburg and Sosnowitz.

Obviously Czech has no evidence for the number of male inmates either, and the alleged 1,117 male deportees are just an unsubstantiated claim by Wolken.

[268] AMS, I-IIC-3, pp. 1-3.
[269] NOKW-2824, list of females, p. 24.

1-15 January 1944 (p. 571)

> *"2,661 female prisoners die in the women's camp in Birkenau, 700 of them selected and killed in the gas chambers."*

Source: "APMO, Mat.RO., vol. VII, p. 486."

Similar observation as for the entries for 1-31 March, 1-30 April, 1-31 August, 1-30 September, 1-31 October and 1-30 November 1943 are due here. The source, propaganda material of the resistance movement, is unreliable and therefore worthless (see the entry for 1-28 February 1943)

The alleged 700 murdered inmates represent another holocaustic conundrum, because Czech does not say when or under what circumstances they were selected and gassed.

21 January 1944 (pp. 574f.)

> *"An SS Camp Doctor conducts a selection in the prisoners' infirmary, B-IIf, where he looks for prisoners with typhus. They are killed on the same day in the gas chambers. Among those killed are 35 prisoners who had been transferred the day before from Men's Quarantine Camp B-IIa to the prisoners' infirmary B-IIf, without having been positively diagnosed as having typhus."*

Source: "APMO, Dpr.-Hd/6, p. 25."

In his statement of 24 April 1945, Wolken stated:[270]

> *"In January 1944, a typhus epidemic broke out in our section of Camp BIIa. We had to send the inmates suffering from this disease to the BIIf camp hospital. I enclose a list of typhus patients which contains 66 names, from 7 January 1944 to 31 January 1944. We became interested in the fate of these sick persons in order to ascertain whether the examination for typhus was positive. On that occasion, we learned that the inmates mentioned in the list under numbers 13, 17, 39 and 50 had died of typhus. The prisoners listed under numbers 1, 2, 3, 4, 5, 6, 11, 14, 15, 16, 18, 20, 22, 23, 25, 26, 27, 28, 31, 32, 33, 34, 35, 36, 37, 38, 40, 41, 42, 43, 45, 48, 49, 51 and 52 were sent to be gassed on 21 January 1944. Among them were some of those for whom typhus had actually been diagnosed, the others were properly under observation. From a medical point of view, I must point out that all of these persons sent to be gassed, both the sick and those suspected of typhus, were curable. The natural mortality rate among the typhus patients was very low: my statistics, which I have presented, show that out of 180 typhus patients only six died a natural death from the disease."*

According to the witness, 66 inmates were transferred to Camp Sector BIIf, of whom four died, 35 allegedly were gassed, and the remaining 27 survived. Therefore, there was a first selection at Camp Sector BIIa, and a second selection at Camp Sector BIIf, after which the 35 detainees who were either sick

[270] AGK, NTN, 88, pp. 24f.

with typhus or were suspected of it were gassed, but since all 66 were transferred precisely because they were suspected of typhus, it is unclear why only 35 of them should have been gassed. There is no need to point out that the alleged gassing comes from anonymous hearsay information whose source is unknown ("we learned").

The list of 66 prisoners mentioned by Wolken was published by Irena Strzelecka (1997, pp. 121-123). It is divided into six columns: "serial number" (L.N.), "date," "inmate number," "last and first name," "block diagnosis" and "remark". At the end, it bears the inscription "Typhus cases January-February 1944."[271] The dating is not consecutive, and runs from 14 December 1943 (#10 on the list) to 31 January 1944. The column "remark" shows dates sometimes followed by illegible writing. The exact meaning of these dates, which are distributed as follows, is unknown:

Serial Numbers	Date	Serial Numbers	Date
1-4	8 January 1944	45-48	19 January 1944
5-13	9 January 1944	49-52	21 January 1944
14-15	11 January 1944	53	23 January 1944
16-26	12 January 1944	54-55	25 January 1944
27	14 January 1944	56	28 January 1944
28-33	15 January 1944	57-59	29 January 1944
34-37	16 January 1944	60	30 January 1944
38-42	18 January 1944	61-64	1 February 1944
43-44	17 January 1944	65-66	10 February 1944

If the alleged gassing indeed took place on 21 January 1944, then how come this date is only noted next to four inmates? In other words, this list does not contain the slightest proof of an alleged killing of these 35 inmates.

Otto Wolken returned to this alleged selection in another statement as well:[272]

> *"On 21 January 1944, during the big selection, when almost the rest of the Jews in the camp were to be gassed, I visited a patient in the block where the victims had been locked up."*

The two statements are clearly contradictory.

That those inmates suspected of being infected with typhus were not killed, as Wolken claims, is clear from the series of daily labor-deployment reports headlined "Auschwitz Camp II – Labor Deployment for…," which Czech knew well. The labor-deployment reports that have been preserved (from 28 July 1944 onward) have a category in the section "Inmates and Gypsies Unfit for Work and Undeployable" which is headed "Quarantine Due to Suspicion

[271] Wolken was Austrian, hence he wrote "*Jänner – Feber"* instead of "*Januar – Februar*."
[272] *Ibid.*, p. 225.

of Typhus." It shows that in early August 1944, 385 inmates were in that category in Camp Sector BIId.[273]

22 January 1944 (p. 575)

I will discuss two paragraphs of this entry. The first reads:

> *"In the prisoners' infirmary in Auschwitz I, an SS Camp Doctor checks again the 800 Jewish prisoners who were selected on January 20, and registers 220 as seriously ill. They are brought to Birkenau the same day and killed in the gas chambers."*

Source: "APMO, Mat.RO, Józef Cyrankiewicz File; vol. II, p. 62."

The report from the resistance movement Czech refers to is extremely terse:[274]

> *"On 22 January 1944, 220 Jews – seriously ill – were brought from KL Auschwitz to be gassed."*

The unknown author of this unverifiable and therefore insignificant "news" did not even care to specify in which crematorium the gassing supposedly took place, but simply said that they went "to the gas" ("*na gaz*").

The second of Czech's paragraph of interest is the following:

> *"An SS Camp Doctor carries out a selection in Men's Quarantine Camp B-IIa, during which he selects 542 prisoners. They are killed the same day in the gas chambers."*

Source: "APMO, Dpr.-Hd/6, p. 7."

Otto Wolken states the following: on 21 January 1944, the occupancy of Camp Sector BIIa was 2,880 inmates. The next day, it was 2,221. On that day, 117 inmates were transferred, 100 went "on transport" ("*auf Transport*"), 15 were admitted to the inmate infirmary, and two died, so the census, Wolken claims, effectively decreased by 542 inmates, who in Wolken's beclouded mind were all selected and gassed.[275] However, the decrease was in fact [2,880 – (117 + 100 + 15 + 2) – 2,221 =] 425 inmates. Wolken adds that in his "Daily Reports" he noted on 22 January 1944 that 542 prisoners had gone to the "Sauna," which is true,[276] but this figure can certainly not affect the census of 22 January, because these 542 prisoners in question are precisely part of the census of 2,221 inmates. It should therefore affect the census of 23 January, which is 2,185 prisoners. Since on 22 January in the column "Losses" another 100 inmates are noted in addition to these 542 inmates, and because the heading "Admissions" has no figures, the census on 23 January should have been

[275] AGK, NTN, 88, p. 7.
[276] APMO, D-AuII-5/1, p. 12.

[2,221 – (542 + 100) =] 1,579, but instead it is precisely 2,185. This is another confirmation that Wolken's figures and the calculations and claims based on them are completely unreliable.

23 January 1944 (p. 576)

> *"An SS Camp Doctor conducts a selection in the Gollenschau* [sic] *A.C. in which he selects 26 Jewish prisoners. The selected prisoners are transferred to Birkenau. In general, the transfer of sick prisoners to Birkenau is equivalent to sending them to the gas chambers. The list of names of the selected and transferred prisoners is signed by the then Squad Leader, i.e., the Camp Commander of the auxiliary camp, SS Staff Sergeant Mirbeth."*

Source: "APMO, D-AuIII/Golleschau/12, pp. 48f.

The list in question, reproduced by Jerzy Frąckiewicz, is headed "*Kommando* Golleschau" and is dated "Golleschau, 23 January 1944." The following explanation is given in it:

> *"The prisoners listed below, who had been discharged by the camp physician, were transferred today."*

The list has the serial number, first and last name as well as the nationality of 26 inmates, all of them Jews. Below the list is the handwritten remark: "*Wohin* [where to]? Birkenau" and at the bottom the stamp "25 Jan 1944" and next to it "*Kommandoführer* SS-Oscha." with an illegible signature (Frąckiewicz, p. 73). Frąckiewicz comments this list as follows (*ibid.*, p. 64):

> *"There is a presumption that these prisoners were directed to the infirmary at Birkenau (BF)* [Sector BIIf] *and from there they were sent to the gas chambers as unfit for work."*

However, he adds (*ibid.*, p. 65):

> *"In Golleschau Camp, killing by phenol injections was also performed."*

But if that is so, then one cannot understand why these 26 prisoners allegedly were sent to die in Birkenau. There is not the vaguest indication that they were killed (neither with lethal injections, nor by gassing or shooting), because everything boils down to a malicious and arbitrary interpretation of their transfer to Birkenau.

Czech is forced to invent for the occasion a general SS directive of what allegedly had to be done with sick inmates transferred to Birkenau, namely that, "[i]n general, the transfer of sick prisoners to Birkenau is equivalent to sending them to the gas chambers." That this is untrue is confirmed by the "*Nummernbuch* 150001-200000," which records changes regarding the inmates who had these registration numbers assigned to them. In fact, twelve of the 26 inmates on that Golleschau list had numbers of the series 150000 and

157000.[277] Of these, six do not show any changes, two were "*üb*.[*erstellt*]," meaning transferred, three died ("†") with no indication of the date of death, and one was transferred to Jaworzno Camp:

– 150787, Sommerfeld Hermann, "*üb*."
– 157803, Tajtelbaum, Szlama, "*üb*."
– 157804, Tatarka, Isaak , "†"
– 157819, Wargon, Jakob, "†"
– 153831, Zielonka, Dawid, "†"
– 153832, Zielonka, Chaim, "Jaworzno."

The *Kommandobuch Arbeitskommando Golleschau* (Unit Book of Labor Unit Golleschau) records 2,348 inmates in six columns showing a serial number ("*Lauf. Nr.*"), the inmate's registration number ("*Häftl. Nr.*"), date and place of birth ("*geb. am*" and "*geb. in*") and "Remarks" ("*Bemerkungen*"). The latter column contains an "A" (for *Abgang*), if the inmate left the unit, and a date. In case of death, the date is marked with a cross ("†"; this applies to 140 inmates). Sometimes, the remark "shot while fleeing" appears ("*auf d. Flucht erschossen*").[278] At least 20 of the 26 above-mentioned inmates were transferred:

Serial Number	Reg. Number	Serial Number	Reg. Number
334	49379	1440	157644
1198	114490	1441	157803
1251	116857	1452	157804
1297	157832	1461	157819
1387	124530	1462	157831
1392	157619	1485	116061
1393	157625	1523	77519
1395	157626	1538	117260
1403	157628	1539	124192
1404	157639	1540	124433

These documents show that the 26 aforementioned prisoners did not die all at once on 23 January 1944, so they were not killed on that date in the alleged gas chambers.

3 February 1944 (p. 581)

> *"247 Jewish prisoners from the Neu-Dachs A.C. are killed in the gas chambers of Birkenau. The list of those selected was put together on January 18, 1944. It contained the names and numbers of 254 prisoners. Four prisoners died in the meantime, and three were stricken from the list."*

[277] APMO, D-AuI3/1,2; NOKW-2824, *Nummernbuch*.
[278] ROD, c[21-23].31. Copy of the original, certified by the Dutch Red Cross on 15 December 1947.

Source: "APMO, D-AuIII, Jaworzno, Folder III, pp. 144-148."

In a footnote, Czech explains:

> *"The list of names from January 18 contains the abbreviation 'SB' ('Sonderbehandlung,' for 'special treatment'), and crosses are placed next to the names of the prisoners."*

This list is headed "*Arbeitslager E.V.O.*" which stands for Labor Camp Energy Supply Upper Silesia (Energie-Versorgung Oberschlesien), the company on whose initiative the Jaworzno Satellite Camp was established. It is therefore not a list of the inmate infirmary, and there is no evidence that the inmates in question were seriously ill or unable to work. Above the date ("*Jaworzno, den 18. Januar 1944*") is the initials "S.B." written in pencil. At the bottom of the page, in the right margin, is the stamp "3 Feb. 1944." On the last page appears "254 inmates in total" ("*Gesamt 254 Häftlinge*"), and below this, handwritten: "minus 7 / 247"; in the right margin "minus 3 struck out / 4 dead / –7" ("*minus 3 gestrichene / 4 verstorbene / – 7*").

In fact, these numbers are reversed, because only three inmates bear the handwritten note "† 22.1.44" in front of the serial number:

– 4/ Hauser Karl, 98193, Jew from the Protectorate
– 155/ Katyn Benjamin, 132766, Polish Jew
– 220/ Tenzer Jakob, 143773, Polish Jew

Instead, there are four "struck-out" inmates (meaning cancelled/erased). As for the initials "S.B.," there is no certainty that this was added on 18 January 1944 and not later, for instance by an overzealous Polish employee.

Be that as it may, on the basis of these initials and the stamp, Czech claims that the 247 inmates in question were all selected and subsequently gassed, without even the support of any testimony or message from the camp's resistance movement. If her conjecture were true, these 247 supposedly unfit inmates would have been left to lounge about at the Neu-Dachs Camp for 16 days after the list was compiled; meanwhile, on 22 January 1944, three inmates died, and this was noted on the 18-January list.

The crosses or plus signs next to the 247 names do not indicate death, which is meaningless if they were all gassed at Birkenau, but are a third check mark (the first, with a horizontal dash, appears before the prisoner's number, the second, a checkmark, follows immediately after this number), the result of three checks of the list; the sign "+" was added only to prevent confusion with the checkmark, which in many cases is double.

25 March 1944 (pp. 600f.)

Czech has here two paragraphs relating to Jewish deportation trains from the Netherlands. The first reads:

"184 Jews – men, women, and children – arrive in an RSHA transport from The Hague. They were hidden by Dutch citizens and arrested as a result of denunciations by informers. They are put in Block 4, which is isolated, of the so-called depot in Men's Quarantine Camp B-IIa. They receive no numbers, as directives are expected from the RSHA. Only prisoner functionaries have access to this block, among them Dr. Wolken, a prisoner doctor from the outpatient department in Camp B-IIa."

Czech writes in a footnote:

"They are killed on April 4, 1944, in the gas chambers."

Source: "APMO, Dpr.-Hd/6, pp. 24, 50, 55."

The second paragraph reads as follows:

"599 Jews from Westerbork – 387 men, 169 women, and 43 children – arrive in an RSHA transport from Holland. After the selection, 304 men, given Nos. 175323-175626, and 56 women, given Nos. 76076-76131, are admitted to the camp. The other 239 deportees are killed in the gas chambers."

Source: none.

All page numbers of Volume 6 of the Höss Trial given by Czech are incorrect. On p. 23, a Polish transcript of an interrogation of Otto Wolken on 24 April 1945 reads in translation:[279]

"At the end of March [*z końcem marca*] *1944, a transport of Dutch Jews consisting of men, women and children arrived at our camp. This transport was housed in Block 4 of our Camp BIIa. This block was strictly closed, no one was allowed to enter it except the camp officials, including myself as a doctor in the medical office. I was told at the camp administrative office that this entire transport was in our camp only as a 'Depot' and that these people were not to be counted as part of our camp's occupancy. After 10 days, the entire transport was picked up by trucks, taken to the sauna* [*do sauny*], *and gassed."*

On p. 52, in his essay "Fates of Women and Children" ("*Frauen und Kinderschicksale*"), Wolken relates the following:[280]

"At the end of February 1944, the date escapes me now, a transport of Dutchmen was brought to our camp with all their luggage, mostly women with children, some infants among them, some older people. They came from German police stations; they were people who had been hidden in Holland with Aryans, and yet they fell victim to the German sleuths. They stayed with us in the camp for almost ten days until the Political Department received their instructions. Then they were picked up in trucks and led to the chimney. These were 184 people."

---

[279] AGK, NTN, 88, p. 23.
[280] *Ibid.*, p. 52.

The last reference is actually on p. 59, in the "Chronicle of the Auschwitz II Camp /BIIa/ according to original documents by Dr. Otto Wolken, Vienna, /Inmate. 128828":[281]

> *"In the middle of March* [1944], *184 Dutch Jews were housed in our camp for ten days, and were then also sent to be gassed."*

On this arrival of this alleged transport, Wolken makes conflicting chronological remarks: end of March, end of February and middle of March. The date of March 25 is therefore Czech's invention, as is that of the alleged gassing nine days later.

Her claim about a transport of 599 Jews from Westerbork on 25 March 1944 was taken from Kempner's already-quoted book. However, the alleged transport of 184 Jews does not appear in that book at all. The transports reported there are (Kempner, p. 77):

– 2 March 1944: 732 deportees
– 23 March 1944: 599 deportees
– 5 April 1944: 240 deportees

According to a list of Jewish deportation trains from Westerbork presumably compiled by the Dutch Red Cross, a train with 599 people left for Auschwitz on 23 March 1943, containing 387 men, 169 women and 43 children.[282] This list confirms that the previous transport left on 2 March, and the next one on 5 April 1944.

In the records of the Trial of the Auschwitz Camp Garrison, there is a long list of 5,271 names of deportees, drawn up by Judge Jan Sehn, which Czech knew perfectly well. According to this list, 186 inmates, mostly Dutch Jews, arrived at Birkenau on 25 March 1944, and were duly registered.[283] This was the transport of 599 Jews that left Westerbork Camp on 23 March 1944. This was therefore the only transport to Auschwitz from the Netherlands in the second half of March 1944 (see also Benz, p. 163). Therefore, the transport of 182 Jews mentioned by Wolken who remained unregistered were in fact the unregistered inmates from the transport of 23 March who Wolken claims were all gassed, although they must have numbered (387 – 186 =) 201. Wolken's claim that these 182 (or rather 201) Jews were killed ("at the sauna" or "at the chimney," and not "in the gas chambers," as Czech wrote!) after ten days in Camp Sector BIIa is not only an unsubstantiated claim, but also inexplicable in the alleged extermination logic presumably implemented at Auschwitz, where those selected on arrival were allegedly killed right away, not ten days later.

3 April 1944 (p. 604)

> *"184 Jewish men, women, and children who were transferred from The Hague on March 25 and are not entered in the camp registers are taken from Quarantine Camp B-IIa in Birkenau to the gas chambers."*

Source: "APMO, Dpr.-Hd/6, pp. 24, 50, 55."

This alleged deportation train and the gassing of its deportees are completely made up. See the discussion in the entry for 25 March 1944.

15 April 1944 (p. 611)

> *"An SS Camp Doctor conducts a selection in Quarantine Camp BIIa in Birkenau, during which he selects 184 prisoners. They are killed the same day in the gas chambers."*

Source: "APMO, Dpr.-Hd/6, p. 7."

Otto Wolken states that the census of Camp Sector BIIa was 2,842 inmates on 14 April 1944, and 2,658 the next day. Since there was no "loss," (2,842 – 2,658 =) 184 inmates must have been selected and gassed according to Wolken's beclouded mind. On 13 April, the census of this camp sector was 2,865 detainees, and there was an "admission" of 320 new detainees (Greek Jews)[284] but no "loss," but on 14 April, the occupancy according to Wolken was not (2,865 + 320 =) 3,185, but 2,842 instead. Yet another confirmation of the total unreliability of Wolken's data in order to establish the actual variations in the census of Camp Sector BIIa, and they are even-less-useful for establishing the fate of certain groups of inmates.

16 and 18 April 1944

These two entries are linked, so I treat them together:

– 16 April 1944 (p. 612)

> *"299 female Jewish prisoners and two nursing infants are transferred from Majdanek. They are put up in Men's Quarantine Camp BIIa in Birkenau in Block 2. With this transport the Majdanek Special Squad arrives, which consists of 19 Russian POWs and a German prisoner who was the Capo of this squad. After their arrival they were put in the Auschwitz-Birkenau Special Squad and housed in Camp B-IId in Block 13, which is occupied at the time by the Special Squad."*

Source: "APMO, D-AuI-3/1, p. 5, Quarantine list; Dpr.-Hd/6, p. 7; Dpr.-Hd/1; Statement of Former Prisoner Stanisław Jankowski (a.k.a. Alter Feinsilber); SAM, *Amid Unspeakable Crimes*, p. 61." (The page number of the German edition is cited.)

---

[284] APMO, D-AuII-5/1, p. 16; D-AuII-3/1, p. 5 (*Quarantäne-Liste*).

– 18 April 1944 (p. 613)

> *"In the evening, SS men with guard dogs lead the 299 female Jewish prisoners and two nursing infants, who were transferred on April 16 from Majdanek from Block 2 of Quarantine Camp B-IIa to the gas chambers. The numbers that had been given to them are given later to other female prisoners."*

Source: "APMO, Dpr.-Hd/6, p. 7, Statement of Dr. Otto Wolken."

S. Jankowski stated the following:[285]

> *"At the beginning of 1944 a transport came from Majdanek to Birkenau, consisting of 300 Polish Jewesses, 19 Soviet prisoners of war and one German prisoner who had been capo at Majdanek. The men were assigned to Block No. 13, to the Sonderkommando and were detailed to work in the crematoria. Those 300 women were kept for 3 days in the Sauna, that is in the baths, then they were led to the crematorium where they were shot at night and cremated. I learnt about the fact of shooting and cremating all the Jewesses directly from my comrades from the Sonderkommando who had been on duty that night and were eye-witnesses of the execution and later participated in the cremation of the corpses. The whole transport of the Jewish women who were shot was naturally not registered anywhere in the camp."*

In the "Quarantine List," the PoWs transferred from Lublin are recorded on 9 April with the registration numbers 11494-11531 (32nd transport), so they were 38 persons, not 19. Another 10 PoWs were admitted on 17 April (11518-11527). The 299 women (plus 2 infants) arrived at Auschwitz on 16 April (33rd transport). Wolken noted that they were housed in Block 2, and that their quarantine ended on 14 May.[286] Jankowski's assertion that these inmates were not registered is therefore false. Only after the end of the war did Wolken allege the gassing. Based on Wolken's statement – which I quote below – as well as that of Jankowski, Czech claims that they were sent "to the gas chamber" on 18 April. First Jankowski text:[287]

> *"On 18 April 1944, 299 girls and 2 infants arrived from Lublin Camp. The camp doctor who examined them found them healthy and completely fit for work, and they were to be transferred to the Women's Camp. They were indeed taken away in the evening, but by the dog squad / SS with guard dogs / and taken to the crematorium. For a long time, we could still hear from the crematorium the desperate screaming of the girls who suspected their fate, the yapping of the dogs, and in between the shooting of the escort unit. We could only guess what tragedy was taking place there. We knew that they were being led to the gas as soon as we saw the dog squad."*

Previously, in a deposition given to Judge Jan Sehn, Wolken had stated:[288]

---

[285] AGK, NTN, 82, Vol. 1, p. 20; here quoted: Bezwińska/Czech 1992, pp. 58f.
[286] *Quarantäne-Liste 1944*. APMO, D-AuII-3/1, Inventory No. 29739, p. 5.
[287] AGK, NTN, 88, Vol. 6 (Höss Trial, Vol. 6), p. 235.
[288] *Ibid.*, p. 7.

> *"On 16 April 1944, a transport from Lublin arrived at our camp, consisting of 299 Jewish women and 2 Jewish infants, a total of 301 persons. They were housed in Block No. 2 of Camp BIIa. The persons in this transport had been arrested by the political section, provided with tattoo numbers, examined by the doctor, recognized by him as healthy and able to work, and were to be transferred to the women's camp. On 18 April 1944, at 7 p.m., they were taken out of the camp by the 'dog unit' to the gassing. These persons were marked with registration numbers around 77000."*

In the footnote (p. 613) Czech points out that for Jankowski these inmates "were shot and killed that night in the crematorium," without even attempting to explain this contradiction. The detailed description of the alleged event by the two witnesses contrasts with the rather-vague indication of the place of execution, "the crematorium": which of the four? [289] Jankowski should have known exactly and should have mentioned it. Moreover, the alleged shooting contradicts the principle he asserted:[290]

> *"It was a rule to use the gas chamber for groups of more than 200 persons, as it was not worth while to put the gas chamber in action for a smaller number persons."*

Zofia Leszczyńska, historian at the Majdanek Museum, describes the 1944 evacuation transports from Majdanek Camp to Auschwitz as follows (Leszczyńska, p. 121):

> *"The most-numerous transports were directed to the Auschwitz Concentration Camp. Between 8 and 13 April, no fewer than 4,566 people were sent there, including 3,239 men and 1,287 women, as well as 40 children."*

According to the "Quarantine List," 938 female inmates plus 38 children and 299 Polish Jewesses plus 2 children arrived at Camp Sector BIIa on 16 April, hence a total of 1,237 women and 40 children. Since the Majdanek women's camp had 2,690 inmates on 15 March, 476 of whom were Jewish (Kranz 2007, p. 19), the transport of the 299 Polish Jewesses can be considered real, but there is no evidence that they were shot or gassed, despite Wolken's following purported arithmetic proof: on 18 April, the census of Camp Sector BIIa was 4,949 inmates, of whom 169 were transferred (11 women to the inmate infirmary, 155 to the women's camp, three men to Camp Sector BIId) and 35 inmates died, so the total loss was 204 inmates. Therefore, the camp should have had (4,949 – 204 =) 4,745 inmates. However, the census was instead 4,444 inmates on 19 April according to Wolken, so (4,745 – 4,444 =) 301 inmates were presumably selected "for the gas" ("*do gazu*"; *ibid*., p. 8), namely the 299 women and 2 infants.

---

[289] Jankowski claims to have worked only in Crematoria IV and V.
[290] AGK, NTN, 82, Vol. 1, p. 20; here quoted: Bezwińska/Czech 1992, p. 56.

But in his "Daily Reports," the changes in census mentioned by Wolken occurred on the 19th rather than the 18th of April, so they must have affected the force on 20 April, not 19. However, on 20 April, the census, according to his data, was 4,400 inmates.[291]

The absurdity of Wolken's calculation is even-more-evident from the fact that there was an "admission" of 1,106 prisoners on 18 April, so the next day (considering his data) the census should have been (4,949 + 1,106 – 204 =) 5,851 inmates rather than 4,444.

Neither Wolken nor Czech explains why – contrary to the rule she wants to have recognized that only inmates sick and unfit for work were killed – 299 healthy inmates who were fit for work should have been gassed. To the contrary, Wolken's original remark about their quarantine explicitly argues against this. At that time, the inmates entering the quarantine camp were all duly registered, so they had already passed the preliminary "selection." From the orthodoxy's perspective, it therefore makes no sense that they are said to have been gassed a few days later.

29 April 1944 (p. 616)

> *"248 Jews who were transferred after selection on April 23 to the forced labor camp for Jews in Silesia receive Nos. 184644-184891. Those who are sick and unable to work are killed in the gas chambers of Auschwitz II. The Jews who are admitted to the camp are probably transferred to Gleiwitz I."*

Source: "Docs. of ISD Arolsen, NA-Men, 1944, p. 109."

In reality, this was not a transport that arrived at Auschwitz from the outside, but a transfer of prisoners from Auschwitz to Blechhammer. In a table based on the *Nummernbuch* (Number Book) and the transport lists, F. Piper ascertained that these 248 Jews, with registration numbers between 184644 and 184891, came from Sosnowitz-Bendsburg and arrived in Auschwitz on 23 April 1944 (Piper 1967, p. 27). In the list of prisoners compiled by Jan Sehn, 198 prisoners are recorded with registration numbers between 184673 and 184928; all arrived at the camp on 23 April 1944.[292] Czech instead mentions only a small transport of 21 Jews from Sosnowitz on 22 April.

In the immediately preceding entry, Czech states, based on the same source (p. 616):

> *"295 Jews who were transferred from a forced labor camp for Jews in Upper Silesia on April 16, 1944, receive Nos. 184349-184643. They are probably transferred to Gleiwitz I."*

F. Piper ascertained on the other hand that these 295 detainees came from Majdanek and had arrived at Auschwitz on 16 April. On this date, Czech only

[291] APMO, D-AuII-5/1, "*Tägliche Meldungen*," p. 16.
[292] AGK, NTN, 156, pp. 167-173.

mentions in general the "transfer of evacuation transports from Majdanek" (p. 612), without mentioning registered inmates.

The probability that, according to Czech, these inmates were transferred to Gleiwitz I Camp is in fact marginal, and she should have known this, because the editor of the *Auschwitz Chronicle* must have been aware of the article by I. Strzelecka on the Gleiwitz I Labor Camp that appeared in 1972, where a table shows the known transfers to Birkenau in 1944, which involved Jews from Płaszów, Westerbork, Drancy and Łódź (Strzelecka 1972, p. 75).

Therefore, the alleged selection of the claimed transport of 29 April 1944, resulting in the gassing of inmates sick and unfit for work, is yet another of Czech's unchecked fantasies.

2 May 1944 (p. 618)

> *"Two transports arrive from Hungary, the first sent from Budapest on April 29 and containing approximately 1,800 able-bodied Jewish men and women between the ages of 16 and 50, the second sent on April 30 from Topoly and containing 2,000 able-bodied prisoners. After the selection, 486 men, given Nos. 186645-187130, and 616 women, given Nos. 76385-76459 and 80000-80540, are admitted to the camp. The remaining 2,698 men and women are killed in the gas chambers."*

Source: "Randolph L. Brahm [sic], *The Destruction of Hungarian Jewry (September 1940-April 1945), A Documentary Account*, New York, 1963, p. 363"

This refers to a telegram sent on 29 April 1944 by Edmund Veesenmayer, plenipotentiary of the Reich government in Hungary, to the German Foreign Office, which says (Braham 1963, p. 363):

> *"Today the first transport of 1800 labor Jews between the ages of 16 and 50 left Budapest. Tomorrow another train with 2000 Labor Jews will leave from Topolya."*

Therefore, 3,800 Jews *fit for work* were deported to Auschwitz *for the purpose of labor employment*: in spite of this fact, Czech would have us believe, that 2,698 (71%!) of these potential workers were gassed, although the most-logical conclusion is that some were registered, while others were admitted temporarily to the camp without registration, which occurred regularly with the establishment of the "transit camp" of Birkenau since mid-May of 1944.

5 May 1944 (p. 620)

Czech summarizes a message from the camp's resistance movement saying, among other things, "that the Germans are concerned with eradicating all traces of their murders as quickly as possible. The so-called old crematorium in Auschwitz is being converted to an air raid shelter."
Source: "APMO, Mat.RO., Vol. VII, pp. 433ff."

Czech did not dare mention the rest of the message contained in the "Report for the Period between 20 April and 5 May 1944," which I report here in its entirety:[293]

> *"The Germans are working frantically to wipe out all trace of their murders. Restructuring the old crematorium into an air-raid shelter. During the demolition of the chimney, a true and proper layer of unburnt human fat several centimeters* [thick] *was found in the soot on the bricks."*

This fairy tale of the layer of human fat is simply pathetic, but this is not the most important problem: since the "Plan for the conversion of the old crematorium for air-raid protection" was proposed by the Head of Air-Defense SS *Obersturmführer* Heinrich Josten only on 26 August 1944,[294] how could the resistance movement already know about it on 5 May? Czech herself writes in her entry for 21 September 1944 (p. 714):

> *"The preparation of the technical plans for the refitting of Crematorium I (the so-called old crematorium) in Auschwitz I to an air-raid bunker for the SS hospital is completed. The plan is called 'Expansion of the Old Crematorium, Air-Raid Bunker for SS Hospital with an Operating Room' and is dated September 21, 1944."*

Source: "APMO, D-AuI-Z.Bau/BW 11/5."

This is the plan already presented by Polish expert Roman Dawidowski in his report of 26 September 1946,[295] which was later published by Jean-Claude Pressac (1989, p. 157).

As for the timeline, Czech gives precedence to the claims of the resistance movement over the documents, writing in a footnote: "The renovation of Crematorium I was begun in April 1944 (APMO, Mat.RO, vol. VII, p. 433)." This cannot be true, however, because the "List of buildings under construction with degree of completion," drawn up by the head of the Central Construction Office on 4 September 1944, indicates a degree of completion of just 5% for the construction project "Remodeling a gas-tight treatment room in the former crematorium for the garrison physician,"[296] meaning that this work had only just begun at the beginning of September.

If nothing else, Czech does not repeat the absurd motivation of the project given by the resistance movement – wiping out all trace of their murders.

9 May 1944 (p. 622)

> *"In connection with the accelerated start of the destruction of Hungarian Jews, SS Camp Senior Höss announces a series of directives. He orders that the expansion of the platform and the three-track rail connection in Birkenau*

[293] APMO, D-RO/91, Vol. VII, pp. 433f.
[294] RGVA, 502-1-401, p. 34.
[295] Höss Trial, Vol. 11, p. 25
[296] RGVA, 502-1-85, p. 196.

> *be sped up; that the inactive cremation ovens in Crematorium V be put in operation; that next to this crematorium five pits (three large and two smaller ones) for the incineration of corpses be dug. Furthermore, Bunker 2 is to be put back into operation, incineration trenches are to be dug next to it, barracks for use as disrobing rooms are to be built, and, finally, the Commander of Gleiwitz I, SS Master Sergeant Otto Moll, is promoted to Director of all crematoriums. Höss orders that the Special Squad be enlarged, i.e., the prisoners who work in the crematoriums and in Canada, on the sorting of stolen property"*

Source: "APMO, Höss Trial, vol. 26b, pp. 168-170, Statement of Rudolph [sic] Höss; vol. 28a, pp. 123ff. 127, Testimony of Former Prisoner and Members of the Special Squad Szlama Dragon; vol. 29, p. 47, Testimony of Former Prisoner and Member of the Special Squad Henryk Tauber."

The first reference points to the minutes of the Höss Trial. Höss stated in this regard:[297]

> *"On the occasion of* [Eichmann's] *visit to Auschwitz, he found that Crematorium 5, which was used for open-air cremation, was out of use, and that it had not even been considered and even been neglected to upgrade the railway siding existing at the camp. Based on this report, Reichsführer Himmler ordered me personally to carry out this operation at Auschwitz.* […] *I remember that the railway station was subsequently enlarged, the railway connection into the camp which had three tracks, and I remember that the installation for outdoor cremation was put back into operation, the so-called Installation V* [*urządzenie V*]*, and that the unit sorting the inmates' luggage was reinforced.*
>
> *The time needed to unload a train full of people and their luggage, if it was only one transport, was 4 to 5 hours, and it was not possible to process a transport in less time than that. Although it was possible to handle the people in this period of time, the luggage of these people piled up in such quantities that it was necessary to give up the idea of intensifying these transports, despite the reinforcement of this luggage-sorting unit by 1,000 additional detainees, the implementation of this operation could not be accelerated in any way."*

These same statements are summarized by Czech in a footnote to her entry for 8 May 1944 (p. 621), but with the source "APMO, Höss Trial, vol. 26b, pp. 166-168." Here, the editor of the *Auschwitz Chronicle* writes:

> *"Eichmann discovered that the outdoor incineration installations of Crematorium V were not in service; it is not known whether he meant the incineration pits near Bunker 2 or the planned crematorium for outdoor incineration."*

[297] Höss Trial, 8th Session, 19 March 1947, pp. 856-858.

In fact, there is no uncertainty about this, because in his memoirs, Höss always numbered the Birkenau Crematoria from I through IV, and he specified there:

> *"*[Crematorium] *Number IV had to be repeatedly shut down, since after its fires had been burning for from four to six weeks, the ovens or the chimneys burned out."*

He added that there was also the "provisional structure number I" (= "Bunker 1") and II (= "Bunker 2"), which was "later called outdoor installation [*Freianlage*] or Bunker V".[298] Hence, "installation V" was exactly "Bunker V," or "Bunker 2" in today's streamlined terminology.

The protocol of the interrogation of Szlama Dragon (10-11 May 1945) can be found in Volume 11 of the Höss Trial's records, and runs from page 102 to page 118. In the passages referred to by Czech, the witness stated:[299]

> *"I worked at Crematorium No. V. Until May 1944 we were employed in gardening, splitting wood, transporting coke, because at that time the furnaces of Crematorium V were not yet operational* [*nie były jeszcze wówczas czynne*]. *This crematorium was not put into operation until May 1944, when transports of Hungarian Jews began to arrive.* […]
>
> *Since, however, the crematoria were less productive, pits were dug for the cremation of the gassed Hungarians at Crematorium V. There were three larger and two smaller pits."*

Henryk Tauber's interrogation protocol (24 May 1945) is also found in Volume 11, but on pages 122-150. Here is his related statement:[300]

> *"The most-depraved of them all was Hauptscharführer Otto Moll. Even before my arrival at the camp, he was the director of works in the bunkers, where the gassing victims were cremated in pits. Some time later, he was transferred to another camp sector. In view of the preparations for the arrival of mass transports from Hungary in 1944, he was entrusted with managing all the crematoria. He organized the entire extermination of the people who arrived with these transports. Even before the arrival of the Hungarian transports, he ordered the excavation of pits next to Crematorium V, and put Bunker No. 2, which was then inactive, and its pits back into operation.* […]
>
> *In May 1944, the SS ordered us to dig five pits in the courtyard of Crematorium V, in the part between the drainage ditch and the crematorium building, in which the corpses of the gassing victims from the Hungarian mass transports were later cremated."*

---

[298] Höss, p. 215. The last phrase, here translated from Broszat, p. 160, reads in the published English translation: "Crematorium II, later designated bunker V," where Höss's term "Anlage" ("installation" or "facility") was mistranslated as "Crematorium," and the term "*Freianlage*" ("outdoor installation") was completely omitted.

[299] Höss Trial, Vol. 11, pp. 107f.

[300] *Ibid.*, pp. 144, 149.

As far as Höss is concerned, the order to "upgrade the railway siding existing at the camp" is pure fantasy, because the work on the siding and the ramp ended already on 16 April 1944.[301] Equally false is Dragon's statement that the furnaces of Crematorium V were only put into operation in May 1944, which is also in contrast to Höss's statement that they were temporarily inoperative at that time.

Czech not only takes at face value these fictitious statements, in support of which she cannot provide the slightest documental evidence, but she even adds on her own initiative a purely imaginary exact date: everything "happened" on 9 May 1944!

24 and 25 May 1944 (p. 633)

These are two entries with the same source, so I will discuss them together:

– 24 May 1944

> *"2,000 Hungarian Jews are transferred as reinforcements for the prisoners deployed in the auxiliary camps in Auschwitz III."*

– 25 May 1944

> *"The resistance movement in the camp states in its regular report that the number of Hungarian Jews killed already amounts to over 100,000 people, and the work shifts of the SS men involved in the extermination operation is 48 uninterrupted hours, followed by an eight-hour break."*

Source: "APMO, Mat.RO., vol. VII, p. 442."

This refers to the "Extraordinary Appendix to the Periodic Report for the Period between 5 and 25 May 1944" with the headline "Oswiecim. 'Action Hees'" (sic). The trustworthiness of this report is revealed by the following quotes:[302]

> *"From mid-May, concentration of transports of Hungarian Jews. Every day 8 trains arrive, and 5 every night. The trains all consist of 48-50 cars, each of which* [carries] *100 persons.* […] *The* [people] *unloaded* [from] *transports which the two gasworks* [*obie gazownie*] *are unable to dispose of camp out in a little wood nearby, or in ditches, guarded by 'Posten'* [*Postów, sentries*] *with submachine guns. The waiting time for death can be up to two days, because there are bottlenecks. Between the railroad ramp and the gaswork* [*gazownią*] *along the road, day and night* [there is] *an uninterrupted procession of persons walking towards the gassing installation* [*ku gazowni*] *as it gradually empties of already-'processed' bodies* […]

[301] RGVA, 501-1-186, p. 49a. Letter by the Central Construction Office dated 19 April 1944.
[302] APMO, D-RO/91, Vol. VII, pp. 440-442.

A neat mountain of suitcases, 300 meters long and 20 meters wide, is piled up at the ramp, up to one floor high, which the trucks, [although] *continuously going* [to load them]*, are unable to take to the warehouses.* […]

Before entering the gas chamber [*do komory gazowej*]*, everybody hands over the money and valuables they have with them to the… depository* [*depozytu*]*. They must then undress completely, handing over* [*oddają*] *all their clothes, which are then searched to find any valuables sewn inside the linings. They then enter the 'bath,' that is, the gas chamber, in groups of 1,000 persons. They are no longer given hand towels and soap, as before – there isn't enough time.*

The two gas chambers [*obie komory gazowe*] *work without letup, but are unable to dispose of the rest* [of the deportees]*. Between the gassing of one group* [and another]*, the only down time is that required for ventilation. On the other side* [*z drugiej strony*] [of the gas chamber]*, where it is certainly invisible to those entering the chamber, there are huge piles of bodies. There is not enough time to burn them. All victims, particularly the women, have their hair cut off by a special Kommando* [*komando*] *of barbers. The hair is loaded onto trolleys as raw material. A special squad of dentists carefully examine the oral cavities of all the corpses, extracting gold and platinum crowns. Since there is little time, they break the jawbones, and only extract the dental work afterwards. Another squad of 'specialists' is responsible for inserting a finger in the vagina of the female corpses in search of hidden jewelry. Only when the bodies have been thus processed and inspected, are they sent for cremation. 4 crematoria work round the clock – one brick kiln* [*cegielnia*] *plus pyres* [*stosy*] *burning in the open. Dense black smoke is visible from far away. It was nevertheless found impossible to cremate so many bodies. One crematorium is temporarily out of service and is being hastily repaired, because as a consequence of continual use, the grate and part of the furnace have burned out* [*ruszta i części pieca*]*. A reinforced 'Sonderkommando' amounting to as many as 2,000 men at the present time participate in all this activity – the looting, the killing and the transport of the bodies. These are strong healthy Jews selected from amongst the inmates. Naturally, in the end, they are all fated to suffer extermination as witnesses.*

Of the Hungarian transports arriving until the present time, 2,000 strong [deportees] ***are allowed to live, and are transferred to the Gliwice Camp.*** *These are immediately separated from the others on the ramp, so that they have no idea of the fate which awaits the others. They are ordered to write optimistic-sounding letters home to Hungary. This is a constant and convenient custom intended to fool subsequent transports.*

At the present time, the number of gassed Hungarian Jews is already approaching 100,000*, and is bound to increase proportionately every day. Auschwitz* [German in text] *must 'process' 1,200,000 Hungarian Jews in the*

shortest possible time. The pace is accelerated to the maximum, yet the intensity of the transports is further increased."

The SS staff work continuously for 48 hours at this massacre, after which they have an 8-hour break.*"*

Therefore, a train contained an average of (100 × 48 to 50 =) 4,900 people, so that in one day (4,900 × [8 + 5] =) 63,700 deportees arrived at Auschwitz! This happened from the middle of May until 25 May, for 10 days, so the number of deportees was (63,700 × 10 =) 637,000!

However, this is in contradiction to the number of the claimed number of gassed Jews – 100,000 – plus those allegedly registered – 2,000 – so that the total number of deportees was actually 102,000!

On the ramp, there was a pile of suitcases neatly arranged about (300 m × 20 m × 2.5 m [the height of one story] =) 15,000 cubic meters!

There were four crematoria, but the gassings were carried out in 2 "gas works," whose locations are not specified. The choice of the term "*gazownia*," in German "*Gaswerk, Gasanstalt*," is quite revealing, because at the time the term referred to an industrial plant for the production of city gas, while the resistance movement intended to mean an alleged "gassing facility," which in German would be a "*Vergasungsanlage*." The crematoria, which were evidently in no way structurally connected to the two "*gazownie*," served only for the cremation of corpses, and were assisted in this function by a fantastic "brick kiln" ("*cegielnia*") – completely unknown to Holocaust historiography – and by "pyres" ("*stosy*"). There were two gas chambers, so each "*gazownia*" had one. The setting of the gassings, although undetermined, undoubtedly excludes the crematoria, because the corpses were piled up "on the other side" of the gas chamber, and it is not even clear whether it was an indoor or an outdoor site. But on that "other side" took place the cutting of hair, the extraction of precious-metal teeth and the inspection of corpses. The procedure was the same as that attributed to the "Operation Reinhardt" Camps: the victims handed over their valuables to a "depository," and then their clothing as well (instead of leaving everything in the "dressing room," according to the final orthodox version).

The claim that 1,200,000 Hungarian Jews were to arrive is patently absurd. The report is also silent about the presence of the transit camp at Birkenau.

It therefore is a series of lies and absurdities. Despite all this, Czech manages to draw from it what she presents as "historical events"! Her use of this document is impertinent: she picked out only the three sentences I have put in bold type, replacing Gleiwitz with "auxiliary camps."

25 June 1944 (p. 652)

"Empty children's strollers are taken away from the storerooms of the personal effects camp, known as 'Canada,' which is located behind Camp B-IIf

> *between Crematoriums III and IV. The strollers are pushed in rows of five along the path from the crematoriums to the train station; the removal takes an hour."*

Source: "APMO, Dpr.-Hd/8, p. 133, Witness Dr. Wanda Szaynoha."

The reference is completely wrong: name, volume and page. The witness's actual name is Wanda Szaynoka. The minutes of her interrogation of 12 September 1945 can be found in Volume 5 (not 8) of the proceedings of the Höss Trial. In it, she stated that upon arrival at Auschwitz she was transferred to Birkenau, where she remained until 29 September 1944 as a nurse in the women's hospital. She "calculated" (one does not know how) that 300,000 Jews were gassed and cremated in crematoria and open-air pits at Birkenau from 16 May to mid-August 1944. The witness introduces the statement referred to by Czech as follows:[303]

> *"These pits burned more or less for a period of four weeks, from mid-June to mid-July 1944. One Sunday in the second half of June, I saw that from the side of the crematorium strollers were being pushed in the direction of Auschwitz Station. There were five strollers in each row, and the parade lasted for over an hour, from which I gather there must have been hundreds, if not more. While these ditches were burning, moans and shouts were coming from them, as well as the echo of gunfire and the barking of dogs. I heard that into these pits were thrown half-gassed people and even living children, and that it was precisely these who emitted these moans and cries."*

Czech further embroiders this fictitious tale. First of all, she authoritatively sets the date at 25 June on the basis of the Sunday mentioned by the witness, but there were two Sundays in the second half of June 1944, the 18th and the 25th. Why did Czech choose the 25th? She then invents the origin of the stroller parade, the personal-effects camp, which is not mentioned by Szaynoka. She merely stated that she saw the procession "from the side of the crematorium" ("*od strony crematorium*"), which means little, because there were four crematoria in Birkenau, and the witness did not specify her point of observation. The alleged procession of strollers is patently laughable, because it would be the equivalent of several thousand inmates marching in rows of five, each of them pushing a stroller in front of them![304] And how could the witness, standing inside the Birkenau Camp, know that the procession was going "in the direction of Auschwitz Station" ("*w kierunku dworca w Oświęcimiu*")? This is obviously crude atrocity propaganda, invented to introduce the gruesome propaganda cliché of children allegedly burned alive in cremation pits.

---

[303] Höss Trial, Vol. 5, p. 95.

[304] The witness's inference is nonsensical. The procession paraded for more than an hour; assuming a slow speed of 3 km/h and a space of three meters for each person with a stroller, there would have been (3,000 m × 5 strollers/row ÷ 3 m/row =) 5,000 of them!

30 June 1944 (p. 654)

> *"Nearly 1,000 Jews arrive in an RSHA transport from the Fossoli di Carpi transit camp. After the selection, 180 men, given Nos. A-15677–A-15856, and 51 women, who receive Nos. A-8457–A-8507, are admitted to the camp. The remaining people, among them 582 men, are killed in the gas chambers."*

Source: "APMO, D-AuII-3/1, p. 6, Quarantine List; Docs. of ISD Arolsen, NA-Women, Series A, p. 4."

Already in the first, German edition of the *Auschwitz Chronicle*, the figure of "nearly 1,000 Jews" appears (Czech 1961, p. 103). In the 1989/1990 editions, when it comes to deportations of Jews from Italy, Czech usually refers to the Italian brochure "Centro di Dokumentazione [sic] Ebraica Contemporana di Milano (Center for Contemporary Jewish Documentation, Milan […], *Ebrei in Italia: Deportazione, Resistenza* (Jews in Italy: Deportation, Resistance), Florence, 1974," which is mentioned for the first time as a source in her entry for 23 October 1943 (p. 512). However, for the entry discussed here, this source is not mentioned. Based on an entry in the first, German edition of the *Auschwitz Chronicle* (1964a), the editors of this brochure state that the transport in question included 1,000 people, and they comment (Centro…, p. 20):

> *"However, on the* Transportliste *of Fossoli, kept in the Archives of the Center for Contemporary Jewish Documentation of Milan, there are only 517, and 16 men and 16 women of these are survivors. It has not been possible so far to find any information on the other 400 or more deportees of this convoy."*

By 1992, only 527 names were known (including 35 "survivors"; Picciotto Fargion, p. 57), simply because "the other" deportees did not exist. The 1,000 deportees were in fact invented by Czech on the basis of the "*Quarantäne-Liste*," where 180 prisoners from the Carpi Transit Camp and 582 alleged gassing victims are noted in the entry for 1 July 1944, so the total number of men would have been 762. Since the percentage of registered men was usually around 24%, if we apply this percentage to the registered female deportees, this yields about (51 ÷ 24% =) 212 female deportees in total. Adding up the two figures, we arrive at (762 + 212 =) 974, which Czech rounded to 1,000! Thus, she invented "the other 400 or more deportees of this convoy."

2, 10 and 11 July 1944

These three entries refer to the same event and share a common source.

– 2 July 1944 (p. 656)

> *"In order to conceal the criminal plan to liquidate the Theresienstadt Family Camp, B-IIb, the camp management orders a selection. Dr. Mengele selects 3,080 young, healthy, able-bodied women, men, and youths. Among those selected, approximately 2,000 women are destined for the camps in Stutthof and*

Hamburg and 1,000 men for Sachsenhausen. Nearly 80 youths are sent to vocational training."

Source: "Kraus and Kulka, *Death Factory*, p. 178."

This refers to the 1957 Czech edition of Kraus's and Kulka's book. On the page indicated, the authors state that "on 1 July" ("*dne I. července*") 1944 "Schwartzhuber [sic] with SS doctors" ("*Schwartzhuber s SS lékeři*") selected 1,000 prisoners fit for work, and sent them the same day ("*téhož dne*") to Sachsenhausen Camp. Then 500 inmates were selected and transported to Germany. 80 boys between the ages of 14 and 16 were selected as apprentices for Reich factories, and sent to Camp Sector BIId (Kraus/Kulka, p. 178):

"In addition, about 2,000 healthy, young, childless women went to Hamburg and Stutthof; few of them returned home."

The total number of those selected is therefore 3,580, not 3,080. Furthermore, the selection did not take place on 2 July 1944, but the day before, and it was not Mengele who carried it out, but Schwarzhuber.

– 10 July 1944 (p. 662)

"In the Theresienstadt Family Camp in Camp B-IIb in Birkenau a camp arrest [lockdown] *is ordered, in the course of which 3,000 women and children are transferred to the crematorium and killed in the gas chambers."*

Source: "APMO, Dpr.-Hd/6, p. 49; Kraus and Kulka, *Death Factory*, p. 178."

I will discuss the reference to the Höss Trial later. Immediately after the account of Schwarzhuber's selection, we read in Kraus's and Kulka's book (*ibid.*):

"The remainder, about 6,000 people, including children and women who did not want to be separated from their children, were exterminated in the gas chambers at night on 10 and 12 July 1944."

– 11 July 1944 (p. 663)

"A camp arrest [lockdown] *in Theresienstadt Family Camp, B-IIb, in Birkenau is ordered, in the course of which all of the camp residents still alive, approximately 4,000 Jewish women and men, are led to the gas chambers."*

Source: "APMO, Dpr.-Hd/6, p. 49; Kraus and Kulka, *Death Factory*, p. 178; Adler, *Theresienstadt 1941-1945*, p. 693."

The reference to Kraus-Kulka's book is always the same, so Czech breaks down the dates and figures they presented on the cited page as follows:

Kraus-Kulka			Czech		
Date	Selected for work	Gassed	Date	Selected for work	Gassed
1 July 1944	3,580	/	2 July 1944	3,080	/
10 + 12 July	/	6,000	10 July 1944	/	3,000
	/	/	11 July 1944	/	4,000
Totals:	3,580	6,000		3,080	7,000

The reference to Adler's book can only correspond to the following entry in the final chronology (Adler 2005, p. 699): "12 Dec. [1944] Family Camp [of inmates from] Theresienstadt in Auschwitz liquidated," although the date is not the one indicated by Czech.

The reference to the Höss Trial for the 10-July entry (APMO, Dpr.-Hd/6, p. 49) – Wolken's already-mentioned essay "Fates of Women and Children" – has in both citations an error in the page number, which is not 49, but 51. Here the witness wrote:[305]

> *"Then, at the end of July 1944, the rest of the Theresienstadt Camp was liquidated. First the able-bodied men were sent on transport, then the able-bodied girls and those mothers who agreed to be separated voluntarily from their children. Some older boys were also singled out and taken to the Men's Camp BIId. On July 10, the mothers with their children were taken to the chimney at night, and on July 11 the rest of the men and women who were still in the camp, about 4,000 in all."*

Czech therefore also distorts her only real source, inventing a gassing of "3,000 women and children" that Wolken did not mention as such. Wolken spoke of this alleged event also on another occasion, but at greater length:[306]

> *"Then, at the end of June, the rest of the Theresienstadt camp was liquidated. First, the infirmary was cleared out and the women were led into the gas. I was able to observe myself how stark-naked, sick women were picked up like cattle by their hands and feet, thrown with verve onto the truck, one on top of the other, without regard for how they fell. In the days that followed, men and women fully capable of work were selected and sent on transport to Hanover, Hamburg and Stutthof. The able-bodied men came to our camp, also prepared for further transport. Old men and old women, the physically weak and women with children were left behind. The latter were advised to separate from their children and go on transport. But only very, very few did so, although it was promised that the children would be well accommodated in a separate children's block. On 8 July, 50 big strong boys were taken out of this camp and brought to BIIb as pipels for the camp aristocrats. Two days later, in the early afternoon, the rest of the Theresienstadt men left our camp for Blochhammer* [Blechhammer]. *In the evening, the mothers with children had to line up, and they were told that they would be transferred to the Gypsy Camp BIIe, but before that they merely had to go through the sauna /bathing facility/, as was always customary when transferring from one camp to another. The only striking thing was that this was done at night, when the watchtowers were already manned and the typing pool in the Gypsy Camp had already closed for the day. And we should not have been mistaken, they were all led into the gas. The next day, the rest of the men and women, about 4,000, were taken from the*

[305] AGK, NTN, 88, p. 51.
[306] AGK, NTN, 88, pp. 249f.

camp into the gas by means of trucks. Trucks had to be used and a large SS commando, because it was already known that the mothers with the children had not gone to the Gypsy Camp but to heaven."

Here as well, Wolken mentions 4,000 alleged gassing victims.

In support of the alleged gassings of 10 and 11 July 1944, Czech provides as sources only pathetic ramblings. Here, as in many other crucial cases, she is unable to cite a single self-proclaimed eyewitness or a single message from the camp's resistance movement – let alone documents.

14 July 1944 (p. 665)

"2,000 female Jews who were selected from the Theresienstadt Family Camp, B-IIb, on July 2 by SS Dr. Mengele are transferred from Auschwitz II to Stutthof. They wait in Barracks 25 in Women's Camp B-Ia for the transport."

Source: "Kraus and Kulka, *Death Factory*, p. 180."

On the cited page is the account of former inmate Hana Roubíčková, Reg, No. 71584. She reports that a selection took place on "Sunday 2 July 1944" (in this context she also mentions Mengele), one of the men in the morning, and one of the women in the afternoon. The column of selected inmates was taken to the railway station and loaded onto cattle cars. The witness states that only 3,000 out of 10,000 inmates remained alive, and this is the only numerical data she gives (Kraus/Kulka, pp. 179f.).

This text therefore contains no mention of the transfer of 2,000 Jews to Stutthof on 14 July 1944. I list the actual transports from Auschwitz to Stutthof of 1944 in the entry for 23 September and 27 October 1944.

27 and 28 July 1944

– 27 July 1944 (p. 671)

"463 male Jews who were selected from an evacuation transport from the labor camp in Pustków near Dębica receive Nos. A-17954–A-18416. There were 1,700 men in the transport; 1,237 of them are killed in the gas chambers. After a quarantine period in Auschwitz II, the 463 selected individuals are transferred on August 25 to Auschwitz III."

Source: "APMO, D-AuII-311, p. 6, Quarantine List"

This list dated 28 July 1944 records the arrival of 463 prisoners from "Dembica Pustków" (with Reg. Nos. A-17954 to A-18416). The next column has the remark "Buna," with the number 1232 next to it[307] (as in the typescript version).[308] From this, Czech calculated the number of deportees (463 + 1.237 =) 1,700 deportees. She omits to mention, however, that the "*Liste der Juden-*

[307] APMO, D-AuII-3/1, p. 6. The final "2" can be mistaken for a 7.
[308] GARF, 7021-108-50, p. 65.

transporte" records two consecutive transports from "Pustkowie," one on 27 July 1944 (with Reg. Nos. A-17954 to A-18416), the other the next day (A-18417 to A-18646).[309] Regarding the latter set of registration numbers, it is necessary to examine Czech's next entry:

– 28 July 1944 (p. 672)

Czech's paragraph is rather long, from which I quote the essentials:

> *"An evacuation transport with male and female prisoners from Majdanek arrives in Auschwitz II. The transport of more than 1,000 prisoners left the Lublin concentration camp on July 22.* […] *Of the more than 1,000 evacuees, 681 men (among them 229 male Jews) and 156 female Jews arrive in Auschwitz. The 229 male Jews from Majdanek and a male Jew from the Pustków labor camp receive Nos. A-18417-A-18646. The following day the female Jews are given Nos. A-13827 -A-13982. The remaining 452 prisoners receive Nos. 190188-190639."*

Source: "APMO, Dpr.-Hd/1, p. 147; Leszczyńska, *Majdanek*, p. 336."

The reference to the files of the Höss Trial point to the interrogation of former inmate Gania Ajdelman on 16 May 1945. The witness stated that "in August 1944" ("*w sierpniu 1944 r.*") she was transferred to Birkenau with a transport "of about 1,000 inmates" ("*z około 1000 więźniów*"). After taking a bath, the inmates were sent to Block 11 (quarantine) of the Women's Camp.[310] Her statement contains neither a reference to the number of deportees on that train nor to the serial numbers assigned to them.

In 1991, Zofia Leszczyńska published a list of transports from Majdanek Camp. The last train left on 22 July 1944, which contained 1,000 inmates (Leszczyńska, p. 455).

The "Smoleń List" records only Reg, Nos. 190188 through 190639 (452 persons) as having arrived at Auschwitz from Lublin Camp on 28 July 1944,[311] while the number set A-18417 through 18646, as I noted earlier, refers exclusively to Jews from Putsków. Finally, according to the "*Liste der Judentransporte*," Reg. Nos. A-13827 through A-13982 were not assigned on 28 July to 156 Jews from Lublin, but on 29 July to Jews from Radom.[312]

In conclusion, the most-likely occurrence is that only one transport arrived from Pustków, from which 693 inmates were registered on 27 and 28 July 1944 with Reg. Nos. A-17954 through A-18646. Since the size and composition of the transport is unknown, the alleged selection with subsequent gassing of the claimed-yet-undocumented deportees is entirely speculative and arbitrary.

31 July 1944 (p. 674)

I will discuss three consecutive paragraphs of this entry. The first reads as follows:

> *"Two female Jews who arrive in an RSHA transport from Tarnów of approximately 3,000 Jews are admitted to the camp and receive Nos. A-14392 and A-14393."*

Source: "APMO, Dpr.-Hd/1, p. 141, Statement of Former Prisoner Lejzor Braun."

Czech adds in a footnote:

> *"Lejzor Braun states: 'One day a transport came from Tarnów with Jews. There were approximately 3,000 people. Upon its arrival in Auschwitz all were dead. Maybe a few showed some weak signs of life, but only a very few. I threw the corpses from the cars… The rumor circulated at the time that these Jews had suffocated in the cars, because the transport came in July or August; it was very hot and the journey lasted approximately four days. In each of the cars were 120 persons. They received nothing to drink.'"*

This quote is more or less faithful. The Polish text begins with "I remember exactly [*dokładnie*] that one day […]." The omitted part indicated by ellipses is: "These corpses were then thrown onto trucks and taken to the crematorium [*do krematorium*]." The next sentence reads, "Word spread among the inmates that…" Finally, the page number is incorrect. Lejzor Braun's statement continues as follows:[313]

> *"After the people were unloaded onto the ramp at Birkenau, they were divided up so that the men were put on one side, the women on the other. Then the camp doctor made a so-called selection, indicating those who were to work in the camp, while the others were sent directly to the gas chambers. The number of people destined for camp work amounted to about 5% of the entire transport, and these were the healthiest. All those destined for gassing were then loaded onto trucks and sent directly to the gas chambers. Before they were loaded up, the doctor who had carried out the selection told the new arrivals that they would go to take a bath and then, after receiving food, be directed to the camp work. The women with small children were all sent directly to the gas chambers."*

Czech chose the date of 31 July based on the fact that the two issued registration numbers A-14392 and A-14393 were assigned precisely on that date according to the "*Liste der Judentransporte*."[314] It is difficult to assume that Czech seriously believes that, of a transport of 3,000 deportees, all but two inmates had died during the journey (the two she claims received the two reg-

[313] Höss Trial, Vol. 1, p. 145.
[314] APMO, D-RO/123, p. 21.

istration numbers), and unlike the witness, she does not mention that the survivors were gassed.

In contrast to Braun's initial claim that only a very few deportees survived the trip, he then insists that 5% of the [surviving] inmates of this transport were selected for work, which he later states corresponds to 150, meaning that (150 ÷ 5% = 3,000) basically all deportees must have survived. So, what now: did two survive the trip or 3,000? Therefore, this witness is completely untrustworthy, and based on his claims, nothing can be established with certainty.

Robert Seidel reconstructed the story as follows, although with the initial clarification that "almost all important documents were destroyed" (Seidel, pp. 367f.): The Steyr-Daimler-Puch Radom/ZAL-Szkolna-Street Camp, which in July 1944 had 1,800 inmates, was evacuated on 23 July. The prisoners had to march 100 km to Tomaszów, and about 150 were killed during attempts to escape. Then the inmates were transferred to Auschwitz, where those unable to work allegedly were killed:

> *"The remaining men, about half of the original inmates, were loaded onto a train after a selection, and transported to the Vaihingen/Enz Camp in Germany."*

Thus, 1,650 deportees arrived at Auschwitz, of whom about 900 were considered fit for work (and sent to the Birkenau Transit Camp without registration), and those killed – presumably gassed – allegedly numbered 750.

Here is this entry's second paragraph of interest:

> *"1,147 and 817 women are admitted to the camp after the selection from an RSHA transport of approximately 3,000 Jewish men and women from the forced labor camp for Jews in Pionki in the Radom District. The men receive Nos. B-1–B-1147 and the women, Nos. A-14394–A-15210. The remaining people are killed in the gas chambers."*

Source: "Docs. of ISD Arolsen, NA-Women, Series A, p. 5/1986."

"NB-Women" stands for "Number Assignment (*Nummernbelegung*, NB) in Auschwitz (Women)" (see p. 591, entry for 1 March 1944) here regarding the set of registration numbers starting with "A" (Series A). It is therefore an equivalent of the "*Liste der Judentransporte*." The number of deportees cannot be deduced from these documents, but only the number of those registered, so Czech's claims and calculation based on them (3,000 hypothetical deportees and, by subtraction of the 1,964 registered inmates, the 1,036 gassing victims) is entirely speculative. This is confirmed by the fact that the figure of 3,000 deportees already appears in the first, German, edition of the *Auschwitz Chronicle*, dating back to 1964 (Czech 1964b, p. 54), 22 years before the set of documents by the International Tracing Service (*Internationaler Suchdienst*, ISD) at Arolsen, Germany, became available (1986), to which Czech refers here.

It is known, moreover, that the explosives factory in Pionki had 1,500 inmates in July 1944 (Seidel, p. 367), but

> *"350 prisoners still remained on the site and were employed in the dismantling of the factory equipment. A large group managed to escape into the surrounding woods shortly before deportation. The remaining Jews were taken to Auschwitz. By order of the military commander of Radom, the remaining Jewish prisoners were deported from Pionki on 20 August. They were first taken to Częstochowa and deployed near the town in the construction of defense works. Eight days later, they were evacuated to Oranienburg Camp* [Sachsenhausen]*."* (*Ibid*., p. 368)

Therefore, there were fewer than (1,500 – 350 =) 1,150 inmates deported to Auschwitz, but a total of 1,964 inmates were registered. Therefore, Czech's entry is purely conjectural.

And now the third and final paragraph of interest in this entry:

> *"1,614 male Jews, given Nos. B-1160–B-2773, and 715 female Jews, given Nos. A-15211–A-15925, are admitted to the camp after the selection from an RSHA transport from Blizyn, an auxiliary camp of Majdanek."*

Czech had previously attributed 3,000 deportees to this transport (Czech 1964b, p. 54). The two transports from Pionki and Blizyn (allegedly 6,000 deportees, 4,293 of them registered) had presumably resulted in the gassing of 1,707 unregistered inmates.

The "*Liste der Judentransporte*" attributes the following sets of registration numbers to "Rad.[om]":[315]

Date	Series	#	Series	#	Total
31 July 1944	B-1-1747	1,747	A-14394-15634	1,241	
1 Aug. 1944	B-1148-1159	12			
31 July 1944	B-1160-2773	1,614	A-15635-16456	822	
		3,373		2,063	5,436

However, the "*Quarantäne-Liste*" of 1 August 1944 records the arrival of 1,614 Jews from Blizyn in Birkenau Camp Sector BIIa, who were registered with the numbers B-1160 through B-2773 (plus number 190707). Together with the 53 inmates of a "group transport" of 31 July and the 129 Jewish children who arrived from Kaunas on 1 August (a total of 1,997 persons),[316] they appear in the "Labor Deployment Report" of the Birkenau Men's Camp of 2 August, where 1,997 inmates are noted in the column "admissions" for Camp Sector BIIa.[317]

Of course, it cannot be excluded that unregistered Jews were sent to the Birkenau Transit Camp.

[316] APMO, D-AuII-3/1, p. 6.
[317] APMO, D-AuII-3a/20, p. 37.

1 August 1944 (p. 676)

> *"129 Jewish boys from the ghetto in Kaunas who were transferred from Dachau to Auschwitz in an RSHA transport receive Nos. B- 2774–B-2902. The boys are between the ages of eight and 14 and left Kaunas with their parents. The mothers and sisters were retained in Stutthof. The fathers and older brothers were selected in Stettin and transferred to Dachau Concentration Camp. In a few days they were sent from there to Auschwitz. In Dachau the boys learned from the prisoners that Auschwitz is an extermination camp. Some youths succeeded in escaping during the transport. After their arrival in Auschwitz they are sent to Men's Quarantine Camp BIIa."*

Source: "APMO, D-AuII-3/1, p. 6, Quarantine List; Dpr.-Hd/6, p. 50, Account of Former Prisoner Lazar Greis (No. B-2810)."

The "*Quarantäne-Liste*," dated 1 August 1944, records in fact: "*J.*[ewish] *Jung.*[en = boys] *Kaunas üb.*[*er* = via] *Dachau B-2774-B-2902 129*," with end of quarantine on 27 August.[318] In the list found in Wolken's interrogation protocol of 24 April 1945, the relevant remark reads like this: "*Litau.*[*ische* = Lithuanian] *J.*[ewish] *Kind.*[*er* = children] *Kaunas B-2774-B-2902 129*."[319] Any other information reported by Czech does not come from Lazar Greis, but from Wolken's essay "Fates of Women and Children," although Wolken incorrectly dates the arrival of this transport to 2 July 1944.[320]

1 and 2 August 1944

These two entries are about the Kielce Forced-Labor Camp:

– 1 August 1944 (p. 676)

> *"94 female Jews who were selected from an RSHA transport from the forced labor camp for Jews in Kielce receive Nos. A-16353–A-16447. Those who are unable to work are sent to the gas chambers."*

Source: "Docs. of ISD Arolsen, NA-Women, Series A, p. 5/1986; Dpr.-ZO/58, p. 81, Statement of Former Prisoner Rozalia Sabat."

I have already explained in the entry for 31 July 1944 that the Arolsen document concerns only the registration numbers of registered female inmates. The trial reference points to the Krakow Trial. In the respective interrogation of 2 June 1947, R. Sabat stated:[321]

> *"On 1 August 1944, I was deported by the Germans on the last evacuation transport from Kielce to Auschwitz-Birkenau Concentration Camp. In Birkenau, I was placed in Camp Sector BIIb, which at that time was used to house*

[318] APMO, D-AuII-3/1, p. 6.
[319] GARF, 7021-108-50, p. 64.
[320] AGK, NTN, 88, p. 52.
[321] AGK, NTN, 58, p. 81.

female prisoners. I was tattooed with the Number A-16407. At that time, more than 20,000 women of various nationalities were housed in this sector."

This testimony neither contains any reference to a selection with subsequent gassing, nor to any inmates unable to work, so this is purely Czech's fabrication.

– 2 August 1944 (p. 678)

"Nos. B-2903–B-3449 are given to 547 Jews selected from an RSHA transport from the forced labor camp for Jews in Kielce. The weak and those unable to work are sent to the gas chambers."

Source: "Docs. of ISD Arolsen, NA-Men, Series B, p. 1/1980."

The source points to the registration numbers assigned to the inmates. The 547 Jews mentioned above are registered under "admission" in the occupancy register of Birkenau's Camp Sector BIIe on 3 August 1944.[322] Robert Seidel writes about Kielce (Seidel, p. 369):

"The dissolution of the Kielce Camp began on 31 July, with the transfer of inmates from Ludwigshütte and the factory 'Henryków.' They were deported for the most part to Auschwitz, a small group to Częstochowa."

In July 1944, the two camps in question had 600 and 400 inmates, respectively. 641 were registered at Auschwitz (according to Czech), but it is unknown how many went to Częstochowa, and it cannot be ruled out that some were sent to the Birkenau Transit Camp without registration, so the statement that the transport contained inmates weak and unable to work who were gassed is mere speculation.

2 August 1944 (p. 677)

The lengthy text of this entry that I wish to discuss, which concerns the alleged gassing of the inmates lodged in the Gypsy Camp at Birkenau, is divided into two parts. Czech asserts that on this date the census of Birkenau Camp Sector BIIf was "2,898 Gypsies – probably both men and women," then she continues:

"An empty freight train is made ready in the afternoon on the railroad ramp in Birkenau. 1,408 male and female Gypsies who were selected from Camp B-IIe and Blocks 10 and 11 of the main camp are brought here from the main camp. They are to remain alive and are, therefore, to be transferred to other camps. […]

On it [the departing train] *are 918 men, among them 15 boys under 14 years of age, and 490 women. The destination of the train is Buchenwald. On August 3 and 4, 1,408 male and female Gypsies are still registered on the labor deployment projects lists in Auschwitz II, with the notation that they are on a*

[322] APMO, D-AuII-3a/20, p. 37.

> *transport to another camp. They were removed from the Occupancy Register after confirmation of their registration at Buchenwald is received."*

Source: "APMO, D-AuII-3/a/20/21, Labor Deployment List, vol. 11; report of the Garrison Doctor in Buchenwald regarding the ages of the 918 Gypsies transferred from Auschwitz; Schnabel, *Power Without Morality*, p. 152." The latter refers to the 1957, German, edition (a published English translation of that book does not exist).

The second part of relevance to my discussion deals with the claimed gassing:

> *"After the evening roll call, a camp arrest is ordered in Auschwitz II and a block arrest in the Gypsy Family Camp, B-IIe. Camp B-IIe and other barracks where Gypsies are housed are surrounded by armed SS men. Trucks drive into the camp and 2,897 defenseless women, men, and children are driven to the gas chambers* [in the crematorium[323]]. *After the gassing the corpses of the murdered are incinerated in the pit next to the crematorium, since the crematorium ovens are not operating at the time."*

Source: "APMO, Dpr.-Hd/1, p. 26; Dpr.Hd/5, p. 31; Dpr.-Hd/6, p. 63, Statements of Former Prisoners; D-AuII-3a/19/20, summary of labor deployment of prisoners in Auschwitz II of August 2, 1944, in which the number of Gypsies is still included; in later summaries these data are not present."

Documents show the following. On 30 July 1944, the "Gypsy Camp Census" was 1,518 persons.[324] On 1 August (the report for 31 July is missing) it stood at 2,815 inmates (plus 11 in other parts of the camp).[325] On 2 August, it was 2,885 (plus 13 in other parts of the camp).[326] On 3 August, the entry "Gypsy Camp Census" no longer appears, and 1,408 Gypsies are listed under the entry "Gypsy relocation" ("*Überstellung Zig*.[*euner*]") in reference to Camp Sector BIId.[327] This entry still appears in the report for 4 August.[328]

According to Czech, the transferred 1,408 Gypsies came from "KL Auschwitz," meaning from Auschwitz Main Camp, so they were not part of the "Gypsy Camp Census," and since this entry disappears from the Birkenau reports on 3 August, all 2,898[329] Gypsies who were there on the 1st of the "Gypsy Camp Census" must have been gassed.

This reasoning is both illogical and fallacious. First of all, it axiomatically assumes that the 1,408 Gypsies who were transferred from Birkenau came from the Auschwitz Main Camp and were not already part of the "Gypsy Camp Census." In this case, the presumed number of gassing victims would in

---

[328] APMO, sygn. AuII-3a/21, p. 41, *Arbeitseinsatz für 4. August 1944*.
[329] It is unclear why Czech writes 2,897 instead of 2,898.

fact amount to (2,898 – 1,408 =) 1,490. Therefore, this conjecture allows Czech to gain precisely 1,408 more gassing victims.

It is true that she writes in her entry for 23 May 1944 (p. 631):

> *"In Blocks 10 and 11 in the main camp, over 1,500 Gypsies-men, women, and children-are housed* […]*"*

but rather than referring to a document, this is backed up only with a statement by Tadeusz Joachimowski. If this were true, the 1,408 Gypsies transferred back to Birkenau should appear under the heading "*Überstellung v. KL. Au. I*" ("transfer from CC Auschwitz I"), but this category does not appear at all in the report of 2 August, while the report for 1 August lists there only two inmates in that category, both housed in Camp Sector BIId, and the 3-August report lists only one inmate in that category, equally housed in sector BIId. It follows that the 1,408 Gypsies in question were not transferred from Auschwitz Main Camp, but were already present in Birkenau.

Equally illogical and fallacious is Czech's claim that the 1,408 transferred inmates were "male *and female* Gypsies," which is obviously absurd: why would female Gypsies be part of the occupancy of the *Men's Camp* at Birkenau? In fact, female Gypsies were lodged in the women's sector of Camp Part BII, and they were consequently registered in the reports of the Women's Camp, such as that of 31 July 1944 concerning the census of the previous day. It is headed "*B.II/e (Frauen) Auschwitz II*" and gives a census of 3,422 inmates (without specifying that they were Gypsies).[330]

Finally, Czech's claim that the transferred 1,408 Gypsies all ultimately were sent to Buchenwald Camp is contradicted by the very document she cited, the report by the SS garrison physician of Buchenwald Camp dated 5 August 1944, which mentions only 918 Gypsies. This document, already published by Reimund Schnabel in the book cited by Czech, was reproduced by her in 1964 (Czech 1964b, p. 113). The relevant transport list of the Political Department Weimar-Buchenwald of 3 August 1944 ("New arrivals of 3 August 1944 Gypsies from CC Auschwitz") contains 918 names, all of them male.[331]

The "List of new arrivals from 1 July 1944" of Buchenwald Camp also mentions for 3 August 1944 only one transport of 918 "Gypsies from CC Auschwitz."[332] Finally, the report of the Dutch Red Cross confirms the arrival in Buchenwald of only one transport of Gypsies on 3 August 1944, who were assigned Reg. Nos. 74084 through 74998, corresponding to 915 inmates. It explains that these inmates were Gypsies from the Birkenau Gypsy Camp, and that the Gypsies had been transferred to Ravensbrück (Het Nederlandse… 1952, pp. 39f.). Hence, since only this one transport of 918 Gypsies arrived in

---

[330] Published online by S. Romanov; reproduced in Mattogno 2019a, p. 115.

[332] NO-1300.

Buchenwald, it is clear that another transport of 490 Gypsies was directed to another camp.

Under the date of 30 July 1944, Czech states that the Gypsy-Family Camp BIIe had an occupancy of 1,518 inmates, plus another 13 who were lodged in other parts of the camp, for a total of 1,531 (p. 673).

This demonstrates the further illogicality of her conjecture: although she does not explain in any way the increase in strength of (2,898 - 1,531 =) 1,367 inmates, in her fallacious perspective she should have considered these as Gypsies presumably coming from Auschwitz I, not the 1,408 transferred.

The fact to be examined is that the census of the Gypsy Camp (without considering the Gypsies housed in other areas of the camp) increased from 1,518 to 2,815 detainees from July 30 to August 1. The documents make it possible to determine who these 1,297 additional inmates were.

On 30 July 1944 a transport arrived at Birkenau with 1,298 Jews from Radom, who were registered under Reg. Nos. A-18647 through A-19944.[333] However, in the Labor Deployment Report of 1 August, they do not appear either in the category "admission," which does not exist at all, or under the category "admission quarantine," where only 968 inmates are registered in Camp Sector BIIa, which is a part of the 1,318 inmates who appear in the report of 30 July. These 1,298 detainees do not appear in the 2-August report either, which records 965 detainees in Camp Sector BIIa in "admission quarantine," the same as the day before, plus two inmates – actually two infants – as "admission/newly born."

In the 3-August report appears for the first time Camp Sector BIIe, in which 1,415 inmates are registered in the category "admission quarantine inmates," and 547 in the category "admission." This category also includes 16 inmates in Camp Sector BIa, and 1,797 inmates in Camp Sector BIIa.

The "*Quarantäne-Liste*"[334] allows us to reconstruct the composition of inmates admitted to "admission quarantine" in Camp Sector BIIa. The 1,797 inmates registered on 3 August were composed as follows:

– 1,614 from Blyżyn (31 July), Reg. Nos. B-1160 through B-2773;
– 129 from Kowno (1 August), Reg. Nos. B-2774 through B-2902;
– 54 from a mixed transport (31 July), Reg. Nos. 190656 through 190707[335] and A-19945 through A-19946.

The 547 inmates listed in "admission" in Camp Sector BIIe were Jews from Radom who were registered on 2 August with Reg. Nos. B-2903 through B-3449.[336]

---

[333] APMO, Ruch oporu, Vol. XXc. Sygn. D-RO/123, *Liste der Judentransporte*, p. 17.
[334] *Quarantäne-Liste*. APMO, D-AuII-3/1, p. 6.
[335] The *Quarantäne-Liste* mentions 53 detainees (Reg. Nos. 190656-190706), but one detainee, from Majdanek, received Number 190707 on the same day.
[336] APMO, Ruch oporu, Vol. XXc. Sygn. D-RO/123, *Liste der Judentransporte*, p. 18.

The "*Quarantäne-Liste*" therefore confirms that the 1,298 Jews mentioned above did not enter the Quarantine Camp BIIa: if they were definitely registered in Birkenau but appeared neither under "admission" nor under "admission quarantine," then they were necessarily admitted to Camp Sector BIIe, whose census consequently increased to (1,518 + 1,298 =) 2,816 inmates. The difference of one inmate from the figure of 2,815 arises from the fact that, for 31 July, the number of Gypsies is unknown and must have fallen from 1,518 to 1,517.

Therefore, the 2,815 inmates of the Gypsy Camp on 1 August 1944 consisted of 1,517 Gypsies and 1,298 Jews.

On 2 August the census of Camp Sector BIIe was 2,885 inmates. The other camp sectors housed a total of 13 Gypsies: one in BIIa, five in BIId and seven in BIIf. On 3 August, there was only one Gypsy remaining in Camp Sector BIIf.

On 3 August, the category "Gypsy Camp Census" disappears from the series of labor-deployment reports, and instead Camp Sector BIIe appears for the first time, in which there are 547 inmates in "admission," whom I have already identified, and 1,415 inmates in "admission quarantine," who had come neither from outside the camp nor from Quarantine Camp BIIa. It is therefore clear that they were already in Camp Sector BIIe and were part of the 2,885 inmates mentioned above. On 3 August, 1,408 gypsies were listed under "transfer," and were also part of these detainees. Finally, under the heading "employed," another 72 inmates are recorded in Camp Sector BIIe.

To sum up, there must have been (1,415 + 1,408 + 72 =) 2,895 inmates in Camp Sector BIIe on 3 August, of whom 1,408 were only on paper.[337] On 2 August, there were 2,885 inmates in that camp sector, but 12 of the 13 Gypsies who were in the other camp sectors were relocated to Camp Sector BIIe, so on 3 August the occupancy of this sector must have been 2,897 inmates. Two inmates from Camp Sector BIIe were probably either transferred elsewhere, or they died, so on 3 August 1944, there were 2,895 inmates in Camp Sector BIIe.

In conclusion, the variations in the census of the Gypsy men's camp between 30 July and 3 August 1944 have a perfectly normal explanation, which Czech could easily have found, had she not been dissuaded by her exterminationist proclivities.

As for the female Gypsies, nothing can be deduced from the documents. The census of the women's section of Camp Sector BIIe at Birkenau on 31 July 1944 was 3,422 inmates, but they were not all necessarily Gypsies, either because the relevant document does not mention them or because it is likely that, due to the overcrowding of the camp at that time, Jewish inmates were

[337] Inmates transferred to other camps continued to be listed in the departure camp's census until the destination camp notified them of their arrival.

also diverted to this sector. It is also likely that the previously announced sending of "mothers with children" from the Theresienstadt Family Camp to the Gypsy Camp as mentioned by Wolken was actually real (entries for 2, 10 and 11 July 1944).

On the other hand, the extant series of reports on the census of the Women's Camp in Camp Sector BIIe apparently ends with the report of 31 July, so that subsequent changes in the census are unknown, so nothing can be said about the fate of the Gypsies, except that there was a transfer to Ravensbrück. The Dutch Red Cross ascertained in this regard that

> *"the transport from Auschwitz Concentration Camp that arrived on 3 August 1944 consisted exclusively of the surviving Gypsies from the Birkenau Gypsy Camp. Most of them were transferred back to the Aussenkommando* [external unit] *Wollenburg (KL Flossenbürg commando) on 30 August 1944."*

The numbers assigned to these Gypsies are unknown (Het Nederlandse… 1952, p. 137). One of these Gypsies, Amalie Schaich, stated that she was transferred from Auschwitz with an unspecified number of inmates to the "Women's Concentration Camp Ravensbrück" (*Memorial Book*, Vol. 2, pp. 1527f.).

The testimonies cited by Czech in support of the alleged event are completely inconsistent with verifiable fact. The reference "Dpr.-Hd/1, p. 26" points to the statement by S. Jankowski of 13 April 1945, but even here the page is wrong. After specifying that "in the spring of 1944, only about 3,000 people remained of the entire Gypsy Camp [*z całego obozu cygańskiego*]," Jankowski recounts:[338]

> *"The Germans liquidated the rest of the Gypsies at that time by gassing. This happened in such way that the administration of the camp made it known to them that those able to work should volunteer to go and work outside of Oświęcim. When some part of them had in fact volunteered, they were loaded into lorries and were taken to the camp at Auschwitz. The Gypsies remaining in the camp were several days later driven before the crematorium at Birkenau (this was crematorium V). At the same time the Gypsies, who some days ago had been taken to Auschwitz, were brought back to the same crematorium and after undressing all of them were crowded into the rooms of the crematorium where they were gassed and next cremated in the pits near the crematorium because crematorium V was not working at that time as far as the cremating ovens were concerned. I have personally witnessed that gassing, together with other members of the Sonderkommando."*

As we have seen, Czech claims that 1,408 Gypsies were transferred from the Main Camp to Birkenau and then (according to her) to Buchenwald, but for Jankowski they were also gassed, and he was allegedly an "eyewitness"!

---

[338] Höss Trial, Vol. 1, p. 22; here quoted: Bezwińska/Czech 1992, p. 62.

The story of the cremation "in the pits" at the Crematorium IV (= V in today's numbering system) comes from this same statement, although Czech does not indicate the number of the crematorium and speaks of a single pit. For Jankowski, the alleged gassing took place in the spring of 1944 rather than August, and it involved 3,000 Gypsies, hence the entire Gypsy Camp, therefore men and women, with the shameless lie I just pointed out. How can this tale of vulgar atrocity propaganda be considered a historical account?

The source "Dpr.-Hd/5, p. 31" refers to the interrogation of Jakub Wolman on 13 and 14 April 1945, which takes up the first 85 pages of Volume 5 of the court records. On p. 31, however, there is no reference to the Gypsies, and the only fleeting mention of them is this:[339]

> *"There were 18,000 Gypsies – only one remained. They were all gassed after having resisted for a long time in the camp. Before the gassing, the Gypsies were rounded up in our camp* [the hospital camp] *and placed in Blocks 8, 9 and 10, where they stayed."*

This source is even more at odds with verifiable facts than the previous one.

The page number of the reference to Volume 6 of the Höss trial is also incorrect. Immediately after the account alleging the gassing of 4,000 Jews from the Theresienstadt Family Camp on 11 July 1944, Otto Wolken continues:[340]

> *"At about the same time, a similar action was carried out in the BIIE Gypsy camp. Here, too, the able-bodied men were taken away, women, mothers and children as well as old people were gassed, about 5,000 of them. The cries of the people, who knew of their fate, reached our camp all night long, because such actions were always carried out at night; then the labor units were in their quarters, no one could show themselves outside the blocks, the fences were charged, and the watchtowers manned."*

The same volume contains other statements by Wolken regarding the alleged gassing:[341]

> *"The total number reached 28,000, as there were also 12,000 Gypsy women. Their mortality rate was high, especially among children; about 3,000 were transferred.* […] *Over 4,000 were gassed, the rest perished in other ways."*

The long account of the alleged gassing of the Jews of Theresienstadt Family Camp, which I quoted earlier, continues as follows:[342]

> *"A few days later, the same action was carried out in Gypsy Camp BII. Here, too, first the able-bodied men were sent on transport, then the able-bodied girls; women, mothers and children, as well as the old and the sick, were gassed, about 5,000 of them. The cries and groans of the people, who knew of their fate, reached our camp all night long, as such actions were always car-*

[339] Höss Trial, Vol. 5, p. 84.
[340] AGK, NTN, 88, pp. 51f.
[341] *Ibid*., p. 214.
[342] *Ibid*., p. 250.

> *ried out at night. Since the labor units were in their quarters and slept in the blocks, no one was allowed to be seen outside the blocks, so there were no witnesses; the fences were electrically charged, and the watchtowers were manned with guards. Back then, many Gypsies ran into the wires* [of the fences] *and found their death that way."*

He went on to state that the Gypsy Camp was completely liquidated on 1 August 1944. This account could not even be accepted in a court of law, because Wolken explicitly stated that "there were therefore no witnesses," so all his "knowledge" in this regard was necessarily mere hearsay, rumors or outright atrocity propaganda.

This witness's lack of credibility can be seen, among other things, not only from his manipulations of the "*Quarantäne-Liste*," which I have outlined in the Introduction, and his story of the purely fictitious tarp-covered "gassing trenches," children being burned alive, human fat collected from pyres to stoke the fire, etc., which I have outlined when discussing the entry for 7 October 1943, but also from what he stated on 22 June 1945.

According to this, of the 2,075,000 deportees allegedly shipped to Auschwitz, 415,000 were registered and 1,660,000 gassed. To these he added the following additional gassings: 600,000 Hungarian Jews, 300,000 from the liquidation of various ghettos, and 500,000 deportees who arrived in small transports, all in all 3,060,000. Furthermore, of the 415,000 registered inmates, about 350,000 were killed at the camp, so the total death toll was about 3,500,000 murdered inmates, however "this figure does not include all the inmates who were killed before the introduction of the tattooing,"[343] so there were even more murder victims! With this he evidently aimed at reaching the iconic death-toll propaganda figure of four million victims as proclaimed by the Soviets at war's end.

3 and 4 August 1944

These entries concern two transports from Ostrowiec:

– 3 August 1944 (p. 679)

> *"306 female Jews who were selected from an RSHA transport from the forced labor camp for Jews in Ostrowiec, in the Radom District, receive the Nos. A-16835–A-17140. The female Jews who are classified as unable to work are killed in the gas chambers."*

Source: "Docs. of ISD Arolsen, NA-Women, Series E [recte: A], p. 5/1986."

– 4 August 1944 (p. 680)

> *"1,443 male Jews who were selected from an RSHA transport from the forced labor camp for Jews in Ostrowiec, in the Radom District, receive Nos. B-3964-*

[343] *Ibid.*, pp. 86f.

B-5406. The male Jews classified during the selection as unable to work are killed in the gas chambers."

Source: none.

The Arolsen document, as I explained earlier, concerns only the set of registration numbers assigned to female inmates. Instead, the numbers assigned to the male inmates (B-3964 through B-5406) are taken from the "*Liste der Judentransporte*," which, as their origin, gives "Rad.[om]."[344] The detainees were received in Camp Sector BIIe at Birkenau.[345]

Robert Seidel writes in this regard (Seidel, p. 369):

"The camps in Ostrowiec and Blizyn were evacuated on the first days of August. In Ostrowiec, a group of about 200 prisoners managed to make a successful escape. The others were taken to Auschwitz, where some of the men were selected and transferred to Jaworzno Mine ten days later. The remaining Jews died in Auschwitz."

In July 1944, the *Hochöfen und Werke* Ostrowiec Camp had about 1,000 inmates (*ibid*., p. 367), so the two transports in question could not have come from Ostrowiec. Since neither their origin nor the number of deportees nor their composition is known, it is completely arbitrary to assume that they contained inmates unfit for work who were gassed.

6 August 1944 (p. 680)

Two of Czech's paragraphs are of interest in this entry. The first states:

"314 male Jews arrive in an RSHA transport from Fünfteichen. After the selection, 31 men, given Nos. A-19962–A-19992, and 12 prisoners who were previously in Auschwitz and were already tattooed with numbers are admitted to the camp. The remaining 271 men are killed in the gas chambers."

Source: none.

The unreported source is the "*Quarantäne-Liste*," which for 8 August 1944 records the arrival from "Fünfteiche" (sic) of 43 prisoners (A-19962-19992) "+ 12 *Rücküberst*." (plus 12 inmates transferred back to Auschwitz), in addition to 271 inmates who were presumably gassed.[346] Adding up these two figures (43 + 271), Czech gets the 314 alleged deportees.

Fünfteichen (in Polish: Miłoszyce) was a satellite camp of Gross-Rosen Camp. All transfers from one camp to another were ordered by the WVHA, and the transferred inmates, who were all duly registered, were accepted into the force of the arrival camp, even if they were unfit for work. This is also

[344] APMO, D-RO/123, p. 18.
[345] APMO, D-AuII-3a/22, p. 43, report "*Arbeitseinsatz*" of 5 August 1944. There were 1,441 "admissions" ("*Zugang*") in Camp Sector BIIe.
[346] GARF, 7021-108-50, p. 65.

documented for Auschwitz, as I have shown in another study (Mattogno 2016a, pp. 80-85).

For example, on 30 October 1942, SS *Obersturmführer* Heinrich Schwarz, head of Department IIIa – Labor Deployment in Auschwitz, sent the following radio message to Office D II – Labor Deployment of Prisoners of the SS WVHA:[347]

> *"The 499 prisoners transferred from Dachau arrived here on Oct. 29, 42. The prisoners are in the worst shape imaginable, infirm—walking skeletons. Perhaps one third will be fit to work after 14 days of rehabilitation."*

Czech summarizes this document in her entry for 30 October 1942 (p. 261).

On 29 November 1942, 163 inmates arrived at Auschwitz from Buchenwald Camp, who were registered with Reg. Nos. 78577-78739. On 5 December, the SS camp physician of Auschwitz Main Camp informed the camp headquarters that only 72 (44%) of these 163 registered inmates were fit for work.[348]

The story of the 271 gassed inmates is therefore unfounded and contrary to normal camp practice.

The second paragraph of interest reads as follows:[349]

> *"7,500 female Jews arrive from the Płaszów concentration camp in an RSHA transport. They are lodged in the Birkenau Transit Camp."*

Source: none given.

The source of this claim is a 1945 or 1946 statement by former inmate Bronisława Krakauer, reported in a Polish book whose title translates as *Documents and Materials*, which was published in 1946 by the Central Jewish Historical Commission. The text begins as follows (Blumental p. 63):

> *"On 6 August 1944, 7,500 women were sent from Płaszów Camp to Auschwitz and Birkenau. There they were shaved, clothed in the same clothes, without underwear, they were ordered to get up at three o'clock in the morning, they were forced to do heavy work, they were beaten and starved. Many women died, the weak ones received the coup de grace, they were poisoned with gas. There were fewer and fewer of them left."*

This source is explicitly invoked by Czech in her entry for 23 September 1944 (see below). Magdalena Kunicka-Wyrzykowska writes that on 7 August 1944 about 4,000-5,000 Hungarian Jewish female inmates from Płaszów Camp were transferred to Stutthof Camp via Auschwitz (Kunicka-Wyrzykowska, p. 69). In the indictment of prosecutor Tadeusz Cyprian of 30 July 1946 concerning the trial against Amon Leopold Goeth, the former commandant of Płaszów Camp, one reads in this regard (*Proces ludobójcy*…, p. 32):

---

[347] APMO, D-AuI-3a/11, *Arbeitseinsatz*, p. 102.
[348] RGVA, 502-1-68, p. 100.
[349] The second sentence of this quote is not contained in the 1990, English, edition of Czech's book. It was added here, translated from Czech 1989, p. 842.

> *"In July 1944, transports amounting to several thousand people left for Auschwitz, Stutthof, Flossenbürg and Mauthausen."*

The sources are therefore rather uninformative. I return to this question when discussing the entry for 23 September 1944.

8 August 1944 (p. 682)

Three of Czech's paragraphs are of interest in this entry. The first states:

> *"After the selection from an RSHA transport of Jews from the forced labor camp in Pustków, 137 men are admitted to the camp. They receive Nos. B-5409-B-5545. Those Jews who are classified as unable to work are killed in the gas chambers."*

Source: none.

Czech knows nothing about this transport, so it is arbitrary and abusive to assume that it contained prisoners unfit for work who were gassed. Since these were mostly registered inmates who were transferred from one camp to another, the general considerations that I outlined in the entry for 6 August 1944 apply here as well.

The editor of the *Auschwitz Chronicle* could also have appealed here to the statements of the Jakubowicz brothers, whom I have already mentioned under the entry for 5 November 1943. After arriving in Auschwitz from Szebnia on 4 November 1943, they were transferred to Pustków, where they remained until 26 July 1944. On that day, they were taken to the local railway station and were loaded onto a train. About that journey, they stated:

> *"After two days and two nights of this journey, we arrived at Auschwitz. Our entire transport had to go to the gas,"*

but the gassing of Hungarian Jews was allegedly in progress, so there was no room for them, they were therefore sent to Birkenau, where they were given a bath and then civilian clothes. Then they were sent to quarantine. Two days later, they were examined by a doctor and tattooed. Keep in mind that at this point in time Witold Jakubowicz was only 11 years old. On 29 July, there was a muster, and they were added to a transport of Jews from the Lublin Region and were transferred to the Jawiszowice Satellite Camp. (Borwicz *et al.*, pp. 188f.).

The dates are offset by eleven days, but at the time, there were no other transports from Pustków to Auschwitz, so the two brothers were referring to the one mentioned by Czech.

The second and third paragraphs of interest state:

> *"25 Hungarian Jews who were probably selected from the transit camp in Birkenau receive Nos. B-5569–B-5593"*

Source: none indicated.

> *"1,414 female Hungarian and Polish Jews who were selected from the female Jews kept in the transit camp in Birkenau receive Nos. A-17141-A-18554. The female Hungarian Jews are from the RSHA transports that arrived between May 15 and June 30 from Hungary. The female Polish Jews were transferred on August 6 from the Płaszów concentration camp to Auschwitz."*

Source: "Docs. of ISD Arolsen, NA-Women, Series A, p. 6/1986."

Randolph L. Braham wrote that, according to a Hungarian Gendarmerie report of 30 June 1944, there were 3,521 Jews in Sárvár, of whom 2,204 were deported to Auschwitz on 7 July 1944 (Braham, 1981, Vol. 2, p. 667, 669; 1988, p. 515). He then mentions another deportation train leaving on 5 August 1944 without providing any details. On 5 August 1944, the British monitored and deciphered a German radio message that said:[350]

> *"Subject: Deportation of Jews. Reference: known. Special train under Run No. 6320410 left Sarvar on 4. Aug. 44 at 22:30 hours for Auschwitz. Transport strength – 1296. Head of transport SS Untersturmführer Hartemberger, B d S Hungary Sek."*

The order of magnitude corresponds quite well: 3,521 – 2,204 = 1,317, as compared to the 1,296 actual deportees. The "List of Jewish Transports" records for 8 August the registration of 25 Jews (Reg. Nos. 5569 through 5593) and 1,414 Hungarian and Polish Jews (Reg. Nos. A-17141 through A-18554),[351] which Czech considers to have been taken from the Birkenau Transit Camp (pp. 844 and 846), but it is clear that these registrations must contain some or all of the deportees from Sárvár.

15 August 1944 (p. 687)

> *"Seven women are admitted to the camp after the selection from an RSHA transport from the Galicia District and receive Nos. A-24197–A-24203. Those female Jews who are classified as unable to work are killed in the gas chambers."*

Source: none.

The "*Liste der Judentransporte*," women, Series "A," records that the above-mentioned numbers were assigned to Polish female prisoners ("*Pol*.") on 15 August 1944.[352] That this was a transport, that it came from the "Galicia District," that it had undergone a "selection," that there were also Jews unfit for work who were gassed, all these claims are unfounded, arbitrary and fictitious deductions by Czech. It is quite possible that this transport consisted only of seven Jewish female inmates fit for work who were transferred to Ausch-

14	15 September 1944	97	B-10173–B-10269	709
15	**18 September 1944**	**150**	**B-10270–B-10419**	**712**
	Total:	3,076		

* The Smoleń List has this transport split into two parts.

In this table, only male inmates are recorded. Czech says nothing about the fate of female inmates and does not even mention the total number of Jews from the Łódź Ghetto who were deported to Auschwitz. On this point, she had already expressed herself many years earlier in a summary of her *Auschwitz Chronicle*: on 15 August 1944, the ghetto contained 70,000 Jews "destined to be exterminated at the Auschwitz Camp" (Czech 1968, p. 209). However, the presumed gassing victims did not number (70,000 – 3,076 =) about 66,900, because, in addition to the registered inmates, Czech also admits an undetermined number of deportees who were sent to the Birkenau Transit Camp without getting registration. This is indicated by her with this expression (or others like it):

> *"Young and healthy prisoners were probably kept in the camp as 'depot prisoners.'"* (p. 687)

However, according to the logic of the *Auschwitz Chronicle*, the number of non-registered inmates cannot be much higher than the number of registered

inmates, hence, according to Czech, most of the alleged 70,000 deportees are said to have been gassed.

Pressured by the need to maximize the number of alleged gassing victims by any means possible and to give credence to the messages sent out by the camp's resistance movement, Czech shirked even the most-obvious test: when exactly did the deportation of the Jews from the Łódź Ghetto take place? To find out, it would have been sufficient for her to refer to the 1946 volume devoted to the Łódź Ghetto in the highly credited Polish collection *Documents and Materials*, in which we read (Eisenbach 1946, p. 266):

> *"In the period from 2 to 30 August 1944, the rest of the Jewish population was deported. Only the Jewish Aufräumungskommando* [tidying-up unit], *a unit of 500 Jews, was left in the ghetto and was responsible for clearing out the belongings left by the Jews."*

Since the distance between Łódź and Auschwitz is just a little over 200 km, one day of travel was more than enough for each deportation train. Therefore, if the first train arrived at Auschwitz on 15 August, those that left from 2 to 14 August must have been directed elsewhere, and the six transports in September are invented. Czech realized this, because she declared all the Łódź inmates mentioned in her entries for 7, 8 and 15 September, for which she does not cite any source, as having been kept as "depot prisoners" in the Birkenau Transit Camp; the first sounds like this (p. 704):

> *"247 Jews from the Lodz ghetto who were kept as so-called depot prisoners in the transit camp in Birkenau receive Nos. B-9372 to B-9618."*

However, in her entries for 2 and 18 September, for which she cites messages of the resistance movement as a source,[353] she writes as if the claimed deportation trains of these days were actually real, because if she were to cast doubt on this, she would undermine the trustworthiness of the relevant information sent out by the Auschwitz resistance movement.

In fact, only the four cases rendered in bold in the above table have any source given. I will deal with them individually under their respective entries.

The actual transports were therefore those corresponding to the first eight entries in the table, from 15 to 30 August 1944. If we assume that a train had an average of 40 cars (see the entry for 22 August) and transported 2,500 persons (see the entry for 18 September), the total number of deportees (men and women) would be around 22,500.

The women were sent without registration to the Transit Camp, from where 11,464 of them were transferred to Stutthof Camp in September 1944 (Drywa, p. 17). Since 3,086 deportees were properly registered and an undetermined number were sent without registration to the Transit Camp, the num-

[353] APMO, Mat.RO, vol. VII, p. 460 for the 2-Sept. entry, and p. 477 for the 18-Sept. entry.

ber of those allegedly gassed, if any at all, could have been at worst on the order of a few thousand, not tens of thousands.

19 August 1944 (pp. 690f.)

Czech sets forth the contents of an evaluation by SS Garrison Physician Eduard Wirths of Birkenau Camp Physician SS *Hauptsturmführer* Josef Mengele. The source is "APMO, Microfilm No. 1613/93." Since the editor of the *Auschwitz Chronicle* presents not a quotation, but merely paraphrases the document, I reproduce the original (translated) text, inserting Czech's comments in the respective places (Kubica, pp. 414f.):

> *"Evaluation of SS Hauptsturmführer (of the reserve) Dr. Josef Mengele born on March 16, 1911*
>
> *SS Hauptsturmführer Dr. Josef Mengele performs his duties in the office of the SS garrison physician Auschwitz, since 30 May 1943.* […]
>
> *During his activities at Auschwitz Concentration Camp, he has applied his knowledge practically and theoretically as a camp doctor during the fight against severe epidemics.*
>
> [Czech: *"... Dr. Mengele has applied his practical and theoretical knowledge in combating serious epidemics during his service as a physician in the Auschwitz concentration camp."*
>
> Footnote: *"The use of this knowledge consisted of sending those sick with typhus to the gas chambers."*]
>
> *With circumspection, perseverance, and vigor, he has fulfilled all the tasks assigned to him, often under the most-difficult conditions, to the complete satisfaction of his superiors and has shown himself capable of coping with every situation.*
>
> [Footnote Czech: *"He conducts these selections on the ramp ruthlessly and without moral qualms. Of the rightness of this behavior he persuades SS Doctor Delmotte, who nevertheless refuses to continue after the first selection."*]
>
> *In addition, as an anthropologist, he has eagerly used the short time off-duty at his disposal to educate himself, and has made a valuable contribution with his work by evaluating the scientific material of anthropological science made accessible to him by his office.*
>
> [Footnote Czech: "*This scientific material is represented by twins and dwarfs whose organs and body parts are conserved after they were killed and sent to the Kaiser Wilhelm Institute for Anthropology in Berlin-Dahlem."*]
>
> *His achievements are therefore to be described as excellent.* […] *He is a Catholic.* […] *In front of the enemy, during the Eastern Campaign, he gave a magnificent proof from June 1941 to July 1943. He was decorated with the Iron Cross First Class, the Iron Cross Second Class and the Eastern Medal. He was also awarded the Wounded-Warrior Badge and the Social Commit-*

> *ment Medal. In the most-conscientious fulfillment of his duty as a physician, he contracted typhus during the combat against epidemics in Auschwitz. Due to his special achievements, he was awarded the War-Merit Cross II. Cl*[ass]. *w/Sw*[ords]. *In addition to his medical knowledge, Dr. M*[engele]. *has special knowledge as an anthropologist. He appears to be suitable for any other assignment and also for the next higher assignment. He was* [never] *disciplined. As an SS physician he is loved and respected everywhere."*

Czech adds, as another mendacious comment, a lengthy quotation from the egregious impostor Miklós Nyiszli, taken from the Polish translation of his book (Nyiszli 1966, pp. 42-44). This mythomaniac is notoriously the creator of Dr. Mengele's sinister reputation as a researcher in racial biology on twins, with the whole corollary of pseudoscientific experiments that is said to have always required the sacrifice of the victims' lives (see Mattogno 2020b). I will return to this issue under her entry for 1 January 1945.

Czech's comments blatantly misrepresent the import of the document. The fact that Dr. Mengele in Auschwitz had "applied his knowledge practically and theoretically as a camp doctor during the fight against severe epidemics" and that "during the combat against epidemics" he had even "contracted typhus" himself becomes proof for Czech that he sent those suffering from typhus to the gas chambers! She also reduces Mengele's "tasks" to selections on the ramp, as if an SS camp physician in Birkenau had nothing else to do. In this context she refers to Dr. Hans Delmotte, who, according to the documents available at the Auschwitz Museum, was never even an SS camp physician at Birkenau, and had nothing to do with the selections. His only involvement with Auschwitz was this (Lasik, p. 356):

> *"Member of the Waffen-SS since 14 July 1941. He was part of the SS Sanitary Office from 20 June 1943 to 15 September 1944, from where he was transferred to the SS Hygiene Institute in Berlin on 15 September 1944. At the end of 1944, he became an official at the Auschwitz* [Rajsko] *Branch of the SS Hygiene Institute."*

Finally, concerning Dr. Mengele's alleged lethal experiments, Czech distorts the reality by following blindly Nyiszli's lurid ramblings. She is silent about the fact that Mengele had educated himself in preparation for his anthropological research during "the short time off-duty at his disposal" (!) and that it was not pseudoscientific because, according to Dr. Wirth, it had made "a great contribution to anthropological science."

Based on the documentation in the possession of the Auschwitz Museum, which was later analyzed and partly published by Helena Kubica, Czech knew full well that Dr. Mengele's anthropological research was purely theoretical and did not involve the killing of twins at all: of the 543 verified twins that passed through Auschwitz, there is no record of any pair of twins nor any single twin having been killed (see Mattogno 2008; 2020b, pp. 383-407).

In order to lend credence to these ramblings about Mengele, Czech writes that organs and body parts purportedly taken by Dr. Mengele from the alleged victims of his claimed experiments were sent to the Kaiser Wilhelm Institute for Anthropology in Berlin-Dahlem, but does not clarify that the source of this lie is again Nyiszli. It can be found on two pages of Nyiszli's Polish edition which she does not cite (Nyiszli 1966, pp. 45, 47)

On 13 December 1943, Mengele was awarded the War-Merit Cross II. Class with Swords with the following evaluation:[354]

> *"SS Hauptsturmführer Dr. Josef Mengele has been serving as camp physician at the Auschwitz Concentration Camp since 17 June 1943. In the performance of his assigned duties, he has distinguished himself in a very special way, and in addition to his service, he also deals with urgent scientific issues in the investigation of the racial affiliation of the Gypsies. He has also regularly cooperated in the performance of special assignments.*
>
> *In the course of his medical duties in the fight against the severe typhus epidemic at Auschwitz CC, he himself became infected and suffered a serious bout of typhus, after previously having caught a serious malaria infection in June/July 1943, also in the course of his duties at Auschwitz CC.*
>
> *His behavior as a physician and as a soldier is impeccable."*

I noted earlier that Czech, following Nyiszli's delusions, claims that organs and body parts which were allegedly taken by Mengele from the alleged victims of his experiments were sent to the Kaiser Wilhelm Institute for Anthropology in Berlin-Dahlem. Since 1942, the director of this institute was Dr. Otmar Freiherr von Verschuer. On 20 March 1944, he sent the chairman of the Reich Research Council (*Reichsforschungsrat*), Bernhard Rust, a series of reports on the activities of the Berlin institute, one of which also mentions Mengele. It is a report on "Experimental research to determine the heritability of specific protein compounds as the basis of hereditary and racial research." After mentioning experiments on rabbits, the report continues as follows (Rudorff, Document 101, pp. 336f.):

> *"In this branch of research, my assistant Mengele, a medical doctor and doctor of humanities, has joined us as a collaborator. He is employed as Hauptsturmführer and camp physician at the Auschwitz Concentration Camp. With the permission of the Reichsführer SS, studies are carried out on the most-diverse racial groups in this concentration camp, and blood samples were sent to my laboratory for processing."*

This was therefore Dr. Mengele's only "bloody" activity!

---

[354] NARA, Record Group No. 242/338, Roll No. 18. fr. 000484.

21 August 1944 (p. 693)

> *"An RSHA transport of Jews from the Lodz ghetto arrives. After the selection 131 men are admitted to the camp and receive Nos. B-7566-B-7696. They are put in quarantine in Camp B-IIe. The remaining people are killed in the gas chambers."*

Source: "APMO, D-AuII-3a/38, Labor Deployment List, vol. 11."

This reference is completely inconsistent, because the report "Auschwitz II Labor Deployment" of 22 August 1944 contains only 131 inmates in the category "admission" in Camp Sector BIIe,[355] without specifying that they were Jews, that they came from the Łódź Ghetto nor that there had been a selection with subsequent gassing. On the other hand, the "*Quarantäne-Liste*" contains no mention of these 131 Jews on 21 August 1944. The only two entries concerning Litzmannstadt (Łódź) are found on 22 August (61 inmates) and 24 August (3 inmates).[356] The only source regarding the 131 registered inmates and their corresponding set of registration numbers (as with almost all records of deportees from the Łódź Ghetto) remains the "*Liste der Judentransporte*."[357]

Czech finally ignores that a portion of the deportees from the alleged transport from Łódź had been interned in the Birkenau Transit Camp without registration, a possibility that should be the most-likely handling of many of these deportees even from her point of view (considering that merely 131 fit males and no females were registered from this entire transport). This grave omission constitutes yet another methodical abuse.

22 August 1944 (p. 694)

> *"An RSHA transport from the Lodz ghetto consisting of 40 cars arrives at Auschwitz. 64 men, given Nos. B-7697-B-7760, and two women, given Nos. 87095 and 87096, are admitted to the camp."*

Czech adds in a footnote:

> *"In a clandestine message to Teresa Lasocka the prisoner Stanisław Kłodziński notes: 'The gassings continue. Today, for example, 40 cars with Jews arrived from Lodz, all went in to the gas.'"*

Source: "APMO, Mat.RO, vol. II, p. 117."

Świebocki reports the translation of the message, including its beginning (2000, p. 340):

> *"The Jewish transports from Płaszów have gone in part to the gas – a small group was taken into the camp. The gassing goes on. Today, for instance, 40*

[355] APMO, D-AuII-2a/38, p. 73.
[356] APMO, D-AuII-3/1, p. 7.
[357] APMO, D-RO/123, p. 18.

> *train cars full of Jews arrived from Łódź – all of them without exception to the gas."*

Czech evidently omitted the beginning of this message with its reference to the gassing of Jews deported from the Płaszów Camp, because she believed it to be false, since she assumed that 7,500 Jews from this camp had been interned in the Birkenau Transit Camp on 6 August 1944.

The set of registration numbers (B-7697 through B-7760) is taken from the "*Liste der Judentransporte*,"[358] but I do not know where she found the numbers 87095 and 87096 for the two women, because the "Smoleń List" for female ends with the Reg. No. 75697.[359]

In practice, from Czech's perspective, the reference to Kłodziński's message is not only unnecessary, but also harmful to her cause, because according to him, the deportees from the Łódź Ghetto in this deportation train were *all* gassed.

30 August 1944 (p. 700)

> *"The prisoner Stanisław Kłodziński writes in a secret letter to Teresa Lasocka of PWOK:*[360] *'further transports with Poles and Russians leave the camp for Germany. The gassing of Jews continues. Transports from Lodz, Holland, and Italy. The pits in which the corpses of gassing victims were burned when the crematoriums could not keep up are now covered over in order to destroy the evidence.'"*

Source: "APMO, Mat.RO, vol. II, p. 126."

The message is quoted and translated correctly, but it is undated (only at the end appear the words "*od Stakło i J.*," "by Stakło and J."),[361] so, leaving aside the message's questionable credibility, the date of 30 August is Czech's invention.

The ambiguity of the message reflects the crass ignorance of the resistance movement regarding the cremation pits: its author knew neither where they were located nor how many there were (see in general Mattogno 2021, pp. 105-289). The fable of the huge cremation pits had a double propaganda value: on the one hand, it served to "demonstrate" the immense scale of the alleged extermination (the crematoria, although credited with fantastic cremation capacities, could not keep up), on the other hand, it permitted to maximize the horror effect by virtue of the fable of children burned alive in the pits.

2 September 1944 (p. 701)

> *"From among the Jews sent in an RSHA transport from the Lodz ghetto, 500 men are admitted to the camp and given Nos. B-8603–B-9102. The young and healthy individuals are sent to the transit camp in Birkenau. The remaining prisoners are killed in the gas chambers. The resistance organization in the camp states in its report for the period September 1-20 that the SS currently is gassing Jews from the Lodz ghetto and in this way is liquidating the last surviving Polish Jews."*

Source: "APMO, Mat.RO., vol. VII, p. 460."

This refers to the "Periodic Report for the Period between 1 September 1944 and 20 September 1944. Special Communiqué," which contains a paragraph titled "The gassing continues" that starts as follows:

> *"The gasworks* [*gazownie*] *and crematoria at Birkenau are still carrying on their horrendous activity, although judgment* [for their crimes] *is rapidly approaching. Most recently, the victims being gassed and burned are Jews from the ghetto at Łódź, the last of whom are being wiped out now."*

There is no way to date this alleged event based on the adverb "recently" ("*ostatnio*"), so Czech's choice of 2 September 1944 is arbitrary, indeed one should say doubly arbitrary, since it is based on the "*Liste der Judentransporte*," which provides two sets of registration numbers of inmates from "Litzmannstadt" for 2 September: B-8210 through B-8602 and B-8603 through B-9102.[362] Of these two, the editor of the *Auschwitz Chronicle* arbitrarily chose the latter.

As I noted in my discussion of the Łódź-Ghetto entries from 15 August through 18 September 1944, the deportations from the Łódź Ghetto ceased on 30 August 1944, and the Jewish tidying-up unit that had been left there was evacuated on 5 October 1944.[363] Therefore, no deportation train arrived at Auschwitz from the Łódź Ghetto on 2 September, and no gassing can have taken place. The registration numbers attributed to the origin of "Litzmannstadt" after 30 August 1944 concern inmates sent to the Birkenau Transit Camp without registration in the period 15-30 August, some of whom were subsequently registered.

11 September 1944 (p. 706)

> *"598 male and female prisoners are transferred from Stutthof. After the selection two men are admitted to the camp as prisoners and are given Nos. 193191-193192. The remaining 596 prisoners are probably killed in the gas chambers."*

---

[362] APMO, Ruch Oporu, Vol. XXc, D-RO/123, p. 18.

[363] Communication of the "*Verwaltungsstelle Getto, Litzmannstadt*" of 5 October 1944, which speaks of the deportation of the last 604 Jews. YVA, O.51-13, p. 3.

Source: "APMO, Mat.Ref.Inf. [= *Material Referatu Informacji*, Material of the Information Department], Prisoner Card Index."

The reference is to the "Smoleń list," which indeed records the two numbers mentioned above, but where did the figure of 598 deportees come from?

In the 1988 Polish book whose title translates to *Stutthof: Hitler's Extermination Camp*, the issue is laid out as follows. In July 1944, Jewish transports arrived at Stutthof Camp originating from Kaunas and Riga, which also contained mothers with children of 10-14 years of age (Ciechanowski, pp. 147f.):

> *"After a few days in Stutthof, the vast majority of these children were sent to Auschwitz. On 26 July 1944, a transport of 1,423 persons departed, including 524 adult women, 416 girls and 483 boys. The remainder were sent on 10 September 1944 with the next transport, which numbered 575 Jewish female prisoners with children, 8 mothers with 8 children and 9 pregnant women of other nationalities. Both transports were sent to Auschwitz II Birkenau, i.e., to their immediate extermination."*

The first transport was announced in Headquarters Order No. 49 of Stutthof Camp on 25 July 1944:[364]

> *"On 26 July 1944, 1,423 Jewish inmates (524 mothers, 483 boys and 416 girls) are transferred from Stutthof CC to Auschwitz CC. The prisoners to be transferred are to be taken from transports from Kauen* [Kaunas] *and Schaulen* [Šiauliai]. *The transport of the prisoners takes place on 26 July 1944. The exact time of departure will be announced later. The transport is given Run Number 163880. The Reich Railways will provide 20 freight cars and one passenger car for the transport from* [the station at] *Tiegenhof."*

On 26 July, the Stutthof commandant, SS *Sturmbannführer* Paul Werner Hoppe, sent a radio message to the Auschwitz commandant with this text:[365]

> *"Subject: Transfer of Jewish prisoners.*
>
> *Reference: Consultation by telephone with Office Group D, Oranienburg. Transport with 1893 Jewish prisoners (801 women, 545 girls, 546 boys) left Tiegenhof for Auschwitz on 26.7.44, 10.00 a.m.*
>
> *+ 1092 children"*

Also preserved is the "hand-over negotiation" of the transport, divided into two parts, one for Stutthof CC for delivery, and the other for Auschwitz CC for receipt.[366] Finally, there is the transport list, which had 27 pages, of which 24 have been preserved (p. 20, torn in half, was completed by the historians of the Stutthof Museum on the basis of the relevant admission registers): it listed 1,683 inmates (with last and first name, date and place of birth, plus the Stutthof registration number). 210 inmates from Kauen Camp had only been

[364] AMS, I-IB-3, p. 133.
[365] AMS, I-IIC-4, p. 94.
[366] AMS, I-IIC-3, p. 43.

"transited through" Stutthof without being registered, so they did not appear by name on the list.[367]

Although this transport is well documented, it does not appear at all in the *Auschwitz Chronicle*.

The list of names of the transport of 11 September was again reconstructed by the historians of the Stutthof Museum based on the relevant admission registers. It contains 476 names (39 of which were women), but it is not known whether it is complete. The deportees were mostly very young (14-16 years old),[368] but there were also about thirty adults.[369] Czech's count (598) therefore remains enigmatic.

That said, the fact that only two inmates from this transport were registered at Auschwitz does not mean, not even "probably," that the others were "gassed." At that time, as I have already pointed out several times, the Birkenau Transit Camp was in operation, and it is most-likely that the two transports from Stutthof were temporarily lodged there without being registered.

It is important to emphasize that these transfers (like all transfers of prisoners from one camp to another) were ordered by the WVHA, and that the transferred prisoners (except for the 210 mentioned above) were all duly registered. Therefore, it is hard to believe that the WVHA had ordered their transfer to Auschwitz for extermination purposes.

In fact, 129 children were duly registered on 1 August 1944 (see the discussion of that entry).

12 September 1944 (p. 707)

> *"300 Jewish children from the area around Kaunas arrive in an RSHA transport. They are killed in the gas chambers on the same day."*

Czech states in a footnote:

> *"The camp resistance organization adds the following: '...Despite all evacuation plans, transports with Jews from the East and recently from France, Belgium, and Holland continue to arrive.'"*

Source: "APMO, Mat.RO., vol. VII, p. 460"

This refers to the "Periodic Report for the Period between 1 September 1944 and 20 September 1944. Special Communiqué," where we read:[370]

> *"On September 12 of this year, a transport carrying 300 Jewish children from the region of Krosno arrived, who were gassed and burned immediately. At the present time, notwithstanding the evacuation plans, transports of Jews are still arriving from the West and recently from France, Belgium and Holland. The*

[367] AMS, I-IIC-3, pp. 44-67.
[368] The youngest child was born on 19 October 1943 and had Reg. No. 83568.
[369] AMS, lista AI, pp. 48-64.
[370] APMO, D-RO/91, Vol. VII, p. 460.

> *retreating Hitlerite hangman is carrying away the Jews, who are doomed to death at all times."*

This is a blatant atrocity-propaganda story with no documental support. Moreover, Czech "corrects" the Polish text, which says "Krosna," which is the genitive of Krosno, a town located in the southeastern part of Poland, about 140 km east-southeast from Krakow. Perhaps she wanted to see in this the Lithuanian village Krosna, which is about 60 km south-southwest of Kaunas, but we must remember that the Polish name of Kaunas is Kowno. How could "Kowno" result from "Krosna"?

On the other hand, the registration of the 129 Lithuanian Jewish children aged 8-14 years who really came from Kaunas on 1 August 1944 points to the fact that the claimed transport of 12 September with the alleged total gassing of all its deportees is purely imaginary.

The deportation train from Stutthof of 11 September contained at least 238 Jewish-Lithuanian children, so that it is likely that this entry is a fancifully embroidered reference to their arrival at Auschwitz.

18 September 1944 (p. 712)

> *"An RSHA transport with 2,500 Jews arrives from the Lodz ghetto. After the selection 150 men are admitted to the camp and given Nos. B-10270-B-10419. Up to 80 percent of the transport consists of children between 13 and 16 years of age. The remaining 2,350 persons were killed in the gas chambers."*

Source: "APMO, Mat.RO., vol. VII, p. 477."

This information, which is part of a resistance message written on 26 September 1944, states:[371]

> *"Currently* [*obecnie*] *2,500 Jews from Birkenau Camp* [*z obozu*] *are being gassed, 80% of them children aged 13-16 deported from the Łódź Ghetto."*

First of all, Czech misrepresents the meaning of the message, which does not speak at all of a transport from Łódź being gassed on arrival, but of the gassing of 2,500 Jews from Birkenau Camp, who had previously (in fact, several weeks earlier) been deported from the Łódź Ghetto. She chose the date 18 September because that is the date on which the "*Liste der Judentransporte*" records the assignment of Reg. Nos. B-10270 through 10419 to deportees from "Litzmannstadt,"[372] but, as I noted earlier, deportations from this ghetto ceased on 30 August, so these numbers refer to inmates from the Transit Camp registered later.

Czech's entry is therefore fallacious, and the reality of the gassing is only supported by the resistance message in question – far too questionable to reach the status of "history."

---

[371] APMO, D-RO/85, Vol. II, p. 167.
[372] APMO, Ruch Oporu, Vol. XXc, D-RO/123, p. 19.

What is more, this message contradicts the fictitious gassing standards of the *Auschwitz Chronicle's* editor, because the message implies that several weeks earlier (2,500 × 0.8 =) 2,000 boys between the ages of 13 and 16 had been regularly admitted to the Auschwitz Camp from the Łódź Ghetto, and it is unclear why they would not have been gassed instantly on arrival but only weeks later.

21 September 1944

A significant omission by Czech should be noted here. Under this date, the "Materials of the Resistance Movement" carry the following message:

> *"In the sandy terrain near Maczki* [a small village about 25 km north of Auschwitz, between Dąbrowa Górnicza and Jaworzno] *the so-called* Sonderkommando *Ruryck is currently stationed, consisting of a gassing truck and a motorcar* [*z samochodu gazowni oraz pługu motorowego*]. *The actual truck, Sauer brand, yellow-green color (license plate number Pol. 71-462), driver Oberwachmeister Arndt, is constructed in such a way that it has a cabin* [*kabinę*] *4 meters long and 2.5 meters wide, covered with sheet metal, with doors without handles and with a trapdoor on the floor, an opening with a grating in the right corner near the ventilation port. This truck has a pipe in the rear to which, when necessary, the exhaust pipe*[373] *is connected and, starting the engine on the spot at full speed, it asphyxiates the victims with the combustion gases that are released into the cabin, then the motor plow belonging to the Kommando buries the corpses and erases the traces. This commando was established in Russia for the rapid liquidation of dangerous elements in the front area. Currently, one has arrived from Lithuania and is serving in the Auschwitz area to carry out executions by order of the Polizei-Standgericht* [police court martial]. *There are witnesses of such executions in the Auschwitz area, where the driver Arndt, getting out of the truck left on full gas and stationed on the spot, walked by saying with a smile that in the meantime 'the birds inside are smoking'."*

This message sent by "Stakło" (Stanisław Kłodziński) to Teresa Lasocka-Estreicher and Edward Hałon on 21 September 1944 was published in at least three important Polish books immediately after the war:

– Friedman 1945, pp. 70f.
– Friedman/Hołuj 1946, pp. 81f.
– Blumental 1946, p. 121.

However, it was brought back to light only in 2006, when the website ARC (Aktion Reinhard Camps) published it together with various testimonies from the Auschwitz Museum, but it remained practically ignored until 2011, when

[373] The text reads "*szlauchem* [= *Schlauch*] *rurę* [= *Rohr*]."

it entered orthodox Holocaust literature thanks to Robert Jan van Pelt,[374] which is why I mention it here.

The message in question warrants two preliminary observations. First, until this message was submitted, the Auschwitz Camp's resistance movement had collected information (real and imaginary) *inside* the camp and disseminated it to the outside world. Here, however, it claims to have collected information *outside* the camp – which, according to the details set forth in the message, requires that "*Oberwachmeister* Arndt" received a delegation of Auschwitz inmates active as resistance fighters from inside the camp while on unsupervised leave, then showed them the vehicle while giving them all the necessary explanations!

In spite of the "testimonies," which I will discuss below, Czech evidently did not find the slightest foothold to be able to cite as a "historical event" even this fable of black propaganda, with its laughable "motor plow" that allegedly buried the dead, and this after a policy of exhuming and cremating old corpses and cremating new corpses right away had been introduced in Auschwitz in the second half of 1942 to erase any traces of the dead. Hence, according to the orthodox version, no more burying of murder victims in mass graves was happening at that time.

On 14 October 1944, a delegate of the Polish underground government of the Krakow District wrote in a telegram:[375]

> *"Mobile gas chambers installed on trucks known as 'Sonderkammern' (special chambers)/luryk/ already transported prisoners in the direction of Maczki."*

During the Höss Trial, this topic was mentioned by four witnesses. Of course, since they could not go to Maczki to see the "gassing truck" in action there, they had the "gassing truck" come to Auschwitz, but without the "motor plow."

In the interrogation of 16 September 1946, Jan Dziopek stated:[376]

> *"In Block 11 they* [the executions] *were carried out until October 1944, then the condemned were now killed exclusively in Birkenau, where they were brought to us* [to the Auschwitz Camp] *in a prisoner van* [*karetką więzienną*]. *This type of prisoner van was very airtight and had gassing devices for the people locked up in the van. The gassing devices were manufactured in the automobile workshops 'Fahrbereitschaft-Kommando'* [motor-pool unit]*."*

There is no need to comment on such fabrications.

During the Höss Trial's fifth session, Stanisław Dubiel, who had allegedly been a gardener in Höss's house, stated that Höss "went to Berna,[377] where

---

[374] van Pelt, pp. 215f.; see my critique in Mattogno 2016, pp. 87-114, and Mattogno 2022a, pp. 337-341, 374f.
[375] TNA, FO 371/39454.
[376] Höss Trial, Vol. 8, p. 109.
[377] Presumably "to Brno," but the genitive of this name is "Brna."

Himmler awarded him the title of Special Commissioner for the Extermination of Jews in Europe." Then, with reference to "*Sturmbannführer* [Liebe] Henschel," he said:[378]

> *"And in a couple of days he found another way* [of killing] – *gassing in a car* [w aucie[379]]. *The car goes to Birkenauen;*[380] *before it gets there, they are all dead bodies. The driver explained what happens: the exhaust gas goes directly into the car. Before the driver gets to the designated place, they are all dead bodies. Such was the behavior of this supposedly good man."*

So the inventor of the "gassing car" was Arthur Liebehenschel! In addition, he was commandant of the Auschwitz Main Camp only until May 1944, so that on 21 September he was no longer on duty at the camp.

During the seventh trial session, Edward Wrona reported the following:[381]

> *"It seems to me that none of the witnesses remarked that gassing cars were used at Auschwitz. I assume that the defendant Höss knew this, because he used to appear every day in his beautiful limousine at the camp's automobile workshops to see these three cars stationed there in which people were being killed. While working in Block 18 at the water-pumping station, while the whole camp was sleeping, I observed that around midnight to one o'clock some cars arrived, I turned off the light of the pumping station, stuck my head out and observed that in these cars women and men were crammed in, and executions were carried out. I witnessed that at night a German, a general, was executed simply because he had refused to comply with a wartime order. At that time, 50 limousines arrived with a huge procession of generals and the camp commandant, and the execution was carried out in a solemn manner, illuminating the death wall and the forecourt of Block 11 with a spotlight."*

Here again, any comment on such imaginary events is superfluous.

Kazimierz Grabowski testified during the 7th trial session. He had been assigned to a workshop of the metalworking shop, and testified about what he claims to have experienced there:[382]

> *"President: Was there a vehicle there intended from the beginning for gassing people?*
>
> *Witness: One time a vehicle came in for inspection that was specially coated with wood. I didn't know what kind of vehicle it was. German trucks ran on natural gas* [*na Metano*]. *There was a suction pipe installed with small holes around it, and when the inmates were inside the vehicle, this gas came through that way. After 15 minutes, people were dead. Before it reached the crematori-*

[380] "*Do Brzezinek*," curiously plural; the nominative singular is Brzezinka.
[381] Höss Trial, 7th Session, 18 March 1947, p. 699.
[382] *Ibid*., pp. 722f.

um, there were already corpses in this truck. I only came across one of these trucks, [the one] *I worked on.*

President: Was this truck always in use?

Witness: Always. Maybe this one went to the repair shop because it was broken down."

Another tall tale invented from scratch.

By hushing up these absurdities, Czech confirmed precisely that all this was mere propaganda bunk. The ensuing position of the Auschwitz Museum is still the same. In the museum's monumental work *Auschwitz 1940-1945. Central Issues in the History of the Camp*, Henryk Świebocki, in his detailed treatment of the camp's resistance movement, mentions several "secret messages" from S. Kłodziński, dated before and after 21 September 1944,[383] but makes no mention of the message just quoted, which means that the decision makers at the Auschwitz Museum had vetoed its inclusion, if it was ever considered. However, this tale is no-less-absurd than many others – equally accompanied by "eyewitness" evidence – to which Czech and the museum gave their seal of approval.

23 September and 27 October 1944

These two entries concern transfers of Jews to Stutthof Camp. In the entire *Auschwitz Chronicle*, only three such transports are indicated: 2,000 inmates on 14 July in the entry examined earlier, an undetermined number on 23 September and 1,500 on 27 October:

– 23 September 1944 (p. 715)

"Some of the female Jews sent on August 6, 1944, from the Płaszów camp to Auschwitz II are transferred from the transit camp in Birkenau to Stutthof."

Source: "*Documents and Materials*, vol. I, p. 63."

Czech refers to the statement of Bronisława Krakauer, quoted under the entry for 6 August 1944. The text continues as follows (Blumental, p. 63):

"On 23 September 1944 they were transferred by transport to the Stutthof Camp. There in a hall 1,500 slept on the floor."

Czech therefore inexplicably omits the figure of 1,500 deportees given by the witness.

– 27 October 1944 (p. 740)

"Approximately 1,500 Jewish prisoners are transferred from the transit camp of Auschwitz II to Stutthof."

[383] Świebocki 2000; for instance, "Appendix 1," which is headlined "Secret Messages Sent from Auschwitz by Prisoners," contains messages by Kłodziński of 6 September and 9 October 1944 (pp. 340f.); on p. 328, a dispatch of 23 September 1944 is mentioned.

Source: "APMO, Dpr.-Hd/1, pp. 136, 142" (The page numbers are incorrect).

This reference is to Volume 1 of the Höss Trial, which contains witness testimonies. The pages quoted concern two completely unknown witnesses, Motek Żeronim Popiół and the already-earlier-mentioned Lejzor Braun.

In an interrogation of 10 May 1945, Popiół stated:[384]

> *"On 27 October 1944, I was transferred with a transport of 1,500 people from Birkenau Camp to Stutthof Camp near Gdańsk."*

Braun was questioned on 11 May 1945 and stated:[385]

> *"On 27 October 1944, I was taken with a transport of 1,500 people to the Stutthof Camp near Gdańsk, where we stayed for a month working in various camp occupations."*

Among Czech's various omissions, those concerning the transfers to Stutthof are particularly serious, because already in 1967, the Polish historian Krzysztof Dunin-Wąsowicz had published a list of the transports that arrived at Stutthof between 29 June and 14 October 1944, of which as many as ten came from Auschwitz, which I report below with ascending Stutthof registration numbers (Dunin-Wąsowicz, pp. 11f.):

Date	Stutthof Reg. Nos.	Number of Deportees
29 June 1944	37642-40143	2,502
25 July 1944	50275-50456	182
20 July 1944	50540-53070	2,531
14 August 1944	63847-66646	2,800
16 August 1944	66702-69501	2,800
28 August 1944	74288-77087	2,800
28 August 1944	80191-80198	8
10 September 1944	81300-81967	668
3 September 1944	81968-84372	2,405
10 September 1944	84618-85699	1,082
27 September 1944	87812-92312	4,501
	Total:	22,279

This list does not include the transport of 28 October 1944 containing 1,500 deportees (Reg. Nos. 99130-100629).[386] When adding them, the total number of deportees rises to 23,779.

The transport of 27 October 1944 contained 4,501 deportees, but the two witnesses cited by Czech stated only 1,500. It is not known whether Czech intentionally omitted this source. The fact remains, however, that she only gives a numerical account for 3,500 inmates transferred to Stutthof, thus obtaining almost 20,300 fictitious deaths.

---

[384] Höss Trial, Vol. 1, p. 133.
[385] *Ibid*., p. 139.
[386] AMS, I-IIB-8, p. 1, 27; list of Jewish transports (manuscript and typescript).

In this context, other serious omissions by Czech are noted.

From the numerous references I have analyzed earlier, it is clear that the editor of the *Auschwitz Chronicle* had examined Volume 6 of the Höss Trial very carefully, looking for any foothold in favor of alleged gassings. This volume, as explained earlier, also contains the statements by Otto Wolken and various documentary material he collected, including the transcription of an important German document. It is a letter from the prisoners' clothing warehouses (*Häftl. Bekleidung-Kammern*) of Concentration Camp Auschwitz II (Birkenau) dated 14 July 1944 and addressed to the clothing department of the camp administration, (*Verwaltung, Abt. Bekleidung*). In this letter, the SS *Unterscharführer* in charge stated the following:[387]

> *"The clothing chambers CC Auschwitz II have clothed about 57,000 prisoners from 16 May 1944 until today, and have dispatched 48 transports with 45,132 prisoners for deportation."*

For the period in question, the *Auschwitz Chronicle* reports the transfers listed in the following table:

Date	Deportees	Destination	Date	Deportees	Destination
16 May	1,578	Buchenwald	12 June	503	Ravensbrück
18 May	10	Sachsenhausen	17 June	1,000	Buchenwald
23 May	1,000	Buchenwald	17 June	1,500	Mauthausen
24 May	82	Flossenbürg	23 June	2,000	Buchenwald
24 May	144	Ravensbrück	1 July	2,000	Buchenwald
28 May	963	Mauthausen	6 July	1,000	Ravensbrück
1 June	1,013	Buchenwald	7 July	1,000	Sachsenhausen
5 June	2,000	Buchenwald	9 July	1,000	Mauthausen
6 June	100	Golleschau	10 July	800	Dachau
6 June	2,000	Mauthausen	13 July	2,500	Buchenwald
11 June	2,000	Mauthausen	14 July	2,000	Stutthof
			Total:	26,193	

It would have been fair for Czech to make it clear to her readers that these transports were only a fraction of all the transports, and that (45,132 – 26,193 =) 18,939 were not mentioned in her various entries. Instead, these too were used to inflate the number of those allegedly killed, which in these two cases alone amounted to (~20,300 + ~18,900 =) about 39,200.

23 and 26 September 1944

These two entries contain references to the alleged killing of 200 inmates of the "*Sonderkommando*."

[387] AGK, NTN, 88, pp. 111-113.

– 23 September 1944 (pp. 715f.)

> *"200 Jewish prisoners in the Special Squad who are deployed to incinerate corpses in open pits are removed – after the trenches are covered and graded – with the explanation that they are to be taken to the Gleiwitz A.C. The selected persons receive food supplies and are loaded onto freight cars that are standing on a siding in Auschwitz II, Birkenau. Rather than to Gleiwitz the train moves onto a siding in Auschwitz I. Here the prisoners are led to a not very large building in which clothing and other goods are disinfected. Their particulars are recorded as if they were new arrivals. In the evening the supervisor of the Special Squad, SS Technical Sergeant Moll, and the SS men who were guarding them drank schnapps, which they offered to the prisoners. As soon as the prisoners were drunk, the room they were in was locked from outside. Zyklon B was thrown in through a window, which killed them. This denouement was overseen by the physician on duty, SS Camp Doctor Horst Paul Fischer."*

Source: "APMO, Salmen Lewental, handwritten manuscript published in SAM, *Amid Unspeakable Crimes*, p. 172 [German edition's page number]; Mat.RO, vol. II, pp. 166ff.; vol. VII, pp. 477, 481;" this is followed by a lengthy reference to the "Protocol of the Trial of the Concentration Camp Doctor [Horst] Fischer" before a court of communist East Germany, as published in a 1966 book.

– 26 September 1944 (pp. 716f.)

> *"The camp resistance movement reports the following in a clandestine letter to Teresa Lasocka and Edward Haloń of the PWOK:* […]
>
> *2. 200 Jews from the so-called Special Squad were gassed in a special way. They made up a closed group that was employed in Birkenau with filling in and leveling pits in which corpses were incinerated when the crematorium was overloaded. When they finished their work, they were not sent back to their squad, but rather to Auschwitz I. With a great display they were registered like newly admitted arrivals and finally were led to the baths in the so-called de-personalization* [=disinfestation[388]] *chamber, where so far no gassings had taken place. They were killed there with gas. The explanation of the camp management of Auschwitz I to the director of the operation, Moll, that the 200 prisoners were guests in Auschwitz and that their 'departure' from Birkenau was to be reported, was characteristic."*

Source: "APMO, Mat.RO, vol. II, pp. 166ff.; vol. VII, pp. 477, 481."

I do not currently have access to the last two sources mentioned for both entries (Mat.Ro., Vol. VII, pp. 477, 481), two messages from the resistance movement, so unfortunately, I cannot discuss them here.

---

[388] This is a very-clumsy attempt at literally translating each component of the German term *Entwesungskammer* (literally: de-creaturing chamber), which can be found as such in Lewental's original manuscript, but which actually translates as disinfestation or fumigation chamber.

Here is what Lewental wrote about this (Bezwińska/Czech 1992, p. 162):

> *"But the day came when our situation became very serious, the reason being the transferring of our entire Kommando to crematoria II-IV. And since there was no 'work' there, we expected in the immediate future the Germans to come and take away a group of men from among us. And so it came to pass, 200 men were taken, killed and cremated."*

This self-proclaimed member of the "*Sonderkommando*" therefore knew nothing about the alleged filling-in and leveling of cremation pits. For him, the 200 inmates were killed only because there was no more "work" in the crematoria. Since, according to Bezwińska and Czech, the transfer of the *Sonderkommando* to the crematoria from Block 13 of Camp Sector BIId was intended to make it impossible for them to have any contact with the inmates in the Men's Camp (*ibid*., FN 75, pp. 160f.; FN 78, p. 162), it is difficult to believe that the 200 prisoners slated for extermination, once they allegedly had been transferred to the Auschwitz Main Camp, had not themselves been isolated there as well, so the "resistance movement" could not have had contact with them. But if that was so, where did the information in the message reported by Czech come from?

She also forgets to explain that the disinfestation facility, in which the gassing is said to have taken place, could only have been the disinfestation chamber of the inmate-property warehouse of the Auschwitz Main Camp, the so-called Kanada I (BW 28, *Entlausungs- und Effektenbaracken*), which she mentions a few pages later in her entry of 2 October 1944, where she states that "250 female prisoners work in the service posts of the SS in Sorting Squad I on the grounds of the DAW, i.e., the so-called Canada Squad I" (p. 721). In the entry for 21 October 1944 of the German edition, she calls it explicitly "*Entwesungskammer I*" (1989, p. 913), which the English translator maliciously mistranslated as "Expropriation Room I" (1990, p. 737).

However, the first message from the resistance movement quoted by Czech says that the 200 detainees were sent "*do 'kąpieli' w tzw. 'Entwesungskammer'"* (German in original); hence "to the 'bathhouse,' to the so-called 'disinfestation chamber',"[389] but this facility, which was well described by Jean-Claude Pressac (1989, pp. 41-50), neither had anything making it resemble a "bath," nor even a "window" or hatch through which Zyklon B could have been poured in, as Czech claims in her entry for 23 September, nor could any equipment in it have been mere "camouflage," because, as the resistance's own message states, this disinfestation gas chamber had never been used for homicidal purposes, meaning that it has always been used for disinfestation purposes.

The observations of the two historians at the Auschwitz Museum were based on a statement by Henryk Tauber, who is not mentioned by Czech, and

[389] APMO, D-RO/85, Vol. II, p. 167.

the reason for her concealing him is easily understood when we read his claims:[390]

> *"Since then* [after the revolt plans were exposed in June 1944], *we were transferred to Crematorium IV in order to make it impossible for us to have any contact with the outside world. From the staff housed there, about 200 prisoners were selected and sent to be gassed. They were gassed in the 'Kanada' delousing chamber at Auschwitz, and cremated in Crematorium II; this cremation was carried out by the SS men in charge of the crematorium themselves."*

Pressac commented on this statement as follows (1989, p. 498):

> *"Henryk Tauber is here reporting a dubious episode that he did not personally witness. The fact is that it is most unlikely that 200 members of the Sonderkommando would allow themselves to he shut in a gas chamber, even though it appeared 'normal' because it was used for disinfestation purposes. Since it was fitted, like the homicidal gas chambers, with the same type of gas-tight door visible at the entrance, it is impossible that 200 men who knew all about the business, who had been opening and closing such doors for months, would have entered such a room without staging a revolt. This execution by gassing still remains to be proved."*

More simply put: could these 200 men have been unaware that Kanada I had a Zyklon-B disinfestation chamber?

Even Czech realized that this alleged gassing was far-fetched, so she invented the story of the SS getting the 200 inmates drunk. Indeed, to be precise, all the parts of her entries for 23 and 26 September 1944 that I underscored are Czech's invention: none of this is attested by the sources she cites.

This also applies to the reference to Horst Fischer, an SS physician who was transferred to Auschwitz on 1 November 1942, with the rank of SS *Obersturmführer*. He initially worked as SS troop physician (*Truppenarzt*), then as SS camp doctor (*Lagerarzt*) in the Main Camp. From 1 November 1943 to September 1944, he was a camp physician at the Auschwitz III-Monowitz Camp. In the interrogation of 19 October 1965, he declared the following:[391]

> *"Together with the SS garrison physician, SS Sturmbannführer Dr. Wirths, I witnessed for the first time an extermination of inmates by means of 'Zyklon B' at the end of November/beginning of December 1942 in the 'Sauna' at Birkenau. I subsequently witnessed extermination procedures there as an SS physician on duty at intervals of about 14 days, depending on how the transports arrived at the 'old ramp' of the Auschwitz I Main Camp, until about May 1943. Based on these six-months and fortnightly intervals, I estimate that I was*

---

390 Höss Trial, Vol. 11, p. 145.

391 "*Vernehmungsprotokoll des Beschuldigten Dr. Horst Fischer*," Berlin, 19 October 1965, in: District Court Wien, 3rd to 5th session in the trial against Gerd Honsik. Ref. 20e Vr 14184/86 Hv 5720/90, p. 429.

> *twelve times at the farmhouse in Birkenau, the gas chamber camouflaged as 'Sauna'."*

Therefore, Fischer was referring to the "farmhouse" near Birkenau, that is, to "Bunker" 1 or 2 (he did not even know that there are said to have been two of these alleged gassing facilities), and to a period not later than May 1943. Czech, on the other hand, refers to Kanada I of the Auschwitz Main Camp, and to 23 September 1944: indeed, according to her, Fischer was an eyewitness even to this alleged killing, which is absurd!

29 September 1944 (p. 717)

> *"500 Jewish prisoners from Gross-Rosen are transferred to Auschwitz. They are sick and invalid prisoners. All transferred prisoners are probably killed in the gas chambers."*

Source: "APMO, Kor. IV-8521/2151/83, List of Names. The names on this list do not appear in the documents of Auschwitz C.C."

"Kor." stands for "*Korrespondenz*"; hence, this is a letter, presumably dating from 1983. In the first, German, edition of the *Auschwitz Chronicle*, this entire entry is absent. Apparently, someone sent the Auschwitz Museum a list of 500 names, claiming that they were sick and disabled prisoners transferred from Gross-Rosen Camp to Auschwitz. As I explained earlier, registered inmates could not disappear from the camp without leaving any trace, so if Czech found no trace of any of these 500 names in the Museum's archives, the most-likely thing is that they were never transferred to Auschwitz to begin with. Furthermore, she evidently could not produce any documents, testimonies or messages from the camp resistance referring to this transfer.

2 October 1944 (p. 720)

> *"The SS Camp Doctor Thilo conducts a selection in the men's quarantine camp during which he cho*[o]*ses 101 prisoners. They are killed the same day in the gas chambers."*

Source: "APMO, Dpr.-Hd/6, p. 8."

This is the last of the selections with subsequent gassings listed by Otto Wolken on the fictitious basis of his "Daily Reports." He notes in this connection that on 6 October 1944 the census of Camp Sector BIIa was 3,861 inmates, yet 3,835 the next day, but six female inmates had been transferred to the inmate infirmary, so (3,861 – 3,835 – 6 =) 20 inmates were allegedly selected and gassed. Wolken gave very-detailed explanations about this alleged selection: Camp Capo Hans Clasen complained about Wolken to Dr. Thilo, because Wolken kept too many inmates in "convalescence." Thilo then ordered Wolken to make a list of these inmates, after which Wolken declared that everything was fine. There were 15 detainees, three of whom were Jews

from Łódź with no registration numbers. Wolken handed Jan Sehn the list of names of these detainees, which contained the words "The camp doctor had the recuperating inmates lined up. The recuperating inmates were gassed."[392] Since this sentence was written by Wolken himself, it has no probative value, for he is the only guarantor of its truthfulness.

The story of Dr. Thilo concerns the story of the alleged gassing of 15 of the alleged 20 gassing victims, so it is not clear how Czech could speak of 101 gassing victims.

6 October 1944 (p. 724)

Czech quotes a secret message from inmate Józef Cyrankiewicz that concludes as follows:

> *"The gassing never ends: 3,000 prisoners from Theresienstadt; 2,500 from Auschwitz I, II, and III; 6,000 female Hungarian Jews; 500 male Jews from the ghetto in Lodz; 400 prisoners from Buchenwald. Selections from among the sick and the unhealthy for gassing continue unabated."*

Source: "APMO, Mat.RO., vol. III, p. 173; vol. VII, p. 480."

The Polish text, published by Nachman Blumental in 1946, states "6,000 Jewish women from Weimar" ("*6000 kobiet żydowskich z Weymar*"; Blumental p. 121). Czech's translation assumes the Polish words "*z Węgier*" = "from Hungary," but it is rather unlikely that "*z Węgier"* was misinterpreted as "*z Weymar*." But even if one grants this, the information would be no-less-false. In this case, since no deportation trains with Hungarian Jews were rolling anymore at that time, we would be dealing with registered inmates, which – even in Czech's view – should appear under the heading "*S.B.*" (for *Sonderbehandlung* = special treatment, or more-precisely "*Durchgangsjuden S.B.*" "transiting Jews, special treatment") of the Birkenau Women's Camp's "Census Report," from which she infers the alleged gassing of 898 Jews on 3 October 1944 (pp. 722). But as Czech knew well, there is no trace in this source of these alleged 6,000 gassing victims, so no matter which way we look at it, she reported false information knowing that it was false. I will return to this issue when discussing the entries for 9-24 October 1944.

7 October 1944 (pp. 725f.)

Czech presents a very-long account relating to the uprising of the "*Sonderkommando*," which begins as follows:

> *"On Saturday morning the camp resistance movement informs the leader of the Auschwitz Combat Group, who is in the Special Squad, that news has been obtained about the camp management's plans to liquidate as quickly as possible the surviving members of the Special Squad. This news probably confirms*

[392] AGK, NTN, 88, pp. 8f.

> *the information that the operation announced a few days ago by the SS to reduce the size of the Special Squads of Crematoriums IV and V by 300 named prisoners allegedly slated for a transport is to be carried out."*

Czech continues, claiming that these inmates decided to rebel and, when the SS went to pick them up, they revolted and set Crematorium IV afire. Some of the inmates of *Kommando* 59 B (working in Crematorium IV) managed to escape into the woods, while those of *Kommando* 57 B (working in Crematorium II), seeing the fire, joined the revolt. The inmates of *Kommando* 58 B (working in Crematorium III) and 60 B (working in Crematorium V) remained inactive, because they had not been informed of the plan to revolt. The escapees were captured near the village of Rajsko and killed. In total, 250 revolting inmates died.

Sources: "APMO, Dpr.-Hd/1, pp. 26, 27, 63; Hd/6, p. 29; Hd/11, p. 115; Dpr.-ZO/26, pp. 161ff.; Mat.RO, vol. III, p. 175; vol. VII, p. 481; Depositions, vol. 13, pp. 76ff.; Lewental, 'Manuscript,' pp. 178- 184 (Lewental was a member of Special Squad 58B in Crematorium III whose manuscript was buried and later dug up on the grounds of the crematorium); *Za Wolność I Lud* (For Freedom and the People), no. 6, Warsaw, 1951."

Czech's story line follows Lewental's account, but with a few important variations: for Lewental, the "camp resistance movement" did not inform anyone, because the inmates of the *Kommando*, after 200 of them had been killed and cremated earlier (Lewental does not say when), began to fear " that the Germans would soon try [again] to reduce the Kommando," and then came to the conviction "that we became certain the date of the final liquidation was approaching" (Bezwińska/Czech 1992, p. 162). Lewental explicitly states this earlier as well (*ibid*., pp. 155, 157).

Indeed, according to Lewental, it was the inmates of the *Sonderkommando* who informed those in the camp's resistance movement (*ibid*., p. 167):

> *"But the next day, i.e. on Saturday morning, 7.10. [19]44, we learnt that at noon the transport of those 300 (*[t]*hree hundred) men from crem[atoria] IV-V was to leave. We strengthened our positions for the last time and notified distinctly and accurately the men who were in contact with us, how they should behave in diverse circumstances."*

Therefore, they prepared a plan for an insurrection which was to start from Crematoria II and III (*ibid*., p. 159), and which was later expanded to include the Auschwitz Camp as well (*ibid*., p. 161).

Furthermore, Lewental did not seem to have known the official terms for the inmate crews working at the Birkenau crematoria (*Kommandos* 57 B, 58 B, 59 B and 60 B), which he simply called "*Kommandos*".

As for the later references cited by Czech, "Dpr.-Hd/1, pp. 26, 27" refers to the interrogation of Stanisław Jankowski on 13 April 1945 (but the page numbers are incorrect). Czech did not want to facilitate verification by referring to

the published German translation of this testimony,[393] and she had good reason to do this, because Jankowski stated:[394]

> *"In the summer* [*w lecie*] *of 1944 we, the prisoners of Sonderkommando, seeing that the camp authorities used to liquidate after some time the squads of the Sonderkommando, decided to organize an escape by rising in mutiny. After getting in secret communication with other sections of the camp, particularly with Sauna, 'Canada', the Soviet prisoners of war and the women's camp, the so-called FKL, the mutiny in fact was carried into effect, but it had not the desired outcome because the SS men managed to master the situation and to quell the attempt of rising in mutiny. Four Unterscharführers perished then, 12 SS men were wounded and 455 men from among the prisoners were killed."*

The reference "Dpr.-Hd/6, p. 29" leads to the interrogation of Otto Wolken on 24 April 1945. Before talking about the uprising of the "*Sonderkommando*," Wolken told another noteworthy story:[395]

> *"The gassings and cremations in the crematoria were carried out by the so-called Sonderkommando. The camp doctor or the Rapportführer selected the persons for this Kommando from among the prisoners who arrived in the transports to Quarantine Camp BIIa. Mostly entire transports were destined for the Sonderkommando. Thus, from 446 Greek Jews who arrived on 30 June 1944 with Transport No. 49, Thilo, on 21 July 1944, selected 434 inmates and sent them to Camp Sector BIId. There 400 inmates were selected and assigned to the Sonderkommando for the crematorium. The next day, this Sonderkommando was sent to the crematoria for work, and when they refused to work, the entire Kommando, with a strength of 400 inmates, was gassed and cremated. I learned this from the corpse registrar, a Slovakian Jew* [named] *Neumann, who worked in Camp Sector BIIf and carried out the registration of the corpses of people who died in the hospital or in other sectors. Neumann told me this personally, who through his crematorium tallies had learned about the gassing of these Greek Jews on the spot at the crematorium."*

Wolken also expounded on the subject in another of his accounts:[396]

> *"For the reinforcement* [of the Sonderkommando], *400 Greek Jews from the transport from Athens-Corfu were deployed. Since they refused to do this work, they were gassed themselves first."*

This fictitious story was still in vogue in 1949, when G. Wellers reworked it with the inevitable embroidery in an article about the "*Sonderkommando*" uprising (Wellers 1949, p. 17**)**:

---

[393] Bezwińska/Czech 1972, pp. 68f.; 1996, pp. 25-57; English in *idem* 1992, pp. 31-68.
[394] Höss Trial, Vol. 1, p. 25; quoted from: Bezwińska/Czech 1992, pp. 65f.
[395] AGK, NTN, 88, p. 27.
[396] *Ibid*., p. 236.

> *"But it is known that in March 1944 the Germans designated 400 Jews of Corfu to the Sonderkommando, and that they collectively refused the work that was required of them. They were all exterminated immediately."*

Czech knew well that this story was untrue, hence she did not include it in her *Auschwitz Chronicle*. Although she was aware of Wolken's unreliability as a witness, she nevertheless quoted him to support her own account. By doing so, however, she neither rendered service to the truth nor to herself, because Otto Wolken had declared:[397]

> *"In September 1944, the crematoria were no longer at full capacity, because at that time no more Hungarian transports were arriving in such large numbers, so the SS authorities decided to carry out a reduction in the Kommando employed in the crematoria. This meant that these people were going to be gassed. Since they knew this, they decided to defend themselves, and if they really had to die, it would not have happened voluntarily, but with a fight. Then there was a riot, the SS brought in reinforcements, and on Saturday 21 September, around one o'clock in the afternoon, all the prisoners were shot. I do not know exactly how many were shot at the time, however, at that time the Kommando employed at the crematorium numbered about 200 prisoners, and the SS later said that there was no one left alive."*

This account is in clear contradiction with the one exposed by Czech.

The next reference, also with a wrong page number, concerns the interrogation of K. Smoleń of 14 April 1945, during which he stated:[398]

> *"In September 1944, I do not remember the day anymore, around 4 p.m., we noticed at the camp an unusual activity of SS men, who energetically brought back the* [external] *units from work to the camp. Then we observed that Crematorium III* [IV in today's numbering system] *was burning. We noticed inmates escaping from it through Sector G in the direction of Crematorium I. We then assumed that it was a Sonderkommando uprising. Our assumptions were later confirmed. The group of inmates who had escaped from Crematorium III was later joined by a small group of inmates of the Sonderkommando working at Crematorium I. These two groups, after cutting the high-voltage wires and barbed wire surrounding the crematorium, attempted to escape. The SS ran after them, firing on the escapees. I do not know how many prisoners tried to escape, how many succeeded and how many were killed. However, no one was brought back to the camp alive, and in the evening, the roll call showed that 92 prisoners were missing. As a result of this uprising, no further repression or harassment was imposed. As I later learned from the account of the Kapo of Crematorium III – I do not know how he saved himself and why he did not escape, but then he was shot and taken to the hospital – because of the uprising that day the Sonderkommando employed at Crematorium III were mistreated*

[397] AGK, NTN, 88, p. 28.
[398] Höss Trial, Vol. 1, pp. 60f.

> *in a special way. These inmates were ordered to strip naked,* [therefore] *they assumed that they would be gassed. Those who had participated in the uprising, after killing an SS man and a German – the Kapo of Crematorium III – burnt their own beds and fled."*

This is followed by a reference to Szlama Dragon's interrogation of 10-11 May 1945 (Dpr.-Hd/11, p. 115), again with an incorrect page number. The witness stated that in October 1944 the "*Sonderkommando*" numbered 700 inmates, but:[399]

> *"Since at that time the crematoria no longer needed a staff of so many men, we feared that we too would be gassed, so we decided to organize an uprising. We had been planning it for a long time, we had contacts and liaison persons with the* [outside] *world, we had manufactured grenades, we had weapons and a camera, and we were waiting for the beginning of the third Soviet offensive. In fact, we believed that only in the case of the offensive could our action have any chance of success. In October, our situation seemed to have worsened, so we decided not to wait* [any longer], *but to take action. I do not remember exactly the date, it was a Saturday, when we threw ourselves on the SS guards, 12 SS were wounded. It seems that some among them were also killed. At the same time, the inmates housed in Crematorium II also went into action. In Crematorium III, the Sonderkommando did not have time to begin the action. SS reinforcements immediately arrived in the area of our crematorium, a couple of companies surrounded the entire area, approximately 500 inmates were shot, and the remainder managed to save their lives by hiding."*

The reference "Dpr.ZO/26, pp. 161f." points to the testimony of Henryk Mandelbaum during the eighth session of the Krakow Trial, during which the witness stated:[400]

> *"In October 1944, when our SS leaders had to take the inmates of our Kommando away in a transport as before, that means they had to kill and cremate them themselves, without us – but they didn't succeed. Because when they arrived at the crematorium, whither we had been transferred from the camp, and we were all spending the nights in the crematoria, three-level bunks and straw mattresses were set up there, and we stayed there for a month; when they arrived to take us away, a revolt broke out among the inmates. When the SS arrived to line them up in rows of four, their commandant and others were hit with a hammer. There was panic. They* [The inmates] *joined the fray. The crematorium was set on fire. The alarm was given* [and] *firefighters rushed from all over the camp to extinguish it. But they did not extinguish it, because the building was made of wood, only the skeleton* [walls] *and the furnaces remained, because they were made of iron. Of course, the commandant arrived, guards were organized and reinforced to surround these inmates, but they*

[399] *Ibid.*, Vol. 11, pp. 112f.

[400] AGK, NTN, 108 (Trial of the Auschwitz Camp Garrison, Vol. 26), pp. 161f. (pp. 850f. of the manual pagination).

> *managed to cut the barbed wire to the women's camp in order to escape. Unfortunately, however, no one* [from this sector] *fled. When the fire broke out in the other crematoria – because it was all a parallel line* [the crematoria were located along the same line] *– so that the other* [inmates] *saw that something was wrong; when they saw the fire that had been started simultaneously, they managed to disarm the SS men who were on guard posts, and then 5 SS men were killed. But they could not escape, because at a distance of 7 km, there was a guard picket of SS men, and they were all captured, indeed killed, because they did not let themselves be taken alive."*

Oddly enough, two years earlier, on 27 February 1945, when he was interrogated by Soviet Major Kotikov, Mandelbaum knew much less about the event, although he should have had fresher memories of it:[401]

> *"At the beginning of October 1944, the Sonderkommando, who was housed in the camp, was transferred to stay in the crematorium, and we stayed there for about a month. Once, in October, a fire broke out in Crematorium 3; it was started by the Sonderkommando; then this crematorium was surrounded by the SS, and a fight began that lasted 2 hours. At the time, the Sonderkommando had disarmed the guards in one of the crematoria and fled the crematorium. I know that the SS captured all the insurgents and shot 400 of them. The crematorium burned down completely and started to be dismantled first."*

Of the two sources relating to material from the resistance movement, the first (Mat.RO., Vol. III, p. 175) is a secret encoded message dated 9 October 1944, attributed to S. Kłodziński, which was sent to the PWOK, the text of which was partially published in 1971 (Bezwińska/Czech 1971, p. 164; in the omitted final part appears this sentence: "Six chambers for killing prisoners with arsenic are being built"! Rudorff, Doc. 147, p. 485):

> *"On Saturday the 7th, the Sonderkommando working on gassings and cremations was to be gassed themselves. They did not go to their gassing, however, because the prisoners, seeing death inevitable, threw themselves on the SS in despair and, having killed six, broke through the chain of sentries. During the pursuit* [by the SS], *about 200* [inmates] *were killed with firearms, about 500 were saved. One of the crematoria was set on fire. The evening flyover of Allied planes in connection with a raid over Silesia,*[402] *hampered the pursuit. Today the SS openly threaten a bloody revenge on all inmates, considering it an unprecedented crime that the unfortunate inmates did not allow themselves to be gassed. Berlin was informed of this fact in a special report* […]*."*

On 10 October, PWOK wrote a message that contains new data compared to the one quoted above (Bartosik, p. 35):

> *"Saturday 7, after the development of a battle and a fire in one of the crematoria, a group of inmates slated to be gassed, consisting of 700 persons,*

401 GARF, 7021-101-13, p. 99.
402 As Czech notes on p. 708, this occurred on 13 September 1944.

> *breached the line of sentries* [and escaped]. *About 200 inmates perished during the escape. Pursuit was made more-difficult by an evening air raid. The inmates are currently in the territory of Silesia, and may enter the territory of Żywiec, Bielsko and Krakow. Please instruct all subordinate units to send assistance to these inmates. A large percentage of them are probably foreigners. Account must be taken of the searches being conducted by the German authorities."*

The second resistance source cited by Czech (Vol. VII, p. 481) is a PWOK report for the period 5-10 October 1944, which is not accessible to me, but as far as its content is concerned, it should correspond to the telegram of 14 October 1944 signed "Government Delegate of Krakow District" which reached the Foreign Office and was translated from Polish into English:[403]

> *"The gassing of prisoners at Oswiecim was to take place on the 7th October. Desperate Poles attacked their executioners killing six of them. 200 prisoners lost their lives in the fight. 500 of them escaped. The pursuit was made difficult because of Allied aircraft which were overhead at that time. Mass executions expected. We demand selection of hostages. /to answer for the lives of our prisoners/."*

The second part of Czech's story is shorter (p. 726):

> *"In the evening, all the prisoners who were killed are brought to the grounds of Crematorium IV and the remaining members of the Special Squad are driven together. Another 200 prisoners from the squads that took part in the uprising are shot to death. A representative of the Commandant delivers a threatening speech in which he announces that if there is a repetition of such incidents all prisoners in the camp will be shot to death. Afterward work is resumed in Crematoriums II, III, and V."*

Source: "APMO, Dpr. ZO/26, p. 162, Statements of Former Prisoner and Special Squad Member Henryk Mandelbaum (No. 181970); SAM, *Auschwitz in the Eyes of the SS*, pp. 188ff." (The page number of the German edition is given here.)

The reference to Mandelbaum points to the continuation of the quote reproduced earlier:[404]

> *"In the evening, at 7, they brought all the killed* [fugitives] *to us to verify that no one was alive. At the same time, the 200 remaining people who had provoked the revolt were also shot by an Unterscharführer whose name I do not know. After all this, the deputy commandant arrived and gave the order that, if something similar were repeated, everyone in the camp would be shot to the last man. After all this, normal work resumed."*

---

[403] TNA, FO 371-39454.
[404] AGK, NTN, 108, p. 162 [851].

Finally, Czech refers to Pery Broad's essay of 13 July 1945, in which he dedicated a few lines to the uprising of the "*Sonderkommando*" (Bezwińska/Czech 2007, pp. 187f.):

> *"Another terrible massacre occurred in Birkenau in the autumn of 1944. The special squads in the crematoria were no longer wanted and their number was to be reduced. Several hundred workers were to be sent in 'a transport to Gleiwitz'. They very well knew what it meant! They would be driven in lorries once around the Birkenau camp to make other prisoners believe they really were departing, and then they would be brought into the gas-chambers. Prisoners of war made shell fuses in the Weichsel-Union-Werke (Vistula-Union Works) and the members of the special squads, resolved upon desperate action, managed somehow to get from them explosives with which they made primitive hand-grenades. A simultaneous outbreak was planned in all the crematoria. The fire set to crematorium III [IV] was to be the signal. The desperate action failed, however. Crematorium III [IV] was burnt down and about eighty prisoners succeeded in escaping from the crematorium I [II] through the barbed wire fences around it, but both eighty and several hundreds from the other crematoria, particularly from crematorium III [IV], lay shot in the evening of that unlucky day in front of its charred ruins. Those who were not shot while breaking out from the burning crematorium III [IV], were driven into the gas-chamber which was undamaged. In tens they were let out and ordered to lie down in the yard on their bellies. There they were shot in the back of their heads. 'The transport to Gleiwitz' was thus dispatched."*

Considering that the tone of the account sounds like that of a former prisoner rather than that of a former SS *Unterscharführer*, it should be noted that it is at odds with other accounts adduced by Czech, particularly that of Mandelbaum.

For over seventy years, the "*Sonderkommando*" uprising has remained an undocumented event, and it was only in 2015 that a historian at the Auschwitz Museum decided to publish two documents related to it.

On 8 October 1944, SS *Sturmbannführer* Richard Baer, then commandant of Auschwitz I, the Main Camp, sent the following telegram to the Zichenau/Schröttenburg branch of the Gestapo:[405]

> *"Subject: Attempted Mass Escape by Prisoners Employed in Crematoria Here.*
>
> *On October 7,* [19]*44 the Kommandos of the crematoria here attempted a mass escape. Through the swift and decisive intervention of the guard staff here, however, it was possible to prevent this. The vast majority of these prisoners were shot while fleeing. At present the following prisoners are still unaccounted for:"*

[405] Bartosik, p. 34, first page of the document; for the entire document see Mattogno 2020b, pp. 456f.

This is followed by the names of four inmates, among them a German Kapo, whom the mutineers had probably killed and eliminated his body, a Russian PoW, and two Jews.

There is also an "Escape Report" which, although dated "7.9.44," hence September, undoubtedly relates to the event mentioned by Baer (the text is written in three columns):[406]

> *"*[Column 1] *a) Secret Police Auschwitz b) City district Auschwitz Pezula, Constable of the Protective Police d.A.* [?] *c) 7 Sept. 44. 19:15 AM Wilczek* [Column 2] *Escape report. Around 1400 hours today, a large number of prisoners escaped from the C.C. Auschwitz II, from the Sonderkommando (crematorium), mostly Jews. Some of the fugitives have already been shot during the instantly initiated pursuit. The search operation continues. Features: shaved, no. tattooed on the l.*[eft] *forearm. Clothing: partly civilian with red stripes. I request to instantly carry out further search measures a.*[nd] *to inform subordinate offices. There are only 4 inmates left on the run.*
>
> [Column 3] *Reinforced patrol sent to the railway-station area."*

Therefore, historically certain is only an escape attempt by a large number of inmates of the crematorium *Sonderkommando* that took place around 2 p.m. on 7 October 1944, and that four inmates were still missing the next day. If one wants to relate to this event what Special Order No. 26/44 of 12 October 1944 says in Point 1, one can add that on 7 October, "in the performance of their duty three SS *Unterscharführers*, Rudolf Erler, Willi Freese and Josef Purke, fell before the enemy, true to their oath to the Führer" (Frei et al., p. 499).

Instead, Czech presented a hodgepodge of contradictory testimonial sources from which she extrapolated individual elements to create a purely fictitious historical reconstruction.

The telegram from the "Government Delegate of the Krakow District" attributed the uprising to Polish prisoners. On 19 October 1944, the Polish newspaper *Dziennik Polski i Dziennik Żołnierza* (*Polish Journal and Soldier's Journal*) published in London embroidered the news in a short article titled "Revolt of Poles at Death Camp" ("*Bunt Polaków w Obozie Śmierci*"):

> *"On the 18th of this month, new details arrived from the country concerning the execution of Poles at Auschwitz.*
>
> *On 7 October in Auschwitz, a new mass murder of political prisoners began. The massacres take place in the gas chambers, built in the area of the camp in Birkenau near Auschwitz. On the day the massacre began, the Polish inmates, who made up the vast majority at the camp, threw themselves on their German executioners. During an uneven struggle, in which the Germans fired at the*

[406] Bartosik, p. 31; reproduced in Mattogno 2020c, p. 228.

> *camp barracks with machine guns, the Poles managed to kill six German executioners. More than 200 Polish prisoners fell in the battle."*

Here we have a confirmation of how Polish chauvinism misrepresented even real events for its black-propaganda purposes.

Other reports were completely invented. A November 1942 report claimed that "in the last two years tens of thousands [*dziesiątki tysięcy*] of Poles have already been killed" and proclaimed:[407]

> *"It is necessary to shout out aloud to the whole world our judgment on Auschwitz, on an unheard-of crime perpetrated against the Polish nation."*

In a secret message dated 21 January 1943, the confabulator Józef Cyrankiewicz, held in high esteem by Czech,[408] wrote (Rudorff, Doc. 51, p. 221):

> *"Gas. Entire transports are sent directly to the gas, without registering anyone at all. The number* [of those murdered] *in these transports already exceeds 500,000. Mostly Jews. Lately transports of Poles from the Lublin Region are going directly to the gas (men and women). Children are thrown directly into the fire. Behind Birkenau the so-called 'eternal flame' burns – an open-air burning of corpses; the crematorium cannot cope."*

In a dispatch of 4 March 1943, Stefan Rowecki, commander in chief of the *Armia Krajowa* (National Army) stated that more than 640,000 people had already died in Auschwitz, and pointed out that "65,000 Poles were shot, hanged, tortured, gassed, or died of starvation and disease" (*ibid*., Doc. 60, p. 233). From such messages one can deduce the trustworthiness of the Polish resistance movement.

9-24 October 1944 (pp. 727-738)

Czech lists numerous alleged gassings that she took from the famous "Notebook of a Member of the Special Squad," identified by someone as Leib Langfus (Source: "APMO, Memoirs/148, vol. 38a"). This is a list of alleged gassings related to October 1944, in a spurious mixture with the "census reports," as I will show below. First of all, I report the data of the list in the following table, where the numbered columns contain the following data: day of October 1944 (1), type of alleged victims (2), origin and/or type of alleged victims (3), crematorium where the alleged gassing took place (4), number of claimed gassing victims (5), number of gassing victims claimed by Czech (6), relevant page number of the *Auschwitz Chronicle* (7).

---

[407] See Mattogno 2021, p. 133.

[408] According to the entries in the Index of name, he is mentioned on at least 28 pages of the *Auschwitz Chronicle*. Cyrankiewicz was Polish premier from 1947-1952. Another of his co-confabulators, Kazimierz Smoleń, took over as director of the Auschwitz Museum in 1955.

409 "Lager niem." "Niem." is an abbreviation of the Polish word "niemiecki," German.
410 "Terezen."
411 "Ce Lager" (sic), meaning Camp Sector BIIc.
412 "Kranken Lager."
413 "Rozmait[y]."
414 "Bunkier."
415 With reference to this source, Czech has 1,000 inmates selected on 21 October from the Men's Camp who were allegedly gassed in Crematorium III, but that has no exact equivalent in the source she quotes (p. 737).
416 "Glejewic."

"Camp C" refers to Camp Sector BIIc of Birkenau, which was used as transit camp for women at the time. For October 1944, the changes in this sector's occupancy were preserved almost completely in the series of reports called "Occupancy Report" ("*Stärkemeldung*"). In the category "losses" ("*Abgänge*"), th option "S.B." also appreas, which almost certainly stands for "special treatment" ("*Sonderbehandlung*") which the orthodoxy equates with gassing, and "transit Jews S.B." ("*Durchgangs-Juden S.B.*"), referring to Jews lodged in the transit camp. Czech cites this series of documents as a source of gassings along with the list in the "Notebook" as shown in the following table, in which I compare the data from the "Census Reports," the "Notebook" list and the numbers listed in the *Auschwitz Chronicle*:

Census Reports				*Notebook List*	Auschwitz Chronicle
October 1944	S.B.	Transit Jews S.B.	Totals S.B.		
9	7	0	7	2,000	2,000
10	12	0	12		
12	3	131	134	3,000	3,000
13	5	3	8	3,000	3,000
14		477	477		477
15	0	0	0	3,000	3,000
16	3	0	3		
17					156
19	3	0	3		
20	117	77	194	200	
21	2	513	515	1,000	513
Totals:	152	1,201	1,353	12,200	12,146

It is evident that the data in the column of the "Notebook" List and in the *Auschwitz Chronicle* are in total contrast to those of the "Census Reports": on 9 October, there were only seven cases of "special treatment," interpreted by the orthodoxy of having been gassed, while the "Notebook" List has 2,000; on 12 October, the "Census Reports" have 134 cases of "S.B" compared to 3,000 gassing victims according to the "Notebook" List; on 13 October, eight cases of "S.B." in the "Census Reports" oppose 3,000 gassing victims in the "Notebook" List; on 15 October, the "Census Reports" have no "S.B." cases at all, while the "Notebook" List has 3,000 gassing victims; on 21 October, there were 515 "S.B." cases according to the "Census Reports," as against 1,000 gassing victims for the "Notebook" List.

For 13 October, Czech notes (p. 731):

"3,000 women are killed in the gas chamber of Crematorium III they were selected in Auschwitz I. Among them are five female prisoners from the prison-

ers' infirmary, three female Jews from the transit camp, and 2,992 female Jews not registered in the camp."

As her source, Czech cites the "Census Report" for that day. But this document only mentions "*Durchg. Jd. SB. 3,*"[417] i.e., the three Jewesses mentioned in Czech's text which I underlined, and it contains no mention of the other 2,997, who are therefore completely invented.

The editor of the *Auschwitz Chronicle* reports the 477 "Transit Jews S.B." in the "Census Report" of October 14[418] as gassing victims, but the "Notebook" list under review ignores them completely.

The 156 alleged gassing victims on October 17 supposedly result from the "Labor Deployment List" (as Czech informs on p. 909), but this reference is meaningless, because this series of reports does not contain a category "Losses"; it neither gives the number of inmates who died, nor of those who were transferred, nor those who were subjected to "S.B.," whatever that may have been.[419]

Czech attributes a total of 12,146 gassed inmates to Camp Sector BIIc, but this figure is belied by the very documents in her possession.

The series of documents "Census Report" and "Women's Camp Birkenau Department IIIa BIa-b/BIIb.g.e./B.III"[420] makes it possible to reconstruct day by day the changes in the occupancy in October 1944.[421] On 9 October, the occupancy was 36,050 inmates, on 24 October it stood at 27,720; in this period, there were 3,391 "admissions" and 11,721 "losses" (36,050 + 3,391 – 11,721 = 27,720). Of these 11,721 "losses," however, at least 8,896 were attributable to transfers (*Überstellungen*), 48 to releases (*Entlassungen*), and 47 to natural mortality. Therefore, any gassings could at worst have resulted in 2,730 victims. The surprising thing is that Czech mentions 8,792 of the 8,896 transferred inmates: how could she seriously believe that 12,146 inmates had been gassed? It is clear that on the one hand she wanted to get as many "gassing victims" as possible, but on the other hand she was concerned not to undermine the credibility of the list of alleged gassing victims in her vaunted "Notebook."

The transports from Theresienstadt during the period covered by the "Notebook" list were as follows (Kárný, Vol. I, p. 73):

---

417 APMO, AuII- 3a, FKL, p. 62a.
418 *Ibid*., p. 63
419 Report "*Arbeitseinsatz*" of 17 October 1944. D-AuII-3a/1a-14c, pp. 355a-c.
420 APMO, D-AuII-3a, pp. 339a-371c.
421 The "Occupancy Report" series has several gaps.

October 1944	Departing Deportees	Assumed Arrivals	Notebook's Gassing Victims
6	1,550		
9	1,600	1,550	2,000
12	1,500		
13		1,600 + 1,500	2,000
14			3,000
16	1,500		
18		1,500	2,000
19	1,500		2,000
20		1,500	2,500
23	1,715		
24		1,715	2,000
Totals:	9,365	9,365	15,500

Note that, in the column listing the number of deportees, the day refers to the departure from Theresienstadt, in that of the assumed arrivals and gassing victims, the date refers to the arrival at Auschwitz.

Even if one were to adopt a charitable interpretation that all departing trains (second column) matched some arriving trains (third column) – meaning the transport of 6 October would have been gassed on 9 October, the transports of 9 and 12 October on 13 October, the transport of October 16 on October 18, the transport of 19 October on the next day, and the transport of 23 October on 24 October – there would still have been 6,135 alleged gassing victims more than there were deportees.

Only for two of these transports do we have any documental record: the "*Quarantäne-Liste*" has three inmates recorded on 15 October, and 216 on 30 October.[422]

To the three alleged transports from Slovakia, Czech attributes 7,000 gassing victims:

– 11 October: 2,000
– 18 October: 3,000
– 19 October: 2,000.

Historian Vlasta Kladivová states that five transports arrived at the camp in 1944, with a total of 7,436 deportees on the following dates (Kladivová, p. 156):

– 30 September: 1,860
– 3 October: 1,836
– 10 October: 1,890
– 17 October: 920
– 2 November: 930

[422] APMO, *Quarantäne-Liste*. D-AuII-3/1, p. 8.

Therefore, there were two transports to Auschwitz during the period in question, with 1,890 and 920 deportees, respectively, which may correspond to those noted in the "Notebook" List on 11 (2,000 claimed victims) and 18 October (3,000 claimed victims). Even if these deportees had all been gassed, their number would be 2,740, not 5,000. The women's transport of 19 October with allegedly 2,000 victims, however, did not exist at all. In any case, even from an orthodox perspective, there would be (7,000 – 2,740 =) 4,260 fictitious gassed Slovak Jews.

10 October 1944 (p. 728)

> *"800 Gypsies, among them children, who had been delivered on October 5 from Buchenwald, are killed in the gas chambers of Crematorium V. Before their transfer to Buchenwald the Gypsies had been in Gypsy Family Camp B-IIe in Auschwitz II."*

In reference to children, Czech adds in a footnote:

> *"During the liquidation of the Gypsy Family Camp on August 2, 1944, they were transferred from Auschwitz to Buchenwald, where they were registered on August 5, 1944."*

Source: "APMO, Memoirs/148, vol. 38a, Notebook of a Member of the Special Squad."

In her entry for 5 October 1944, Czech writes (p. 723):

> *"1,188 prisoners are transferred from Buchenwald to Auschwitz II, among them 800 Gypsies who were already in Auschwitz. Most of the prisoners from this transport are probably killed in the gas chambers."*

Source: "Docs. of ISD Arolsen, Folder 11."

The total number is certain, but it is very doubtful that there were 800 Gypsies among the deportees. A report written in Buchenwald on 18 April 1945 and titled "Statistical Data on the Buchenwald Camp" mentions a transport of "1,188 Jews" sent to Auschwitz on 6 October 1944, but also an earlier one, dated 26 September 1944, with "200 Gypsy-children."[423] With reference to the same source as the one just quoted, the *Auschwitz Chronicle* contains the following text for this date (p. 716):

> *"200 prisoners are transferred from Buchenwald to Auschwitz."*

That the aforementioned 1,188 deportees were Jews is also confirmed by an important official publication (Gedenkstätte, p. 221).

The story of the 800 Gypsies was therefore invented by Czech to "confirm" the fanciful story of the "Notebook of a Member of the Special Squad." The relevant entry, however, explicitly mentions "Dzieci," children, so in the first, German, edition of the *Auschwitz Chronicle*, Czech wrote that "800 boys

[423] TNA, Document 054, Roll 7/46, p. 2.

and girls – Gypsies" were gassed on 10 October 1944, and even here she specified that these were the Gypsies who had previously been transferred to Buchenwald on 2 August 1944 (Czech, 1964b, p. 76). However, this is nonsense, because in this very publication, she presented a schedule of the Buchenwald Camp's SS garrison physician of 5 August, which divided the 918 deportees transferred to this camp according to age groups: the first (9-14 years) had 105 deportees and the second (14-24 years) 393 deportees (*ibid*., p. 113), so it was impossible for "800 boys and girls" to return to Auschwitz from Buchenwald, also because the Gypsy inmates had not been transferred to Buchenwald, but to Ravensbrück.

This alleged gassing of Gypsies is therefore purely fictitious.

22-23 October 1944

– 22 October 1944 (p. 737)

> *"Over 2,000 female Jews from the Płaszów concentration camp and a good dozen male Jews from the prisoners' infirmary are brought to Auschwitz II in the evening. They have to spend the night in the so-called sauna."*

Source: "Poliakov and Wulf, *Third Reich and the Jews*, pp. 286ff." (The page number refers to the German edition of this book.)

– 23 October 1944 (p. 738)

> *"SS Camp Doctor Mengele conducts a two-hour selection among the female Jews sent from the Płaszów concentration camp. He sends 1,765 women to Transit Camp B-IIc. The remaining women are killed in the gas chambers. Giza Landau, who arrives with this transport, receives No. A-26098, and another female Jew is given No. A-27752."*

Source: "APMO, D-AuII-3a/69a, FL Occupancy Report; Prisoner Card Index; Poliakov and Wulf, *Third Reich and the Jews*, pp. 286ff."

Poliakov and Wulf report a long excerpt from an interrogation protocol of "Giza Landau, born May 5, 1932 in Tarnow." The witness was interned in Płaszów in October 1943. On 21 October 1944, she was transferred to Auschwitz with a transport of Jews, with whom she spent the night "in a large hall," without indicating how many deportees there were. The next day, Mengele carried out a selection, and she was registered under Reg. No. A-26098. Here is her comment:

> *"But unfortunately children were continually selected and went to the ovens."*

Since she herself was a 12-year-old child, it is not clear how she could escape this selection (Poliakov/Wulf, pp. 285-287).

The fact remains, however, that Czech arbitrarily sets the number of deportees on the transport at 2,000 inmates, in order to achieve a selection with the subsequent gassing of 235 victims. But is this transport real?

The chronicle of the Płaszów Camp does not contain any reference to it: in September 1944, the camp census was 2,200 inmates, and on 15 October, there was a transport of 1,600 inmates to the Gross-Rosen Camp, so that 600 inmates remained. The next transport took place on 21 November, and involved 20 inmates (Kunicka-Wyrzykowska, pp. 71-73). Alfred Konieczny confirms this order of magnitude.[424]

During the trial against the former commandant of Płaszów Camp, the witness Eward Eisner stated that the main camp was liquidated on 15 October, and that 600 Jews, 6 Poles and 40 German Kapos remained there (*Proces ludobójcy*…, p. 251).

Thus, Giza Landau could not have come to Auschwitz by a transport from Płaszów. According to the "Census Report," a transport of 169 inmates did in fact arrive in Auschwitz on 21 October, and they were registered in the Census Report on the 22nd as "transit Jews."[425] These detainees included the Polish Jews Hanka Kartuz and Iva Kleiner, who on 21 October received the Reg. Nos. A-26347 and A-26350.[426] Czech is silent about the age of Giza Landau, evidently in order to avoid the embarrassment of explaining why Mengele had allowed a 12-year-old girl to be admitted into the camp, instead of sending her to the alleged gas chambers.

The "Census Report" of 24 October says that 1,765 transferred "transit Jewesses" ("*Durchg.Jd.überst.*") arrived the day before,[427] but it does not indicate where they came from, and this document contains nothing at all to imply that these inmates had undergone any kind of selection.

29 October 1944 (p. 742)

> *"An SS Camp Doctor conducts a selection in Men's Quarantine Camp B-IIb, during which he singles out 64 prisoners. They are taken the same day to the bath of the prisoners' infirmary and from there are driven with other selected prisoners to the crematorium, in whose gas chambers they die."*

Source: "APMO, Dpr.Hd/6, p. 10."

This is Czech's habitual reference to Wolken, who in this regard stated:[428]

> *"On 29 October 1944, just before the dissolution of the camp* [Sector BIIa], *64 persons were selected and gassed. Since my aide did not record the exact numerical strength until then, I noted this decrease under 3 November 1944 in the Loss entry, with the explanation that these persons had been sent to 'f'* [Sector BIIf]. *In this connection, I should point out that larger groups of in-*

---

[424] Konieczny, pp. 61f. Given the gaps in numbering, the set 68839-69962 (1,124 inmates) plus approximately 500 (partial numbering 74463-74686) should be considered as totaling just over 1,600 inmates.
[425] APMO, *Stärkemeldung*, AuII-3a, p. 69.
[426] GARF, 7021-108-22, pp. 125f. List of inmates found at Auschwitz by the Soviets.
[427] APMO, *Stärkemeldung*, AuII-3a, p. 70a.
[428] AGK, NTN, 88, p. 10.

mates selected for gassing were brought directly from various camps. Smaller groups were brought to the bathhouse of Camp BIIf, and from there they were taken to a crematorium."

These are unfounded claims that are expressly refuted by a "health report" of the outpatient clinic of the inmate infirmary of Camp Sector BIIa (*HKB-Ambulanz BIIa*) dated 2 November 1944. In its last two points, this document states (Strzelecka 1997, p. 131):

"4. Block 15: All scabies and sycosis patients transferred to B/IIf.

5. On November 3, the camp is liquidated, inmates transferred to BII/d, and the outpatient clinic moved to BII/f."

Here, as usual, Otto Wolken, with his typical mendacity, passes off a normal transfer as a selection with subsequent gassing.

2 and 26 November 1944

These two entries deal with Himmler's alleged order to end all homicidal gassings, and the alleged implications of this purported order.

– 2 November (p. 743)

"Killing with Zyklon B gas in the gas chambers of Auschwitz is probably discontinued. The selected prisoners are shot to death in the gas chamber or on the grounds of Crematorium V."

Sources: "Adler, *Theresienstadt 1941-1945*, p. 694; Škodowa, *Three Years*, p. 168." (The last page number refers to the Czechoslovakian edition of this book.)

Adler mentions the alleged event in his "Tabular Overview" – a chronology without reference to sources (Adler, p. 700). In the text body of the book, he merely writes (*ibid*., p. 186):

"But it took until 2 November 1944 for Himmler to stop the gassings at Auschwitz."

But he does not document this statement either. The reference to Juliá Škodová's book is even more insubstantial, because the page in question merely reads (Škodová, p. 168):

"The furnaces of Birkenau and the crematoria of Auschwitz had already swallowed more than four million people when the gas chambers came to a halt at the beginning of November 1944."

The "end-of-gassing" order is a mythical event of atrocity propaganda created in the immediate post-war period, which Czech and other historians at the Auschwitz Museum later attempted to "historicize."

– 26 November (p. 754)

> *"The SS Commander in Chief* [*Reichsführer* SS Heinrich Himmler] *orders the destruction of the crematoriums in Auschwitz-Birkenau."*

Sources: "IMG, vol. 11, p. 370; vol. 33, pp. 68-70 (Doc. No. PS-3762), Statements of Kurt Becher; Adler, *Theresienstadt 1941-1945*, p. 694; Reitlinger, *Final Solution*, p. 608." (All page numbers refer to the German editions of the works cited.)

In the first, German, edition of the *Auschwitz Chronicle*, Himmler's alleged order to end homicidal gassings was not mentioned; Czech considered it implicitly in her entry for 26 November 1944 (Czech 1964b, p. 89):

> *"RF-SS Himmler ordered the destruction of the crematoria at Auschwitz Concentration Camp."*

As her source she cited: "Garrison Order No. 29/44 dated 25. Nov. 1944."

This source reference is misleading because the document in question does not contain the slightest mention of an order from Himmler or even the crematoria at Birkenau (Frei *et al*., pp. 514-516).

As for the sources given in the 1989/1990 edition, Adler merely gives the date, and Reitlinger draws it from an obvious distortion of Kurt Becher's affidavit, which he summarizes before (Reitlinger 1953, pp. 455, 587).

These statements are in fact Czech's true and only source. The reference to page 370 of Vol. 11 of the German edition of the IMT volumes is a mere repetition of the other IMT reference, as Becher's affidavit (PS-3762) as transcribed in Vol. 33 of the IMT series is merely quoted in Vol. 11 when the defendant Ernst Kaltenbrunner is confronted with it (IMT, Vol. 11, p. 334).

In his affidavit of 8 March 1946, former SS *Standartenführer* Kurt Becher stated (IMT, Vol. 33, p. 68; PS-3762):

> *"Between mid-September and mid-October 1944, I obtained the following order from Reichsführer SS HIMMLER, which I received in two originals, one each intended for SS Obergruppenführer KALTENBRUNNER and POHL, and a copy for myself:*
>
> *'I forbid with immediate effect any extermination of Jews and on the contrary order the care of weak and sick persons. I hold you (this referred to Kaltenbrunner and Pohl) personally responsible for this, even if this order is not strictly obeyed by subordinate offices.'"*

During the pre-trial interrogation of 27 March 1946, Becher was read his affidavit and asked for explanations, but none of the three interrogators had the curiosity to ask him the exact date of Himmler's alleged order. Becher stated however:[429]

[429] NARA, RG 238, M1270, OCCPAC. Testimony of Kurt Becher, taken at Nurnberg, Germany, 27 March 1946, 1000 to 1200, by Captain Richard A. Gutman, Mr. S. Jaari, and Mr. Richard Sonnen-

> *"The order in its present form was dictated by Himmler in my presence. He dictated it to his secretary, Fraulein* […] *Meinert."*

But this, according to his affidavit, took place "between mid-September and mid-October of 1944." In the afternoon interrogation, the following exchange unfolded:[430]

> *"Q. What happened to the copy of order you had received from Himmler with regard to the stopping of extermination of Jews in the concentration camps?*
>
> *A. I kept this with the files I kept on the Joint matters.*[431] *I had a special file in which we kept the materials on the Joint actions."*

The fact that Becher was unable to indicate the date of Himmler's alleged order, although he allegedly had a copy of it in his hands with the date, confirms that this imaginary order was his invention.

In 1994, Franciszek Piper, at the time director of the Auschwitz Museum's research department, "corrected" Czech's 1989 entry, stating that "Himmler ordered the demolition of the gas chambers and crematoria in Auschwitz on 25 November 1944" (Piper 1994, p. 174). In a footnote, Piper justified his statement as follows (*ibid*., FN 74, p. 181):

> *"According to the testimony of the leader of the Hungarian Zionists, Rezso Kastner, a copy of the order to demolish gas chambers and crematoria, shown to him by Himmler's associate Kurt Becher, bore the date November 25, 1944."*

This is Kastner's affidavit of 13 September 1945, in which he stated (IMT, Vol. 31, p. 13; PS-2605):

> *"According to Becher, Himmler issued instructions – on his advice – on the 25 November 1944 to dynamite all the gas-chambers and crematoria of Oswiecim. He also issued a ban on further murdering of Jews.* […]
>
> *To this desire of Himmler may be ascribed the general prohibition dated 25 November 1944, concerning the further killing of Jews. On 27 November 1944 Becher showed me a copy of Himmler's order on this subject."*

However, in his very long "Report," Kastner told a different story (Kastner, p. 242):

> *"Becher returned from Himmler's headquarters on 26 November with the declaration: 'I have won all along the line'. He related that his memorandum to Himmler had not failed to have its effect. After reading it, Himmler had or-*

[430] NARA, RG 238, M1270, OCCPAC. Testimony of Kurt Becher, taken at Nurnberg, Germany, 27 March 1946, 1400 to 1700, by Captain Richard A. Gutman, Mr. S. Jaari, and Mr. Richard Sonnenfeldt, Interrogators. Also present: Mr. Leo Katz, Interpreter, and Mr. Charles J. Gallagher, Court Reporter, p. 1.

[431] The U.S.-Jewish Joint Distribution Committee, with whose president Becher negotiated in Switzerland on Himmler's orders.

> *dered the immediate cessation of the extermination of the Jews; the gassings at Auschwitz were to cease immediately, and the gas chambers were even to be dismantled.* […] *The actual existence of this Himmler order was later confirmed on various occasions."*

Therefore, Kastner had not seen Himmler's alleged order, and did not say that it was dated 25 November.

On the other hand, the date of 26 November cited by Czech is in direct conflict with that of Document PS-3762 ("between mid-September and mid-October 1944").

Such spurious and contradictory sources cannot prove the reality of any alleged event.

3 November 1944 (p. 744)

> *"An RSHA transport of Jews, 990 men among them, arrives from the Sered camp. Men, women, and children are registered as prisoners and admitted to the camp without a selection."*

Sources: "APMO, D-AuII-3/1, p. 8, Quarantine List; Docs. of ISD Arolsen, NA-Men, Series B/1980."

Arolsen's reference concerns the assignment of the B-series registration numbers, specifically B-13970 through B-14479. These numbers, together with the figure of 990 registered inmates, are also found in Otto Wolken's "*Quarantäne-Liste*," but no gassings are considered here.[432] This document was well known to Czech even when she wrote the first, German, edition of her *Auschwitz Chronicle*, and it is in fact the unreported source of many alleged selections with subsequent gassings. Nevertheless, in 1964 she wrote in relation to 3 November 1944 (Czech 1964b, p. 84):

> *"RSHA transport, Jews from Sered. After the selection, 509 men were admitted to the camp as inmates, they were given the numbers B-13971 through B-14479. The rest were gassed, among them 481 men."*

If we follow the numbers reported by Otto Wolken, 510 men were registered, so the figure 990 must refer either to the entire transport or to the total number of men, of whom 510 were registered and 480 remained in the camp without registration.

Czech's 1964 distortion in considering the latter gassed was of an ideological origin: since at that time she assumed that Himmler's fictitious order to end homicidal gassings was issued on 26 November 1944, the transport in question must have been subjected to a selection with subsequent gassing, even contrary to Otto Wolken's entry! For the same ideological reason, she wrote down as gassed ("*wurden vergast*") all those inmates who, from 3 to 26

[432] APMO, D-AuII-3/1, p. 8.

November 1944, are listed in the "Census Report" of the Women's Camp under the heading "S.B."[433]

In 1989/1990, Czech declared them instead as "killed on the spot,"[434] and only in one case did they die "from 'special treatment' (SB)" (10 November, p. 747), yet evidently without gassing.

[433] Czech 1964b, pp. 84-87: two on 3 November, two on the 4th, eight on the 7th, 131 on the 8th, five on the 9th, four on the 10th, one on the 11th, eleven on the 13th, five on the 15th, 13 on the 16th, six on the 17th, eight on the 18th, five on the 20th, four on the 21st.

[434] 3 Nov. (p. 744); 4 Nov. (p. 744); 7 Nov. (p. 745); 8 Nov. (p. 746; without "on the spot"); 9 Nov. (p. 746); 11 Nov. (p. 747; without "on the spot"); 13 Nov. (p. 748); 15 Nov. (p. 749); 16 Nov. (p. 749; "killed directly"); 17 Nov. (p. 750); 18 Nov. (p. 750; "killed directly"); 20 Nov. (p. 751; "killed directly"), 21 Nov. (p. 752; "killed directly")

1945

1 and 17 January 1945 (pp. 773, 784)

Czech reports an account of an alleged event that begins like this:

> *"100 male and 100 female Poles who were condemned to death by the Police Court-martial are shot to death in Crematorium V in Birkenau."*

Source: "Nyisli [sic], *Mengele's Laboratory* [=*Pracownia doktora Mengele*], p. 156."

Here I complete what I have already anticipated in my discussion of the entry for 19 August 1944.

To the shameless impostor Miklòs Nyiszli I have devoted an entire monograph in which I examined in detail his incredible profusion of lies and absurdities (Mattogno 2020b). The narration of his alleged experiences at Auschwitz while in the service of Dr. Josef Mengele as a pathologist is in radical contrast to that of the *Auschwitz Chronicle*. Nevertheless, Czech found a way to quote him three times. The first (29 May 1944, p. 636) only to point out that Nyiszli's wife and daughter were in Camp Sector BIIc; the second, under the date of 19 August 1944 (pp. 690f.; see the pertinent entry). The Polish translation of Nyiszli's book cited by the editor of the *Auschwitz Chronicle* was republished in 1996 (Nyiszli 1996), from which I will subsequently quote, and the page numbers are quite similar; in this edition, the relevant account is found on pages 155f.

The enormity of the claims made by this self-proclaimed "eyewitness" becomes glaringly apparent even if one limits oneself to the final events of his account, which he described not many pages earlier.

Nyiszli states that the uprising of 6 October 1944 caused the death of 853 inmates of the "*Sonderkommando*" and 70 SS men; only seven of the inmates were saved: Nyiszli himself and his three collaborators Dénes Görög, Józef Körner and Adolf Fischer as well as an engineer, a foreman and a "Pipel" (camp jargon for servants of "prominent" inmates and SS men; *ibid*., pp. 116-127). For Czech, however, 451 prisoners and three SS men perished, and 212 prisoners survived (pp. 726, 728).

Nyiszli reports that after the uprising another 460 inmates were assigned to the "*Sonderkommando*," all of whom were killed on 17 November 1944; only four inmates survived, again Nyiszli and his three colleagues; another 30 inmates were assigned to Crematorium V, but they were not part of the "*Sonderkommando*" (*ibid*., pp. 128-151), which no longer existed.

Czech says instead that on 26 November 1944 a selection was made among the 200 inmates of the "*Sonderkommando*," as a result of which 100 were

chosen, of whom 30 were sent to Crematorium V and 70 to the demolition squad; the remaining 100 were probably killed (p. 754).

When Nyiszli claims to have witnessed the killing of the 200 Poles on 1 January 1945, he claims that he and his colleagues were (again) the only survivors of the "*Sonderkommando*"! For Czech, however, the 100 survivors of the "*Sonderkommando*" were evacuated on 18 January 1945 (see my discussion of the respective entry).

This is another example of Czech's fallacious method, which consists of cherry-picking isolated pieces from Nyiszli's narrative which are unverifiable yet suitable to her agenda, while keeping silent about these jarring contradictions that make Nyiszli completely untrustworthy even from the perspective of her *Auschwitz Chronicle*. This denotes blind fanaticism and deliberate bad faith.

To complete her fallacious account of Dr. Mengele's activities, Czech writes in her entry for 17 January 1945 (p. 784):

> *"SS Camp Doctor Mengele liquidates his experimental station in Camp B-IIf and brings to safety the 'material' acquired from the experiments on twins, dwarfs, and cripples."*

Source: "APMO, Dpr.-Hd/3, p. 138, Statement of Former Female Prisoner Stanisława Rachwałowa."

The first observation to make is that her source *par excellence*, Nyiszli, explicitly states two pages after the account of the alleged execution of the 200 Poles on 1 January 1945 that Mengele had left Auschwitz. A few lines later, Nyiszli mentions the date 10 January (Nyiszli 1996, p. 157), so the departure of this SS camp physician must have occurred before this date.

In an interrogation of 25 July 1945, the witness cited by Czech stated:[435]

> *"On the night of 17-18 January 1945, SS men arrived from the main camp of Auschwitz and began to destroy the card files, especially the hospital's card files. Only Dr. Mengele succeeded within half an hour to load on a car all the material concerning the twins and bring it to Berlin."*

Czech misrepresents even this testimony, making it sound like Mengele had taken away organs extracted during his imaginary experiments, whereas the context makes it clear without a shadow of a doubt that S. Rachwałowa was referring to paperwork, but as I mentioned when discussing the entry for 18 August 1944, this documentation was actually left behind at Auschwitz.

5 January 1945 (p. 774)

> *"Six prisoners, so-called bearers of secrets, are transferred from the men's camp in B-IId in Birkenau to Mauthausen. The transferred are five Polish prisoners who work in the Special Squad: Wacław Lipca (No. 2520), Miec-*

[435] Höss Trial, Vol. 3, p. 138.

> *zysław Morawa (No. 5730), Józef Ilczuk (No. 14016), Władysław Biskup (No. 74501), Jan Agrestowski (No. 74545), and the Czech prisoner Stanisław Slezak* […]. *They are shot to death on April 3, 1945, in the Mauthausen crematorium building."*

Source: "APMO, Mat.RO., vol. IV, p. 49; D-Mau-3/a/142, 1469, 8071, 14139, 16408. Prisoner's Personal-Information Card."

The transfer of these six inmates was communicated on 5 January 1945 by the *Lagerführer* of the men's camp of the "Conc. Camp Auschwitz, Birkenau Subcamp" in a letter to the Auschwitz headquarters, which states:[436]

> *"The following inmates were transferred today from Auschwitz CC, Birkenau Subcamp, to Mauthausen CC."*

The names of the six inmates in question follow.

The references "D-Mau-3a/142, 1469, 8071, 14139, 16408. Prisoner's Personal-Information Card" refer to the personnel files of these detainees, which accompanied them during this transfer. "D-Mau-3a/16408" points to the files of Mieczysław Morawa, which I have already described when discussing the entry for 5 March 1943. Here I add some necessary additional remarks. On the upper right-hand side of the card, within a rectangle, is Morawa's Auschwitz number (5730), above which is written the number that Morawa received at Mauthausen: 114665. The central column of the front bears the printed "transferred" ("*Überstellt*"), below which is written: "on 5 January 1945 to Mauthausen CC" ("*am 5.1.45 an KL. Mauthausen*"). This column is crossed from left to right (and from bottom to top) by the pencil inscription "transferred on 3 April 1945" ("*überstellt 3.4.45*"; Bezwińska/Czech 1972, p. 50).

Therefore, Czech interpreted the word "transferred" as "shot"! She also invented the alleged execution place, the "crematorium building."

In addition to being false, this interpretation is also inexplicable, not to mention absurd: if these inmates were dangerous "bearers of secrets," why were they transferred from a supposed extermination camp to a concentration camp, in order to be killed there? And after having arrived at Mauthausen, why were they kept alive for another three months instead of being killed immediately? So that they could spill their "secrets" to the other inmates at Mauthausen?

This fallacious interpretation is obviously not historical, but ideological: these inmates, precisely because of their characterization by the Holocaust orthodoxy as "bearers of secrets," *had to die*, meaning that Czech could not allow them to live.

But even here, the editor of the *Auschwitz Chronicle* becomes entangled in a series of inconsistencies and incongruities, because according to her logic, the 100 survivors of the "*Sonderkommando*," also being "bearers of secrets,"

---

[436] Reproduced in Bezwińska/Czech 1972, p. 44, and Czech 1964b, p. 119.

should all have shared the same fate as the six mentioned by Czech. Why were only six of them shot?

In the entry for 18 January 1945, Czech mentions a column of prisoners ready for evacuation from Birkenau and specifies (p. 786):

> *"400 prisoners join this column to escape being liquidated in the camp. Among them are some youthful prisoners from the Penal Company, 70 prisoners from the crematorium demolition squad, and 30 prisoners from the Special Squad, who take advantage of an unguarded moment in Crematorium V to join the march."*

Letting 70 dangerous "bearers of secrets" (not just one, two or three, but 70!) slip through their fingers due to carelessness is not exactly the behavior that, from an orthodox point of view, can be attributed to the bloodthirsty SS men in charge of the crematoria.

Immediately after discussing the six inmates transferred to Mauthausen on 5 January 1945, Franciszek Piper writes (2000, pp. 188f.):

> *"Approximately 100 Sonderkommando members remained alive on January 18, 1945. During the final evacuation, they were led on foot along with other prisoners to Wodzisław, and then by train to the Mauthausen concentration camp. During a roll-call assembly there three days later, all Auschwitz Sonderkommando members were called on to step forward. The appeal was repeated twice, but no one responded. Without the appropriate records, the SS were unable to establish their identities."*

Czech does not mention at all that all these inmates were also transferred to Mauthausen.

However, Piper's explanation is inconsistent, because it presupposes an astonishing as well as unlikely stupidity on the part of the Auschwitz SS, who are said to have rushed to eliminate six "bearers of secrets" as early as 5 January 1945, but did not care at all about the other 100. Not only that, but even though they must have known that these 100 former "*Sonderkommando*" members had "infiltrated" the other inmates evacuated to Mauthausen, they did not even bother to pass on to the Mauthausen Camp the names and registration numbers of these 100 inmates. Upon registration at Mauthausen, it would have been easy to verify the tattoo number of each inmate, not to mention that the transport list of inmates who departed from Auschwitz on 18 January 1945 and were registered at Mauthausen on the 25th under Mauthausen's Reg. Nos. 116501-122225[437] contains all the inmates' data, including their Auschwitz registration numbers.[438]

---

[437] Het Nederlandse… 1952b (Deel VI), p. 65. Here are recorded four other transports of prisoners who left Auschwitz on 18 January and arrived on different dates: 28 January (122571-123557), 29 January (123603-124671), 30 January (124773-125089) and 2 February (125155-125588).

[438] AGK, Mauthausen,131-12, pp. 166-257.

The story of the "bearers of secrets" is therefore incoherent, historically untenable and also silly.

25 January 1945 (pp. 800f.)

Czech presents an accurate account of events that are in themselves irrelevant for the present study, but which she develops by imaginatively embroidering on the sources she cites – and this is the only interesting aspect of the story, because it is further confirmation of the irrepressible mythomania of the *Auschwitz Chronicle*'s editor:

> *"At 2:00 P.M. an SD division arrives in the women's camp in B-IIe and the men's camp in B-IIf in Birkenau. The order is given for all Jews to leave the barracks. In Camp B-IIf Capo Schulz points to Jews and drives them out of the barracks. Some of the Jewish prisoners are able to conceal themselves under the floors in previously prepared hiding places. Approximately 150 male and 200 female Jews are taken to the gate. Several Jewish prisoners are taken behind the Block Leader's Room and shot to death, among them the Jewish prisoner Harff from Cologne. Those prisoners who cannot keep up with the march tempo are also shot to death. The transport is stopped by SS men who drive past in an automobile. The prisoners are ordered to return to the main camp. But the SD members drive away with the SS men. Some of the prisoners return to Birkenau, some of them follow the order and return to the main camp."*

Source: "APMO, Dpr.-Hd/1, pp. 78, 88; Dpr.-Hd/6, pp. 306- 308, Statements of Former Prisoners Luigi Ferri, Roman Goldman, and Dr. Otto Wolken."

Luigi Ferri, whose claims I will analyze when discussing the entry for 26 January 1945, merely stated:[439]

> *"On 25 January 1945, men from the Gestapo/SD* [*gestapowcy/SD*] *arrived at the camp and ordered all Jews to set out."*

During an interrogation on 24 April 1945, Roman Goldman stated:[440]

> *"Just at this time* [on 24 or 25 January 1945], *a dozen SS men came to the camp and ordered all the Jews to leave the block. I did not come out and hid. As I later learned a few days later, the entire transport of Jews (I do not know how many there were) were led to the side of Auschwitz I, and on the way they must have been shot."*

Otto Wolken gave a long account of the events of 25 January 1945, of which I summarize the essential points.

On 25 January 1945, at approximately 2:00 p.m., "an SS Kommando" arrived at Camp Sector BIIf and, after a brief conversation with the camp eldest, rang the gong and gave the order: "All Jews step out!" Wolken rushed to his block and shouted to all inmates to get into bed, even the service personnel, so

---

[439] Höss Trial, Vol. 1, p. 79.
[440] *Ibid.*, p. 85.

that they would not be evacuated. In Camp Sector BIIf was Kapo Schulz, a vile character, who immediately made himself available to the SS. Luigi Ferri, who was Wolken's protégé, had asked to go to the Women's Camp. Seeing him not return, Wolken went to look for him, but could not find him. Upon returning to Camp Sector BIIf, he was seen by Schulz, who reported him to the SS as a Jew. Wolken showed his doctor's armband, but the SS ignored his pleas and ordered him to follow them. He then asked to fetch his jacket from the block, which was granted, but then he ran in the opposite direction, towards Block 18, where the fence had a large hole in it, and hid in the sewage-treatment plant. In the meantime, the SS left without him.

> *"Near the Blockführer's room they stopped and were asked who was incapable of marching. They were to present themselves and could return to the camp. Six of them, including the German Jew Harff from Cologne, presented themselves. They were taken behind the Blockführer's room and shot. Then the women of BIIe joined the column, and they all marched to Auschwitz. Those who remained behind along the way were shot."*

When the column was over the railroad tracks, on the way to Auschwitz I, a car with SS men arrived who exchanged a few words with the escort. Then the Kapo asked an inmate whether he knew where the Auschwitz Camp was, and when he said yes, he told him to go ahead, they would follow. Then "they all climbed into the car and disappeared into the darkness of the night." Some inmates returned to Birkenau and told Wolken what had happened; the others marched to Auschwitz.[441]

In the first, German, edition of the *Auschwitz Chronicle*, Czech recounted the supposed events of 25 January 1945 in an entirely different way, based on other accounts (Czech 1964b, p. 107):

> *"At the Auschwitz Camp, a unit of the Security Service arrived and ordered all sick inmates out of the blocks. The Reich Germans were ordered to line up in the front row, behind them the Aryans, and finally the Jews. Aryans and Jews who could not walk were lined up separately. The Gestapo men controlled the blocks and pulled out the recalcitrants. Their behavior made it clear that the prisoners were to be shot. As they lined up, an SS car arrived. The prisoners were ordered to return to the camp. The Security Service unit left in a hurry together with the SS men."*

In her footnote she cited the following sources: "Pr. H. [Höss Trial], vol, 1, p. 175, vol. 5, pp. 9 and 19." The first reference is to Leon Małecki's interrogation of 18 May 1945, but the events of 25 January 1945 are not mentioned in it. However, a vaguely similar story appears in the immediately preceding interrogation of Jakub Gordon from 17 May 1945:[442]

---

[441] AGK, NTN, 88, pp. 297-299. The page numbers given by Czech (306-308) are incorrect; Vol. 6 of the Höss Trial has only 303 pages.

[442] *Ibid.*, p. 172.

> *"On 25 January 1945, a large number of SS arrived at the camp and ordered all prisoners who could get up from their beds to prepare for transport. From their behavior we gathered that they intended to shoot us all. They gathered us near the gate, and we were already on our way when a car with two SS men arrived. They argued with one of those who were to escort us, and after a short time they all left the camp."*

The second source is the interrogation of Jakub Wolman on 13-14 April 1945. He gave a very verbose narration, which I summarize:

On the afternoon of 25 January 1945, 80 Gestapo men showed up at Birkenau and ordered all remaining inmates, including those who were seriously ill, to line up for evacuation. The witness decided to appeal to the *Kommandoführer* to intervene on behalf of the sick. He reached him, but before he could begin to speak, a car with two Gestapo men arrived; they whispered something to the *Kommandoführer*. When the witness then pleaded the cause of the sick prisoners to him, he ordered him to line up with the other prisoners. But the witness, by means of a ruse, managed to get himself sent back to the sick block. Five minutes later, there was not a Gestapo man left in the entire camp.[443]

As can be seen, Czech has also imaginatively embroidered these two testimonies.

The entry for 25 January 1945 is another example of how the *Auschwitz Chronicle's* editor created conflicting "events" based on conflicting testimonies, distorting them to her liking.

26 January 1945 (p. 801)

> *"At 1:00 A.M. the SS squad with the task of eliminating the traces of SS crimes blows up Crematorium V, the last of the crematoriums in Birkenau."*

Source: "APMO, Dpr.-Hd/1, p. 79, Statement of Former Prisoner Luigi Ferri."

Czech forgets to point out that this detainee was an Italian Jew born on 9 September 1932, who was deported from Trieste to Auschwitz on 18 August 1944 and registered under Reg. No. B-7525, when he was still only 11 years of age, but the editor of the *Auschwitz Chronicle* assures that children "up to 14 years of age" were gassed immediately upon arrival (p. 563). Even-more-striking is the case of the Bucci sisters, both deported from Trieste to Auschwitz on 23 September 1944. 5-year-old Alessandra, born on 1 July 1939, was registered with Reg. No. 76483, while 7-year-old Tatiana Liliana, born on 19 September 1937, was given Reg. No. 76484. To this we can also add 6-year-old Sergio de Simone, born on 29 November 1937, and deported from Trieste on 29 September 1944, who received Reg. No. 179614, and 11-year-old Ari-

[443] Höss Trial, Vol. 5, pp. 61f. This interrogation fills pages 1-85 of this volume; the pages given by Czech are incorrect.

anna Szorenyi, born on 18 April 1933, deported on 21 June 1944, and registered with Reg. No. 89218 (Picciotto Fargion, pp. 157, 217, 575).

Luigi Ferri was interrogated on 21 April 1945, when he said the fateful phrase referred to by Czech:[444]

> *"As the last step, the V Crematorium* [*ostatnie V krematorium*] *was blown up on 25 January 1945 at one o'clock in the morning."*

It is at least unique that, in order to substantiate the fact that Crematorium V had been destroyed, she was forced to refer to a meager sentence of a boy who was not even 13 years old at that time.

She also cites Luigi Ferri for other events, starting with the alleged shooting of six Soviet PoWs on 22 January 1945 (p. 798), then for the open-air cremation of those allegedly killed on 23 January (p. 800). In this regard the witness stated immediately after the sentence I quoted earlier:[444]

> *"On January 22nd, after the shooting of the Russians, some soldiers came again and ordered the bodies of those shot at Crematorium V brought. It eluded them that one of the shot Russians was missing. The corpses were placed on a pyre that the soldiers set on fire themselves. Even today there are still in that place the incompletely burnt remains of these Russians."*

Czech didn't even wonder how this kid could possibly have knowledge of all this.

27 January 1945 (p. 805)

> *"The first Red Army reconnaissance troops arrive in Birkenau and Auschwitz at around 3:00 P.M. and are joyfully greeted by the liberated prisoners. After the removal of mines from the surrounding area, soldiers of the 60th Army of the 1st Ukrainian Front, commanded by General Pawel Kuroczkin, march into the camp and bring freedom to the prisoners who are still alive. On the grounds of the main camp are 48 corpses and in Birkenau over 600 corpses of male and female prisoners who were shot to death or died otherwise in the last few days."*

Source: "APMO, Dpr.-Hd/5, p. 19; Dpr.Hd/6, p. 89, Statements of Former Prisoners Professor Dr. Geza Mansfeld and Dr. Otto Wolken."

During the interrogation of 18 December 1946, Geza Mansfeld said this terse sentence: "On 27 January, the Soviet Army arrived at Auschwitz."[445] Shortly before that, he had recounted that on the night of 29 September 1944, "all inmates in the entire camp" were ordered to report naked "to the bath" ("*w kąpieli*"), then *Unterscharführer* Kaduk allegedly selected 1,000 inmates and assigned them "to the chimney" ("*do komina*"). The next day they were

[444] Höss Trial, Vol. 1, p. 76.
[445] *Ibid.*, Vol. 17, p. 18.

all supposedly gassed.[446] Czech knew nothing about this alleged gassing event.

Otto Wolken merely stated the following:[447]

> *"After the Germans had fled, 1,200 sick people remained at the Auschwitz Camp, 600 sick people at Monowitz and 5,800 sick people at Birkenau. Of the latter figure, 4,000 were women. In Auschwitz, after the Germans had fled, 48 killed and dead inmates were left behind; in Birkenau more than 600."*

Czech, with reference to the same source, provides this information immediately afterwards, asserting that more than 7,000 sick inmates remained at Auschwitz-Birkenau, distributed as stated by O. Wolken (p. 995).

Since a chronology that purports to be historical requires first of all accuracy, it should be noted that the Soviets found 536 corpses (not more than 648), which they subjected to autopsies. It turned out that 309 prisoners had died of problems related to undernourishment, 165 to undernourishment and tuberculosis, 18 of tuberculosis, 20 of other diseases and 24 as a result of "trauma" ("*ot travmy*").[448]

Epilog

In February and March 1945, the Soviets thoroughly inspected all the structures of the Auschwitz-Birkenau Camp, both those abandoned intact by the retreating Germans and the ruins of those they had previously destroyed. Inexplicably – at least from an orthodox perspective – they left behind for the Soviets to discover and confiscate the complete archives of the camp's Central Construction Office, containing among other things the well-known "criminal traces" re-discovered by Jean-Claude Pressac more than forty years later.

The Soviets eventually found at least 4,299 inmates unable to walk at Birkenau alone,[449] who had been left alive by the Germans, and interrogated just over 200 of them.

In another study I described in detail the progression of Soviet "knowledge" about the alleged Auschwitz Extermination Camp, beginning with the fantasies of the Soviet journalist Boris Polevoi, which was the pen name of Boris Nikolajevich Kampov (1908-1981), who on 29 January 1943, in his first report on the camp, spoke of the killing of prisoners with electricity in a room whose floor opened up, so the corpses could fall down onto a conveyor belt underneath, which carried the corpses to blast furnaces almost half a kilometer away, where they burned within eight minutes. In the next, better-known report, he wrote that the Germans "blew up and destroyed the traces of the electric conveyor belt where hundreds of people had been simultaneously killed with electric current; the corpses fell onto the slow-moving conveyor belt and were carried by it to the blast furnace, where they were completely burned" (Mattogno 2021, p. 294f.)

On 19 March 1945, Major Pakhomov, deputy military prosecutor of the First Ukrainian Front, wrote a long report on Auschwitz based mainly on tes-

[449] GARF, 7021-108-23, p. 13. Statistics for 2 February 1945.

timonies, of which he presented more than 90 quotations.[450] It was then reworked into the well-known "Communiqué of the Extraordinary State Commission for the Investigation and Research of the Crimes of the German-Fascist Invaders and Their Accomplices," later published by *Pravda* on 7 May 1945 and presented at the trial of the International Military Tribunal in Nuremberg as Document USSR-008. These were the interpretive models – a "historical reconstruction" based essentially on false or hyperbolic testimonies – that was later followed by the various Polish postwar tribunals and then by Czech, the worthy heir of Soviet atrocity propaganda.

[450] Conclusion of the Investigation into German-Fascist Misdeeds at the Auschwitz/Os'vientzim [Oświęcim] Concentration Camp. GARF, 7021-108-29, pp. 1-55.

Conclusion

In 2002, the National Association of Former Political Deportees to Nazi Camps (Associazione Nazionale Ex Deportati Politici nei Campi Nazisti, ANED) sponsored the online publication of an Italian translation of Czech's *Auschwitz Chronicle,* following the German edition as examined in the present study, under the title *Kalendarium. Gli avvenimenti del campo di concentramento di Auschwitz-Birkenau 1939-1945*; a printed edition with the same title followed in 2007, published by Mimesis (Milan). In a review, Lucio Monaco, vice-president of ANED of Turin, wrote the following on the Association's website (my emphasis):[451]

> *"Given the chronological and day-by-day structure, the exposition is extremely concise and essential. It is thus possible to grasp, despite the intricacy of the events, an overview and an overall sense even for rather long periods (the crucial month of July 1944, for example).*
>
> *Each event is described in a limited number of lines (sometimes one or two), and is sealed by the reference to the source. The source is usually archival (mostly the APMO, the Archives of the Auschwitz Museum) and, to a much-lesser extent, reference is made to essays, history books or memoirs. It is worth underlining the scientific nature of the procedure, which allows us to check not only the validity of the event, but also to relate it precisely to the type of documentation that transmits its memory. The facts of the* Auschwitz Chronicle *are presented, more than as 'true,' but as 'verifiable,' which is perhaps not the least reason for the denialist attacks."*

In the present study, I have undertaken to "verify" the "facts" claimed by the *Auschwitz Chronicle* regarding the alleged extermination of Jews and Gypsies (and others). I have carefully tested the "scientific nature of the procedure," documenting and demonstrating, precisely by virtue of verifying its sources

[451] Taken from https://arengario.net/memo/memo16.html.

from archives, testimonies, memoirs and historical literature, that the "events" described therein are a mere jumble of conjectures, distortions, inventions and omissions, a fable that is the result of an intentionally deceptive and pathologically mendacious method.

This mythopoiesis, which merely transmits the imagery of Czech's obsessive exterminationist fantasies, should therefore not only be "attacked," but should indeed be completely rejected by every honest scholar of the history of Auschwitz.

Death-Toll Statistics

Considering that Czech is unable to document even a single gassing, it is opportune to expose, at the end of this study, a numerical tally of the presumed extermination resulting from the *Auschwitz Chronicle*. In the following table I report month by month and year by year the figures of the alleged gassings listed by her, which I comment on later:

	1941	**1942**	**1943**	**1944**
January	/	/	45,753	5,688
February	/	/	18,753	5,327
March	/	/	24,159	6,342
April	/	/	20,444	4,837
May	/	6,700	13,512	5,031
June	/	4,886	6,203	2,900
July	/	4,152	440	14,429
August	/	30,672	42,564	7,840
September	1,750	20,476	7,243	9,427
October	/	19,078	8,734	51,342
November	/	20,926	8,365	
December	/	16,799	5,676	
Totals	1,750	123,689	201,846	113,163
of whom “selected” prisoners	/	10,459	12,039	48,826

The overall total of gassing victims alleged by Czech is therefore 440,448. However, the *Auschwitz Chronicle* has several gaps. For 1942, Czech does not give the number of the claimed gassing victims of eight deportation trains with Jews from Slovakia, and for four trains with Jews from Yugoslavia. In the first case, I assumed the data put forth by Franciszek Piper in his tables of Jews deported to Auschwitz (Piper 1993, pp. 182-199), and subtracted the number of registered inmates reported in the *Auschwitz Chronicle*. In the second case, Piper only cumulatively mentions the number of Jews deported in the four above-mentioned deportation trains (all in the month of August 1942): 3,500 persons. Subtracting the total number of registered prisoners given by Czech (587), we obtain 2,913 alleged gassed victims.

Much-more-significant are the gaps contained in the *Auschwitz Chronicle* for the year 1944. In the months of May-July, the number of claimed gassing victims from transports of Hungarian Jews is never recorded, and for the months of August-September 1944, the number of alleged gassing victims from transports from the Łódź Ghetto are not listed.

From the orthodox perspective, these gaps can be filled by using Piper’s statistics. For Hungary, he assumes 437,685 deportees (in round figures

438,000; *ibid*., p. 182), of whom, according to the *Auschwitz Chronicle*, 29,971 were registered, in round figures 30,000. The claimed gassing victims would therefore be about 408,000. In reality, however, as I have documented in another study (Mattogno 2007), the maximum number of Hungarian Jews who were deported to Auschwitz is only 398,400, but the most-probable number is, in round figures, about 360,000, since 107,200 Hungarian Jews who were able to work[452] were registered or sent to the Birkenau Transit Camp without registration, from where most of them were later transferred to other camps.

For the transports from the Łódź Ghetto, Piper mentions 55,000-65,000 deportees. Since the number of registered deportees mentioned by Czech is 2,168, the number of presumed gassing victims (assuming the average number of 60,000 deportees in total) would be 57,832, of which 2,350 are already listed in the table above (entry for 18 September 1944), so this gap would be some 55,500 gassed deportees in round figures.

To sum up, the total number of alleged gassing victims would be about 906,900.

Of these, about 71,300 are attributable to imaginary "selections" of registered prisoners, and about 30,300 come from fictitious transports, in total about 101,600.

But, even if one wanted to maintain in the orthodox perspective, the real number of prisoners who were transferred to other camps should be subtracted from the above figure.

The historian of the Auschwitz Museum Andrzej Strzelecki states that from May to October 1944 up to 100,000 inmates were interned at Birkenau without being registered (Strzelecki 1995, p. 352). For my part, I have documented that this number includes at least 79,200 Hungarian Jews and about 11,500 Jews deported from Łódź (Mattogno 2007, pp. 10-20), a total of 90,700 inmates. Czech only accounts for about 27,600 Jewish inmates transferred from the Birkenau Transit Camp, so she omits (100,000 – 27,600 =) 72,400 who were not registered but definitely not killed either.

Therefore, the figures regarding the Hungarian and Łódź Jews must be corrected cumulatively as follows:

	Hungary	Łódź Ghetto
total deported:	408,000	+ 60,000
minus total registered:	–29,971	– 2,168
	378,029	+ 57,832
Total unregistered:	435,861	
minus total unregistered, not killed:	–72,400	
Total in round figures:	363,500	

[452] According to known records, those fit to work averaged 30-33% of the total. Mattogno 2007, p. 21.

Adding this to the approximately 440,500 resulting from the first table yields 804,000 alleged gassing victims. From this figure must be subtracted the number of Jewish prisoners transferred until April 1944 (according to the *Auschwitz Chronicle*, about 5,000), the ridiculously low number of those released plus those taken off from the deportation trains at Cosel (according to orthodox sources, about 6,100).

Given that one may well believe the fable of the 71,300 "selections" of registered inmates, but certainly not the fictitious transports, one must still deduct 30,300 fictitious gassing victims.

Consequently, from an orthodox perspective, the number of alleged gassing victims should be approximately 763,000.

Introduction

It is well-known that the most-important historical-documental source on the Auschwitz Camp published so far is the 1989 German tome *Kalendarium der Ereignisse im Konzentrationslager Auschwitz-Birkenau 1939-1945* by Danuta Czech, which was published a year later also in English with the title *Auschwitz Chronicle 1939-1945*. However, this massive work only offers a prejudiced, biased view of the camp's history, because it has a limited and tendentious focus on the alleged extermination of the Jews and Gypsies, which are portrayed as having been the main, if not even the sole purpose of the activities unfolding at Auschwitz. The book gives the impression that the camp SS, starting with the camp's Commandant Rudolf Höss, had nothing else to think of and to do day in, day out than to exterminate human beings. This perspective is both incomplete and profoundly wrong.

First, as I have documented thoroughly in a separate study, the "events" described by Danuta Czech are a collection of assumptions, distortions, inventions and omissions, which allow her to paint a fairy-tale image resulting from a deliberately misleading and pathologically mendacious method.[1]

Add to this that the opening of historical archives in Moscow made accessible a deluge of documents – especially those of the Central Construction Office of Auschwitz – which on the one hand have opened up immense and unexpected historical horizons, and on the other hand have rendered Czech's *Chronicle* obsolete.

The work presented here is meant to offer as complete as possible a historical-documental image of the Auschwitz Camp's activities, in which also the oft-claimed "criminal traces" are put into their proper, harmless historical context.

The only merit of Czech's *Chronicle* is the list of deportation transports arriving at Auschwitz (but not their fate!). However, Czech's approach was purely chronological, because she lists the registration numbers assigned to admitted inmates in her entry for the day on which those numbers were assigned. If one wants to find out when a certain registration number was issued, however, it is necessary to leaf through many pages of

[1] *Il Kalendarium von Auschwitz di Danuta Czech. Fonti e metodologia*. Effepi, Genoa, 2021. An English translation appeared as *Mis-Chronicling Auschwitz: Danuta Czech's Flawed Methods, Lies and Deceptions in Her "Auschwitz Chronicle"* (Mattogno 2022).

the *Chronicle*, with its many entries dealing with a broad variety of events, in search for a specific transport. This can be very time-consuming, since the numbers were not always assigned chronologically. For instance, the numbers 20951-20986 were issued on 18 September 1941, while the subsequent numbers 20987-20992 were assigned only on 11 February 1942.

Since compilations of total figures are more important to most readers than the exact date when a certain registration number was assigned, the statistically interesting aspect of the Auschwitz inmates – transports and registrations, camp occupancy as well as mortality – were not integrated into the chronological part of the present study, but set out in tables in its second part. The list of registered inmates contained in it include all known number series of all inmate categories (male and female) in a continuous sequence.

In the first, chronological part of this study, only the camp occupancy numbers of such inmates were included that were considered unfit for labor and deployment, especially "inpatients", "invalids" and "adolescents". If we were to follow the orthodox Holocaust narrative, these inmates would have been the primary targets for homicidal gassings, yet in the camp's documents recalcitrantly ignored by Czech, these inmates are listed consistently and steadily as very much alive.

One statistical aspect of the camp's history neglected by Czech concerns the camp's occupancy, meaning the number of inmates present in the camp at any given time. Czech's *Chronicle* only provides sketchy and very incomplete data about this, which are scattered throughout her book. However, the documentation preserved on this aspect, which is include in Part 2 of the present study, is much more comprehensive than what Czech has quoted in this regard.

The same is true for the documentation on the registered inmates' mortality, a topic only superficially treated by Czech, who gives a few total figures here and there. This aspect is covered in Part 2 in great detail. The introduction to this Part 2 contains more detailed explanation on the methods and formats used to lay out this massive body of statistical data.[2]

The text of the documents listed in the present part (some 2,400) has been taken in most cases from photocopies or electronic scans of the originals; the archival reference for each document is given next to it in the outside margin. In a few cases, the source is a book (containing photo reproduction or transcripts of documents), for which a brief reference pointing to this book's bibliography is given. For completeness's sake, all known garrison and headquarters orders issued by the Auschwitz camp administration were also integrated. The source for these orders is usually a source edition published by the German Institute for Contemporary History (*Institut für Zeitgeschichte*) in Munich (see Frei).

Undated documents where we do not know the month and year when they were created were not included; the most probable date of other documents where we know at least the year, and in some cases also the month, have been included, but the date is set in brackets.

---

[2] The Italian original of Part 2 of the present study appeared as a separate volume with the title *Auschwitz: Trasporti, Forza, Mortalità*. Effepi, Genoa, 2019.

In case of very important documents, their entire text has been quoted. In other cases, essential parts were quoted, while the rest has often been summarized.

The topics of the documents listed are diverse, but the main focus is on the documentation of the sanitary and medical situation as well as the planning and construction of the camp, and here especially of the crematories at Auschwitz-Birkenau. Only rarely included are documents on the many satellite camps in the grater Auschwitz region.

This work does not claim to be complete, but it offers an enormous quantity of information – mainly from archives in Moscow (RGVA, GARF), Auschwitz (APMO) and Warsaw (AGK), but also of radio messages intercepted by the British. This is therefore an essential basis for further possible documental contributions in the future.

Chronology of Events

1939

December 1939 *"Site plan of the artillery barracks and stables south of Auschwitz (Oświęcim)".* APMO, BW 2/1, Neg. No. 20954/7.

1940

April 1940

24. Order of the Reichsführer-SS with the subject "Responsibility in the Construction Section of the Waffen-SS". RGVA, 502-1-9, p. 250.
"1) Planning and implementation of all constructions of the Waffen-SS is exclusively a matter of the Main Office Budget and Constructions. […]
4) The local construction supervisors are organs of the Main Office of Budget and Construction. They are therefore exclusively subordinate (i.e., also in disciplinary terms) to the Chief of the Main Office for Budget and Constructions. Therefore, the construction managers are not allowed to take orders on construction measures from other departments."

30. "Statement of costs for the Auschwitz camp near Kattowitz," prepared by SS-Obersturmführer Seidler in Berlin. Included in it are 30 items: RGVA, 502-1-176, pp. 37-38.
"1. 2300 running m. electr. wire fence
2. 2300 " camp wall
3. installation of a prisoners' kitchen in Building No. 56
4. installation of a prisoner laundry with heating and hot water in Building No. 54
5. installation of a prisoners' quarter in Buildings 43 and 44
6. new construction of a cell building
7. new construction of a main guardhouse
8. new construction of a block-leader building
9. new construction of 6 watchtowers
10. new construction of pump house incl. water supply system
11. installation of a prisoners' bath in Building 41
12. new crematorium
13. installation of delousing facility in Building No. 42
14. installation of the prisoners' barber shop in Building No. 44
15. repair of Building No. 16 as headquarters
16. installation of the SS infirmary in Building no. 23
17. new building headquarters administration building
18. new building headquarters utility building
19. new construction of SS bath, storage and barbershop building
20. repair of the building for the SS guard block
21. new construction of a headquarters' garage
22. drainage system
23. irrigation system
24. structural repair of 19 accommodation buildings (3-15, 17-22)
25. structural repair of 18 accommodation buildings (27, 28, 29-31, 33-37, 61-68 and 58)
26. structural repair of Building no. 68 as storage
27. reconstruction of Building No. 52 as a workshop building
28. for road and square paving
29. for outdoor lighting

30. for wiring and transformer station and backup generator."
Total costs: 2,000,000 RM.

May 1940

25. Letter from the company J.A. Topf & Sons, Erfurt, to the SS New Construction Office of Auschwitz CC with the subject "Crematorium, cremation furnace". RGVA, 502-1-327, p. 231.
"In the next few days, you will receive a foundation plan for the oil-fired double-muffle furnace, according to which you will want to have the concrete foundation made. Then in about 14 days our fitters will arrive to start the construction of the furnace. Please let us know what the exact shipping address is."

31. Letter from J.A. Topf & Sons, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Cremation furnace". RGVA, 502-1-327, p. 229.
"We received your above message and inform you that we have provided the motors for three-phase 380-volt operating voltage. You want to obtain the necessary cables for a three-phase motor of 1.5 hp power. The third motor, which is intended for the oil burner, will not be installed."

June 1940

3. Letter from J.A. Topf & Sons, Erfurt, to SS New Construction Office Auschwitz CC with the subject "Cremation furnace, ash urns etc.". RGVA, 502-1-327, pp. 226-227.
"To put the crematorium into operation, you will still need ash urns, a labeling device for the urn lids, and fireclay tokens. We assume that for the time being you will make do with 500 ash capsules and fireclay tokens in the same quantity and recommend that you place your order now, as a delivery time of 6 weeks is required for the above material quantities."
The Topf Company offers:
"500 pieces of ash urns DIN format, made of black plate, with black plate lid, at the price of RM 675.--
500 pieces of fireclay markers with consecutive number 1 – 500, at the price of RM 65.--
1 labeling device, consisting of the wooden setting box and the wrought-iron device, including the types for labeling, i.e. complete, at the price of RM 150.--."

5. The Chief of Office II-Construction of the Main Office of Budget and Construction informs the SS New Construction Office of Auschwitz: RGVA, 502-1-333, p. 145.
"After saving iron, sealing materials, skilled workers, etc. to the greatest possible extent, no hydrogen-cyanide but hot-air delousing facilities are to be built in the future (Chief of Army Armament and Commander of the Reserve Army). These facilities are to be set up in existing buildings."
For disinfestation, the air temperature must be 80°C, for disinfection 100°C.

6. In Headquarters' Order No. 1/40, camp commandant Rudolf Höss points out that the well and tap water is not potable. He sets the working hours of the Auschwitz CC offices, announces the exact postal address of the camp, and declares that radio messages must be approved before being sent. He establishes a patrol service, introduces vacation and curfew rules, and forbids SS members under his command to stay in all hospitality establishments in Auschwitz except the "German House." In addition, three commandeerings (transfers of SS members) and one business trip are reported. Frei, pp. 3-5

10. J.A. Topf & Sons, Erfurt. Construction drawing D 57253 for SS New Construction Office Auschwitz CC on "Coke-fired cremation furnace and foundation plan". BAK, NS 4/ Mauthausen 54.

11. Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Crematorium, cremation furnace". RGVA, 502-1-327, p. 224.
"Enclosed please find drawing D 57253 […] *The chimney will have a cross-section of 50/50 cm and a height of 10-14 m.* […] *The construction time is approx. 14 days, and unskilled workers are to be provided by the customer.* […] *Instead of the planned oil firing, 2 coke generators will be added according to your superior department. For this reason, the delivery date is delayed, because various parts still have to be re-built."*

13. Letter from the "Imperial Office for Industrial Fat Supplies" to the SS Construction Office of Auschwitz ordering 7 barrels of standard varnish and 2 barrels of linseed-oil varnish. Request for information about the surface to be painted and the type of use. RGVA, 502-1-76, p. 79.

15. Telegram from SS New Construction Office Auschwitz CC to the J.A. Topf & Sons company, Erfurt: RGVA, 502-1-327, p. 228.
"Plant cremation furnace extremely urgent -- requested construction materials available."

16. Telegram from SS New Construction Office Auschwitz CC to the J.A. Topf & Sons company, Erfurt: RGVA, 502-1-327, p. 222.
"Accommodation and meals for the fitters locally possible."

20. SS New Construction Office Auschwitz CC. "Activity Report of 14 to 20 June 1940," by SS-Untersturmführer August Schlachter, Construction Manager, to the Headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 102-103.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. management.
"Preliminary designs were prepared and completed for a crematory building."

Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Crematorium, cremation furnace". RGVA, 502-1-327, p. 221.
The company acknowledges receipt of the two telegrams from the SS New Construction Office dated June 15 and 16 and states,
"that our fitters will arrive there in the middle of the next week, and will begin construction of the furnace. We ask you to provide our fitters with enough helpers to complete the furnace in 16 days."

27. SS New Construction Office Auschwitz CC. "Activity Report of 21 to 27 June 1940," by SS-Untersturmführer August Schlachter, Construction Manager, to the Headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 100-101.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. management.

July 1940

1. Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Crematorium, cremation furnace". RGVA, 502-1-327, p. 220.
"Following up on our letter of 20 June '40, we inform you that the wagon with the iron materials left our plant today."

Army High Command. "Type Sheet 260/9 (OKH) collapsible and relocatable horse stable." Construction drawing of a horse stable barrack. Longitudinal view and ground plan. Dimensions: 40.76 m × 9.56 m. RGVA, 502-2-93, p. 30.

5. SS New Construction Office Auschwitz CC. "Activity Report of 21 June to 4 July 1940," by SS-Untersturmführer August Schlachter, Construction Manager, to the Headquarters of Auschwitz CC. RGVA, 502-1-214, p. 97.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. management.

12. SS New Construction Office Auschwitz CC. "Activity Report of 5 to 11 July 1940," by SS-Untersturmführer August Schlachter, Construction Manager, to the Headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 98-99.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. management.

Headquarters Order No. 3/40 prohibits the keeping of dogs in the CC. It is pointed out that only those motorists may drive a vehicle who have been assigned to that vehicle. Due to negligence, it is explained that vehicles leaving the camp are to be stopped and checked extensively, especially for prisoners who may be hiding and trying to escape. Two commandeerings are carried out. Frei, pp. 5f.

20. SS New Construction Office Auschwitz CC. "Activity Report of 12 to 18 July 1940," by SS-Untersturmführer August Schlachter, Construction Manager, to the Headquarters of Auschwitz CC. RGVA, 502-1-214, p. 96.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. Review and payment of invoices etc.

22. In Headquarters Order No. 4/40 we read, among other things:
"1. Camp visits
Despite repeated warnings, it has happened again and again recently that members of the SS have taken female visitors into the camp or into the mess hall. I would like to point out once again that it is forbidden for all SS leaders, sub-leaders and men of the Auschwitz CC, without exception, to take any visitors into the camp or into the mess hall."
"6. photographing in the camp.
I call your attention once again to the fact that taking photographs in the camp area without my permission is forbidden. Violators will be severely punished by me in the future."
The order also reports two commandeerings, a business trip (transfer of three SS men to Breslau for pre-trial detention) and the punishment (strict reprimand) of an SS man for negligently letting vehicles in and out of the camp. The curfew rules are changed, and office hours are set for evacuation matters.

26. SS New Construction Office Auschwitz CC. "Activity Report from 19 to 25 July 1940," by the Head of Construction SS-Untersturmführer August Schlachter to RGVA, 502-1-214, p. 95.

the headquarters of Auschwitz CC.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.

[28.] Telegram from SS New Construction Office Auschwitz to the J.A. Topf & Sons company, Erfurt. RGVA, 502-1-327, p. 223.
"Send by express compressed-air blower with forced-draft device, generator lids, introduction cart and rails, rollers for smoke-duct damper."

29. Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Crematorium, cremation furnace". RGVA, 502-1-327, p. 218.
"We had already informed our fitter, Mr. Koch, that the introduction cart and the rails had arrived for shipment last Saturday. The compressed-air blower, the forced-draft device and the other fittings will leave our factory tomorrow by express delivery."

30. Circular letter of Construction-Industry Trade Union – IG Gleiwitz. The Chief President of the Pricing Office in Breslau has issued a new regulation on daily wage supplements for the administrative district of Kattowitz. The regulations also apply to the civilian companies later employed at Auschwitz. RGVA, 502-1-127, p. 423.

With Headquarters Order No. 5/40 Höss specifies his representative during a business trip (Ostuf. Fritzsch), announces a transfer, orders details on escorting prisoners on their way to work, repeats the need to submit motor-vehicle requests no later than the day before, promulgates a regulation on the registration of service awards in various documents, reminds that social intercourse with Poles is forbidden, and forbids SS members to speak Polish or Czech except in unavoidable cases. Frei, pp. 8f.

August 1940

6. SS New Construction Office Auschwitz CC. "Activity Report from 26 July to 1 August 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, p. 94.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.

10. SS New Construction Office Auschwitz CC. "Activity Report from 2 to 8 August 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 93-93a.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.

11. Postcard of prisoner No. 290 Wiesław Kielar to his father. On the edge of the postcard the postal order is printed: APMO, microfilm no. 1456/9,10.
"Auschwitz Concentration Camp.
The following orders are to be observed in correspondence with prisoners:
1.) Each protective-custody prisoner may receive mail from and send mail to his rela-

tives twice a month. Letters to prisoners must be written legibly in ink and may contain only two pages of 15 lines each. Envelopes must be unlined. Only 1 stamp of 12 pf. or 6 pf. may be enclosed in a letter. Anything else is prohibited. Postcards have 10 lines. Photographs may not be used as mail.
2) Money is allowed only by postal money order.
3) Care must be taken that, for money or mail items, the exact address, consisting of: Name, date of birth, and inmate number, must be written on the items. If the address is incorrect, the mail will be returned to the sender or destroyed.
4) Newspapers are permitted but may only be ordered through the Auschwitz CC post office.
5) Packages may not be sent, since prisoners can buy anything in the camp.
6) Requests for release from protective custody to the camp administration are futile.
7.) Permission to speak with and visits prisoners in the concentration camp is generally not granted.
The camp commandant."

[15.] SS New Construction Office Auschwitz CC. "Control slip for the J.A. Topf & Sons company, Erfurt". RGVA, 502-1-327, p. 215.
"The local construction office confirms that the installation work of the cremation furnace was completed on August 15, 1940. The trial cremation of the first corpse took place on the same day."

16. Headquarters Order No. 6/40 announces a comradeship evening, prohibits all SS members who are not on duty with prisoners or who do not have a headquarters note on their camp ID card from entering the protective-custody camp, specifies details for guard units escorting prisoners to and from work; reports five commandeerings and two punishments of SS members. Frei, pp. 10-12

17. SS New Construction Office Auschwitz CC. "Activity Report from 9 to 15 August 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 92-92a.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.
"The entire crematorium building, including the actual incineration plant, was completed, so that the first incineration could be carried out at the end of the reporting week."

31. SS New Construction Office Auschwitz CC. "Activity Report from 22 to 30 August 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 90-90a.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.

September 1940

10. SS New Construction Office Auschwitz CC. "Activity Report from 31 August to 6 September 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 89-89a.
Activities regarding:
1. construction site operations

2. purchase of materials
3. planning
4. accounting.

12. In a special commandant's order, Höss forbids SS members to buy food because of hoarding. Food is to be obtained exclusively from the mess hall. Frei, p. 12

14. SS New Construction Office Auschwitz CC. "Activity Report from 7 to 13 September 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 87-88.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.

16. Letter from the SS New Construction Office Auschwitz CC to the Main Office for Budget and Construction, Office II, with the subject "Invoice from the Topf company, Erfurt". RGVA, 502-1-327, p. 216.
"Enclosed is the invoice received here from the Topf company, Erfurt, for the construction of an Incineration plant at Auschwitz CC. The incinerator is completely finished and has been in operation for weeks. Since no defects of the plant are known, nothing should stand in the way of full payment for the plant."

18. Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Delivery of a cremation furnace". RGVA, 502-1-327, p. 214; *ibid.*, p. 213; *ibid.*, p. 212.
The Topf company demanded full payment for the plant in the amount of RM 10,679, but at least an advance payment of RM 9,000. The demand of at least 9,000 RM is repeated on September 23, 1940 and again on September 30.

19. A special headquarters order announces that SS men and NCOs are forbidden by decree to carry weapons off duty within Germany, and further: Frei, p. 13
"Following this excerpt, it is noted that I will severely punish anyone, without regard to rank or person, who once again fires a pistol or rifle without being in self-defense or under physical attack."
In addition, the unauthorized conversion of assigned structures is prohibited.

21. A headquarters special order explains how headquarters supervisors can be reached at night. Frei, pp. 12f.

28. Letter from the SS garrison physician Auschwitz to the Auschwitz CC headquarters with the subject "Crematorium". RGVA, 502-1-52, p. 3.
"It proves to be urgently necessary to continue developing the dissection room of the crematorium so that it can be put into use as soon as possible. In cases of deaths whose causes are not clear, dissections should be carried out, especially in cases of shootings and deaths caused by external violence. It is requested that the following deficiencies in the dissection room be remedied.
1) Lack of hot and cold running water. […]
8.) A dissection table, also provisionally built of wood, and wooden grates for the entire floor."

Headquarters Order No. 6a/40 explains under what circumstances the delivery and collection of weapons to or from checkrooms and storage places is permitted or forbidden. Attention is drawn to the fact that the delivery of construction material and tools is forbidden without written permission from the construction office. The daily working hours of the prisoners are set at 7:00-11:30 and 13:00-17:00 (8½ hrs.) as of 6 Oct. 1940. The members of the headquarters staff are giv- Frei, pp. 14f.

en temporary housing in the camp. In addition, two commandeerings are reported.

October 1940

1. "Construction projects as of October 1, 1940 of the SS New Construction Office Auschwitz CC." Completion rates of construction works. RGVA, 502-1-239, p. 10
"Crematorium construction and extension by a double furnace, ventilation system under construction, 7% completed."

2. Letter from the SS New Construction Office Auschwitz CC to the J.A. Topf & Sons company, Erfurt, with the subject "Payment on account." RGVA, 502-1-327, p. 211.
The SS New Construction Office informs that "the invoice documents have been forwarded to Main Office Budget and Construction, Berlin-Lichterfelde West, Unter den Eichen 129."

3. Letter from the SS New Construction Office Auschwitz CC to the SS garrison physician with the subject "Crematorium," referring to his letter of September 28. RGVA, 502-1-327, p. 212.
"The SS New Construction Office Auschwitz CC gives the following answers to requests 1 – 8 for deficiencies in the dissection room of the crematorium:
To 1.) Running cold water will be installed in the next few days. The order was already placed with the prisoner fitter's shop on 27 Sept. 40. A hot water system is also planned. […]
To 8.) A dissection table is also part of the furnishings and cannot be built or procured by the construction office, however, the construction office is prepared to manufacture a provisional one, and asks for a written request for this, also for wooden grates."

4. SS New Construction Office Auschwitz CC. "Activity Report from 14 September to 4 October 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 85-86.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.
The company Friedrich Boos begins work on the heating system.

9. Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Cremation furnace, our offer No. 40/897". RGVA, 502-1-327, pp. 209-210.
"We refer to the conversation which took place today between your Mr. Unterscharführer Urbanczyk and our Mr. Chief Engineer Prüfer, and enclose a copy of our cost estimate of 17 April 1940 concerning
Delivery of a coke-fired Topf cremation furnace with double muffle and compressed air system and
1 Topf draft booster system.
Furthermore, we have a cost estimate for:
11 pcs. fireclay grate bricks and
200 kg of monolithic ramming mix.
In accordance with your request, these materials will leave by express delivery tomorrow or the day after, as soon as we receive a railway-owned container."

11. Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Cremation furnace, – our order No. 40 D 945". RGVA, 502-1-327, p. 208.
The company informs about the total price of 11 pieces of molded fireclay grate bricks and 200 kg of Monolit ramming mass: 146 RM.

14. SS New Construction Office Auschwitz CC. "Activity Report from 6 to 14 October 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 84-84a.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.

28. SS New Construction Office Auschwitz CC. "Activity Report from 16 to 28 October 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 83-83a.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.
"The Boos company installed the new boilers in Buildings 52 and 54, and put the old heating system into operation, so that both buildings can now be heated."

November 1940

1. Letter from the Inspector of the Concentration Camps, SS-Oberführer Richard Glücks, to the camp commandants of seven concentration camps, including Auschwitz, with the subject "Training of prisoner bricklayers." RGVA, 502-1-60, p. 58.
"The construction work envisaged for the concentration camps, etc., demands that a larger number of prisoner bricklayers be trained as soon as possible."
Guidelines are issued in this regard.

4. Letter from Main Office Budget and construction, Chief of Office I, to SS New Construction Office Auschwitz CC with the subject "Invoicing". Office I was unable to settle the invoice from the J.A. Topf & Sons company, Erfurt, dated August 27, 1940, in the amount of RM 10,283, "since an invoice from the above-mentioned company has not been received to date." RGVA, 502-1-327, p. 206.

5. SS New Construction Office Auschwitz CC. "Activity Report from 29 October to 1 November 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, p. 82.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.

7. Letter from the SS New Construction Office Auschwitz CC to the J.A. Topf & Sons company, Erfurt, with the subject "Incineration plant at Auschwitz CC". RGVA, 502-1-312, p. 146.
"The present utilization of the incineration plant you have set up here has shown that the plant is too small after all. The SS New Construction Office intends to double the size of the incineration plant and requests that one of your gentlemen be ordered to Auschwitz to discuss the expansion so that the details can be discussed on the spot. The visit to Auschwitz is to be announced in good time."

9. SS New Construction Office Auschwitz CC. "Activity Report from 1 to 8 November 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, p. 81.

Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.

13. Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Your letter of 7.11.40, Incineration Plant at Auschwitz CC, our inquiry no. 40/999". RGVA, 502-1-312, p. 145.
"From your aforementioned letter, which we received on the 10th of the month, we were able to gather that the incineration plant there is too small at present, and that you intend to build another plant.
Our chief engineer Prüfer will therefore visit you there next Tuesday, the 19th of this month, in order to go over the details with you on the spot. Mr. Prüfer will bring with him the necessary cost estimate for the delivery of a new furnace and the necessary drawings."

Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Your letter of 7 Nov. 40, incineration plant in CC, our offer No. 40/999". RGVA, 502-1-327, p. 166; *ibid.*, pp. 168-172.
"Enclosed we are sending you a cost estimate for:
1 coke-fired Topf double muffle furnace with compressed air system.
Since we assume that this furnace will be connected to the same chimney of the present crematorium, there is no need for the new purchase of another draft-booster device, since this is sufficient for the alternate operation of one or the other furnace. Also, both furnaces can be operated with this system."
The accompanying "cost estimate," also dated 13 Nov. 1940, lists the components of the device and provides for a cost of RM 7,753, including the installation of the furnace.

18. SS New Construction Office Auschwitz CC. "Activity Report from 9 to 16 November 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 78-79.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.

22. Letter from the SS New Construction Office to the Main Office for Budget and Construction, Office II C 2, with the subject "Extension of the Crematorium". RGVA, 502-1-327, p. 173.
"The past operation of the crematorium has shown that even in the relatively good season the furnace device with 2 chambers is too small; the headquarters, as well as the Political Department, have approached the SS New Construction Office, and have urgently requested the expansion of the device by 2 chambers. The SS New Construction Office then contacted the Topf & Sons Erfurt company, which also built the first plant. The extension of the plant was discussed on the spot with Mr. Prüfer, chief engineer of Topf & Sons, and the extension can be carried out under favorable conditions. The price for the extension with 2 chambers is RM 7753.
Since the extension of the crematorium is an urgent necessity, the SS New Construction Office asks for approval of the construction and approval of the above costs."

27. SS New Construction Office Auschwitz CC. "Activity Report from 17 to 27 November 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 84-84a.
Activities regarding:

1. construction site operations
2. purchase of materials
3. planning
4. accounting.

28. Headquarters Order No. 9/40 reports two commandeerings and one transfer, and reminds that SS men are forbidden to hand prisoners objects through the camp fence (here clothing for repair). The theft of service bicycles and bicycle parts is deplored, and prosecution threatened for it. Frei, p. 16

30. J.A. Topf & Sons, Erfurt, "Re.: SS New Construction Office, Auschwitz CC – Crematorium". Drawing No. D 57999. The following rooms are mentioned: dissection room, furnace room, morgue, and coke storage. RGVA, 502-1-312, p. 135.

December 1940

5. Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Crematorium".
The Topf company encloses drawing D 57999 showing the new installation.
"The fireclay and insulating materials are on their way to there, and we hope that the cast- and wrought-iron fittings will also be ready for shipment by the 20th of that month. After the materials arrive, we will then send an installer to you there immediately." RGVA, 502-1-312, pp. 193-194.

9. Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Ventilation system for morgue cells and dissecting room, our offer No. 40/1096".
"We politely refer to the meeting which took place on the 19th of March between your dear Mr. Oberscharführer and Deputy Construction Manager Urbanczek [sic] *and our Mr. Chief Engineer Prüfer, and send you enclosed the offer for the ventilation system for the morgue cells and for the dissecting room.*
For the dissecting room we have provided a 10-fold air exchange, and for the morgue cells a 20-fold air exchange. With this air exchange rate, a good ventilation of the rooms is achieved. We would like to point out, however, that, above all, fresh air must be supplied through windows or other openings for the morgue cells. For the discharge of the exhaust air we recommend a brick chimney with a minimum height of 10 m above the ground."
The delivery was scheduled in about 3 months. The corresponding cost estimate, also dated December 9, 1940, lists the components of the plant:
1 blower No. 450 for conveying 6000 cbm of exhaust air per hour against a total pressure of 25 mm water column, 1 three-phase motor for 220/380 volts, 1 star-delta switch, and 1 exhaust air pipe. Price, including assembly of the plant, RM 1,784. RGVA, 502-1-312, pp. 136-137; *ibid.*, pp. 138-140.

10. SS New Construction Office Auschwitz CC. "Activity Report from 28 November to 7 December 1940," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting. RGVA, 502-1-214, pp. 76-77.

1941

4. accounting.

10. Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Crematorium". — RGVA. 502-1-312, pp. 131-132.
"We hereby confirm your telegram: 'First furnace defective, new furnace urgently needed…'. […]
As we were able to learn from our subcontractor, all materials required for furnace construction have already been dispatched and must have arrived there in the meantime. Our iron materials are expected to be shipped in the middle of next week, as the parts cannot be dispatched due to the freight ban currently in place. […]
As it appears from your wire message, the first furnace installation is defective. If you would like a mechanic to repair the furnace, please let us know by telegraph. We will then be happy to send our fitter, Mr. Koch, to that location for a charge."

13. Telegram from the SS New Construction Office Auschwitz CC to the J.A. Topf & Sons company, Erfurt. — RGVA, 502-1-312, p. 130.
"Monolith grates and interior walls burned through. Send fitter with spare parts immediately."

15. The J.A. Topf & Sons company, Erfurt, Dept. D, sends the SS New Construction Office Auschwitz CC an estimate of costs "concerning the provision of fitters for the crematorium, our order no. 41 D 73." — RGVA, 502-1-327, pp. 167-167a.

A special headquarters order prohibits SS men and NCOs from drinking alcoholic beverages while on duty. — Frei, p. 18

17. The J.A. Topf & Sons company, Erfurt, shipped to the SS New Construction Office the "Parts for cremation furnace, 2 m.[uffles]", order no. 40 D 263, 1090, 892. Total weight 3,193 kg. RGVA, 502-1-327, pp. 201-203.

18. SS New Construction Office Auschwitz CC. "Activity Report from 11 to 18 January 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, p. 74.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.

20. With a special headquarters order, the listing of all SS members of the various departments is requested, stating who among them has a university-entrance diploma. Frei, p. 18

21. The company J.A. Topf & Sons, Erfurt, send to the SS New Construction Office Auschwitz CC "2 cement counterweights with eyelet," weight 82 kg. RGVA, 502-1-327, p. 200.

21. Letter from the SS New Construction Office Auschwitz CC to the J.A. Topf & Sons company, Erfurt, with the subject "Crematorium extension". RGVA, 502-1-327, pp. 185-186.
"The SS New Construction Office Auschwitz encloses a drawing which you may wish to use for the following explanations. The second induction cart must be delivered as soon as possible, since the column in question cannot be removed for constructional reasons. The creation of an urn space changes the morgue space, as indicated by the blue line in the drawing. The blower with motor is to be placed in the urn room. The creation of the urn room results in the change for the duct of the suction air device. Furthermore, it is desired to connect the furnace room to the ventilation system. The aforementioned change was discussed with your fitters on the spot. You can accept the order for the suction air device. […] *Furthermore, 2 generator lids are to be delivered as soon as possible for the repair work, since the old ones are completely burned out."*

25. SS New Construction Office Auschwitz CC. "Activity Report from 19 to 25 January 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 73-73a.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.

The commissioning of a shower facility with opening hours is announced with a special headquarters order. Frei, p. 19
A circular also states:
"It is intended to prepare a book on the construction of the Auschwitz concentration camp. In order to complete the collection of photographs required for this purpose, all SS members of Auschwitz Concentration Camp shall submit photographs of the local camp and its surroundings taken by them to the headquarters, marked with their names and troop affiliation. Suitable pictures will be paid for, unsuitable pictures will be returned."
Moreover, clothing unfit for field service is to be handed in for exchange.

27. A special headquarters order announces training for the headquarters staff. Frei, p. 20

29. The J.A. Topf & Sons company, Erfurt, thanks the SS New Construction Office Auschwitz CC for the order of "1 second coffin introduction cart with push-in de- RGVA, 502-1-327, pp. 183-184.

vice, at the price of RM 680.--." and "2 cast-iron generator lids with insulating caps, at the price of RM 180.--."

February 1941

1. SS New Construction Office Auschwitz CC. "Activity Report from 26 January to 1 February 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, p. 72.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.
"In the crematorium, the concrete of the foundations for the new furnace was cast, and the new partition wall made of insulating bricks was erected. The installation of the new incinerator was started."

3. The J.A. Topf & Sons company, Erfurt, sends the SS New Construction Office Auschwitz CC a cost estimate for "1 ventilation system for corpse and dissection room, RGVA, 502-1-312, pp. 123-128.
1 ventilation system for furnace room."
Parts of the first plant:
"Blower No. 450 for conveying 6000 cbm of exhaust air per hour against a total pressure of 25 mm water column."
Three-phase motor for 220/380 volts;
Star-delta switch;
Exhaust-air piping."
Parts of the second plant:
"Blower No. 300 for conveying 3000 cbm of exhaust air per hour against a total pressure of 15 mm water column."
Three-phase motor for 220/380 volts;
Star-delta switch;
Exhaust air pipe.
Discharge connection for connecting the blower discharge opening with the masonry exhaust duct."
Total price: RM 757.

5. Political Department, order no. 33 to workshops: "Urgently 100 pieces of urn boxes." RGVA, 502-2-1, p. 46.

6. A special headquarters order governs the procedures for submitting Sunday leave requests. Frei, pp. 20f.

7. A special headquarters order requests reports of stolen or lost parcels for investigation, and threatens SS members with punishment if they tamper with local Jews because they fail to salute, since Jews have no duty to salute. Frei, pp. 21f.

10. SS New Construction Office Auschwitz CC. "Activity Report from 2 to 8 February 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 71-71a.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.
"Work continued at the crematorium to complete the new incinerator."

11. Letter from the prisoner infirmary, camp doctor Auschwitz CC, to the SS Construction Office: RGVA, 502-1-342, p. 4.
"The luminosity and heating power of the installations in the inmate infirmary connected to the current [electric] network is subject to great fluctuations. This often has a very disturbing effect during surgeries, etc.
Since after installation of the X-ray device a line with voltage fluctuations is inadequate, it is requested that the connection be changed."

File memo on an official trip to Auschwitz and Chielmek. This concerns an operation for the purpose of procuring housing for Reich German officials and employees as well as the evacuation of the resident population, including Jewish inhabitants, of whom those capable of work are to be placed at the disposal of SS-Oberführer Schmelt. The memo deals under b) with the compilation of the evacuation transports from Brzeszcze, Plawy and Harmense, under c) with measures for the implementation of the transports, under e) with the loss of taxes due to the removal of the houses standing on the area where the concentration camp is to be built. Then there is a report on the visit of the shoe factory "Bata" in Chielmek. ISD, 82347155-58

12. Political Department, order no. 35 to workshops: "100 pieces of urn boxes [sic]." RGVA, 502-2-1, p. 45.

13. I.G. Farbenindustrie A.G. "Buna Works Project – Auschwitz branch." NI-11782.
"5.) Labor Deployment:
Auschwitz and the communities belonging to the district comprise, according to the district commissar there, 25500 inhabitants, of whom 11200 are in Auschwitz itself. The ethnic composition is very poor. In total, only 2000 ethnic Germans are said to live there, but only a few of them speak German. In Auschwitz, 7000 Jews are grouped together, while the rest of the population is Polish. The labor output of the Poles is described by all technical authorities as very low. The entire area belongs to Evacuation Zone I, from which all Jews and Poles are to be evacuated by 1 April 42. The town of Auschwitz and the villages make a very dirty and neglected impression. For the most part, the typical Galician wooden huts are to be found in the villages. Only a small part of the residential buildings will be able to be used to house the population to be settled there."

A special headquarters order threatens SS members with punishment if they request food stamps at railroad stations during their Sunday vacation. Frei, p. 22

15. Letter from the SS New Construction Office Auschwitz CC to the J.A. Topf & Sons company, Erfurt, with the subject "Crematorium ventilation system". RGVA, 502-1-312, p. 121.
"The SS New Construction Office Auschwitz has your drawing 'Crematorium Auschwitz ventilation system', but does not agree with the discharge of the exhaust gases into a new chimney yet to be built. It is therefore requested that the project be reworked so that the exhaust air is directed into the existing chimney. The proposed modification is to be submitted to here as soon as possible, and any price adjustments are to be communicated."

17. SS New Construction Office Auschwitz CC. "Activity Report from 9 to 15 February 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 70-70a.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.
"At the crematorium, the new incinerator has been completed except for some minor finishing work."

22. SS New Construction Office Auschwitz CC. "Activity Report from 16 to 22 February 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 69-69a.

1. construction site operations
2. purchase of materials
3. planning
4. accounting.
"The new crematorium incinerator was completed."

24. The SS New Construction Office sends a cost estimate to the J.A. Topf & Sons company, Erfurt, for "Ventilation system", offer 41/191. RGVA, 502-1-327, pp. 195-199.
Components of the system:
"Blower No. 550 for conveying 8600 cbm of exhaust air per hour against a total pressure of 30 mm water column."
Three-phase motor;
Motor circuit breaker;
Star-delta switch;
Wrought-iron console;
Exhaust-air piping;
discharge nozzle."
Price: RM 1,884 + 596 for installation of the equipment.

SS New Construction Office Auschwitz CC Crematorium. J.A. Topf & Sons Erfurt, ventilation system. Drawing No. D 58052. RGVA, 502-1-327, pp. 191-192; *ibid.*, pp. 193-194
Construction drawing of the ventilation system for the crematorium of the main camp (dissection room, furnace room, morgue). The blower is placed next to the chimney and directs the exhaust air into the chimney. In the accompanying letter, which bears the same date, the Topf company states:
"As requested, we have directed the exhaust air into the existing flue-gas stack. The blower is installed elevated on a wrought-iron structure."

25. A special headquarters order announces the closure of the upper floor of the headquarters for construction. Frei, pp. 22f.

28. On the occasion of the upcoming visit of Heinrich Himmler, a special headquarters order gives behavioral instructions to create a good impression. Frei, pp. 23f.

March 1941

1. SS New Construction Office Auschwitz CC. "Activity Report from 23 Feb. to 1 March 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 67-67a.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting.
"At the crematorium, work was completed on the new incinerator, a temporary deaeration was connected to the exhaust duct, and everything was maintenance."

4. Letter from the Plenipotentiary General for Special Issues of Chemical Production to I.G. Farbenindustrie AG, Ludwigshafen. NI-11086.
"At my request and on the instructions of the Reich Marshal, the Reichsführer SS has issued the following order on February 26 of this year:
1.) The Jews in Auschwitz are to be resettled as quickly as possible, their dwellings are

to be vacated and secured for accommodation of the construction workers of the Buna works.
2) No Poles who might be considered as workers or construction workers for the Buna works are to be expelled from the area of Auschwitz."

5. This date marks the beginning of the first of at least 25 X-ray books of the prisoner infirmary of Auschwitz CC. It consists of 49 pages divided into 5 columns without headings and containing the consecutive number, the prisoner's number, the prisoner's first and last name, the type of examination (e.g., "fluoroscopy," "x-ray"), and the medical diagnosis.
X-ray Book No. 1 extends from March 5 to June 24, 1941, and contains entries numbered 1 through 875.
The surviving X-ray books contain the names of 34,876 prisoners. APMO, D-Aul-5/1. ISD, folder 67f.

A special headquarters order forbids entering the village of Brzeszcze. Frei, p. 24

8. SS New Construction Office Auschwitz CC. "Activity Report from 3 to 8 March 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC.
Activities regarding:
1. construction site operations
2. purchase of materials
3. planning
4. accounting. RGVA, 502-1-214, pp. 66-66a.

12. A special headquarters order provides instructions on how to handle construction orders and material requests directed to construction office. Frei, pp. 24f.

13. Letter from the SS New Construction Office Auschwitz CC to the Topf company, Erfurt, with the subject "Ventilation system for crematorium".
"The SS New Construction Office hereby awards you the supply and installation of a ventilation system for the crematorium here on the basis of your offer of 24 Feb., and requests that the delivery or implementation be reduced to the shortest possible delivery time." RGVA, 502-1-327, p. 188.

15. SS New Construction Office Auschwitz CC. "Activity Report from 10 to 15 March 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC.

1. construction site operations
2. purchase of materials
3. planning
4. accounting. RGVA, 502-1-214, pp. 65-65a.

17. Letter from the leader of inmate deployment, SS-Untersturmführer Heinrich Schwarz, to the head of Main department I/5. Main Office Budget and Construction, with the subject "Monthly Report of Field Office I/5."
"Special Occurrences:
On 1 March 41, 3:30 p.m., the Reichsführer SS and Chief of the German Police arrived at Auschwitz CC. The Reichsführer SS was very satisfied with the progress and the work done in the Au. CC, which had been noted during the inspection by the Reichsführer SS accompanied by the inspector of the concentration camps, SS-Oberführer Glücks, and expressed to the Commandant of Au. CC, SS-Sturmbannführer Höss, his fullest appreciation. […]
Nutritional condition:
The rations of the prisoners have improved considerably during the month of Febru- GARF, 7021-108-32, pp. 28-30.

ary. Various partial rations have been increased. Individual prisoner detachments are receiving the heavy laborer's allowance. The preparation of meals is clean and faultless. Before moving out in the morning, additional warm soup is given to the outside commandos.
Prisoner kitchen:
A 9-meter extension is added to the prisoners' kitchen as a room for potato peelers and vegetable cleaners. The extension is nearing completion. An electric cooling machine was put into operation for the cold storage room on February 10, which now ensures proper storage of fat and meat.
Prisoners are housed in the infirmary and sanitary blocks. [The right margin of the sheet is partially damaged.]
The first 1000 beds arrived from Troppau at the end of February, with more to follow. Some of these have been given their first coat of paint. In two recuperation blocks, 350 beds are already installed. The recuperation blocks will also receive bedsteads, all of which will be built up on three levels. Through this measure, space has been gained, which results in a […] *distribution and accommodation of the prisoners* […]. *Straw sacks have been provided, a thorough delousing* [and dis]*infection of the rooms and linen has been carried out* […] *appropriate feeding of the sick prisoners is* […] *in progress."*
Eight more paragraphs follow.
"Evacuation:
All persons from Oswiecim – Birkenau – Harmenze – Bor – Plawi – Babice – Prosckowitz – Klutschnitckowicz – Stare Stawi – Raysko – Budy – Jawischowitz – Skitschin – Denkendorf registered according to nationality.
2 transports with 800 Poles and 250 Jews each have already been deported to the General Government. Since a new situation has arisen as a result of the halting of the evacuation trains to the General Government, internal resettlement must now be carried out in the interest of the setup, drainage and construction of the entire camp area. This work continues under the supervision and orders of the commandant and the working staff of the Au."

22. SS New Construction Office Auschwitz CC. "Activity Report from 17 to 22 March 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 65b-65c.
Activities regarding:
I. construction site operations
II. surveying department
III. purchase of materials

V. accounting.

24. Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Deaeration system crematorium, your letter of 15 March 41, our order no. 41 D 414/15". RGVA, 502-1-312, p. 118.
"We thank you for the order placed with us for the delivery of a ventilation system for the morgue cells and the furnace room. We have accepted the order on the basis of our cost estimate of 24.2.41 and its conditions at a total price of RM 2,480."

25. Headquarters Order 1/41 orders a bi-weekly meeting of all department heads, reminds that business trips must be approved by Inspection CC, and advises SS members with many children of their right to child allowances. Frei, p. 25

27. A special headquarters order announces the testing of a new alarm siren. Frei, p. 26

28. SS New Construction Office Auschwitz CC. "Activity Report from 24 to 28 March 1941," by the Head of Construction SS-Untersturmführer August RGVA, 502-1-214, pp. 64-64a.

Schlachter to the headquarters of Auschwitz CC.
Activities regarding:
I. construction site operations
II. surveying department
III. purchase of materials
IV. planning
V. accounting.

30. Dr. Ing. Hans Stosberg – Architect. "Auschwitz. Explanation of the spatial planning sketch". APK, Land PlGo/S 467, pp. 197-206.
"[…] *Population: The present state of the population in the Auschwitz area (regional district) gives the following picture:*
Auschwitz town 12500 (of which 7000 Jews).
Babitz 2500
Birkenau 4500
Broskowitz 400
Dwory 2200
Monowice 1200
Stare-Stawy 750
altogether about 25000 (the number of ethnic Germans is negligible)
Population planning: According to the importance of the situation, the future planning is based on 35500 inhabitants plus two reserve areas with 11500 inhabitants, so that a total of 47000 inhabitants can be reached".
A detailed report follows.

April 1941

2. Letter from the SS New Construction Office Auschwitz CC to the J.A. Topf & Sons company, Erfurt, with the subject "Second furnace plant". RGVA, 502-1-312, p. 113.
"The SS New Construction Office Auschwitz confirms today's telegram and informs you again that the 2nd furnace plant has too little draft, so that the incineration cannot be carried out completely. Therefore the plant had to be suspended, and you want to immediately send a mechanic here for repair."

Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC with the subject "Cremation furnace". RGVA, 502-1-312, pp. 115-116.
"We received your telegram today, reading 'Second furnace has no draft, immediately send fitter here'."
Topf cannot send a fitter, but the problem can be solved in another way.
"It should be noted that both furnaces are connected to one forced-draft system. By its nature, Furnace 2, which is farthest from the forced-draft system, will get slightly less draft when both furnaces are running at the same time. The draft must therefore be controlled by the draft-control damper provided at the furnaces."
Instructions follow on how to make the adjustment.

3. Headquarters Order No. 2/41 lists a number of promotions, points out that transfer to another department requires a commandeering, and requests that all SS personnel be listed by occupation; headquarters staff members are to turn in their pay books; a roll call of all staff members, including those commandeered, is announced; it is pointed out that all members of the headquarters staff must properly sign out for leave and sign back in from leave; wartime uniform relief is announced; vehicles entering and leaving are to be noted in a book in the guardhouse; instructions are given for promotion proposals. Frei, pp. 26f.

4. SS New Construction Office Auschwitz CC. "Activity Report from 31 March to 5 [sic] April 1941," by the Head of Construction SS-Untersturmführer August RGVA, 502-1-214, pp. 62-63.

Schlachter to the headquarters of Auschwitz CC.
Activities regarding:
1. construction site operations
2. surveying department
3. purchase of materials
4. planning
5. accounting.

5. Headquarters Order No. 3/41 announces a promotion, mentions a Wehrmacht request concert, and mentions a lost and found object (sports badge) for collection. Prisoner work hours are set at 6:00-11:30 and 13:30-18:00 (10 hrs) as of 7 April 41. It is mentioned that appointments and promotions are issued only by the headquarters, and how Sunday leave passes are to be handled. Frei, p. 28

9. Headquarters Order No. 4/41 announces a theater performance for SS members (admission 40 pfennigs), mentions that Good Friday is not a holiday, announces a staff company roll call and a bicycle roll call, and reminds that all SS members who have moved to Auschwitz must officially register there. Department heads whose departments fail to meet a deadline are to be held accountable, and the disappearance of dishes from the mess hall is deplored, with threats for delinquents caught. Frei, pp. 28f.

12. SS New Construction Office Auschwitz CC. "Activity Report from 7 to 12 April 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC.
Activities regarding:
1. construction site operations
2. surveying department
3. purchase of materials
4. planning
5. accounting. RGVA, 502-1-214, pp. 61-61a.

17. A special headquarters order announces the opening of the SS Training and Vacation Hut Soletal (Sola Hut) and explains how this hut can be occupied. Frei, p. 30

18. Headquarters Order No. 5/41 mentions a roll call on the occasion of the Führer's birthday, lifts the ban on SS members entering the city after the deportation of all Jews from Auschwitz, announces office hours at the SS headquarters for family members, prohibits the use of express trains as vacation trains, announces the establishment of a technical department in the camp administration, and prohibits SS members from visiting the "Beatrix" boarding house in Berlin. Former members of SS Infantry Regiment 14 receive new entries in their military passports, if applicable; the reorganization of the concentration camps' medical service is explained; it is pointed out that training material for ideological training is not to be requested from the Training Office, since the Waffen-SS garrison at Auschwitz has sufficient material on site; ethnic German SS members from Romania, Hungary, Yugoslavia and Slovakia are registered for the purpose of folklore care and support; the possibility for SS men and NCOs to obtain civilian clothes while on leave is cancelled; a roll call of the headquarters staff is announced for 22 April. Frei, pp. 31-33

19. SS New Construction Office Auschwitz CC. "Activity Report from 7 to 12 April 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC.
Activities regarding: RGVA, 502-1-214, pp. 59-60.

1. construction site operations: Block I, II, III, IV, XIII, 13, 16, 3, 20.
"Block 11 (prison cell building) continued installation of heating system."
German Equipment Works (*Deutsche Ausrüstungswerke*), House No. 151 (residence), SS Community building Auschwitz.
2. surveying department
3. purchase of materials
4. planning
5. accounting.

21. Headquarters Order No. 6/41 reports four promotions and a long list of appointments. Frei, pp. 33-35

26. SS New Construction Office Auschwitz CC. "Activity Report from 21 to 26 April 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 57-58.
Activities regarding:
1. construction site operations: Block I, II, III, IV, XIII, 13, 16, 3, 20.
"Block 11 (prison cell building) continued installation of heating system."
German Equipment Works (*Deutsche Ausrüstungswerke*), House No. 151 (residence), SS community building Auschwitz.
2. surveying department
3. purchase of materials
4. planning
5. accounting.

28. Letter from the SS New Construction Office to the SS Auschwitz CC with the subject "Medical examination of SS New Construction Office members in the reserve field hospital in Kattowitz.-" RGVA, 502-1-342, p. 7.
"The SS New Construction Office Auschwitz CC reports the following SS members of the SS New Construction Office for the ordered examination at the reserve field hospital in Kattowitz."
1. SS-Scharführer Arloth Willibald
2. SS Unterscharführer Vieth Hermann
3. SS Rottenführer Decaco [Dejaco] *Walter*
4. SS Rottenführer Hoffmann Heinrich
5. SS Unterscharführer Wilk Paul
6. SS Unterscharführer Reichwein Bruno
7. SS Rottenführer Ertl Fritz
8. SS Rottenführer Gertl Franz
9. SS Oberscharführer Urbanczyk Walter
10. SS Unterscharführer Stiller Alfred
11. SS Rottenführer Giesenberg Heinz
11. SS Rottenführer Kywitz Walter.
The examination days range from 29 April to 2 May 1941.

In a special headquarters order Höss complains about improper behavior of SS members in the town of Auschwitz and threatens to ban them from entering the town again if they do so again. Frei, p. 35

29. Letter from the Auschwitz CC Political Department to the SS New Construction Office with the subject "Urn Storage." RGVA, 502-1-314, p. 1.
"According to the order of the Inspector of Conc. Camps [of 14 April 1941] *and in agreement with the Reich Security Main Office, the urns of deceased prisoners are to be placed in one of the local buildings. The commandant has therefore ordered that a floor room be set up in the infirmary building for this purpose. In order for the urns to be properly stored in this space, it is necessary that appropriate shelving be installed*

and minor modifications be made. It is requested that a professional be assigned to inspect the space and make the necessary arrangements."

30. Headquarters Order No. 7/41 explains to which department prisoners may be requested for work, forbids the carrying of pistols off duty for SS men and NCOs, threatens punishment for uniforms not conforming to regulations, reminds that vacationers must take the 3rd class Reichsbahn train, and complains about unauthorized use and improper parking of bicycles. SS members transferred to the headquarters must have passport photos taken. It is reminded that personnel changes must be reported immediately. SS men and NCOs may wear civilian clothes only with special permission. A roll call of the staff company is announced. Frei, pp. 36f.

May 1941

3. SS New Construction Office Auschwitz CC. "Activity Report from 28 April to 3 May 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 55-56.
Activities regarding:
I. construction site operations: new inmate lodging buildings: Block I, II, III, IV, 11, 7, 9, 13
"Block 13 [later renumbered to 11] *(prison cell building) heating system completed."*
Deutsche Ausrüstungswerke, troop economic building, SS community building Auschwitz (Building No. 7)
II. surveying department
III. purchase of materials
IV. planning
V. accounting.

6. Due to indiscipline at Auschwitz station, a special headquarters order gives strict rules of conduct to SS members, and prosecution for theft is threatened to those who steal flowers or vegetables from the nursery. Frei, p. 37

7. Letter from Main Office Budget and Construction, the Chief of Office II Construction, to SS New Construction Office Auschwitz CC with the subject "Approved construction measures in the second year of war economy 1940/41". RGVA, 502-1-215, pp. 27-29.
Approved construction works:
"Completion of heating system, crematorium, prov. pumping system with pipe network for used water, pumping system for sewage, troop kitchen and troop quarters."
Total construction sum RM 76,000, for the crematorium RM 5,000.

9. SS New Construction Office Auschwitz CC. "Addition of a slaughter room," Plan No. 473a. APMO, AuI, BW 33B/1.

10. SS New Construction Office Auschwitz CC. "Activity Report from 5 to 10 May 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 52-53.
Activities regarding:
I. construction site operations: new inmate lodging buildings: Block I, II, III, IV, 7, 9, *Deutsche Ausrüstungswerke*, troop economic building, SS community building Auschwitz (Building No. 7)
II. surveying department
III. purchase of materials
IV. planning
V. accounting.

12. Letter from the SS New Construction Office to the SS garrison physician Auschwitz CC with the subject "Manufacture of a dissecting table" (for crematorium). *"Regarding the above request, the construction management inquires who will pay for the cost of the dissecting table, since the construction management is only required to execute and pay for parts that are firmly connected with the building. Clarification is requested."* RGVA, 502-1-342, p. 6.

13. Headquarters Order No. 8/41 announces a number of promotions, establishes the working hours of the headquarters' office and typing pool (8 hrs/day), announces times for dental appointments, stipulates that no prisoners may be assigned to work in private gardens, orders blackout measures for SS members living in the camp, and announces a roll call for the headquarters. Frei, pp. 38f.

17. SS New Construction Office Auschwitz CC. "Activity Report from 12 to 17 May 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 49-51.
Activities regarding:
I. construction site operations: new inmate lodging buildings: Block I, II, III, IV, 7, 9, 10, 11, 12, 13, 15, 16, officers' mess, physicians' quarters, officers' quarters, school in Building 83, *Deutsche Ausrüstungswerke*, troop economic building, SS community building Auschwitz (Building No. 7)
II. surveying department
III. purchase of materials
IV. planning
V. accounting.

21. Headquarters Order No. 9/41 announces four promotions, regulates motor vehicle requests, orders medical examinations for newly arrived SS members, schedules the exchange of bed linen and towels, announces a *Kraft durch Freude* evening with a *Bund Deutscher Mädels*' play group, and establishes a roll call of the headquarters. Frei, pp. 39f.

24. SS New Construction Office Auschwitz CC. "Activity Report from 19 to 24 May 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 46-48.
Activities regarding:
I. construction site operations: new inmate lodging buildings: Block I, II, III, IV, 7, 9, 12, 13, 14, 15, provisional inmate kitchen, slaughterhouse *Industriehof* I, provisional dairy building *Industriehof* I, officers' mess, physicians' quarters, officers' quarters, school in Building 83, *Deutsche Ausrüstungswerke*, troop economic building, SS community building Auschwitz (Building No. 7)
II. surveying department
III. purchase of materials
IV. planning
V. accounting.

26. A special headquarters order stipulates that all SS members of the headquarters must attend a further-education course. Frei, p. 40

28. Due to a holiday ban, a special headquarters order stipulates reduced Pentecost vacation days. Frei, p. 41

Commandant's Order No. 10/41 quotes excerpts from the 7th collective decree of the SS court, including on dealings with members of the Polish ethnic group (usually prohibited, with the exception of approved brothels) and on adultery proceedings. The departments of the headquarters are requested to draw up a list of all SS Frei, pp. 41-43

members. A notice is given that only SS members who are on duty there are allowed to enter the workshops. Stepping on flowerbeds in the camp, "jewels of the camp", will be punished. Due to bite injuries, a reminder is given that no dog is allowed to roam free, and a shooting bounty for such animals is announced. Peaked caps for SS men are only permitted when on leave. It is announced that applications for accommodation outside the barracks will be rejected with immediate effect. A roll call from the headquarters is announced.

31. SS New Construction Office Auschwitz CC-Oswiecim. "File report on the official trip of SS Untersturmführer and Head of Construction Schlachter and SS Oberscharführer and Deputy Head of Construction Urbanczyk, on 30 May 1941". RGVA, 502-1-22, pp. 13-13a.
First destination of the trip: Gleiwitz (purchase of fittings)
Second destination: Oppeln (transport headquarters – provisioning of loading space for the procurement of the most necessary construction materials)
Third goal: visit a sawmill.

SS New Construction Office Auschwitz CC. "Activity Report from 26 to 31 May 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 43-45.
Activities regarding:
I. construction site operations: new inmate lodging buildings: Block I, II, III, IV, 7, 9, 13, 14, 15, 16, provisional inmate kitchen, slaughterhouse *Industriehof* I, provisional dairy building *Industriehof* I, officers' mess, physicians' quarters, officers' quarters, school in Building 83, *Deutsche Ausrüstungswerke*, troop economic building of Waffen SS: Building 56, SS community building Auschwitz, House No. 7
II. surveying department
III. purchase of materials
IV. planning
V. accounting.

June 1941

5. Headquarters Order No. 11/41 quotes from a staff order in matters of uniforms, military salutes, off-duty carrying of weapons, excessive drinking of alcohol, and eating of fruit. It also prohibits the use of camp sleeping blankets as a pad for open-air bathing, and announces a staff company roll call. Frei, pp. 43f.

7. Letter from the Auschwitz CC Political Department to the SS New Construction Office with the subject "Ventilation in the Crematorium". RGVA, 502-1-312, p. 111.
"It is absolutely necessary that a special deaeration be installed in the crematorium's morgue. The present deaeration has been rendered worthless by the installation of the second furnace. When the second furnace is used – and this is now the case almost daily – the ventilation flap to the morgue must be closed, because otherwise warm air enters the morgue through the flue and thereby causes exactly the opposite of deaeration. The lack of deaeration and air supply is especially noticeable in the current warm weather. It is hardly possible to stay in the morgue, even if it is only necessary for a short time. A regulated ventilation will certainly improve the air and also eliminate the humidity of the room. Also, the presence of flies in the morgue will be prevented, or kept to a minimum. The abolition of these deficiencies is in the interest of the general public, especially since this will also prevent the transmission of disease by the flies.
It is therefore requested that two ventilators be installed in the morgue, one each for deaeration and aeration. For deaeration, a special duct must be built to the chimney. It is requested that the work be started as soon as possible."

SS New Construction Office Auschwitz CC. "Activity Report from 3 to 7 June 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 40-42.
Activities regarding:
I. construction site operations: new inmate lodging buildings: Block I, II, III, IV, 7, 9, 11, 13, 14, 15, 16, provisional inmate kitchen, slaughterhouse *Industriehof* I, provisional dairy building *Industriehof* I, officers' mess, physicians' quarters, officers' quarters, school in Building 83, *Deutsche Ausrüstungswerke*, troop economic building of Waffen SS: Building 56, SS community building Auschwitz, House No. 7
II. surveying department
III. purchase of materials
IV. planning
V. accounting.

9. A special headquarters order forbids – with exceptions for two SS men – the shooting of birds and "predatory animals" at the ponds; bathing and fishing in them is also forbidden. The area around the Raisko ponds and the park in Raisko are completely off limits. Frei, p. 45

12. Headquarters Order No. 12/41 announces four promotions, orders various air-raid precautions, especially blackouts, imposes a vacation ban, opens the passage through the industrial yard, requests all staff members without gas masks to receive one in the armory, regulates practice times and examinations for the Reich Sports Badge, and permits fishing in the oxbow lakes of the Sola and Vistula only for commissioned SS members. Frei, pp. 46f.

14. SS New Construction Office Auschwitz CC. "Activity Report from 9 to 14 June 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 37-39.
Activities regarding:
I. construction site operations: new inmate lodging buildings: Block I, II, III, IV, 7, 9, 11, 13, 14, 15, 16, provisional inmate kitchen, slaughterhouse *Industriehof* I, provisional dairy building *Industriehof* I, officers' mess, physicians' quarters, officers' quarters, school in Building 83, *Deutsche Ausrüstungswerke*, troop economic building of Waffen SS: Building 56, SS community building Auschwitz, House No. 7
II. surveying department
III. purchase of materials
IV. planning
V. accounting.

18. Letter from the Main Office Budget and Construction, the Chief of Office II, SS-Oberführer Kammler, to the Camp Commandant of Auschwitz CC, SS-Sturmbannführer Höss, with the subject "Auschwitz CC – Construction Measures 2nd and 3rd year of war economy." RGVA, 502-1-11, pp. 37-39.
"1. The construction measures listed below will be registered by Amt II in due time with the General Plenipotentiary for the Regulation of the Construction Industry for the 3rd year of war economy (1 Oct. 41 -30 Sept. 42):
a) Extension of the utility building
b) 30 new prisoner quarters
c) delousing plant
d) laundry building
e) access building

f) entrance building CC
g) 5 watchtowers
h) extension of camp wall and wire barrier
i) new building construction office with garages
k) headquarters' building
l) guardhouse headquarters area
m) headquarters' garages
n) quarters headquarters' staff
o) accommodation for 1st guard battalion
p) extension of a temporary officers' mess and officers' quarters in existing buildings
q) labor camp for civilian workers
r) drainage
s) water supply
t) roads and garden facilities
u) outdoor electrical installations
In view of the fact that the entire construction project Auschwitz CC can no longer be registered in the second year of war economy (end of the second year of war economy on 30 Sept. 41), I agree, in view of the December 31, 1941 occupancy date of the camp with 18,000 prisoners that the following construction measures be begun or that those already begun be continued:
a) addition of a story to 14 old prisoners' quarters
b) expansion of the utility building
c) 30 new prisoners' quarters
d) delousing facility
e) laundry building
f) new building construction office with garages
g) headquarters' garages
h) quarters headquarters' staff
i) extension of a temporary officers' mess and officers' quarters in existing buildings
k) labor camp for civilian workers
l) drainage
m) water supply
(n) road construction."

21. SS New Construction Office Auschwitz CC. "Activity Report from 16 to 21 June 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 34-36.
Activities regarding:
I. construction site operations: new inmate lodging buildings: Block I, II, III, IV, 7, 11, 14, 15, 12, provisional inmate kitchen, slaughterhouse *Industriehof* I, provisional dairy building *Industriehof* I, completion of workshops in *Industriehof* I, officers' mess (annex and alteration), physicians' quarters, officers' quarters, school in Building 83, *Deutsche Ausrüstungswerke*, troop economic building of Waffen SS: Building 56, SS community building Auschwitz, House No. 7
II. surveying department
III. purchase of materials
IV. planning
V. accounting.

24. X-ray book no. 2 of the prisoner infirmary of Auschwitz CC begins with this date. It extends from June 24 to October 2, 1941, and contains entries numbered 876 to 2733. APMO, D-Aul-5/2. ISD, folder 67f.

27. Letter from the Main Office Budget and Construction, the Chief of Office II Buildings, to the SS New Construction Office Auschwitz CC with the subject "Construction Order". RGVA, 502-1-215, pp. 32-33.

"The Main Office Chief, SS Gruppenführer Pohl, has approved the preliminary sketch for the Auschwitz General Construction Plan. By the end of 1941, the housing of 18,000 prisoners is necessary to provide the manpower to carry out both the camp's own construction work and that of IG-Farben."
The construction works classified as urgent are:
a) addition of a story to 14 old prisoners' quarters
b) expansion of the utility building
c) 30 new prisoners' quarters
d) delousing facility
e) laundry building
f) new building construction office with garages
g) headquarters' garages
h) quarters headquarters' staff
i) extension of a temporary officers' mess and officers' quarters in existing buildings
k) labor camp for civilian workers
l) drainage
m) water supply
(n) road construction.

28. SS New Construction Office Auschwitz CC. "Activity Report from 23 to 28 June 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 31-33.
Activities regarding:
I. construction site operations: Staff Building 54, Troop Quarters No. 52.
"Crematorium: framed and tuck-pointed the defective chimney with angle iron and turnbuckles."
New inmate lodging buildings: Block I, II, III, IV, 7, 11, 12, 14, provisional inmate kitchen, slaughterhouse *Industriehof* I, provisional dairy building *Industriehof* I, completion of workshops in *Industriehof* I, officers' mess, physicians' quarters, officers' quarters, school in Building 83, *Deutsche Ausrüstungswerke*, troop economic building of Waffen SS: Building 56, SS community building Auschwitz, House No. 7
II. surveying department
III. purchase of materials
IV. planning
V. accounting.

28. Express letter from the Reich Minister of the Interior. To various government, police, and health offices of the Reich. APK, OPK, 2176, pp. 14-16.
"Concerns: epidemic-hygienic monitoring of camps for recruited Polish workers. In the Government General, the number of cases of typhus has increased considerably in recent weeks, more than doubling. Thus, the danger of the introduction of typhus by the Polish workers has become much greater. Quarantine is not possible either in the Government General or in the Reich, especially for reasons of labor deployment and due to lack of personnel and materials."
The Reich Minister ordered that these Polish workers be subjected to a second delousing upon their arrival in Reich territory.

30. Main Office Budget and Construction, Office II-Construction, Berlin. Office Order No. 3 concerning the organization of SS construction offices. RGVA, 502-1-11, pp. 55-57.
The field offices are subordinated to Office II and are designated "Central Construction Office of the Waffen-SS and Police." New Construction Offices and Construction Offices each become "Construction Office of the Waffen-SS and Po-

lice."
As of July 1, 1941, a headcount report must be sent to Office II by the 10th of each month.
Enclosure 1: Organization of a Central Construction Office
Enclosure 2: Organization of a Construction Office
Enclosure 3: Structure of the headcount report
Enclosure 4: Form "Construction Deadline Plan"
Enclosure 5: Preparation of a "Construction Deadline Plan".

July 1941

2. Headquarters Order No. 14/41 contains only a long list of appointments. Frei, pp. 49-51

4. Headquarters Order No. 15/41: Frei, pp. 51f.
"1. Commendations
During an escape attempt by a prisoner in Dwory, SS-Rottenführer Stolten, who was assigned to the command as a block leader, showed very prudent behavior. He succeeded in thwarting the escape and shooting him in his attempt. I express my appreciation to SS-Rottenführer Stolten for this.
During a mass escape of Jews, on 26 June 41, SS man Ewald Leuow, 4th /SS-T-Sturmbann, contributed significantly to preventing this escape by his attentiveness and circumspection. I express my appreciation to SS man Leuow for this."
The founding of the SS *Sportgemeinschaft* (Sports Association) Auschwitz is reported, pay payments are now made exclusively by transfers to bank accounts, and private phone calls and telegrams are to be paid immediately in cash and recorded in lists.

5. SS New Construction Office[3] Auschwitz CC. "Activity Report from 30 June to 5 July 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 28-30.
Activities regarding:
I. construction site operations: Staff Building 54, Troop Quarters No. 52, new inmate lodging buildings: Block I, II, III, 7, 12, 14, provisional inmate kitchen, slaughterhouse *Industriehof* I, officers' mess, officers' quarters, school in Building 83, *Deutsche Ausrüstungswerke*, troop economic building of Waffen SS: Building 56, SS community building Auschwitz, House No. 7
II. surveying department
III. purchase of materials
IV. planning
V. accounting.

5. Letter from the Chief of the Main Office Budget and Construction to the SS New Construction Office of Auschwitz with the subject "Fire Damage of May 19, 1941." RGVA, 502-1-178, pp. 252f.
"The prisoners are to be regarded as vicarious agents of the German Reich from a legal point of view, so that they are to be held responsible for any fault."

9. Headquarters Order No. 17/41 lifts the vacation ban, regulates promotion proposals, prescribes the marking of private bicycles, schedules the return of membership lists to the SS Sports Association, establishes a patrol in the village of Brzeszcze, reminds of requirements for official travel, mentions the mix-up of a Frei, p. 59

[3] On July 1, 1941, the SS New Construction Office (SS-*Neubauleitung*) was renamed SS Construction Office (SS-*Bauleitung*) der Waffen-SS und Police Auschwitz, but the name SS New Construction Office/SS-Neubauleitung still appears in many subsequent documents.

belt, and announces a staff company roll call.

Garrison Order No. 1/41 forbids SS members to enter the commons' mess hall, defines the area of the Auschwitz Garrison (town, camp area and village of Neuberun), and reminds of the ban to frequent Polish bars. Frei, p. 54

11. Headquarters Order No. 18/41 describes bureaucratic requirements for issuing engagement and marriage licenses, reports the opening of a coffee shop for the SS, appoints SS-Untersturmf. Dr. Blaschke as 2nd camp physician, sets the start of work for the motor pool at 6:00 a.m., lists types of sport and times of the SS Sports Association Auschwitz, explains when and how the Reich Sports Badge can be earned, regulates the allocation of construction allowances, and reminds that convalescent leave to the Sola Hut must be approved by the headquarters. Frei, pp. 54-56

12. SS New Construction Office Auschwitz CC. "Activity Report from 7 to 12 July 1941," by the Head of Construction SS-Untersturmführer August Schlachter to the headquarters of Auschwitz CC. RGVA, 502-1-214, pp. 25-27
Activities regarding:
I. construction site operations: Staff Building 54, Troop Quarters No. 52, inmate lodging buildings: Block I, II, III, 7, 11, 12, 14, provisional inmate kitchen, slaughterhouse *Industriehof* I, officers' mess, officers' quarters, school in Building 83, *Deutsche Ausrüstungswerke*, troop economic building of Waffen SS: Building 56, SS community building Auschwitz, House No. 7
II. surveying department
III. purchase of materials

4. Letter from the local representative of the Plenipotentiary General for the Regulation of the Construction Industry in Military District VIII to the Commandant of Auschwitz CC with the subject "Construction Work in Auschwitz Concentration Camp". RGVA, 502-1-319, p. 251.
"I refer to the personal conversation I had with your SS-Sturmführer Schlachter on August 27, and I ask you to send your head of construction or your adjutant with the necessary documents, which will give an overview of the individual construction projects in the concentration camp, again on September 15, 1941, at 11 a.m. to my office for an interview. As you are aware, as the local representative of the Plenipotentiary General for the Regulation of the Construction Industry, I must be informed within my organization about every construction project and know its scope."

5. A special headquarters order mentions that the headquarters have regular access to 4-5 discounted tickets to the Kattowitz Theater. Frei, p. 64

Garrison Order No. 7/41 orders that every SS member must identify himself when passing through the guard chain without being asked to do so. Frei, p. 65

6. The J.A. Topf & Sons company, Erfurt, sends invoice No. 41 D 719 to the SS New Construction Office Auschwitz as requested by this office on August 5, 1941, with company stamp and signature. RGVA, 502-1 327, pp. 186f.

8. A special headquarters order prohibits guards and clerical workers from smoking during duty hours. Frei, p. 65

10. Headquarters Order No. 23/41 reports a promotion, orders non-riding SS members in possession of breeches to turn them in, schedules the submission of promotion proposals, orders the overhaul of dilapidated service bicycles, and reports some lost and found items. Frei, pp. 65f.

12. Headquarters of Auschwitz Concentration Camp. APMO, Inventory No. 162020.
"Release certificate
Georg Sroczynski, born on 10 Oct. 1913 in Strzyzow, was placed in a concentration camp in the period from 20 June 1940 to 12 Sept. 1941. He was released on September 12, 1941.
The camp commandant p.p. [signature] *SS-Hauptsturmführer."*

15. A special headquarters order regulates the issuance of Yule chandeliers to married SS members. Frei, pp. 66f.

17. Headquarters Order No. 24/41 reports sporting successes of the SS Sports Association Auschwitz, mentions opening hours of the SS library, explains a decree on awards, and lists lost (badge of honor, briefcase) and found items (a pistol). Frei, p. 67

20. Headquarters Order No. 25/41: Frei, p. 68
"1. Commendation
The SS rifleman Karl Mathey, 2nd /SS-T-Sturmbann, prevented the escape of a prisoner by securing civilian clothes that had been laid out in advance. I express my appreciation to SS rifleman Mathey for this. M. will subsequently receive 2 days special

leave for his prudent behavior in addition to his recreation leave."
In addition, the ban on the use of express trains for vacation travel is repeated, the working hours of the headquarters are changed, and a found object is mentioned.

24. The J.A. Topf & Sons company, Erfurt, sends the SS New Construction Office Auschwitz "Operating instructions for the Topf cremation furnace and the Topf forced-draft system in triplicate."
The company asks that "one copy each of the operating instructions be hung under glass in the furnace room, so that the furnaces located there will be operated properly."
The two appendices are titled "Operating Instructions on 'Topf' forced-draft system" and "Operating Instructions on coke-fired Topf double-muffle cremation furnace."
APMO, BW 11/1/3, p. 1; *ibid.*, pp. 2f.

25. Prisoner locksmith shop. Work card. Order No. 1714, BW (Building, Structure) 11.
"Subject: make 4 pcs. airtight flaps.
Applicant: crematorium.
Started: 25 Sept. 1941. Finished: 25 Sept. 1941."
RGVA, 502-2-1, p. 74, 74a

25. J.A. Topf & Sons, Erfurt, construction drawing D 59042: "Installation of an incineration plant for Auschwitz CC," floor plan.
The construction drawing shows the location of the "new furnace" (the third double muffle furnace) in the furnace room.
APMO, Neg. No. 20818/1.

26. "Phone call from Main Office Budget and Construction, Berlin (spokesman SS-Rttf. Eggeling) Order from SS-Oberführer Kammler".
"1. Camp Auschwitz will be occupied by 50000 + 10000 prisoners of war (in a special camp).
2. 5000 prisoners of war to arrive next week, who are to build the camp themselves.
3. have site plans and camp plans ready
4. overall responsibility for camp Auschwitz SS-Sturmbannführer Höss and SS-Brigadeführer Glücks.
5. overall responsibility for buildings SS-Gruppenführer Pohl – SS-Oberführer Kammler.
6. appointed by SS-Oberführer Kammler as head of construction POW camp SS-Obersturmführer Grosch and special head of construction from Dachau. […]
13. SS-Obersturmführer Grosch and the special representative from Dachau arrive Saturday afternoon, 24 Sept. 41."
RGVA, 502-1-85, p. 7.

29. Decree of Construction Office of the Waffen SS and Police, Auschwitz. The working hours of the members of the Construction Office are: 7:30-12:00, 13:00-19:00 (10½ hrs.).
RGVA, 502-1-1, p. 167.

Letter from the Chief of Office II – Construction of the SS Main Office Budget and Construction (Kammler) to the special representative for the construction of POW camps at the Central Construction Inspectorate of the Waffen-SS and Police in Lublin, SS-Obersturmführer Grosch.
"Subject: Construction of prisoner-of-war camps.
Reference: Verbal meeting in Berlin 26 and 27 Sept. 41.
Enclosure: without
In Lublin and Auschwitz, prisoner-of-war camps with a capacity of 50,000 prisoners each are to be set up immediately on 1 Oct. in accordance with the instructions given in Berlin (*) and the drawing documents provided. The head of Construction Office of the Waffen-SS and Police Buchenwald, SS-Obersturmführer Grosch, is entrusted with the central processing. The Construction Offices in Lublin and Auschwitz are at the
Rudorff, 14, Dok. 1, p. 119.
APMM, Zentralbauleitung, Sygn. 120, p. 8.

disposal of SS-Obersturmführer Grosch for the execution of his special assignment. The work is to be started immediately, and carried out with the greatest possible speed.
1. report on the selection of the final sites in accordance with the proposals determined in Berlin on 26 and 27 Sept. 41 by F.[ernschreiben = telegram.] *The construction of the camps is to be based on the sketches of Amt II, which found the approval of the Inspector of KL on 27 Sept."*
* On November 1, 1941, Kammler sent the following order to the Central Construction Office of KL Lublin (see there):
"The construction order for the erection of a concentration camp in Lublin to house 125,000 prisoners of war is hereby issued."

30. Headquarters Order No. 26/41 mentions the result of a collection for the Winter Relief Charity, that all SS members receive a 50% discount for theater visits in Bielitz, that they must carry their pay book with them when leaving the camp, and that express trains are not vacation trains. Changes to wartime pay are explained, a lost bicycle is reported, and found items are listed (including a car key). Frei, pp. 68f.

October 1941

1. Main Office Budget and Construction, the Chief of Office II Construction. Letter to the Construction Office of the Waffen-SS and Auschwitz Police with the subject "Final details for construction projects in the III. Year of war economy." RGVA, 502-1-319, pp. 227-239.
"According to the guidelines of the Plenipotentiary General for Construction for the handling of construction projects important to the war effort in the 3rd year of war economy, dated 12 July 1941, the building permit is issued only after approval by stamp imprint of the application documents explained in the enclosed guidelines
A) site sketch
B) construction description
c) cost estimate
by the inspection commission of the responsible military district."
Detailed guidelines follow.

"Karl Bischoff, Special Representative for Construction of the Auschwitz Prisoner of War Camp". RGVA 502-1-85, pp. 8-10.
"According to telex dated 27 Sept. 41, Main Office Budget and Construction, Office II, Berlin, the undersigned was dispatched to Auschwitz as special representative for the construction of a POW camp of 50000 men. […]
3.) erection of barracks.
a.) wood procurement:
As can be seen from the files, the wood is to be cut from the local forest. The camp covers an area of about 10000 acres, the forest stand is very sparse. The possible deforestation would take such a long time exceeding the set deadlines, and would be disproportionate to the yield, moreover, the stock is too young. Negotiations with the forestry offices of Saybusch, Bielitz and Andrichau Castle will be started immediately for the procurement of the wood."

3. Letter from the SS Construction Office Auschwitz CC to the J.A. Topf & Sons company, Erfurt, with the subject "Order for a coke-fired Topf cremation furnace with double muffle and compressed-air system". RGVA, 502-2-23, p. 269.
"The Construction Office of the Waffen-SS and Police Auschwitz refers to the negotiations held with your Herr Chief Engineer Prüfer and, on the basis of your offer of 25 Sept. 41 and your general terms of delivery A, places with you: Order for the delivery and assembly of a coke-fired Topf double-muffle cremation furnace with compressed-air system, coffin-introduction cart with rail system and turntable at a total price of Rmk. 7,332.00. The order is to be confirmed."

Headquarters Order No. 27/41 gives a long list of appointments, sets the daily rhythm including working hours for inmate labor units, introduces the leader of the protective-custody camp, and mentions a lost ring. — Frei, pp. 70-72

7. SS New Construction Office Auschwitz CC. Prisoner locksmith shop. Work card. Order No. 1760. BW 11.
"Subject: making 25 pieces of deaeration hats from sheet iron 27/27 cm long. Otherwise as specified.
Applicant: crematorium.
Started: 7 Oct. 1941. Finished: 13 Oct. 1941."

Special Construction Office for the construction of a Waffen-SS prisoner-of-war camp at Auschwitz, Upper Silesia. "Site plan of the prisoner-of-war camp – Auschwitz U.S.," drawn by SS-Unterscharführer Fritz Ertl.
The complex is divided into three sections: Quarantine Camp, Camp I and Camp II. — APMO, BW 2/1, Neg. No. 21135/1.

8. Letter from the Construction Office to the 1st Leader of the Protective-Custody Camp Auschwitz CC with the subject "Additional Rations for Prisoner No. 1000, Plaskura". — RGVA, 502-1-31, p. 76.
"The Construction Office of the Waffen-SS and Police Auschwitz again requests, as already communicated in our letter of 12 Sept. 41, to grant additional rations to inmate no. 1000, Plaskura, since he can be given the best report in terms of performance and conduct."

Construction Office of the Waffen-SS and Police Auschwitz. Accommodation barracks for a prison camp. Capacity ca ~~550~~ 744 [corrected with pen] men.
Handwritten note: "62 bunks with 4 men = 248 men in 3 [layers ?] = 248 x 3 = 744 men." — APMO, BW 3a, p. 1.

9. The J.A. Topf & Sons company, Erfurt, confirms receipt of an order from the SS Construction Office Auschwitz dated October 3, 1941 for a coke-fired Topf double-muffle cremation furnace. — RGVA, 502-2-23, p. 272.

11. Telegram from SS New Construction Office Auschwitz CC to "Topfwerke, Erfurt": — RGVA, 502-1-313, p. 179.
"Expecting visit from your Herr Prüfer early next week, regarding new construction of crematorium. Wire when Prüfer will arrive."

14. Letter from the J.A. Topf & Sons company, Erfurt, to the SS New Construction Office Auschwitz CC. The company confirms receipt of the telegram of October 11 and states: "Prüfer arrives twenty first 9 o'clock." — RGVA, 502-1-313, p. 178.

Special Construction Office for the construction of a Waffen-SS prisoner-of-war camp at Auschwitz U.S. "Site plan of the prisoner-of-war camp-Auschwitz U.S.," drawn by prisoner No. 471 Alfred Brzybylski.
Division into three sections as in the plan of October 7, 1941. — APMO, BW 2/2, Neg. No. 21135/2.

17. Headquarters Order No. 28/41 announces the result of a collection for the Winter Relief Charity, orders ideological training for all SS members, informs about further-education and training courses (arithmetic, German, shorthand), and repeats the ban on carrying weapons off duty for SS men and NCOs. — Frei, pp. 72-74
"6 Commendation
SS rifleman Otto Müller, 3rd /SS-T-Sturmbann, succeeded in preventing a prisoner, who was already in civilian clothes, from escaping and arresting him. I express my appreciation to SS rifleman Otto Müller for this."
It is also noted that those commandeered to other departments are subordinate to

their company while off-duty. The staff company provides important units on Sundays. A power cut is announced as well as fish sales on Fridays. Prisoner move-in and roll call times and infirmary hours are changed. Lost and found objects are mentioned.

21. The J.A. Topf & Sons company, Erfurt, sent to the SS New Construction Office Auschwitz CC "Parts for the coke-fired Topf double-muffle cremation furnace." Total weight: 3,548.5 kg. RGVA, 502-1-312, pp. 104-105.

Letter from the SS Construction Office Auschwitz CC to the firm H.F. Meyer, Tarnow, with the subject "Order for a barracks camp". RGVA, 502-1-272, pp. 409-409a.
"The Construction Office of the Waffen-SS and Police Auschwitz orders for immediate delivery according to your offer of 16 Oct. 41.":
1 piece office barracks 12.50 x 21.25 m large, 2.80 m high: price RM 14,640
6 pieces crew barracks 42.50 x 12.50 m large, 2.50 m high: price RM 24,000 per piece
1 piece utility barracks 62.50 x 12.50 m large + 21.25 x 10 m large, 3 m high: price RM 53,675
1 piece garage hall 36.00 x 14.28 m large: price RM 29,300
1 piece toilet barracks 7,50 x 11,25 m large, 2,50 m high: price RM 4,080
1 piece toilet barracks 5.21 x 12.50 m large, 2.70 m high: price RM 3,770
1 piece guard barrack 8.23 x 13.40 m large, 2.70 m high: price RM 6,390.

Letter from the SS Construction Office Auschwitz CC to the firm H.F. Meyer, Tarnow, with the subject "Order for a barracks camp". RGVA, 502-1-272, p. 408.
"The Construction Office of the Waffen-SS and Police Auschwitz orders for immediate delivery according to your offer of 16.10.41.":
6 pieces of crew barracks, 42.50 x 12.50 m in size, 2.80 m high: price RM 25,000 per piece.
1 piece canteen barracks, 62.50 x 12.50 m large, 3 m high: price RM 40,625.

22. Letter from the SS Construction Office Auschwitz CC to the J.A. Topf & Sons company, Erfurt, with the subject "Order for Topf three-muffle furnaces, forced-draft systems and waste-incineration furnace". APMO, BW 30/34, p. 116.
"The Construction Office of the Waffen-SS and Police Auschwitz refers to the conversation between your Herr Prüfer and the local head of construction K. Bischoff, and places an order with you for:
5 pcs. Topf three-muffle furnaces with compressed-air system
2 pcs. Topf forced draft units for approx. 10,000 cbm flue gases each per hour
1 pc. Topf waste incinerator."

23. The Inspector of Concentration Camps. Letter to the commandants of the concentration camps with the subject "Written reports on Soviet-Russian prisoners of war". Instructions on admissions, transfers, and deaths of these prisoners of war. AGK, NTN, 119, pp. 60-61.
"(c) send in a death notice to be drawn up by the camp physician, signed, and bearing his official seal.
The designation of the grave location is omitted, since cremation is to take place, and the urns are to be kept ready on call."

24. *"Special Construction Office for the construction of the Waffen-SS prisoner-of-war camp at Auschwitz U/S.* RGVA, 502-1-1, p. 168.
Ref. No. 61/41 Bi/Da.
Subject: House Decree No. 2.
Medical care of civilian employees employed here.
Notifications of sickness by civilian employees must be made in writing to the CC infirmary via the Construction Office no later than 8:30 a.m. the next day. Attn. Bischoff.

"

SS-Rottenführer Walter Dejaco prepares the construction drawing "New construction crematorium, view from camp." RGVA, 502-1-285, p. 21.

27. X-ray book No. 3 of the prisoner infirmary of Auschwitz CC begins with this date. It extends from October 27 to November 18, 1941, and contains entries numbered 3338 to 4683. The pages are filled out in pairs (left and right pages as one sheet), with the following columns: "Serial No.", "Date", "Inmate No", "Last and first name", "Diagnosis", "Surgery", "Surgent", "Assistant", "Anaesthetist", "Anaesthesia", "Remark." APMO, D-Aul-5/3. ISD, folder 67g.

28. "Special Construction Office of the Waffen-SS and Police Auschwitz/labor deployment. Order No. 1". RGVA, 502-1-18, p. 47.
"For the work assignment of the Huta & Lenz company, a commissioner has been appointed by the Special Construction Office of the Waffen-SS and Police Auschwitz for the construction of a prisoner-of-war camp, who will initiate and regulate both the work assignment and the procurement of identity cards."

"Special Construction Office of the Waffen-SS and Police Auschwitz /labor deployment. Activity Report". RGVA, 502-1-18, p. 24.
"Altogether, up to the present day, 28 Oct. 41, the following have arrived and been registered at the reception office of the Huta & Lenz company:
1.) bricklayers 314 men
2.) Carpenters 73 "
3.) Cleanup women 7
Together 394 men and women."

A special headquarters order offers SS members a job at the company *Deutsche Erd- u. Steinwerke* after appropriate further training. Frei, p. 74

29. Letter from the inmate infirmary, camp physician Auschwitz CC, to the concentration-camp workshops (Installation Department): RGVA, 502-1-342, p. 8.
"The inmate infirmary requires:
2 hot-water boilers for the bathing facilities (hot water)."

30. "Special Construction Office of the Waffen-SS and Police Auschwitz /labor deployment. Activity report." There are 390 civilian workers and 7 cleanup women in the camp, broken down as follows: RGVA, 502-1-18, p. 20.

Firm	Masons	Carpenters
Lenz	107	23
Huta	198	17
Total	305	85

Moreover the 7 cleanup women.

Construction Office of the Waffen-SS and Police Auschwitz, "Explanatory Report on the Preliminary Design for the New Construction of the POW Camp of the Waffen-SS, Auschwitz U/S." and "Cost Estimate for the Preliminary Design for the New Construction of the POW Camp of the Waffen-SS, Auschwitz U/S.". The land allocated to the PoW camp has an area of 81 ha. RGVA, 502-1-233, pp. 13-30.
"This plot of land is sufficient for the construction of a prisoner-of-war camp for approximately 125,000 prisoners. […]
The groundwater varies between 0.30 and 1.20 m. The terrain is partly marshy. […]
Design arrangement:
On the existing terrain are to be built:
I. Buildings:
1. BW 3 prisoner housing barracks 1,174

2. BW 4 utility barracks 1-14
3. BW 5a delousing barracks 1
4. BW 5b " 2
5. BW 6 wash barracks 1-16
6. BW 7 toilet barracks 1-18
7. BW 8 morgue barracks
8th BW 9 quarantine camp entrance building
9th BW 10 headquarters building
10. BW 11 guard building
11. BW 12 enclosure with open privies
12. BW 13 wooden watchtowers
13. BW 14 barracks camp for guard troops
14. BW 15 warehouse
Exterior facilities:
15. BW 16 access road and parking lot
16. BW 17 road paving inside the camp
17. BW 18 sewerage system with sewage treatment plants
18. BW 18 water-supply plant
19. BW 20 high-voltage facility
20. BW 21 feeder of the power line from Birkenau
21. BW 22 telephone system
22nd BW 23 alarm system
23rd BW 24 fencing
24. BW 25 wire fences inside the camp
25. BW 26 transformer station
26th BW 27 rail siding from Auschwitz station."
"inmate lodging barracks:
The perimeter walls are constructed with 12 cm thick masonry blocks with pillar support every 4 meters. The barracks will be divided into 62 bunks with 3 levels of bunks, one above the other, each for 3-4 prisoners. Thus, a barracks can be occupied by a maximum of 744 prisoners."
"Auxiliary operations:
As a result of the large occupancy (125000 prisoners), a crematorium is erected. It contains 5 muffle furnaces, each with 3 muffles for 2 men, so that 60 men can be cremated in one hour. In addition, a morgue basement and 1 garbage incinerator are built. The crematorium will be built on the grounds of the concentration camp [Auschwitz].*"*
"Construction time:
Construction has begun on October 15. The quarantine camp must be completed by November 15 by order of the Chief of Office II-Construction."
Total cost: RM 7,700,000.

31. Construction Office: "Explanatory Report on the Preliminary Design for the Construction and Expansion of the Concentration Camp Auschwitz U/S. Construction Section I".

RGVA, 502-1-225, pp. 2-11; *ibid.*, pp. 12-25.

"According to the order of the Reichsführer-SS and Chief of the German Police, a concentration camp for approx. 30,000 prisoners is to be built on the site of the former Polish artillery barracks in Auschwitz U.S."
"I. Buildings.
(a) Existing structures.
1st BW 4 inmate infirmary building.
2nd BW 5 prisoner cell building
3rd BW 11 prov. crematorium (former bunker).
4. BW 12 prisoner effects storage building
5. BW 13 prov. headquarters building
6. BW 14 prov. SS infirmary and mess-hall building

7. BW 17A prov. crew building 1
8. BW 17b prov. crew building 2
9. BW 19 prov. inmate workshop barracks
10-26. BW 20A-R prov. inmate accommodation buildings 1-17
27th BW 24 prov. headquarters residential building
28th BW 35 prov. school building with kindergarten
b) Constructed buildings
29th BW 6 prov. main guardhouse
30. BW 7A prov. block leader accommodation barracks
31st BW 18 prov. motor vehicle hall
32nd BW 30A prov. motor vehicle workshop
33. BW 42 prov. prisoner kitchen barracks
II. External facilities:
(a) Existing facilities
34. BW 9 sewerage system
35. BW 23A prov. transformer station
36. BW 29 water supply plant
37. BW 33A stable facilities
b) Constructed facilities:
38. BW 8 prov. guard towers
39. BW 21 road paving
40th BW 26A field barns
41st BW 34 bathhouse at the Sola River
42nd BW 41 fences of protective-custody camp and industrial yard
43rd BW 49 electr. outdoor facilities
44. BW 27 existing dwellings for married headquarters staff."
"Prov. crematorium. Installation in former bunker with 2 double furnaces, morgue, etc."
The related cost estimate provides for a total cost of RM 2,026,000.
"BW 11 prov. crematorium (former bunker).
Erection of partition walls, installation of two double furnaces, erection of a new chimney, irrigation and drainage systems.
prov. crematorium: total cost, best approximation 52,000.00."

Construction Office: "Explanatory Report on the Preliminary Design for the Construction and Expansion of the Auschwitz Concentration Camp U/S. Construction Phase II" RGVA, 502-1-225, pp. 26-35; *ibid.*, pp. 36-52.
"I. Buildings:
a) Existing structures: […]" as for Construction Section I, but additionally the following structures:
"BW 30 B fuel station
BW 36 A officers' mess
BW 50 construction yard.
b) Constructed structures:
BW 7 B prov. block leader barracks
BW 28 prov. reception barrack with delousing
BW 32A civilian workers' accommodation barracks
BW 32B civilian workers' accommodation building
BW 37A construction-office barracks
BW 100-107: inmate lodging buildings 18-25
II. Exterior facilities:
(a) Existing facilities:
BW 39 prov. SS quarters
BW 9 prov. sewerage system
BW 23A prov. transformer station
BW 29 water-supply plant

BW 33A prov. stable facilities
BW 44 sports field facilities
BW 45 shooting range facility
b) Constructed facilities:
BW 8 prov. watchtowers
BW 21 road reinforcements
BW 23 backup power generator
BW 40 fences protective-custody camp and industrial yard
BW 49 outdoor electrical installations
BW 54 gardening facilities
BW 33B prov. slaughterhouse with dairy
BW 27 further expansion and repair of existing housing for married NCOs
BW 36 B, similar, for married officers."
The related cost estimate provides for total costs of RM 4,630,000.

Letter from the J.A. Topf & Sons company, Erfurt, to the SS Construction Office Auschwitz CC with the subject "Your letter dated 22 Oct. 41, crematorium, cremation furnaces". The Topf company announces that it will send confirmation of the order and the corresponding cost estimates in the next few days. RGVA, 502-1-312, p. 103.

Headquarters Order No. 29/41 announces the exchange of adjutants from the Auschwitz and Neuengamme camps and the assignment of Karl Bischoff as the camp's Head of Construction. Daytime limits on commandeering prisoners are mentioned. SS members are forbidden to enter the leather factory because of repeated circumvention of official channels for leather repairs. Completion of pay books is urged. Reporting rules for vacationers, travelers and troop units in Vienna are issued. The loss of a ring is mentioned. Frei, pp. 75f.

November 1941

1. Main Office Budget and Construction, the Chief of Office II Construction, SS-Oberführer Kammler. Letter to the Construction Office Auschwitz CC with the subject "Auschwitz Prisoner of War Camp". RGVA, 502-1-233, p. 11; 502-1-215, p. 10.
"The construction order for the erection of a prisoner-of-war camp to house 125000 prisoners of war is hereby issued."

4. The Topf company, J.A. Topf & Sons, Erfurt, sends the SS Construction Office Auschwitz CC the "Cost estimate for aeration and deaeration systems", offer no. 41/0587/1, for the new crematorium (the later Crematorium II). RGVA, 502-1-327, pp. 149-157.
For the "B" room [morgue 1], an aeration blower as well as a deaeration blower for conveying 4,800 m³ of air per hour, with a fresh-air intake pipe and exhaust air pipe of 450 mm, in addition a three-phase motor, motor protection switch, star-delta switch and a pressure pipe, are planned at a price of 720 RM per piece.
Deaeration system for furnace room: 1 blower to convey 10,000 m³ air per hour, exhaust-air piping from 550 to 250 mm, otherwise as above. Price RM 1,837.
Deaeration system for dissecting room and washing room: 1 blower for conveying 3,000 m³ of air per hour, exhaust air piping of 375 mm, otherwise as above. Price 779 RM.
Deaeration system for "L" room [morgue 2]: 1 blower to convey 10,000 m³ of air per hour, otherwise as above. Price: RM 3,332. Total price: RM 7,795.

Letter from the J.A. Topf & Sons company, Erfurt, to the SS Construction Office Auschwitz CC with the subject "Your letter dated 22 Oct. 41, order for Topf three-muffle furnaces, induced forced-draft systems and Topf waste incinerator". RGVA, 502-1-313, pp. 81-83.
"We thank you very much for the order placed with us for the delivery of
5 Topf triple-muffle furnaces with compressed-air system

2 coffin insertion devices with rail system for 5 furnaces
3 Topf forced-draft devices
1 Topf waste incinerator
flue system.
We accept the order on the basis of our enclosed cost estimate and its conditions at the total price of RM 51,237."
"Implementation: We would like to mention that the cremation chambers in the furnaces are now built larger than in previous furnaces. Through this we want to achieve a greater output. For the same reason, we have also provided for 3 forced-draft systems instead of 2, but we have also taken into account the fact that frozen corpses will be cremated, which require more heating material, thus increasing the amount of waste gas."

5. SS Construction Office Auschwitz CC. Prisoner No. 538 draws the "guard building for PoW camp, drawing no. 11". RGVA, 502-1-23a, pp. 12-13.

6. "Report on the business trip of SS-Untersturmführer (S) Urbanczyk with SS-Strm. Böhm as representatives of the Auschwitz CC headquarters to the Bau-Chemie Company in Berlin on Nov. 5 and 6, 1941, concerning the allocation of raw materials." RGVA, 502-1-233, pp. 77-79.
Discussion about the degree of urgency of construction projects:
"For each building project separately, the following documents are to be enclosed with the individual applications: Construction description, site plan, floor plans, sections, parts lists, views, total costs, costs of civilian labor deployment and costs of inmate labor deployment."

Auschwitz CC Headquarters. Order with the subject "Escape of prisoners". RGVA, 502-1-31, p. 58.
"Recently, Polish protective-custody inmates and also Russians have repeatedly escaped, often up to three on one day. The cause was investigated in more detail and it was found that the Poles and Russian prisoners of war let themselves be dug in, and then escaped after the chain of guards had been withdrawn. In the case of the demolition squad, for example, 5 Russians also escaped on 3 Nov. 41. According to a witness (Russians), they also allowed themselves to be buried in the rubble of a demolition site and, in order not to suffocate, attached a pipe to their mouths, which protruded somewhat from the rubble. The prisoners practiced the burial first by one of them laying down in some hole, and the next one then covered him with bricks or demolition debris. In this way, one after the other follows. In the POW camp itself, the prisoners hide under the so-called bridges laid over the water ditches and also under building materials."

Huta A.G. Kattowitz informs the Auschwitz Construction Office of the breakdown of the workforce as of November 2, 1941: 220 Germans and 36 foreigners. RGVA, 502-1-18, p. 16.

7. "Elevation Plan of POW Camp, Drainage Construction Section I. Drainage Plan," drawing by inmate no. 115. RGVA, 502-2-24, p. 226.

Headquarters Order No. 30/41: Frei, pp. 76-78
"1st Commendation
SS-Sturmmann Reimers, headquarters staff Auschwitz CC, dept. agriculture, succeeded in shooting a fleeing Russian prisoner of war about 400 meters outside the chain of posts, and thus prevented his escape. I would like to express my appreciation to SS-Strm. Reimers my appreciation for this."
In addition, two commandeerings are mentioned, rules of conduct are given for the staff company in the event of an alarm, and dealings with foreign civilian workers are restricted to official matters. Civilian workers must remove head coverings when leaving the camp to ensure that these are not escaping prisoners. An

ordinance requiring reporting of not yet conscripted draftees is explained. A reminder for the deadline for Sunday leaves is given. A soldier's song is ethnically cleansed of anything Polish. A reminder of speed limits due to speeders. Lost money and a stolen bicycle are mentioned.

8. SS Construction Office Auschwitz. Letter to the Main Office Budget and Construction, the Chief of Office II-Construction, with the subject "Renaming of the local SS Construction Office to 'Central Construction Office'." RGVA, 502-1-295, p. 203.
"In accordance with consultation with the Chief of Office II, SS-Oberführer Dr. Kammler, on the occasion of the inspection of the construction site on 24 Oct. 41, the office requests that the SS New Construction Office be renamed the 'Central Construction Office' of the Waffen-SS and Police in Auschwitz.
The request is justified as follows:
The area of interest of the concentration camp has an area of 15 km square, on which extensive construction work is planned.
Likewise, the construction of a prisoner-of-war camp for 125,000 prisoners of war is taking place."

SS Construction Office of Auschwitz CC. Plan "Delousing Plant for PoW camp," drawn by inmate no. 127, Josef Sikora. Reviewed by SS-Untersturmführer Walter Dejaco on 10 Nov. and approved by SS-Hauptsturmführer Karl Bischoff on 11 Nov. AMPO, Neg. No. 20932/1.
Main elements: unclean side, undressing room – wash and shower room – clean side, dressing room – double sluice and disinfestation gas chamber.

Letter from the Construction Office Auschwitz CC to the Main Office Budget and Construction, the Chief of Office II-Construction, with the subject "Request for Operating Funds, Month of December 1942". RGVA, 502-1-215, p. 2.
"The Construction Office of the Waffen-SS and Police Auschwitz reports the expected need for money for the month of December 1941 at 1,200,000.00 Rmk. at Chapter 21/7.
The increase of Rmk. 500,000.00 is due to construction of the prisoner-of-war camp."

Telegram from the SS Construction Office Auschwitz CC to the Topf company, Erfurt: RGVA, 502-1-312, p. 102.
"Third furnace plant is needed extremely urgently. Wire when installation will take place and plant will be completed."

12. Letter from the Construction Office to the Weimar Armaments Command with the subject "Leave of absence for the construction soldier Ludwig Topf from Langensalza". RGVA, 502-1-314, pp. 8-8a.
"The Topf & Sons company, combustion technology, Erfurt, has received an order from the local office to build an incineration plant as quickly as possible, since a prisoner-of-war camp has been attached to the Auschwitz concentration camp, which will be occupied by about 120,000 Russians in a very short time. The construction of the cremation plant has therefore become urgently necessary in order to prevent epidemics and other dangers. The person in charge of the plant is the construction soldier Ludwig Topf from Langensalza."
The Topf company announces that, without the presence of Ludwig Topf, "the in-

stallation of the cremation plant is not possible," but that construction is scheduled to begin on November 18, 1941. The Central Construction Office therefore requests that L. Topf be granted a 3-week leave of absence.

Letter from the Construction Office to the Army Pioneer Park at Cosel with the subject "Supply of Barbed Wire": RGVA, 502-1-55, p. 64.
"The local office has received an order from the superior office to carry out a prisoner-of-war camp for 120000 men in an immediate program.
For the fencing of the quarantine and main camp (double electr.-charged wire barrier) 120 km of galvanized barbed wire are needed."

A special headquarters order announces the dissolution of the staff company and the incorporation of all its NCOs and SS men into the SS-T-Sturmbann. The resulting bureaucratic circumstances are explained. Frei, p. 79

13. Reply of the Topf & Sons company, Erfurt, to the telegram from the SS Construction Office Auschwitz CC dated November 11, 1941: RGVA, 502-1-312, pp. 100-101.
"One of our furnace construction fitters will return on Monday, the 17th of the month, from another construction site; we have earmarked him for furnace construction. Accordingly, the fitter will arrive there no later than Wednesday, the 19th of that month.
[…]
It is expected that our chief engineer Prüfer will also be there at the end of next week or the beginning of the week after next to discuss the new order with you on the basis of the drawing submitted by us."

14. Letter from the Construction Office of the Waffen-SS and Police Auschwitz, to the headquarters of Defence District Kattowitz, with the subject "Securing the manpower requirements for the construction of a Waffen-SS prisoner-of-war camp in Auschwitz in accordance with the Standstill-Agreement for special projects in the interest of Reich defense pursuant to the Fuehrer Decree": RGVA, 502-1-55, p. 33.
"Enclosed is a list of Huta, Above- and Underground Construction Inc., Kattowitz branch, naming those workers who are employed in the construction of the POW camp of the Waffen-SS at Auschwitz and who are subordinate to your office re. military registration.
The construction of the prisoner-of-war camp has been ordered by the superior office for the fastest possible completion, and the deployed forces have been obligated to serve by the president of the State Labor Office in Kattowitz. The application is passed on with approval."

Main Office Budget and Construction. "General Plan of the Construction Inspectorates and Central Construction Offices of the Waffen-SS and Police." Map of the Reich (incl. the Government General) dividing the area into four major districts: West, North, South, East, indicating the location of: WAPL, Zentralbauleitung, 3, p. 24.
Headquarters of the Higher SS and Police Leader [HSSPF].

Seat of a Construction Inspectorate
Seat of a Central Construction Office [Central Construction Office].
Upper Silesia is part of the Southeast Subdistrict, which includes a Central Construction Office (and a headquarters of the HSSPF) in Breslau and a Central Construction Office in Auschwitz.
In the General Government there is an HSSPF headquarters, a Construction Inspectorate, and a Central Construction Office in Kraków, and also a Central Construction Office in Warsaw, Lublin, Debica, and Lviv (which are "part of the General Government").

15. The Inspector of Concentration Camps. Letter to the commandants of the concentration camp with the subject "Execution of Russian prisoners of war". GARF, 7021-108-47, p. 5.
"The Reichsführer-SS and Chief of the German Police has agreed in principle that, of the Russian prisoners of war transferred to the concentration camps for execution (especially commissars) who, on account of their physical condition, can be used for work in a quarry, the execution will be postponed. For this measure, the consent of the Chief of the Security Police and the SD must be obtained beforehand. For this purpose, it is ordered:
When execution transports arrive in the camps, the physically strong Russians who are suitable for work in a quarry are to be singled out by the leader of the protective-custody camp and the camp doctor. A list of the Russians selected by name is to be submitted here in duplicate. The camp physician must note on this list that there are no objections on the part of the doctor to the employment of the persons concerned.
After the Chief of the Security Police and the SD have given their consent, the Russians in question will be transferred to a quarry camp from here.
signed. Glücks
SS-Brigadeführer and Major General of the Waffen-SS."

17. Auschwitz Concentration Camp – Department II. Letter "to the leader of the protective-custody camp of Au. CC." GARF, 7021-108-47, p. 5a.
"On the basis of the decree overleaf [of November 16, 1942]*, the Russians who are exempt from execution are to be reported here. At the same time it is requested to report to here those who are eligible for the above order, since these must be submitted in list form to the ICC and to the Chief of the Security Police. In this regard, agreement with the local camp physician is absolutely necessary. Eligible are the Russians on the enclosed list, the Russian prisoners of war selected by the special unit for execution last week.*
The head of Department II
Grabner
SS-Untersturmführer and Detective."

Telegram from the J.A. Topf & Sons company, Erfurt, to the SS Construction Office Auschwitz CC: "Fitter Mehr arrives nineteenth forenoon – Topf Works." RGVA, 502-1-312, p. 99.

The J.A. Topf & Sons company, Erfurt, requests the SS Construction Office Auschwitz CC to pay at least half of the order amount (order no. 41 D 1980/1) of 3,650 RM and repeats this request on November 27. RGVA, 502-1-327, pp. 147f.

18. Construction Office of the Waffen-SS and Police Auschwitz. Certificate: RGVA, 502-1-44, p. 120.
"In addition to its construction project, the Construction Office of the Waffen-SS and Police Auschwitz received the order to build housing for 125,000 captured Russians as quickly as possible. For the transport of building materials and equipment, prisoner convoys are used for the most part. For this purpose, 30 carts are urgently needed."

X-ray book No. 4 of the prisoner infirmary of Auschwitz CC begins with this date. It extends from November 18, 1941 to December 9, 1941, and contains entries numbered 4684 to 5817. APMO, D-Aul-5/4. ISD, folder 67g.

19. Headquarters Order No. 31/41 mentions a number of commandeerings, lists the results of a collection for the Winter Relief Charity, reserves the horse hunting car for the commandant, schedules a department head meeting, reaffirms the chain of command for motor vehicle requisitions, lifts the ban on entering the village of Neuberun, reaffirms that express trains are not vacation trains, and mentions a found wedding ring. Frei, pp. 80f.

20. Letter from the government of the Government General to the Reich Minister of the Interior with the subject "Diseases of Jews with typhus who returned to Vienna from the Government General". APK, OPK, 2176, p. 27.
"The increased incidence of typhus in the Government General is essentially due to the fact that Jews illegally left the district to which they had been assigned. This has resulted in very extensive illnesses in the districts of Radom, Lublin and Warsaw. In a very large number of cases there was unimpeachable proof of this claim."
To prevent contagion, the guilty are sentenced to death. The first death sentences have already been passed.

The Main Office Budget and Construction, the head of Office II-Construction, sends to the Central Construction Office an "approved sketch about the design of the crematorium." These are two drawings by the architect Werkmann, a civilian employee belonging to Department II/3/3 (CC and PoW camp construction matters) of the Main Office Budget and Construction. One of the drawings contains a west and north elevation and a floor plan of the basement of the new crematorium, the other an east and south elevation and a cross-section and floor plan of the first floor. These documents were reprinted in Pressac 1993, Doc. 10f. RGVA, 502-1-313, p. 68.

A special headquarters order announces the invalidity of the 12 Nov. order to disband the staff company. The members of the headquarters now form the headquarters staff. Frei, pp. 81f.

21. Letter from Kurt Prüfer, J.A. Topf & Sons company, Erfurt, to SS Construction Office Auschwitz CC. RGVA, 502-1-314, pp. 1-2; *ibid.*, p. 5.
"In view of the importance and problematic nature of the new design to be created for you, I have interested my plant manager, Mr. Ludwig Topf, in Auschwitz CC. Since Mr. Topf has worked through the three-muffle cremation furnace himself, he would also like to get to know and see the construction site, especially the furnace in operation, because of its construction. Mr. Topf is currently a construction soldier in the 3rd Construction Replacement Battalion 9 in the area here. I would now like Mr. Topf to travel there with me to take part in the meeting. In order for the above-mentioned to be granted leave, I would ask you to send a telegram to my company, perhaps with the following content:
'Request urgent visit from Ludwig Topf for second to fifth December for discussion of furnace redesign'."
A telegram with this text was sent to the SS Construction Office, probably on the same day.

23. Headquarters Order No. 32/41 forwards Himmler's order to refrain from official Christmas and New Year's wishes in order to relieve the postal service and personnel. The manner in which prisoner units are to be requested is repeated. Mail may not be collected from headquarters until after 11:00 a.m. An ordinance sheet for training troop cooks is cited, and two newly trained troop cooks are named. A date is set for nominations for appointments. Instructions are given for theater visits to Kattowitz. The beginning of further-education and training courses (arithmetic, German, shorthand) is set. Procedures for substituting for the camp commandant are explained. Two lost items are mentioned. Frei, pp. 82-84

24. Letter from the J.A. Topf & Sons company, Erfurt, to the SS Construction Office Auschwitz CC with the subject "Crematorium, new coke-fired double-muffle cremation furnace, fireclay materials". RGVA, 502-1-312, p. 98.
The Topf company informs the SS Construction Office that the company Collmener Schmottewerke Ltd., Colditz, cannot ship fireclay materials because of the rail-car blockage and asks it to intervene with the Construction Materials Office East of the Plenipotentiary General for the Regulation of the Construction Industry in Breslau to provide a rail car for the company in question.

3. SS-WVHA. “Audit comment on the preliminary design for the Waffen-SS prisoner-of-war camp Auschwitz.” RGVA, 502-1-215, p. 14.
“The preliminary design concludes after expert technical examination with an estimated cost of RM 7700000.--.
Designs of the crematorium and the bakery were drawn up in Office II.”

Letter from the Central Construction Office to the Main Office Budget and Construction. Office IIB, with the subject “Crematorium for Auschwitz Concentration Camp”. RGVA, 502-1-312, p. 93.
“The above office submits enclosed a drawing of the installation of the incinerators and the chimney, as well as the arrangement of the flues and forced-draft systems for the new crematorium building. The drawing is taken from the project of the Topf & Sons Erfurt company, and is the result of several discussions between the chief engineer Prüfer of the Topf & Sons company and the local office. For operational reasons, it is absolutely necessary to install the chimney centrally in order to avoid unnecessarily long flues. The above department requests that the sketches concerning the design of the crematorium be amended in accordance with this proposal and approved.”

3. Main Office Budget and Construction. “Audit comment on the preliminary design for the Waffen-SS Auschwitz prisoner-of-war camp”. RGVA, 502-1-233, p. 60.
“The preliminary design, after technical examination, concludes with a cost estimate of RM 7700000.--.
New designs of the crematorium and the bakery have been drawn up in Office II and are attached.”

4. Central Construction Office. “Construction Report for the Month of November 1941.” RGVA, 502-1-214, pp. 9-11.
General:
“About 800 civilian workers, 2495 prisoners u. 1150 prisoners of war, about 60-80 horse-drawn vehicles, 3 trucks, and 1 semi-trailer truck are currently in use.”
Construction site operations:
A.) Protective custody camp: prisoner quarters, prisoner kitchen. “The delousing and admission building with prisoner baths is under construction.”
B.) Accommodation and utility buildings for troops.
C.) Officers’ and NCOs’ dormitories.
“D.) Prisoner-of-war camp:
For the time being, the quarantine camp has been expanded, and the following stage of construction has been reached so far:
6 barracks for about 700 prisoners each completed except for glazing.
8 additional barracks roofed and shell completed.
7 barracks shells completed and roof pitched.
2 barracks completed except for roofing.
The foundations of 7 barracks were completed.
1 utility barracks with roofing started, chimneys bricked.
1 utility barracks completed except for roofing. Concrete fence post 90% complete, barbed wire attached except for lower rows.

Entrance building with transformer station under construction, roof trusses cut at transformer station. Power line from Birkenau cardboard factory to warehouse installed.
3 wells for water supply completed. Foundation of access road from CC to PoW camp 90% completed, rolling had to be stopped due to snowfall. The septic tank and the trench leading to the Vistula River had to be stopped due to lack of prisoners or prisoners of war. Demolition of the village of Birkenau continued, and the resulting material was taken to the construction site for processing."

Letter from the Main Office Budget and Construction, the Chief of Office II-Construction, to the J.A. Topf & Sons company, Erfurt. APMO, D-Z/Bau Inv. No. 1967, pp. 11f.
"With reference to the discussion with your Mr. Chief Engineer Kurt Prüfer, an order is hereby placed with you for the delivery of 4 pieces of Topf double-4-muffle cremation furnaces according to the delivered plan (drawing no. D 59478). The delivery will be made on the basis of the cost estimate still to be submitted for 4 furnaces. You will supply the fireclay materials and the monolithic ramming mix and the cast and wrought iron fittings for the furnaces. The anchoring irons as well as all masonry materials will be supplied on this side."

Headquarters Order No. 33/41: Frei, pp. 85-91
"1st Commendation
SS-Oberschützen Fritz Rott, 1st /SS-T-Stuba., and SS-Schützen Johann Kamphus, Headquarters Staff Dept. II, succeeded in arresting a prisoner at the Sola who had escaped from the local camp on 22 Nov. 41. I express my appreciation to the above mentioned for this."
There follows a several-page list of promotions, appointments, and commandeerings. Correcting a previously issued order, the 1st leader of the protective-custody camp is appointed deputy to the camp commandant. Warnings are issued against touching or damaging survey stakes. A final deadline is set for wage tax cards. Dogs running loose in the camp are to be shot. Proper use and equipment of service bicycles is admonished. Punishment is threatened for willful damage to clothing. Unused leave food cards are to be destroyed at the end of the leave. The vacation regulations for the turn of the year 1941/42 are explained.

5. The J.A. Topf & Sons company, Erfurt, informs the SS Construction Office Auschwitz CC that the Collmener Schamottewerke company has not received any rail cars, despite approval by the Oppeln Transport Command. RGVA, 502-312, pp. 89f.

9. Letter from the J.A. Topf & Sons company, Erfurt, to the SS Construction Office Auschwitz CC with the subject "Crematorium, cremation furnace". APMO, BW 11/1, pp. 4f.
"Our fitter Mähr had carried out the foundation installation for the new cremation furnace as well as a repair on the two coke-fired double-muffle cremation furnaces and had performed this work for a daily wage. We thank you very much for the order placed with us for the provision of fitters, which we have accepted on the basis of our

rates and conditions for the provision of fitters known to you.
We can inform you that a rail car with fire-clay material has been loaded by our supplier Plützsch, Fichtenhainichen near Rositz. These materials had been ordered as replacement materials for repair work by your CC administration there. However, we can use these materials, which are sufficient for the construction of a new furnace, for the new furnace for the time being, and ask you to make every effort to notify us in good time so that we can send a fitter to erect the furnace there."

10. X-ray book No. 5 of the prisoner infirmary of Auschwitz CC begins with this date. It extends from December 10, 1941 to January 31, 1942 and contains entries numbered 5818 to 7908. APMO, D-Aul-5/5. ISD, folder 67h.

Central Construction Office. "Construction report on the status of construction work for the construction project for the Waffen-SS prisoner-of-war camp at Auschwitz. Construction costs according to cost estimate of 30 Oct. 1941 RM 8,900,000.00 previously approved by decree of the Chief of Office II-Construction of 1 Nov. 1941 Ref. II B – So – 8/3 Se/Lo. RM 5,000,000.00". RGVA, 502-1-24, pp. 489-492.
BW 31 – Bakery: RM 180,000.
BW 3 – inmate lodging barracks 1-174: RM 2,088,000.
BW 4 – utility barracks 1 and 2: RM 22,600 x 2.
BW 16 – Access road to the property: RM 600,000.
BW 18 – Sewerage system: RM 250,000

"[…] *Concentration camp. The CC cannot bring the expected support, since it has orders to produce accommodation for 120000 captured Russians in the shortest possible time.* […]*"*

Headquarters Order No. 34/41 schedules the Yule celebration of the commandant's staff, reports on the results of donations for a request concert, regulates payment for coal deliveries, warns not to use the road to the Central Construction Office as a camp entrance, demands the use of SS ranks for postal addresses, mentions that Neuberun is no longer part of the Auschwitz garrison, declares the administration's legal department responsible for all legal cases, and mentions lost/misappropriated items. Frei, pp. 92f.

Garrison Order No. 8/41 also reports that Neuberun is no longer part of the Auschwitz garrison. Frei, p. 93

22. Central Construction Office, certificate. RGVA, 502-1-44, p. 3.
"The above office hereby certifies that SS-Sturmmann Josef Janisch SS-No. 299849 is assigned to produce photographic records for the Main Office Budget and Construction, within Auschwitz CC."

Letter from the J.A. Topf & Sons company, Erfurt, to the SS Construction Office Auschwitz CC with the subject "Your letter dated 16 Dec. 41, your letter no. 1959/41, crematorium, new cremation furnace". The fireclay rail car has been on its way to Auschwitz since 12 Dec. 41. The Topf company arranges for the fitter Koch to be sent to the camp and to begin assembling the furnace on January 5, 1942. RGVA, 502-1-312, p. 81.

1942

January 1942

3. The SS Construction Office Auschwitz CC informs the J.A. Topf & Sons company, Erfurt, of the arrival of the fireclay material with rail car Frankfurt on Main No. 33208. The company was already informed about this by means of an urgent telegram. RGVA, 502-1-312, p. 83.

Headquarters Order No. 1/42 mentions a promotion and the appointment of a new Staff Scharführer of the headquarters. It is explained that Wehrmacht and Waffen SS soldiers crossing the border into the Protectorate of Bohemia and Moravia are no longer controlled by the border police. Weapons of booty may not be given as souvenirs. A new deadline is set for promotion and appointment proposals. Writing on clothes and equipment is forbidden. Stationery paper may not be used as wrapping paper. Uniform regulations are reminded. Deadlines for submission of leave slips are reminded. Service bicycles may be placed in bike racks only. Canteen sales to civilians are allowed only with special permission. In addition, a badge find is noted and the theft of three bicycles is deplored. Frei, pp. 93-95

5. Letter from the SS Construction Office Auschwitz to the J.A. Topf & Sons company, Erfurt, with the subject "Crematorium Auschwitz CC".
The SS Construction Office confirms to the Topf company the performance of 230 working hours and 26 overtime hours (including travel) for the period from November 27 to December 4 and December 18-26, 1941. RGVA, 502-1-312, p. 82.

Special Construction Office for the construction of a Waffen-SS prisoner-of-war camp at Auschwitz U.S. "Site plan of the Auschwitz Upper Silesia prisoner-of-war camp," drawn by SS-Unterscharführer Karl Ulmer. APMO, BW 2/6, Neg. No. 21135/4.

Central Construction Office. "Site Plan of the Auschwitz Prisoner-of-War Camp – Upper Silesia". Plan No. 885 drawn by SS-Unterscharführer Walter Dejaco. In the northwest corner is a "crematorium" of dimensions 55.50 m × 12 m and 10 m × 12.9 m (the extension contains the chimney). RGVA, 502-2-95, p. 7.

7. SS New Construction Office Auschwitz CC. Advance payment of RM 3,650 to the J.A. Topf & Sons Erfurt company for "delivery and construction of a coke-fired Topf double-muffle cremation furnace" (third furnace). RGVA, 502-1-23, pp. 262-262a.

Central Construction Office. "Construction Report for the Month of December 1941." RGVA, 502-1-24, pp. 468-471.
General:
"An average of about 780 civilian workers, 2540 prisoners and 900 prisoners of war, 50 horse-drawn vehicles, 1 truck, and 1 semi-truck are employed."
Construction site operations:
A.) Protective custody camp: prisoner quarters, delousing and reception buildings with prisoner baths. "In infirmary block 27, the hot water preparation system with wash basins, etc., was installed, including all ancillary work. Similarly, in Sick Bay Block 14 for the prisoners of war, 4 showers, 1 bathtub, and 2 coal-burning stoves installed and connected."
B.) Accommodation and utility buildings for the troops.
C). Officers' and NCOs' quarters
"D.) Prisoner of War Camp:
The already-completed 6 barracks for 700 prisoners each within the quarantine camp

have been separately enclosed, prov. privies have been prepared for the time being, so that cirka 4000 prisoners can be housed immediately.
Construction work in the quarantine camp continued despite bad weather conditions, so that the following status of construction work has been reached:
6 barracks completed as described above,
19 barracks erected and roofed,
1 barrack erected,
2 barracks, outer walls almost finished,
2 utility barracks roofed and under construction.
The boilers could not be delivered due to transport difficulties.
Continuation of the construction work for the entrance building, the transformer station there already in operation.
Work on the access road has been stopped, but the foundation has been completed, so that the same is passable for construction operations. A 4th well at the utility building has been sunk."

20. Central Construction Office, House Decree No. 12. RGVA, 502-1-25, p. 6.
"From now on, attendance at the cinema in the town of Auschwitz is forbidden until further notice because of the danger of typhus. This prohibition applies both to SS members and to all civilian employees of the Central Construction Office."

Main Office Budget and Construction, the Chief of Office II – Construction. Letter to the Construction Office of Auschwitz with the subject "SS Accommodation and Auschwitz CC". The Plenipotentiary-General-Construction identification number of this construction project, which was previously "U Kattowitz 1", now becomes "U Kattowitz 3001". RGVA, 502-1-319, p. 219.

22. Headquarters Order No. 2/42 announces the result of a collection for the Winter Relief Charity, forbids attendance at the Auschwitz movie theater because of the danger of infection with typhus, orders that only a certain chimney sweep may clean residential chimneys in a number of villages around Auschwitz, and orders a "gassing of the staff building" for vermin control, giving detailed instructions, including: RGVA, 502-1-36, p. 4. Frei, pp. 97-100
"4. Gassing of the Staff Building.
During the period from Saturday, 24 Jan. 42, 8:00 a.m., to Tuesday, 27 Jan. 42, 8:00

a.m., the staff building will be gassed and may not be entered during this time. For this purpose the following points are to be observed:
1. as of Thursday morning, the windows will be taped and may not be opened thereafter.
2. the new barracks next to the Construction Office will be prepared as sleeping quarters during the gassing period.
3. on Friday evening, after a bath, the laundry is to be changed. The dirty laundry will remain in the rooms so that it can be gassed as well. […]
9. no damage of any kind is caused by the gassing."
Because of the danger of fire and poisoning, coke furnaces in workplaces must be extinguished after the end of service. Troop quarters, workshops, duty rooms, etc., receive fire extinguishers. The headquarters department IV (ideology, culture, library) moves. Ideological training takes place on Mondays and is mandatory. Damage to survey stakes is deplored. A date for passport picture taking is mentioned. An SS calendar for 1942 is offered. Trading food is prohibited. The use of express trains by vacationers is deplored, as well as their undisciplined behavior. The current ban on smoking in uniform on streets and in train stations is repeated. The civilian workers of the company *Deutsche Erd- u. Steinwerke* receive new armbands. A lost watch is mentioned.

23. Central Construction Office. "Design for the Crematorium," Plan No. 932, drawn by SS-Unterscharführer Karl Ulmer. "Floor plan of the basement". APMO, BW 30/01, Neg. No. 20818/3.

Garrison Order No. 4/42 forbids attendance at Auschwitz movie theater because of risk of typhus infection. Frei, p. 101

25. Teletype from Himmler to SS Brigadier Glücks, Oranienburg. NO-500.
"Since Russian prisoners of war are not to be expected in the near future, I will send a large number of the Jews and Jewesses who will emigrate from Germany to the camps. Prepare to take 100000 male Jews and up to 50000 female Jews into the concentration camps in the next 4 weeks. Large economic orders and tasks will approach the concentration camps in the next few weeks. SS-Gruppenführer Pohl will instruct you in detail."

27. Letter from the company Heinemann & Co., construction materials, Berlin branch, to the SS New Construction Office of Auschwitz, concerning "air-raid protection trenches for workshops, factories, public places, etc."; "with reference to the decree of the Reich Marshal concerning air-raid protection", this company sends a "description and drawing of frames for air-raid protection trenches". RGVA, 502-1-401, p. 2.

30. Central Construction Office. Note on a meeting in the office of the Central Construction Office. Participants: SS-Sturmbannführer Höss, SS-Hauptsturmführer Wagner, SS-Hauptsturmführer Bischoff, SS-Unterscharführer Ertl. RGVA, 502-1-19, pp. 4f.
"Subject: Urgent construction tasks in 1942.
Reason: In order to direct the work effort for the year 1942 in an orderly manner and to achieve the greatest possible effort, the following was agreed upon.
Arrangements:
a.) For the construction of the planned new buildings, only about 2000 prisoners capable of work can be assigned by the camp leadership. Every effort will be made to retrain the prisoners during the frost period. For this purpose, schools for apprentice bricklayers have already been set up in the camp.
b). The following buildings are designated as 'urgent,' and their completion, at least in the shell stage, is absolutely necessary this year.
1) Laundry with delousing, admission and prisoners' bath.
2). Security workshops of the CC and 10 prisoners' quarters.
3) pump house with water supply
4.) main collector trench with sewage treatment plant and digester-gas utilization
5.) extension of the electrical supply line and construction of the transfer station

6) headquarters' lodgings and commandant's building
7) adding a story to the remaining 6 inmate lodging buildings in the protective-custody camp
8) barracks for troop accommodation and the like.
a) accommodation for 1 battalion on the road to the main utility camp, opposite the newly erected barracks.
b) accommodation for 2 companies in the prisoner-of-war camp
c) 4 pieces of officers' lodging barracks
d) construction-office barracks for PoW camp, including accommodation and utility buildings.
9.) crematorium (according to the available manpower)
10) completion of the Auschwitz plant of DAW [Deutsche Ausrüstungswerke].
11.) agricultural buildings, greenhouse facility, etc.
12) further expansion of the prisoner-of-war camp after the arrival of the barracks provided for this purpose by the Main Office Budget and Construction, as well as irrigation and drainage.
13) Completion of the 'Deutsches Haus' hotel at the Auschwitz railroad station, and repair of various buildings in good condition for residential purposes.
14.) New road construction and maintenance work in the CC and PoW camp, as well as gardening facilities."

31. Letter from the Auschwitz Political Department CC to the SS Construction Office with the subject "Repair of a furnace". RGVA, 502-1-312, p. 77.
"Since an engineer from the Topf company is currently in the local camp to set up a furnace, it is requested that he take this opportunity to repair furnace no. 2 in the local crematorium, which is in need of repair."

[31.] "SS Economic and Administrative Main Office – Office Group C – Construction." Organization chart. RGVA, 502-1-4, pp. 24-31.
Office Group C – Construction. Chief: SS-Oberführer Dr. Ing. Kammler
Office C/I – General construction tasks. Chief: Architect Pfeil
Office C/2 – Special Tasks. Chief: SS-Sturmbannführer Kiefer
Office C/III – Technical fields. Chief: SS-Sturmbannführer Wirtz
Office C/IV – Artistic Specialties. Chief: SS-Sturmbannführer Blaschek
Office C/V – Central Construction Inspections. Chief: SS-Sturmbannführer Lenzer
Office C/VI – Building maintenance, business administration, preliminary inspection. Chief: SS-Standartenführer Eirenschmalz.

February 1942

2. Order No. 747 from the Central Construction Office to the Prisoners' Locksmith Shop with the subject "Crematorium Furnace II". RGVA, 502-2-1, p. 61; *ibid.*, 502-2-1, p. 62.
"Make 2 doors for the furnace passable.
Cut and drill 4 pieces of angle iron 50/60 mm 1.25 m lg."
The corresponding work card is dated February 3, 1942. The work was carried out on February 10, 1942.

3. X-ray book No. 6 of the prisoner infirmary of Auschwitz CC begins with this date. It extends from February 3 to May 7, 1942, and contains entries numbered 7909 to 11235. APMO, D-Aul-5/6. ISD, folder 67j, k.

Central Construction Office. "Construction Report for the Month of January 1942." General: RGVA, 502-1-24, pp. 432-436.
"Approximately 1000 civilian workers, 2850 prisoners, approximately 55 horse-drawn vehicles, 2 trucks, and 1 semi-truck were used."
Construction site operations:

I) Above-ground construction department
a) Protective-custody camp:
New prisoners' quarters 3-8, prov. prisoners' kitchen, laundry delousing with reception building and prisoners' bath.
b) Other buildings:
utility barracks for troops,
prov. delousing facility,
headquarters accommodation barracks,
construction-office barracks (annex)
garages headquarters
concrete and carpentry workshops
headquarters guard barracks
Prag-Birkenau
school-Birkenau
high school (troop accommodation)
civilian workers' quarters
officers' and NCOs' quarters:
completed: house no. 142, 118a, 125, 127
in progress: house no. 130, 132, 150, 151, 152, 24
prov. dairy.
"c) POW camp:
On Jan. 12, work was stopped due to heavy frost; from that time on, the workers on duty were used for demolition work in the village of Birkenau, and the transport of materials to the construction site continued. The already completed, separately fenced-in 6 finished barracks inside the quarantine camp were extended to 8 barracks. So far, the already purchased cooking kettles for the utility barracks could not be brought due to transport difficulties. The well-drilling work continued, and the 5th well was started. Transformer system completed and put into operation, the electrical wire obstacle almost completed."
Bakery for main utility camp.
II.) On- and Below-Ground Construction Department:
road construction, road through Russian camp.
water supply
surveying: field works
office works
railroad construction:
"Track to Pow camp projected (site plan, length and cross sections)."
drainage
landscaping.
III.) Workshops
carpentry, locksmith, painting, glazing, concrete workshop.

Garrison Order No. 5/42 admonishes that dwellings in the camp area may be occupied only by permission of the commandant. Frei, p. 101

5. Headquarters Order No. 3/42 contains a long list of appointments, measures for naming SS economic enterprises, a reminder to save paper, and gives the telephone number of the Waffen SS's main utility camp. A ban on entering certain houses in Auschwitz is issued. Certain dwellings in the camp area are rented out and therefore not to be altered. All pay books are to be turned in and brought up to date. Official channels must be followed for payment questions. A department head meeting will be scheduled. SS members without German citizenship must report for naturalization. The theft of a rifle and bicycle tires is reported. Frei, pp. 102-105

Garrison Order No. 6/42 orders the issuance of camp ID cards to all SS personnel, and gives detailed instructions on how to do so. Frei, pp. 105f.

6. The accounting books of the Tesch & Stabenow company in Hamburg show a delivery of 480 kg of Zyklon B to Auschwitz CC, corresponding to a value of RM 3,038. TNA, WO 309-1603.

9. Central Construction Office. "Construction Deadline Plan for Construction Project: Prisoner of War Camp of the Waffen-SS Auschwitz" for January 1942. RGVA, 502-1-22, p. 8.

Structure	Start [d/m/y]	
1. BW 3: lodging barracks 2-4, 12-14, 22-24	7/10/1941	100%
2. BW 3: lodging barracks 1, 5-10, 16-20, 25-30	24/2/1941	90%
3. BW 3: lodging barracks 11 and 21	4/12/1941	45%
4. BW 4: utility barracks 1 and 2	10/11/1941	75%
5. BW 5A: delousing barracks 1	4/12/1941	40%
6. BW 8: morgue barracks	5/1/1941	40%
7. BW 9: quarantine camp – entrance building	5/12/1941	40%
8. BW 16: access road etc.	7/10/1941	50%
9. BW 18: sewerage system and sewage treatment plant	21/10/1941	15%
10: BW 19: water supply	5/1/1942	5%
11. BW 21: feeding the power line	16/11/1941	95%
12. BW 24: fencing (electr. wire)	8/10/1941	25%
13. BW 25: wire fences for camp subdivision	1/12/1941	15%
14. BW 26: transformer station	6/12/1941	95%
15. BW 31: bakery	21/11/1941	10%

Labor deployment: civilian workers: 608; inmates: 217.

10. Central Construction Office. File note. RGVA, 502-1-24, pp. 427-428.

"Place: Deutsche Ausrüstungswerke Ltd., Auschwitz plant.
Time: February 1 and 10, 1942.
Participants:
DAW: SS-Ostuf. Wagner, head of the Auschwitz plant
SS-Uscha. Russ, local construction supervisor
Central Construction Office of the Waffen-SS
and Police Auschwitz: Head of Construction Bischoff
SS-Uscha. Ertl, Head of Structural Engineering Dept.
Subject: Assumption by the local Central Construction Office of responsibility for the construction projects of the Deutsche Ausrüstungswerke in Auschwitz.
Reason: According to the order of the Chief of Office II – Construction SS-Oberführer Dr. Ing. Kammler of 21.1.42 -II/3-So-3/3/Hei./Lo. – the Central Construction Office of the Waffen-SS and Auschwitz Police will take over the construction management of the German Auschwitz Equipment Works with immediate effect."

Central Construction Office. "Construction Deadline Plan for Construction Projects: Auschwitz CC" for January 1942. RGVA, 502-1-22, p. 7.
There are 39 structures listed, the 36 listed in the 10 Dec. 1941 and 10 Jan. 1942 construction deadline plans, plus the following three:

37. extension of power hall:	Start: 15/1/1942
38. inmate canteen	″ 5/1/1942
39. com.[mandant's] quarters, remodeling (roof truss)	″ 5/1/1942

Labor deployment: civilian workers: 374; inmates: 2,107.

Letter from the J.A. Topf & Sons company, Erfurt, to the [Central] Construction RGVA, 502-1-312,

Office Auschwitz CC with the subject "Aeration and deaeration system, our offer no. 41/0587/1". pp. 75-76.
"We thank you for the order placed with us through our Herr Chief Engineer Prüfer for the supply of an aeration and deaeration system. We have accepted the order on the basis of our cost estimate of 4.11.41 and its conditions at a total price of RM 7,795. […] *We shall make the delivery in accordance with the drawing D 59320 enclosed with our quotation."*

11. Auschwitz Headquarters CC. RGVA, 502-1-31, p. 52.
"As of Monday, 16 Feb. 42, the working hours of the prisoners are as follows: 7:30 a.m. – 5:30 p.m."

Garrison Order No. 7/42 prohibits entry into a certain house (a Polish brothel). Frei, p. 106

12. Letter from the J.A. Topf & Sons company, Erfurt, to the Central Construction Office with the subject "Crematorium, cremation furnaces". APMO, BW 30/34, pp. 27-29.
Enclosed is an "Estimate for delivery of 2 pieces of three-muffle cremation furnaces and manufacture of the chimney lining with cleaning door": "1 coke-fired cremation furnace with 3 muffles" at a unit price of RM 7,106, 14,212 for both furnaces. "The fireclay lining for the chimney up to 6 m high and 12 cm thick" at a price of RM 440.

19. Letter from the SS-WVHA. Office Group C, the Chief of Office C III, to the Central Construction Office with the subject "Auschwitz – on- and below-ground engineering measures for 1942". RGVA, 502-1-149, pp. 67-70.
"1. Water supply
The consumption figures on which the water supply is based do not correspond to the existing facts. The amount of water was calculated from an occupancy of the camp with 60000 prisoners at 100 l/day. In fact, according to the latest orders, the camp is occupied by only 30000 prisoners, the troop accommodation by a fully motorized regiment of 3600-5000 men, and the settlement by about 5000 inhabitants."

23. CC headquarters, "Result of the meeting between the management of the concentration camp in Auschwitz and the Reichsbahn operations management in Kattowitz on 13, 17 and 23 Feb. 1942". RGVA, 502-1-183, pp. 118-120.
"According to the camp management, an increase in traffic to a maximum of 70 – 80 cars is to be expected. To this must be added another increase for the troop utility camp, the amount of which depends on the future conditions in the east, and which therefore cannot yet be estimated. After a detailed description of the difficulties of the previous year by the representative of the Reichsbahn, there was agreement that the unloading tracks of the camp will not be sufficient for the expected traffic, all the more so since the number of prisoners to be transported to and from Dwory is to be increased from the present 1000-1200 to 4500.
It was stated: […]
2). the loading and unloading of prisoners outside the camp on railway-station tracks is not possible for safety reasons."

25. Central Construction Office. "Cost Estimate for the Construction Project: Waffen-SS Prisoner-of-War Camp at Auschwitz U/S." RGVA, 502-1-235, pp. 17-21.
The following structures are listed:
1) 252 prisoner lodging barracks (40.76 m × 9.56 m).
2) 18 utility barracks (40.76 m × 9.56 m)
3) 18 supply barracks (40.76 m × 9.56 m)
4) 36 wash and toilet barracks (40.76 m × 9.56 m)
5) 4 infirmary barracks (40.76 m × 9.56 m)
6) 10 morgue barracks (28.80 m × 14.00 m)

7) headquarters' building
8) guard building
9) barrack camp for guard troops
10) 27 wooden watchtowers
11) crematorium (basement, chimney, flue masonry, elevator, 5 cremation furnaces, waste incinerator)
12) bakery
13) water supply plant
14) sewerage and sewage treatment plants
15) drainage
16) road paving in PoW camp incl. roll call areas
17) railway siding from Auschwitz railway station
18) fencing (electr. wire)
19) wire fences for camp subdivision
20) power supply system
21) alarm and telephone system.
Total sum for PoW camp Auschwitz construction project: RM 8,900,000.

Central Construction Office. "Construction Description." RGVA, 502-1-235, pp. 11-15.
POW camp of the Waffen-SS at Auschwitz.
Track with associated switches, substructure, earthmoving, etc.
Construction status on 1 July. 41: not yet started. Total construction costs: RM 546,000. The associated location sketch shows the track route through the PoW camp between Construction Sections I and II.

Central Construction Office, "Report on the Status of Construction Work and Labor Deployment. Cut-off date: February 25, 1942," to the Regional Commissioner for the Regulation of the Construction Industry in Kattowitz. RGVA, 502-1-319, p. 212.
A total of 858 people worked in the camp, of whom 626 were prisoners and 232 civilian workers.

26. Headquarters Order No. 4/42 announces 19 promotions, reports on a collection for the Winter Relief Charity, reminds of immediate submission of salary applications, explains requirements for applicants for administrative service, announces that the weekly department-head meeting is cancelled effective immediately, mentions a commandeering, complains of unsoldierly behavior by members of the Waffen SS, and explains uniform regulations in detail. The address of Niederhagen CC is mentioned, the use of the term "Ostmark" is discontinued at the request of the Führer, and it is pointed out that subletting is permitted only with permission. Keeping dogs is allowed only with special permission; free-roaming dogs are to be shot. Bicycles brought into lodgings are to be confiscated. One item each is be reported lost and found. Frei, pp. 107-110

27. Central Construction Office. "Prisoner deployment of February 27, 1942." RGVA, 502-167, pp. 94-95.
Breakdown by "construction site," "occupations," "skilled workers," "unskilled workers," "total no." The construction sites are: protective-custody camp, new inmate lodging buildings, laundry, Harmense agriculture, Raisko nursery and greenhouse, utility barracks, conversion of German House, House 152, clean-up detachment from the Sola bridge to the railroad station, demolition detachment at the officers' mess, guest house water supply, gardener unit at the Vistula, construction office, construction yard, workshops, prisoner of war camp.
Prisoners employed: skilled workers: 606; unskilled workers: 2,364; total number: 2,970; also in PoW camp: 500 prisoners of war; total number: 3,470.

March 1942

2. Letter from the Chief of the SS Economic and Administrative Main Office to the Central Construction Office with the subject "Construction Program 3rd Year of War Economy, budget year 1942 for Auschwitz CC." Approved buildings: RGVA, 502-1-233, pp. 30-31. Transcript: 502-1-319, pp. 210f. Transcript of transcript: NO-4464.

"I. Agricultural buildings.
1) 30 to 35 horse-stable barracks for the makeshift housing of of livestock, etc.
2) 2 massive cattle sheds for a total of 400 pcs. large cattle
3) 3 field barns and 4 makeshift farm barns
4) makeshift greenhouses for 3,000 sqm area
5) 4 potato warehouses
6) extension of the shell building in Raisko as a laboratory.
II. Erection of makeshift buildings for the German utility enterprises.
1) Construction of a makeshift Sola bridge to the entry [for?] *protective-custody inmates using the road administration's makeshift road overpass, which will be demolished.*
2) addition of a story to 6 massive prisoner shelters.
3) completion of 5 massive inmate lodging buildings, which are initially used as follows:
5 prisoner lodging buildings as workshops
5 prisoner lodging buildings for storage
5 prisoner lodging buildings for guard units
The spacing of the massive accommodation buildings is set at 14 m from house edge to house edge.
4) laundry buildings
5) protective-custody camp's entrance building
6) water supply facility
7) drainage system
8) digester-gas extraction plant
9) completion utility barracks headquarters
10) crematorium in the prisoner-of-war camp
11) 4 officers' lodging barracks
12) construction-office barracks
13) necessary road constructions
14) completion of existing residential buildings and completion of a house for the director of agricultural operations at Auschwitz."

Garrison Order No. 8/42 details the tobacco rationing measures instituted, permits hunting and fishing only with authorization cards, and admonishes general posting of orders. Frei, pp. 110-112

4. Auschwitz CC Headquarters. "Alarm Regulations of the Camp Fire Brigade of the Conc. Camp Auschwitz". RGVA, 502-1-31, pp. 47-48.
"The camp fire department is established and ready for action. The fire department is deployed inside and outside the camp (radius 15. km). It is composed of prisoners."
Detailed rules of engagement follow.

In a circular letter, the camp commandant explains the alarm regulations of the Auschwitz CC fire department. Frei, pp. 112f.

Garrison Order No. 9/42 declares that the existing supply of electricity is insufficient for consumption in the camp area and requires that all residential and service electricity users be reported. Frei, pp. 113f.

5. Letter from the Central Construction Office to the J.A. Topf & Sons company, Erfurt, with the subject "Crematorium, cremation furnaces PoW camp Auschwitz". APMO, BW 30/25, p. 1.

"On the occasion of the inspection of the Central Construction Office here, which took place on February 27, 1942 by the Group Chief of Office Group C of the SS Economic and Administrative Main Office, SS-Oberführer Dr. Ing. Kammler, it was decreed that the cremation furnaces ordered for the crematorium in the prisoner-of-war camp would not be implemented, but that the 5 units ordered according to the order letter of October 22/41 Corr.Reg.-No. 215/41/Ho, would be used. Three-muffle furnaces were to be installed in the prisoner-of-war camp.
The order verbally placed by the Central Construction Office is therefore withdrawn, and it is requested that the cancellation of the order be confirmed in writing to here."

6. Auschwitz Headquarters CC. RGVA, 502-1-31, p. 46.
"As of Monday, March 9, the prisoners' work assignment is as follows:
from 7:00 a.m. to 12:00 p.m. and
from 1:00 p.m. to 6:00 p.m."

7. The head of the Central Construction Office Prague, Geissen, requests by telex from the head of the Central Construction Office of Auschwitz "immediate transmission of planning and execution documents for the construction of a delousing plant for 20,000 men, with indication of the implementing companies for an immediate measure to be carried out by the Reichsführer in the Protectorate." RGVA, 502-1-333, p. 141.

9. Central Construction Office. "Construction Deadline Plan for Construction Projects: Auschwitz CC" for February 1942. RGVA, 502-1-22, p. 12.
43 structures are listed, the 39 on the February 10, 1942 construction deadline plan, plus the following:

40. fence construction	Start:	15/2/1942	15%
41. reception barracks with delousing	″	15/2/1942	20%
42. remodeling *Deutsches Haus*	″	2/2/1942	15%
43. inmate workshop barracks	″	13/2/1942	35%

Labor deployment: civilian workers: 310; inmates: 2,784.

Central Construction Office. "Construction Deadline Plan for Construction Projects: Prisoner-of-War Camp of the Waffen-SS Auschwitz" for February 1942. It lists the 15 structures on the February 9, 1942 construction deadline plan. Only the percentages of completion change. RGVA, 502-1-22, p. 9.
Labor deployment: civilian workers: 502; inmates: 797; prisoners of war: 500.

The accounting books of the Tesch & Stabenow company in Hamburg show a delivery of 516 kg of Zyklon B to Auschwitz CC, corresponding to a value of RM 3,266. TNA, WO 309-1603.

11. Letter from the Chief of Office C of the SS-WVHA with the subject "Delousing Facilities," addressed to "CI, C II, C III, CV, all Construction Inspectorates, Central Construction Offices, and Construction Offices of the Waffen-SS." RGVA, 502-1-336, p. 94.
"An individual case gives me cause to point out once again that delousing in the camps of the SS is done by hydrogen cyanide. A deviation from this – for example delousing by means of hot air or superheated steam – is only permissible insofar as it concerns temporary installations in which the necessary safety in the use of hydrogen cyanide is not guaranteed.
The final condition of all delousing plants shall be set for operation with hydrogen cyanide."

"Subdivision Chapter 21/7b(Construction) war structuress. Status as of 11 March 1942". Long list with "SS area" (Roman numerals), "cha[ter" (21/7b(Bau),1-121), "construction project" and "garrison". Entries about Auschwitz: RGVA, 502-1-9, pp. 115-118.

VIII – 21/7b(Bau)81 – troop utility camp – Raisko.

Letter from the Auschwitz CC headquarters to the Central Construction Office with the subject "Fencing and work on Block 12". RGVA, 502-1-85, p. 34; *ibid.*, pp. 35f.
"The headquarters encloses a letter from the leader of the protective-custody camp for further action. The fencing as well as the installation of a provisional washing facility and the installation of the 2 missing cisterns in Block 12 is urgent, since special prisoners (top secret matter) are to be housed here. We ask that this be done immediately."*
* *"Protective-custody camp Dept. 3. of Auschwitz CC U/S. To the Central Construction Office of the Waffen-SS and Auschwitz Police. Ost-U/S. via the headquarters and administration of the Au. CC"*
See entry of 24 March 1942.

Garrison Order No. 10/42 announces the appointment of a liaison officer under the authority of the headquarters between the Auschwitz [railway] freight office and the Auschwitz CC, and lifts the ban on entering the Auschwitz cinema. Frei, p. 114

12. Radio message from SS-Obersturmbannführer Arthur Liebehenschel (SS-WVHA, Office D I) to Auschwitz CC: TNA, HW 16-17. ZIP/GPDD Nr. 11/2.5.42, n. 52.
"The SS members JANISCH, JOTHANN, KUNERT and KOFLER remain with the Construction Office AUSSCHWITZ [sic]*."*

Headquarters Order No. 5/42 reports a promotion, announces the appointment of SS-Oberführer Caesar as Chief of the Agriculture Department, reminds of the early submission of leave certificates, prohibits the use of the baths in the SS infirmary for SS members who are not sick, aligns the duty hours of the motor pool with those of the protective-custody camp, sets mail-collection times at the headquarters, mentions some commandeerings, and stipulates that bank transfers can only be made to field postal addresses if the recipient is also the account holder. The SS-T-Sturmbann is given its own clothing-exchange office, including an administrator (*Fourier*). A reminder of the changed name of the CC Inspection is given, new office hours of the SS dental station are set, and due to the shortage of raw materials, the careful handling of clothing and its timely repair is urged. The ban on the (pointless) carrying of Reich banknotes and *Rentenmark* bills into the Eastern territories is repeated; these are to be exchanged for Reich credit bills. Frei, pp. 114-117

Letter from the Central Construction Office to the SS-WVHA, Office Group C V/1, with the subject "Construction Program 3rd Year of War Economy, Budget Year 1942 for Auschwitz CC". Cost estimate of the approved individual construction works with a total sum of RM 24,254,300. RGVA, 502-1-319, pp. 202-206. 502-1-85, pp. 46-50.
"For the 3rd year of war economy, the Central Construction Office of the Waffen-SS and Police has submitted the following construction projects to the regional commis-

sioners for approval:
A.) Construction projects approved by the Plenipotentiary General for Special Questions of Chemical Production, and classified under O. Wo – E (Chem) Katt. 3009 (as per attached photocopy), namely:
1.) adding a story to 6 old prisoners' quarters
2) 5 new prisoner quarters
3) laundry and reception building (access building) with delousing facility and prisoners' baths
4) headquarters and headquarters' lodging building
5) water supply (1st construction phase)
6). utility building
7.) drainage (main collector, storm sewer and sewage treatment plant with septic tank)
B. Construction works submitted to the Plenipotentiary General for the Regulation of Construction under Urgency Level 2 U Kattowitz 3001:
1.) 10 prisoners' quarters and 5 prisoners' workshops
2.) entrance building
3.) crematorium
4) temporary bridge over the Sola River
5) 12 crew barracks and 8 wash and toilet barracks for the guard troops
6) 4 crew barracks for the headquarters
7.) 4 officers' lodging barracks
8) SS accommodation 'Deutsches Haus'
9.) 1 construction offices, 1 lodging, and utility barracks with garage for the construction office
10). prisoner canteen barracks
11) prisoners' workshop barracks
12.) 1 utility, 1 wash and 1 toilet barracks for the civilian workers' camp
13.) utility barracks for the guard troops
14.) motor-vehicle halls and workshop extension
15.) construction yard and makeshift workshops
16). irrigation and drainage
17.) pump house
18). security facilities (camp wall and 5 watchtowers).
19.) transfer station
20.) road construction
21.) repair of existing residential buildings
22.) 4 potato warehouses
23.) 4 field barns and 12 cattle shelters
24.) duck breeding and poultry houses
C.) POW camp of the Waffen-SS under Ox and Ov:
a.) Works until February 6, 1942 (quarantine camp).
1.) 30 prisoner lodging barracks (walled)
2.) 2 utility barracks
3.) 10 washing and toilet barracks
4.) 2 delousing barracks
5.) 1 morgue barracks
6.) entrance building
7) warehouse
8.) 11 wooden watchtowers
b). Works after 6 February 1942
1.) 252 prisoner lodging barracks
2.) 18 utility barracks
3.) 18 storage barracks
4.) 36 washing and toilet barracks
5.) 4 infirmary barracks
6.) 10 morgue barracks

7) headquarters building
8) guard building
9) barracks for the guard troops
10.) 27 wooden watchtowers
11.) crematorium
12.) bakery for main utility camp
13). water supply plant
14.) sewerage and sewage treatment plant
15.) access road incl. parking lot
16.) road paving in the PoW camp, incl. roll call areas
17.) railroad siding from Auschwitz station
18.) fencing (electr. wire)
19.) wire fences for camp subdivision
20.) power supply system
21.) alarm and telephone system
D.) Special permit for:
I.) Agricultural structures
a.) massive:
1.) 2 cattle barns for a total of 400 pcs. of large cattle.
2.) extension of the prov. slaughterhouse, installation of cold storage rooms
3.) dairy, prov.
4.) 2 farm steads
5.) extension of the building shell in Raisko as a laboratory
b.) makeshift:
1.) greenhouse facility in Raisko
2.) 35 horse-stable barracks
3.) 3 field barns and 4 farm barns
4). SS accommodation 'Prague' and prov. riding hall
5) extension of a house for the director of agricultural operations in Auschwitz
II.) Other
1) 4 lodging barracks for civilian workers' camp
2) 1 toilet and 1 wash barracks for civilian workers' camps
3) 1 canteen barrack
4) installation of 2 sauna facilities.
E.) Exemption for buildings of the main utility camp of the Waffen-SS
1.) 2 pcs. of office and storage barracks 2nd part with basement
2.) Potato bunker."
Expenditures of RM 403,000 are budgeted for the crematorium, RM 1,100,000 for the laundry and reception building, and RM 882,000 for the entrance building.

18. Letter from the SS-WVHA, the Chief of the Central Construction Inspection Office, to the Construction Inspectorate of the Waffen-SS and Police Reich East, Posen, with the subject "Women's Camp, Branch Auschwitz". RGVA, 502-1-319, p. 2.
"By letter dated 5 March 1942, the Commandant of Auschwitz CC applies to the Inspector of CC for the following construction measures for the purpose of establishing in the Auschwitz CC a branch camp of the women's concentration camp Ravensbrück.
[…]
In view of the urgency, I approve the construction project and commission the Central Construction Office Auschwitz to carry out the work."

Letter from the Central Construction Office to the J.A. Topf & Sons company, Erfurt, with the subject "Cremation furnaces for PoW camp Auschwitz – order no. RGVA, 502-1-272, p. 500.

42/261/1".
"Enclosed please receive back 2 copies of the submitted advance invoice, as the order has been cancelled."

Central Construction Office, "Month of February 1942." Daily overview of prisoner employment in the following construction works and commands: Fence construction in camp, Boos Company, Godzik Company, sewerage outside, sewerage, Anhalt Company, snow plow, utility barracks, transport command, utility barracks [twice], workshops, unit Körlin, unit Grumens, transport command, carpenter's shop, fence setup construction yard, roll cart for new sand pit, gravel pit S.K., lime driver new building, new inmate lodging building, painters, plumbers new building, mason school, pavers and stone setters, reconstruction Deutsches Haus, well drillers, Prag hall, new gardeners building, Vistula a. Raisko, greenhouse in Raisko, guest house officer's mess, excavation unit laundry, demolition squad, clean-up squad, Sola bridge, demolition Birkenau, cable trenches, construction yard, unloading squad construction yard, loading squad construction yard, construction office, roofers PoW camp, construction Warehouse PoW camp.
Working days, total: 48,875 (on 28 days). RGVA, 502-1-60, p. 74.

Hummel & Baumann Company, below- and above-ground construction, Nuremberg. "Cost calculation for the construction work, including water containment and pipe laying, for the mech.-biolog. Sewage-treatment plant of the SS area in Auschwitz", to the Central Construction Office of the Waffen-SS and Police Auschwitz U/S. Long offer for a total cost of RM 782,341.65. RGVA, 502-1-130, pp. 19-36.

Auschwitz Headquarters CC.
"As of Monday, 23 March 42, the prisoners' working hours are as follows: 6:30 a.m. – 12:00 p.m. and 1:00 p.m. – 6:000 p.m." RGVA, 502-1-31, p. 44.

The Anhalt Hoch-Tief-Eisenbetonbau construction company sends to the Central Construction Office a detailed "Cost estimate for carrying out groundwater lowering work for the construction of a shallow basin on the Waffen-SS construction site in Auschwitz/Silesia". RGVA, 502-1-150, pp. 1-22; *ibid.*, pp. 39-56
"Preliminary remark:
For an excavation pit with an area of about 53.5 x 25.5 m, the groundwater level, which rises about 1.10 m below ground level, is to be lowered to about 3.7 or 8 m below ground level."
This company also prepared a "cost calculation for the construction work, including water containment and pipe laying for the mech.-biolog. sewage treatment plant of the SS area in Auschwitz" which is undated but has a note: "recalculated on 25 March 42." Here, too, it is noted:
"The groundwater level is approx. 1.10 m below terrain."

Letter from the Central Construction Office to the Auschwitz CC headquarters with the subject "soil management service" ("Bodenwirtschaftsdienst"). RGVA, 502-1-272, p. 333.
"On the occasion of the meeting with chief of Office Group C, SS-Oberführer Dr. Ing. Kammler, on 27 Feb. 1942 in Auschwitz, it was determined that house no. 37 for the soil management service will not be developed."

23. Garrison Order No. 11/42 forbids SS members to enter the houses in Babitz that had been set aside for residential purposes for IG-Farbenindustrie, and to frequent the company's employees' restaurant without being invited. Frei, pp. 117f.

24. Central Construction Office. "Report on work carried out on the fencing of Block 12". Report on I. concrete fence construction and II. installation of prov. washing facility. Work completed March 15, 1942. RGVA, 502-1-85, pp. 36f.

25. Letter from the Auschwitz Concentration Camp Administration to the SS-WVHA, Office D IV – Administration, with the subject "specialist for provisioning". NO-2146.

"The local specialist for provisioning, Unterscharführer Schmidt, is not able to manage the very extensive kitchen operation. At present there are to be fed:
ca. 1,800 SS men
11,000 prisoners.
The number of prisoners to be fed increases these days by another
5,000 male
and 11,000 female prisoners,
so that a total of
27,000 prisoners have to be fed.
With this high level of rations on the one hand and the primitive kitchen facilities on the other, a prudent officer or NCO who is trained in matters provisioning is required."

Central Construction Office. "File memo on the staff meeting with Chief of Office C/III SS-Sturmbannführer Wirtz." RGVA, 502-1-19, pp. 14-15.

"Reason: clarification of all questions concerning building construction, such as heating systems and special operating facilities (bakery main utility camp, crematorium, sauna facility). […]
The marketing and administrative costs in the amount of RM 1769.36, invoiced by the Topf & Sons company for the technical and commercial processing of a project for the installation of 2 pieces of three-muffle cremation furnaces, are not paid, but the order is reallocated to another construction site."

Headquarters Order no. 6/42 mentions a commandeering, redefines the working hours of the headquarters, points out that SS men and NCOs can commit themselves for up to 12 years, deplores the theft of cutlery from the mess hall of the headquarters, advertises the keeping of mess-hall cash vouchers, notes the finding of a bunch of keys and the loss of two civilian ID cards including armbands, points out that from now on salary payments will no longer be made by cashier's check but only by bank transfer, orders the exchange of all marching boots for lace-up shoes, and cites a Himmler order urging a good shave at all times. Frei, pp. 118-120

Garrison Order No. 12/42: Frei, p. 121

"Due to reports received here recently, I have noticed that SS members, their families and also civilian workers did not use the prescribed camp entrances, but simply passed through the chain of posts to enter the camp area at random places, although the guards tried to prevent this. Since the newly erected chain of posts will be in place as of Friday, March 27, 1942, I hereby order for the last time that the camp and thus the chain of posts may only be passed at the prescribed entrances, i.e., where the checkpoints and turnpikes have been erected. In the event of violations, I will take the most severe measures against those concerned. This order is to be announced to all family members of SS families living here, as well as to all civilian workers."

27. Auschwitz Headquarters CC. Order with the subject "Entering the women's camp, branch Auschwitz". RGVA, 502-1-31, p. 43.

"I forbid with immediate effect all SS members to enter the women's camp, branch Auschwitz. Only the following are authorized to enter the women's branch camp:
1. the 1st leader of the protective-custody camp, as my representative, SS-Hauptsturmführer Aumeier
2. the 2nd leader of the protective-custody camp, as my representative for labor deployment, SS-Obersturmführer Schwarz
3. the head of administration, SS-Hauptsturmführer Wagner
4. the accommodation administrator, SS-Hauptsturmführer Reinicke
5. the head of the political department, SS-Hauptsturmführer Grabner
6. the court officer, SS-Obersturmführer Bräuning
7. the SS garrison physician, SS-Hauptsturmführer Schwela

8. the SS-Obersturmführer v. Bodman, assigned as physician for the woman's branch camp.
The aforementioned must immediately submit their camp ID cards to the headquarters, so that an authorization note for entering the woman's branch camp can be entered on the same. This note must be signed by me personally.
I would like to point out once again that all SS members – with the exception of the above-mentioned – are strictly forbidden to enter the women's branch camp. I will take the strictest measures against violators.
Sincerely yours. Höss,
SS-Sturmbannführer and Commandant."

28. Letter from the Central Construction Office to the Auschwitz CC headquarters with the subject "Demolition of houses in Babitz." RGVA, 502-1-272, p. 329.
"On the occasion of a local inspection it was found that in the village of Babitz the roof tiles have been removed from 18 houses, and that they have now been left in this condition."
The Central Construction Office requests permission to demolish these houses for the purpose of recovering the wooden material.

30. Letter from the Central Construction Office to the SS-WVHA, Office Group C, the Chief of Office III, with the subject "SS accommodation Miendsche Brodsche (ski hut)" and reference "Service meeting with the head of Office C/III SS-Stubaf. Wirtz on 25 March 1942 in Auschwitz". RGVA, 502-1-272, p. 321.
"Referring to the staff meeting held on 25 March 1942 in Auschwitz with chief of Office C/III SS-Stubaf. Wirtz, plan documents of the SS accommodation in Miendsche Brodsche (ski hut) are handed over in the enclosure with the request for project planning and approval for the installation of a central heating system."

Letter from the Central Construction Office to the SS-WVHA, Office Group C, Chief of Office III, with the subject "Residential building for the head of Auschwitz agricultural operations SS-Oberführer Dr. Caesar". RGVA, 502-1-272, p. 322.
"At the staff meeting held in Auschwitz on 25 March 1942 with chief of Office C/III SS-Stubaf. Wirtz, it was determined that a central heating system should be installed in the residence to be built for the head of the Auschwitz agricultural operations, SS-Oberführer Dr. Caesar."

Letter from the Central Construction Office to the SS-WVHA, Office Group C, Chief of Office III, with the subject "Utility building Auschwitz CC" and reference "staff meeting with chief of Office C/III SS-Stubaf. Wirtz on 25 March 1942 in Auschwitz". RGVA, 502-1-272, p. 326.
"The [contract for the] *hot-water preparation for heating as well as aeration and de-aeration system of the utility buildings was given to the company Friedrich Boos, Cologne, and most of the material for this was secured."*
Due to the planning of a district heating plant, the heating system has changed, and a new project and offer is needed.

Letter from the Central Construction Office to the SS-WVHA, chief of Office C/III, with the subject "Crematorium, cremation furnaces for PoW camp Auschwitz". RGVA, 502-1-313, p. 174. NO-4472.
"For the Waffen-SS prisoner-of-war camp at Auschwitz, 2 pieces of three-muffle cremation furnaces in simplified form, as shown in enclosed drawings, were originally planned.- At the staff meeting on 27 Feb. 1942 with Chief of Office Group SS-Oberführer Dr. Ing. Kammler in Auschwitz, it was ordered that the 5 pieces of three-muffle cremation furnaces intended for the CC be installed in the PoW camp, and that the 2 pieces of three-muffle cremation furnaces were thus superfluous.- The Topf and Sons company, Erfurt, now wants to invoice the marketing and administrative costs in-

curred in the processing of the project in the amount of RM 1,769.36. At the staff meeting on 25 Feb. 1942 with the chief of Office C/III SS-Stubaf. Wirtz, it was agreed that the project for the construction of 2 three-muffle cremation furnaces should be transferred to another construction project. The Topf and Sons company of Erfurt should be informed accordingly."

31. Central Construction Office. "Explanatory report on the preliminary draft for the construction and expansion of the Auschwitz U/S concentration camp. Construction phase III." RGVA, 502-1-225, pp. 53-69; *ibid.*, pp. 70-94.

I. Structures:
(a) Existing structures:
1-6: BW 20 K-Q prisoner lodging buildings 10-16.
b) Buildings to be erected (massive) for the protective-custody camp
7-21: BW 116-138 prisoner lodging buildings 26-40
22-26: BW 157A-157E prisoner security workshop buildings 1-5.
27. BW 158 entrance building
28: BW 160 laundry and reception building with delousing facility and prisoner bath
c) Buildings (massive) to be erected for the headquarters:
29. BW 31 utility building for headquarters
30. BW 173 headquarters and headquarters" lodging building
d) Other command buildings to be erected and modified:
31. BW 172 utility barracks for troops
32. BW 17C 4 crew lodging barracks for the headquarters
33. BW 17D 12 crew lodging barracks for the guard force
34. BW 36D 4 officers' lodging barracks
35. BW 40 SS accommodation "Deutsches Haus"
36. BW 32C 4 civilian workers' lodging barracks
37. BW 32D utility barracks for the civilian workers' camp
38. BW 32E canteen barracks for the civilian workers' camp
39. BW 32F 2 wash barracks for the civilian workers' camp
40. BW 32G 2 toilet barracks for the civilian workers' camp
41. BW 43 prisoner canteen barracks
42. BW 37D construction office's garage
43. BW 18 garage extension for headquarters
44. BW 23 garage extension with workshop for construction office
45. BW 61A makeshift workshop barracks at the construction yard
46. BW 61B carpentry shop barracks
47. BW 61C building material storage shed
II. Exterior facilities:
(a) Completion/extension of existing facilities.
48, BW 9 sewerage system
b) Facilities to be constructed:
49. BW 21 road construction
50. BW 29 water supply system
51. BW 41 protective custody enclosure
52. BW 49 outdoor electrical installations
53. BW 54 horticultural facilities
54. BW 200 5 watchtowers
55. BW 201 main-collector trench with sewage treatment plant and digester-gas extraction plant
56. BW 202 alarm system

57. BW 203 lightning protection system
58. BW 204 telephone system
59. BW 205 command system
60. BW 206 fire-extinguishing system
61. BW 207 2 sauna systems
62. BW 208 siding
63. BW 209 command bridge over the river Sola
64. BW 210 enclosures
65. BW 211 transformer station.

The related cost estimate puts the total cost at RM 18,700,000.

RGVA, 502-1-267, pp. 3-13. 502-1-210, pp. 21- 30.

Central Construction Office, "Distribution of the structures (BW) for the buildings, external and ancillary facilities of the construction project Auschwitz U/S concentration camp". Very long typewritten list of structures at Auschwitz CC, of which about thirty were later added in pencil.

SS-WVHA, chief of Office Group D. Letter to the commandants of the CC with the subject "Request for prisoners and guard crews". AGK, NTN. 172, pp. 38-39. Odpis (transcript).

"By order of the Reichsführer-SS, work is being done in several camps within the protective-custody camp for the armaments industry. This work is vital to the war effort and therefore especially urgent. With incoming new prisoner arrivals, I must first fill up these camps, and then, depending on the urgency, the requirements of the other camps will be satisfied. […]

The Reichsführer-SS further orders that the working hours of the prisoners are to be increased to 11 hours. Now that 10 hours and more are already being worked in the camps, the working hours are to be increased to 11 hours as the days grow longer."

Letter from the Central Construction Office to the Kattowitz Pricing Office with the subject "Cut Wood Supply". RGVA, 502-1-78, pp. 139-140.

The Central Construction Office needs large quantities of softwood lumber to carry out extensive construction, but the firms in the immediate vicinity are unable to supply it, so the Central Construction Office was forced to turn to firms further afield. It requested a total of 3,400 cubic meters of lumber from the following companies:

Alfons Sopott, Bytom; F. Huppert, Sharley; J. Judkowicz, Dt. Piekar; Marczunszek, Bytom; Gladisch, Gleiwitz; E. Weida, Breslau; Sawmill Adamaschek (Kenty), Sucha (Sucha), Wegierska Gorka (Wegierska), Las (Andrichau), Gebrüder Grundei (Langerdorf).

[31.] Central Construction Office. "Development Plan for the Construction and Expansion of the Auschwitz U.S. Concentration Camp and Prisoner-of-War Camp". Plan No. 2215 drawn by prisoner No. 471 Alfred Brzybylski and "checked" by SS-Untersturmführer Walter Dejaco on April 2, 1942. RGVA, 502-2-94, p. 2; *ibid.*, 502-2-93, p. 1.

A second, manipulated version also exists (three huts are drawn near two houses without number or name west of the *Zentralsauna*, one of which has been crossed out with three oblique pen strokes).

April 1942

1. Letter from the Bielitz Labor Office, Auschwitz Branch, to the Labor Office Statistics Department in Bielitz, with the subject "Status of employed workers and salaried employees as of March 31, 1942, for further handling." RGVA, 502-1-417, pp. 1, 1a, 2.
"Enclosed I submit the list of workers and salaried employees employed in the A-card index as of March 31, 1942, for further handling."
Daily listing. Total:
8,418 men, of whom 8,170 working.
3,804 women, of whom 3,313 working.
The A-card was a file of persons considered by the Gestapo to be hostile for various reasons.

Central Construction Office, Building Construction Department, SS Gunner Jothann. "Activity or Construction Report for the Month of March 1942." RGVA, 502-1-24, pp. 397-398.
Work on the following BW: 1.) utility barracks, 2.) PoW camp, temporary bakery, 3.) civilian workers' quarters, 4.) "Deutsches Haus" remodeling, 5.) troop utility camp, 6.) officers' and NCOs' quarters (houses 130, 132, 150, 152, 151, 171).

2. The Huta Company sends an invoice to the Central Construction Office for "1 pc. delousing barracks 64.20/11.66 and 11.66/12.00 m large according to drawing of 8 Nov. 41, and manufactured according to cost estimate No. 3 of 26 Jan. 42." Total sum: RM 11,000. RGVA, 502-1-187, pp. 11-12.

Letter from the Central Construction Office to the J.A. Topf & Sons company, Erfurt, with the subject "Aeration and deaeration system for the crematorium to be built in Auschwitz CC". RGVA, 502-1-312, p. 69.
"Enclosed you will receive a set of amended plans, concerning the crematorium to be built at Auschwitz CC. In the plans, the desired routing of the aeration and deaeration ducts has been drawn. When preparing or modifying your project according to drawing D 59366, we ask you to adapt, if possible, to the duct routing shown in our plans. The ventilation above the roof should be in the form of brick chimneys."*
* See Pressac 1993, Docs. 13-15.

3. Central Construction Office. "Construction Report for Month of March 1942". RGVA, 502-1-24, pp. 380-386.
"General:
As a result of the onset of open [frost-free] *weather, construction operations could generally commence in full.*
There are at present about 930 civilian workers, 2859 prisoners, 380 prisoners of war, about 90 horse-drawn vehicles and 4 trucks in use."
Construction site operations:
I. Above-Ground Construction Department:
(a) protective-custody camp:
new prisoners' quarters: Blocks 7, 15, 18, 17, 16
prov. prisoner kitchen
fence construction
laundry and reception building with prisoner bath
prisoners' canteen barracks
prov. effects storage barracks in women's CC
prov. laundry and delousing in women's CC
new prisoners' quarters for the extension of the protective-custody camps

b) Other buildings
utility barracks for the troops
prov. delousing barracks with reception
crew lodging barracks for the headquarters
Commandant's barracks at the staff building
staff building
garages for headquarters
Civilian workers' quarters
Officers' and NCOs' dormitories
Reconstruction "Deusches Haus"
poultry farm in Harmence [sic]
prov. stables in Bor-Budy
prov. nursery with greenhouse for agriculture in Raisko
large greenhouse facility in Raisko
construction offices barrack
Driver's accommodation barrack
Construction yard

"c) Prisoner-of-war camp
Another 4 barracks of the quarantine camp were completed, and masonry, carpentry and roofing work continued on the remaining 17 barracks there. One utility barrack is ready for operation, the other one has been roofed, furthermore the roof trusses of 2 delousing barracks have been finished or is about to be finished, likewise the morgue barracks' roof truss has been finished and roofed in the meantime. The washhouse and entrance building with watchtower have been erected and roofed, and the interior work is currently underway. In the quarantine camp, 6 dismountable barracks (horse-stable barracks) have also been erected, which will be expanded to accommodate the prisoners of war. Guard towers were set up. The fence construction with wire obstacle is almost finished. For the II. construction section, 5 of the above-described barracks have been erected so far. Work on the camp road to be built has been resumed. For the sewage-treatment plant to be laid out in the PoW camp, the earthwork has been completed, and preparations for masonry work have been made."

Bakery for main utility camp

II. On- and Below-Ground Construction Department
Road construction
Water supply (work on the well of the officers' residences 136 and 177, on the well of the NCOs' dwellings 27, 151, 152, 160, 132, 151A, and on those of the civilian workers' lodgings [house "Record"])
Surveying
Drainage
Landscaping
Workshops
a) joiner's workshop, locksmith's workshop, carpenter's workshop
b) painting, glazing
c) concrete workshops.

Letter from the Commandant of Auschwitz CC to the SS-WVHA, Office Group D, with the subject "Setting up the camp's own laundry". RGVA, 502-1-347, p. 391.

"Due to the lack of an own laundry, the body and bed linen as well as the clothing of the prisoners of Auschwitz CC are given to a contract laundry in Bielitz for cleaning. This company was not able to clean the entire laundry load of 10,000 prisoners, since it did not have sufficient operating facilities for this purpose."

There is no other laundry facility in the district, and the one in Bielitz "is already 36 km away anyway." In addition, the camp's strength is expected to increase to

over 30,000 prisoners in the future. The commandant of Auschwitz CC therefore asks that the construction of the laundry building be expedited.

Letter from the Central Construction Office to the SS-WVHA, Office Group C/I/2 with the subject "inmate effects storage". RGVA, 502-1-272, p. 314.
"Enclosed is a photocopy of the letter from the Auschwitz CC headquarters regarding space requirements for the inmate effects storage, with a request to please take note of it.
The occupancy level of the CC is envisaged to reach approx. 30,000 prisoners."

8. Letter from the SS-WVHA, the head of Office III, to the J.A. Topf & Sons company, Erfurt, with the subject "Auschwitz – Cremation Furnaces for PoW camp." RGVA, 502-1-313, p. 173; *ibid.*, pp. 32-33.
"The 2 pieces of three-muffle large cremation furnaces originally planned for Auschwitz CC will be transferred to another construction project. All technical and commercial preparatory work as well as all drawings will be transferred to a new construction project, so that the incurred marketing and administrative costs in the amount of RM 1,769.36 will be eliminated. Further details about the new construction project are yet to be communicated."
On July 16, 1943, the above office sends a copy of this letter to the Central Construction Office in response to their request of July 10.

Headquarters Order No. 7/42 quotes a letter from Himmler to the men of the Waffen-SS reprimanding boastings about the heroism of the Waffen-SS. It reaffirms that Reich banknotes may not be taken on official or vacation trips abroad; decrees that deceased Waffen SS men are to be buried in accordance with military regulations; regulates the ordering of horse teams; decrees that specially marked shells in cleared villages may not be demolished or parts stolen; declares permanent furloughs invalid; directs that requests for structural alterations to houses within the camp area are to be submitted to the headquarters, not to the Central Construction Office; prohibits the use of railroad tracks at *Deutsche Aurüstungswerke* as a route to the railroad station; reprimands unauthorized use of official bicycles; admonishes adherence to official channels in salary matters; informs that costs of inpatient treatment borne by the SS Sanitary Office are paid to patients, who must then use them to pay outstanding hospital bills; orders that inmate craftsmen employed on contracts may be used elsewhere only with special permission; reminds again of the duty to save paper; mentions a lost camp ID card; announces training times for track and field athletes; and states that the headquarters is also staffed full time on weekends. Frei, pp. 121-124

10. Central Construction Office. "As-built plan of building no. 47a. B.W. 11. Crematorium." Plan No. 1241, drawn by inmate No. 20033 (Stefan Swiszczowski), contains a total of 4 drawings: Front view, partial view, first floor and section A-B. RGVA, 502-2-146, p. 21.

Garrison Order No. 13/42 explains that the ban on entering the IG-Farbenindustrie employees' restaurant refers only to the restaurant in Dwory. Frei, p. 124

14. Central Construction Office. "Explanatory report on the construction of the laundry and reception building with delousing facility and inmate Bath at Auschwitz CC U/S. III. construction section." RGVA, 502-1-347, pp. 377-378.

15. Letter from the Central Construction Office to the SS-WVHA, Office Group C III/1, with the subject "Crematorium, cremation furnaces for PoW camp Auschwitz". RGVA, 502-1-313, p. 171; 502-1-272, S. 300.
"With reference to the above-mentioned letter [of March 30, 1942]*, invoice no. 396 dated March 17, 1942, from the company J.A. Topf & Sons, Erfurt, for the marketing and administrative costs incurred in the processing of the project in the amount of RM 1,769.36 is handed over and requested that further arrangements be made from there."*

Central Construction Office, "Construction report on the status of construction work for the Auschwitz Concentration Camp construction project" with status of construction on 1 April 1942. Labor deployment: civilian workers: 399; inmates: 2,714.
The PoW camp's construction deadlin plan for March 1942 has not been preserved.

Letter from the Central Construction Office to the SS-WVHA, Office Group C III/1, with the subject "Auschwitz – Examination of the static calculation for potato storage main utility camp." RGVA, 502-1-272, p. 301.

Special headquarters order No. 1/42 indicates that SS-Obersturmführer Schwarz, as leader of work deployment, reports directly to the commandant and prohibits other subordinates from interfering in matters of work deployment. It also stipulates that there will be no Sunday work for prisoners, with the exception of vital operations (cattle care, kitchen, etc.). It further states: Frei, pp. 125f.
"If full work performance is to be achieved by the prisoner, it is necessary that he also approach the respective weekly workload sufficiently invigorated, rested and prepared. For this purpose, he needs Sunday for rest. In this respect, it is essential that the inmates bathe once a week in the future, and that the Sunday of rest be used especially for repairing laundry and all other articles of daily use which the inmate needs for his personal care. Only after these goals have been achieved can full performance of the inmates' labor be assured. This notion applies in a corresponding manner likewise to the horse material available for the execution of the present work. The animals must also

have a day of rest during the week. It is expected that all measures will be taken to carry out, with regard to the future use of labor, the guidelines given above. If all services do not endeavor to adhere to these basic matters, severe shortfalls must continue to be expected with regard to the manpower of men and animal[s], *and there would be continuous large shortfalls in the future as a result of an overuse of these available forces, which would make it impossible to carry out the tasks assigned to the CC in a manner that would serve unrestricted war-economic objectives and help to achieve by their contribution the ultimate goal of today's struggle, namely, victory."*

16. With "rail car no. 4.62703 B.M.B." the Topf company shipped "parts to the Topf three-muffle furnaces." Total weight: 11,149 kg. RGVA, 502- 1-313, pp. 167-170.

Letter from the Central Construction Office to the Construction Inspectorate of the Waffen-SS and Police Reich-East with the subject "Construction inspector treatment of buildings in the service area of the SS Economic and Administrative Main Office". RGVA, 502-1-272, pp. 291-292.
"For the time being, the Auschwitz CC construction projects were for the most part repairs of already existing buildings of the former Polish artillery barracks, which were handed over to the Auschwitz CC headquarters by the Army Base Administration Kattowitz on May 4, 1941."
"Similarly, since the existence of the Construction Office (April 1941), during the activity of the former Head of Construction SS-Ostuf. Schlachter until Oct. 15, 1941, no buildings had been accounted for and no usable documents for the construction and expansion of Auschwitz CC were available.
In addition, at the beginning of October, there was the special order for the construction of a prisoner-of-war camp of the Waffen-SS for approx. 150000 prisoners."

Headquarters Auschwitz CC. Special order for CC and women's CC. RGVA, 502-1-36, p. 121. Frei, pp. 126f.
"The working hours of the prisoners are fixed with effect from 20 April 1942 as follows:
in the morning from 6.00 – 11.00 a.m,
in the afternoon from 13.00 – 19.00 hours.
The resulting lunch break is to be used by the prisoners as a rest period.
Great care must be taken to ensure that the prisoners rest in their beds after taking their midday meal, in order to achieve the greatest possible absorption of the midday meal to strengthen the prisoners' working capacity.
With regard to these aforementioned working hours, the same procedure is to be followed accordingly with the external units, with whom the ordered rest period must be carried out at suitable places to be explored by the unit leaders."

21. Letter from the Central Construction Office to the SS-WVHA, Office Group C/V1, with the subject "Cost Estimate Concentration Camp Auschwitz". RGVA, 502-1-215, pp. 8-9.
Cost estimate for Construction Section I: 2,026,000 RM
Cost estimate for Construction Section II: RM 4,630,000
Cost estimate for Construction Section III: 18,700,000 RM.
Construction Sections I and II: structures already built or under construction; Construction Section III: structures of the 3rd year of war economy.

22. Letter from the Central Construction Office to the CC headquarters with the subject "Armbands for civilian employees": RGVA, 502-1-265, p. 665.
"Regarding the above subject, you are informed that green armbands for civilian employees of the local office can only be procured if a ration card is available for this purpose. It is therefore requested that you apply for a purchase voucher for green-armband material with the appropriate voucher office."

24. A special garrison order quotes a letter from the Reichsbahn complaining that SS men and entire units with CC inmates were illegally crossing Reichsbahn tracks to take shortcuts, and when reprimanded for this by Reichsbahn officials, the SS men Frei, pp. 127f.

sometimes became abusive and resorted to physical threats. The commandant orders all SS men to abide by the Reichsbahn's operating regulations and to follow its orders, even if they are issued by strangers.

25. Central Construction Office, inmate paint shop, "Labor performance during the period 26 March – 25 April 1942." Handwritten report on work at BW: utility barracks, construction office, motor pool, staff building, lodging office of civilian employees, central construction yard, houses 151, 136, 25, 130, 132. RGVA, 502-1-24, pp. 370-371.

27. SS-WVHA, Chief of office Group C. Note with the subject "Auschwitz CC". RGVA, 502-1-19, p. 24; 502-1-272, p. 275.
"On the 25th of this month, the commandant of Auschwitz CC came to see me and asked for the following measures to be carried out as a matter of urgency:"
1.) Water-supply system
2.) Laundry building
3.) Installation of adequate stoves in the prisoner-of-war camp."
4.) Set up construction office
5.) *"Central Construction Office receives from commandant: 50 horse carts per day. – Purchase of horses by Central Construction Office thus not necessary."*

Letter from the Central Construction Office to the SS-WVHA, Office Group C, with the subject "Application for construction funds for the new construction of the second extension of the water-supply plant in the concentration camp Auschwitz B.W. 29". The Central Construction Office encloses an explanatory report, cost estimate and site plan. RGVA, 502-1-149, p. 137; *Ibid.*, pp. 138-139; 153-165 *Ibid.*, pp. 140-142; *ibid.*, p. 150.
"Explanatory report on the construction of the second extension of the water-supply system (structure 29) in the concentration camp Auschwitz U/S.".
"Subsoil: Under a 30 cm thick humus layer, firm loamy soil, in places gravel and sand emerge. The groundwater is about 2.50 to 3.50 m below ground level."
The cost estimate calls for an expenditure of RM 48,700. The site plan shows the structure of the system: pump house I-III, each drawing water from 3 wells, which enters the camp's water supply system via water treatment plant, elevated and underground tanks.

28. Garrison Order No. 13a/42 indicates that the organization of social or cultural events for SS personnel is the sole responsibility of Division VI of the headquarters. Frei, pp. 128f.

29. Letter from the Auschwitz CC, Labor Deployment Department, to the Central Construction Office with the subject "Labor Deployment": SS-Obersturmführer Heinrich Schwarz replied on April 23, 1942, to various accusations made by the Central Construction Office. It was not true, he said, "that only women and sick prisoners were made available to the Central Construction Office," and that those capable of work were employed by the Buna Works. RGVA, 502-1-256, pp. 217f.
"It should be noted in passing only that the replacement of sick prisoners of the 'I.G. Farben' operation is being done entirely from the new Jewish arrivals of recent times. On the question of the replacement of sick prisoners from Central Construction Office units, we note that 15% of the prisoners sent out for the construction yard in the last few months had to be sent to the infirmary."
The charge that the work performance of female prisoners assigned to the Central Construction Office is inferior to that of inmates is unfounded because it is "above the level of male prisoners."
The Central Construction Office's request for 10,000 to 12,000 inmates must take into account overall strength, he said, and finally, the Central Construction Office must better manage its units and ensure that inmates have the tools they need.

Central Construction Office. "Site Plan for the New Construction of the Laundry and Admission Building with Delousing Facility and Inmate Bath at Auschwitz CC RGVA, 502-1-347, pp. 344, 383.

U.S. (III. Construction Section)," BW 160.

Headquarters Order No. 8/42 quotes a letter from Himmler about the sacrilege of seducing underage girls, which Himmler would "punish ruthlessly." The order deplores the bad behavior of some SS men traveling on trains, and announces that the superiors of these louts will also be prosecuted. In this context, the order also mentions a propaganda campaign "More Politeness." A reminder is issued about the 14-day training evenings as compulsory events for SS officers. Regarding secrecy, it states, among other things: Frei, pp. 129-134

"As is well known, all SS members of Auschwitz CC are instructed, obligated and sworn to secrecy with regard to any facilities and occurrences in CC that come to their knowledge within the scope of their service. There is cause to point out once again that any violation of this sworn obligation will be considered treason."

SS men are offered a weekend in an SS-owned ski lodge; procedures for requesting and assigning remedies are explained; workshop orders may not be directed directly to workshops but must be approved and assigned by the headquarters; bureaucratic matters concerning leave passes for official travel are explained; weekly concerts by the SS-Sturmbann band are announced; limits are set on the size of home gardens; paper conservation measures are mentioned; parking bicycles indoors instead of on bicycle racks is punishable; detailed rules for hunting are listed, and poaching is punishable; chickens are not allowed to roam free during sowing season; a counting card system for managing food for SS members and their families is introduced; Labor Day is moved to 2 May (Saturday); civilians employed by the Wehrmacht are not entitled to railroad tickets when on leave; guard offenses are made public; some lost and found objects are mentioned.

30. Letter from the Chief of the SS-WVHA to the Reichsführer-SS with the subject "Incorporation of the Inspectorate of Concentration Camps into the SS Economic and Administrative Main Office". R-129.

List of CCs existing at outbreak of war (Dachau, Sachsenhausen, Buchenwald, Mauthausen, Flossenbürg, Ravensbrück, with indication of prisoner occupancy) and those built in 1940-1942 (Auschwitz, Neuengamme, Gusen, Natzweiler, Gross-Rosen, Lublin, Niederhagen, Stutthof, Arbeitsdorf).

"1.) The war brought about a visible structural change in the concentration camps and fundamentally altered their tasks with regard to the use of prisoners. The multiplication of prisoners for security, educational or preventive reasons alone is no longer in the foreground. The emphasis has shifted to the economic side. The mobilization of all prisoners' labor for war tasks (armament increase) and later for peace tasks is pushing itself more and more into the foreground."

Letter from Chief of SS-WVHA "to Chief Office Group D, to all camp commandants, to all plant managers, to all W offices." "Order." GARF, 7021-103-1, pp. 22-23.

"The instructions and guidance which were given to the camp commandants and plant managers in the meetings of 24 and 25 April 1942 are hereby promulgated as an order, to take effect as of 1 May 1942. […]

4) The camp commandant alone is responsible for the <u>deployment of the labor force</u>. This deployment must be <u>exhaustive</u> in the true sense of the word in order to establish maximum output.

The assignment of work shall be made only centrally by the Chief of Office Group D. The camp commandants themselves may not accept work from third parties on their own authority, nor may they conduct negotiations in this regard.

5) The <u>working time</u> is not bound by any limits. Its duration depends on the operational structure of the camp and the nature of the work to be performed, and is determined by the camp commandant alone."

May 1942

1. Letter from the Central Construction Office to the SS-WVHA, Office Group B/IV, with the subject "Reference coupons for green armbands." RGVA, 502-1-265, p. 664.
"According to the Headquarters Order of the Auschwitz Concentration Camp, all civilian workers and also the civilian employees of the local office are to wear green armbands so that they can be recognized as such."
Request for 3 meters of green canvas.

Administration of the Auschwitz CC, "Proof of Claim for the Use of Female Prisoners for the Central Construction Office of the Waffen-SS and Police at CC Auschwitz U/S. Month: April 1942." RGVA, 502-2-50, pp. 17f.
Total days worked: 46,965 (on 30 days). Amount: 14,089.50 RM. (Daily rate: RM 0.30 over 4 hours, RM 0.15 under 4 hours).
Attached: "List of female prisoner employment at the individual construction sites for the month of April 1942."
The following structures are listed: 2, 21, 32B, 36A, 50, 54, 64, 65A, 116, 172, 201, PoW camp: 3A, 3B, 3C, 4B, 16.

Radio message from Obersturmbannführer Gerhard Maurer (SS-WVHA, Office Group D) to Auschwitz CC: TNA, HW 16-18. ZIP/GPDD 85/28.5.42, n. 12/13, n. 12/13.
"Concerning prisoners for agriculture.
I request to inform SS Oberf. Dr. CAESAR that 3 German-speaking plant breeders and 2 botanists and biologists (all Polish) can be transferred from RAVENSBRUECK. Should the transfer take place immediately, or does SS Oberf. Dr. CAESAR intend to have the ability of these prisoners checked beforehand? I ask for an early answer by telex."

Letter from the Central Construction Office to Friedrich Boos Company, Cologne-Bickendorf, with the subject "Project for heating system". RGVA, 502-1-272, p. 423.
"Enclosed a plan of the residential building to be built for the head of the Auschwitz agricultural operations, SS-Oberführer Dr. Caesar, is conveyed, and it is requested that the project for the heating and hot-water supply system be worked out immediately and submitted here with a cost estimate."

4. In a circular from the headquarters we read: Frei, p. 135
"As of Tuesday, May 5, 1942, the working hours of male and female prisoners will be from 6:00 a.m. to 1:00 p.m. [sic; probably 6:00 p.m.]*, with a one-hour lunch break."*

7. IG-Farben, Ludwigshafen. "Report on the meeting in Leuna, office of Head Engineer Dr. Dürrfeld, on 6 May 1942". RGVA, 502-5-1, pp. 1-4.
Subject: "Organization of the Auschwitz Technical Department."
"The Auschwitz technical department is divided into the following groups: 1.) Synthesis 2.) Buna 3.) Electrical engineering 4.) Workshop operations 5.) Energy operations 6.) Construction Department 7.) Operational Control."
A detailed description follows.

Radio message from Julius Muthig, Deputy Head of Office D III, to the SS garrison physician of Auschwitz CC: TNA. HW 16-21. ZIP/GPDD 68/20.5.42, n. 5/6.
"Leave for SS Sturmmann JAMBOR approved for the period 11 May to 24 May 42. Leave for SS Obersturmführer ENTRESZ cannot be approved until a replacement for SS Hauptsturmführer SCHWELA, who is ill [with typhus]*, has arrived there."*

Letter from the Central Construction Office to the Auschwitz CC headquarters with the subject "Demolition of houses in the area of interest of the Auschwitz CC." RGVA, 502-1-272, p. 267.
"For the demolition of houses in the area of interest of Auschwitz CC by the Central Construction Office, written application was submitted to the headquarters each time."

One house near the "Deusches Haus" was spared for the time being.
"During the inspection by the Chief of the SS Economic and Administrative Main Office, SS-Gruppenführer and Major General of the Waffen-SS Pohl, which took place on May 5, 1942, it was ordered by him that the building be demolished."

8. Letter from the J.A. Topf & Sons company, Erfurt, to the Central Construction Office with the subject "Ventilation system for the crematorium to be built at Auschwitz CC". As a result of the letter from the Central Construction Office dated April 2, 1942, the Topf company had to change the aeration and deaeration system of the crematorium, which is shown in the new drawing D 59394. RGVA, 502-1-312, pp. 65-68.
"For Morgue 2, wrought-iron piping will be provided by us to conduct away the exhaust air. The main piping will be laid to the ceiling of the room, and a recess in the partition wall from the large cellar to the small cellar of approximately 1000 x 600 mm is to be provided for the time being for the passage of the piping. After insertion of this pipeline, the opening is to be neatly plastered.
For Morgue 1, you want to provide an exhaust duct with a clear width of 600 x 500 mm and Morgue 2 an exhaust duct of 800 x 500 mm."
Drawing D 59389 shows the installation of the forced-draft devices.

Central Construction Office. "Construction Deadline Plan for Construction Projects: Auschwitz CC" for April 1942. The list of structures differs only slightly from the March deadline plan. BW 136-138 were added, corresponding to inmate quarters nos. 38-40; the women's camp is named BW 3, and the large greenhouse at Raisko BW 64, the duck breeding stable at Harmense BW 65 A, and the horse-stable barracks for agriculture BW 71. RGVA, 502-1-22, pp. 17-18.
Labor deployment: civilian workers: 442; prisoners: 4,232.

Central Construction Office. "Construction Deadline Plan for Construction Projects: Waffen-SS Prisoner-of-War Camp at Auschwitz" for April 1942. RGVA, 502-1-22, p. 15.

Structures	Start	
1. BW 2: drainage of the terrain	16/2/1942	15%

"For SS Hauptsturmführer Dr. Siegfried SCHWELA, who died on 10 May 42, the questionnaire Ds Hdqts. 143 with the medical reports on his death is to be submitted here in triplicate as soon as possible."

18. Central Construction Office, "Travelogue about the official trip to Berlin from May 11-17, 1942". — RGVA, 502-1-43, pp. 14-18.
Participants: SS-Hauptsturmführer Bischoff, SS-Untersturmführer Ertl, SS-Unterscharführer Wilk. Topics discussed: Raw materials, construction projects assigned to Auschwitz, accounting, barracks (344, plus 10 for Wehoba, 10 for Schenk u. Lüttjens, and 14 for Albrecht), construction plans for Auschwitz. A detailed report follows.

19. Letter from Central Construction Office to SS-WVHA, Office Group C I, subject — RGVA, 502-1-272, p. 262.

"As-built Plans of Old Buildings."
"Enclosed are the requested as-built plans of Buildings Nos. 48, 52, 54, 56, 69, and 23."

Headquarters order no. 9/42 mentions the result of a fund-raising campaign for the Red Cross; sets forth new rules for vacation food cards; explains that food-counting cards are only due to SS members whose families are entitled to live in Auschwitz; prescribes access routes for tower guards; deplores damage to turnpikes and wire fences by SS members; explains that civilian workers may bring into the camp only the civilian clothes worn on the body and no packages except daily rations because of danger of escape; in summer, drill sets are to be worn to protect other sets; due to lack of shoe wax, shining of shoes is omitted; location of duty room, duty hours, and rules of conduct for the NCO on duty of the staff company are listed; the proper provision of food for SS men in custody is admonished; radio owners must pay a permit fee; vehicle assignments in search operations for fugitives may be made by the officer on duty; the ban on entering the "casino" is lifted; illegal procurement of rationed food in surrounding villages without payment with ration cards is threatened with punishment; it is reminded that workshop orders must go through the administration; fishing and angling in the Sola, Vistula and ponds is forbidden; NCOs are no longer given eating utensils at lunchtime; because of misconduct, SS men are forbidden to enter the stage and its adjoining rooms in the *Kameradschaftsheim*; demolition of barns in the Auschwitz CC area of interest is forbidden; a ladies' bracelet has been lost. Frei, pp. 136-140

20. Central Construction Office. "File memo". The SS-WVHA commissions the firm Friedrich Petersen with the "execution of the drainage and irrigation work of Construction Section I in the PoW camp." On the same day, Bischoff and Petersen sign a "Preliminary note to the performance list in Construction Section I of the PoW camp Auschwitz," in which the Central Construction Office undertakes to contribute 100 prisoners as assistants, and the firm "at least 10 skilled workers as pipe layers." The company puts the cost at RM 4,235. RGVA, 502-2-24, p. 215. 502-2-24, pp. 242-243.

Central Construction Office. "Listing of Construction Work Performed."
"In the crematorium, a chimney flue was repaired. In the engine house, walls were built up, ceiling put in, interior walls repaired and plastered up." APMO, BW 11/5, pp. 5-6.

21. Letter from the J.A. Topf & Sons company, Erfurt, to the [Central] Construction Office with the subject "Crematorium, aeration and deaeration system".
"Enclosed you will find a ground-plan drawing for the aeration and deaeration system no. D 59394, and the sectional drawing D 59395. Compared to the drawing D 59394 sent to you earlier, only the arrangement of the fresh-air supply fan for the morgue has changed. We had planned to take the fresh air on ground level, but we consider it more correct to take the fresh air from above the roof and feed it to the blower through a special duct." RGVA, 502-1-312, p. 63.

Garrison Order No. 14/42 reduces sick calls and consultation hours for SS family members due to shortage of doctors. Frei, p. 140

26. Letter from SS-WVHA, Office Group D, Concentration Camps, to 16 concentration camps with the subject "Disinfestation Plant".
"As the Hygiene Institute of the Waffen-SS informs under 23 May 1942, disinfestation plants (hot-air furnaces with blowers) are available in sufficient quantity for the concentration camps. The equipment is available at short notice from the companies mentioned, and the respective construction office is responsible for its procurement. Allocations will be provided by Office C V. Insofar as the individual camps have not yet ordered this disinfestation equipment, the order is to be placed as follows:" RGVA, 502-1-332, p. 96.

For Auschwitz, Buchenwald, Flossenbürg and Ravensbrück: to *engineering works Fritz Hochheim*, Mönchengladbach.

29. Central Construction Office. "Activity Report for the Month of May 1942" by civilian employee Heinrich Teichmann (Construction Office Auschwitz CC and Agriculture). Work carried out on the following structures: 1.) extension of the protective-custody camp, 2.) reception building and inmate bath, 3). Laundry, 4.) Slaughterhouse, 5.) Concrete workshops, 6.) Fortification work on the horse-stable barracks at D.A.W. RGVA, 502-1-24, p. 301.

Radio message from SS-Obersturmbannführer Arthur Liebehenschel (SS-WVHA, Office D I):
"To camp comm.[andant]
Concerning the compilation of the list of deaths by name in the month of May 42. In accordance with the instructions issued, I would like to point out that the compilation of the list of deceased female prisoners in the camp is to be carried out in the same manner as the list of deceased male prisoners. Furthermore, on the list of male dead … goes off … are not to be listed." TNA. HW 16-21. German Police Decodes Nr 3 Traffic: 29.5.42. ZIP/GPDD 92/2.6.42, n. 43/44.

30. Central Construction Office. "Activity Report for the Month of May 1942" by SS-Sturmmann Heinz Lubitz (Construction Foreman, Above-Ground Construction Department). Work performed on the following structures: 1-4.) New building block 15, 18, 17, 16, 5.) construction office's garage – construction yard, 6.) delousing chamber, 7.) prov. laundry in women's CC, 8.) greenhouse Raisko, 9.) tile stoves, 10.) prov. nursery Raisko, 11.) duck rearing Harmense, 12.) crew barracks, "13.) crematorium. Demolition of the old pavement. Erection of the concrete fence in front of the entrance with pavement. Transport of materials. Soil removal", 14.) Commandant's building, 15.) Work in women's CC. RGVA, 502-1-24, pp. 298-300.

Central Construction Office. "Report of SS Oscha. Pollok in the capacity of specialist for construction inspector's affairs".
"On the chimney of the crematorium at Auschwitz CC, the chimney lining has come loose. This is due to improper execution, as well as partial overheating of the chimney. The bindings are not designed as frames according to their purpose and are therefore ineffective. Since the chimney already has severe cracks, which, although repaired on the outside, are still present in the masonry in my opinion, there is a risk that the chimney may collapse in the event of stronger winds. In order to avoid unforeseeable consequences, I ask the head of the Central Construction Office to arrange for immediate measures to be taken to remedy the defects. This would include ensuring that all bindings are removed and replaced with frame bindings in a proper and workmanlike manner." RGVA, 502-1-312, p. 64.

June 1942

1. Central Construction Office, "Activity Report of the Motor Pool from May 1 – 31, 1942". RGVA, 502-1-24, pp. 295-296.

"A. Vehicle deployment.

vehicle deployment daily on average	*7-8 LKW*	
total trips in the above period	*1171*	
kilometers driven " " "	*7493*	
Fuel consumption " " "	*gasoline 1975*	
	diesel 1799	*= 3774"*

A detailed report follows.

Central Construction Office. "Report on work carried out at the crematorium".
"Repair of the lower channel. Bricklaying of the walls in the engine house and casting the ceiling. Repair of the interior walls and plastering of the same." APMO, BW 30/25, p. 3.

The work was carried out by 5 prisoners on May 14 and 15, 1942.

Letter from the Central Construction Office to the Auschwitz CC headquarters with the subject "Chimney at the crematorium CC Auschwitz". RGVA, 502-1-312, p. 62.
"Due to frequent overheating of the chimney of the crematorium at CC Auschwitz, the binding of the same has become loose. The chimney also has cracks which, although on the outside they have been partly repaired, are in my opinion still present in the masonry. There is a danger that the chimney may collapse in stronger winds and incalculable consequences may result."
The head of the Central Construction Office requests that all defects be corrected and that the SS-WVHA be informed.

Letter from the Central Construction Office to the SS-WVHA with the subject "Chimney at Crematorium CC Auschwitz". RGVA, 502-1-272, p. 256.
"Due to the continued operation (day and night operation), the chimney has suffered damage from overheating."

This date marks the beginning of the directory "Workshop Orders (Administration) as of June 1, 1942," which contains over 1,000 entries by February 2, 1943. The orders mainly concern the locksmith's shop, carpentry shop, printing shop, painting shop, bricklaying shop, carpentry shop, wheelwright's shop, technical department, leather factory, glazier's shop, administration, bookbindery, DAW and blacksmith's shop. RGVA, 502-1-153, p. 1-37 (sheets only partly paginated).

2. Telex from the SS-WVHA to the Commandant KL. Auschwitz. RGVA, 502-1-312, p. 61.
"In response to the request here, the following telex is received from Brigadef. Dr. Kammler: 'Construction order for the renewal of the chimney in the Auschwitz crematorium issued'. pp. sgd. Liebehenschel SS-Oberstubaf."

Central Construction Office. "Construction Report for Month of May 1942". RGVA, 502-1-24, pp. 258-265.
"<u>General:</u>
There are at present deployed ca. 1006 civilian workers, ca. 4394 inmates, ca. 2465 women, ca. 40 carts, 7 motor vehicles."
I. Above-Ground Construction Department
a) Protective-custody camp
BW 104 – inmate lodging building (new building VI – Block 18)
BW 105 – inmate lodging building (new building VII – Block 17)
BW 106 – inmate lodging building (new building VIII – Block 16)
BW 107 – inmate lodging building (new building V – Block 15)
BW 20L – inmate lodging building (adding floor in women's CC Block 1)
BW 20M – inmate lodging building (adding floor – Block 14)
BW 20O – inmate lodging building (adding floor – Block 12)
BW 20Q – inmate lodging building (adding floor – Block 23)
BW 3 – prov. laundry in women's CC
existing buildings in women's CC
b) Extension of the protective-custody camp
BW 7A – prisoner accommodation building (for now prov. troop lodgings)
BW 135, 136, 137, 138 – inmate lodging buildings
BW 160 – laundry and reception building with delousing facility and prisoner bath
c) Other buildings
BW 28 – prov. reception barracks with delousing facility
BW 17C/4 – crew barracks 4
BW 24 – commandant's residence
BW 18 – garage extension for headquarters
BW 36B – officers' residential houses and lodgings

BW 172 – utility barracks
BW 40 – remodeling SS lodgings "Deutsches Haus"
"BW 11 – crematorium. In front of the entrance, an enclosed courtyard with 2 entrances was created, and the access roads were laid out."
d) Agriculture
BW 65 A-B – duck & poultry breeding stables in Harmence [sic].
BW 71- Stable yard for agriculture and for the construction office,
BW 33 B – slaughterhouse extension
BW 33C – nursery with greenhouse for agriculture
BW 64 – large greenhouse facility in Raisko
e) Construction yard
BW 37 B-C – construction-office barracks & lodgings
BW 50 – construction office
BW 23A – construction office's garage annex
f) Prisoner-of-war camp
"In the quarantine camp (Section I), 12 brick lodging barracks have been put into use so far, and interior work on the remaining 18 barracks is nearly completed. Furthermore, a total of 12 demountable barracks (horse-stable barracks) have been erected, of which 6 are usable so far, one is being prepared as infirmary barracks. In the second utility barracks, the boilers have been installed, and the remaining installation work is still to be carried out. In the first delousing barracks, the pumping station of the water supply has been installed. The second delousing barracks is almost finished. The 10 wash and toilet barracks' roff trusses are finished and have been roofed, the installations etc. are currently being installed. Remaining finishing work is still to be done on the guard and entrance building. For the II. construction section, 54 dismountable barracks (horse stables) have been erected, some of which have already been filled. The fence construction works for this construction section are being continued. Work has continued on the water-supply system and sewage treatment plant, as well as earthwork for the receiving ditch. Drainage of the area in the quarantine camp was started. The road PoW camp – Birkenau was partially excavated and the packing layer was moved, as was the road between the quarantine camp and Camp 2, and part of the camp roads in the quarantine camp were provided with packing layer and gravel, and rolled. Furthermore, 2 barracks (horse-stable barracks) were erected outside the the PoW camp."
BW 31 (PoW camp) – Bakery for the main utility camp
g) Main economic camp
BW 7 – (main utility camp) storage barracks
II. On- and Below-Ground Construction Department
BW 21 – road construction
BW 29 – water-supply system
BW 9 – sewerage system
BW 201 – storm-water and main-collector sewer with sewage treatment and digester-gas extraction plant
Surveying
Landscaping
III. Workshops
Joinery, lock smithy, carpentry, painting, glazing.

4. SS garrison radio station Auschwitz, message no. 14: RGVA, 502-1-312, p. 55.
"W.V.H.A. to Construction Office.
According to Chief Office Gr. D, there is danger of collapse for the chimney of the crematorium CC Au. If true, immediately start renewal of chimney. Implementation report to here, and indicate why I am not informed by the Central Construction Office.
The Chief of Office Group C Dr. Ing. Kammler, SS-Brigadef. a. Major General of thr

Waffen-SS."

5. Central Construction Office. "File memo on the inspection of the construction-offices inmate workshops by head of Main Department SS-Hauptsturmführer Dr. May, DAW Berlin." RGVA, 502-119, p. 45.
On June 4, May visited the workshops of the Central Construction Office:
"According to SS-Hstuf. Dr. May, on the orders of SS-Gruppenführer Pohl, the workshops are to be taken over by DAW in the foreseeable future, but according to Dr. May, this is to take place only after completion of the workshops under construction at the DAW Auschwitz plant."

Letter from the Central Construction Office to the J.A. Topf & Sons company, Erfurt, with the subject "Blower for new Auschwitz crematorium, and start of installation of the furnaces". RGVA, 502-1-272, p. 499.
"The cast- and wrought-iron parts for the 5 cremation furnaces have now arrived. The construction work for the crematorium is in full swing, but an exact date for the installation of the furnaces cannot be announced for the time being. A blower with motor for the Buchenwald-Weimar CC cannot be delivered, since they are intended for the local installation of the furnaces and will be needed in a short time."

Radio message from SS-Obersturmbannführer Arthur Liebehenschel (SS-WVHA, Office D I) to Auschwitz CC: TNA. HW 16-19. ZIP/GPDD 104/10.6.42, n. 5/6.
"Secret! Concerning the internment of Jews.
As the RSHA informs us by telegram, for internal political reasons it is not possible at the present time to carry out the deportation of 1,000 Jews, each capable of work, to AU, which had been planned for 3 and 4 June 42. However, it was promised that these two and the other 5 transports destined for the local camp camp will still be carried out in June. In due course the new dates will be announced."

Letter from Robert Koehler, civil engineer, to the Central Construction Office with the subject "Chimney construction". Koehler agrees to build the new square chimney, which has "a height of about 25-30 m and a top clear diameter of about 65-70 cm." RGVA, 502-1-312, p. 48.
"Likewise, in agreement with the head of the political department, as desired, the new chimney to be built is to be pushed out about 8-10 m along the previous axis and connected with a flue."

6. Headquarters order no. 10/42 mentions the result of a fund-raiser for the Red Cross; prohibits the consumption of unboiled drinking water taken from local wells because of germs; reports the establishment of a leave-of-absence book for SS officers; announces the completion and, from now on, the use of the laundry for SS men; Prohibits guards and work-unit leaders from having their belongings carried by inmates, and insists on a "strict and coldly objective relationship" between guards and those guarded; admonishes the right-hand-driving rule for horse teams in the camp area; and threatens those who lose camp passes with severe penalties for effectively aiding escapes. It then states: RGVA, 502-1-9, pp. 23-25. Frei, p. 141
"8. Wire obstacle around PoW camp.
Effective immediately, the wire obstacle around the POW camp shall be electrically charged. The Construction Office is to see that all civilian workers are notified of this immediately."
There is a final mention of a Saturday shuttle service to the SS hut in Porombka, as well as the loss of a purse and the finding of a bunch of keys.

Letter from the J.A. Topf & Sons company, Erfurt, to the Central Construction Office with the subject "Crematorium. Chimney". RGVA, 502-1-312, p. 52.
"We received your wire message:

'Chimney old-stock crematorium must be renewed at 7 meters from present location, request wire cross section size and chimney height,'
and replied to you today:
'Chimney size old-stock crematorium 15 m height 80/100 cm cross section drawing follows.'
Enclosed we send you a drawing D 59463, from which the dimensions for the chimney column and for the foundation can be seen. […] *The chimney is sufficient for the three pieces of two-muffle cremation furnaces* […]. *On this occasion, we refer to our letter of 29 May, and would like to hope that you have complied with our request and delivered a blower with motor to the Central Construction Office of the Waffen-SS, Weimar-Buchenwald, since otherwise we will not be able to put the three-muffle furnace newly erected there into operation."*

Decree of the Chief of Army-Armament and Commander of the Reserve Army to various agencies with the subject "Fire Fighting in Delousing Institutions": RGVA, 502-1-333, pp. 119-121.
"In recent months, fires have occurred in a number of delousing establishments, some of which have led to the destruction of the entire establishment. Since the origin of the fires was in most cases due to overheating, and since fire-fighting was carried out in a haphazard manner, it is necessary to supplement the operating regulations of the delousing establishments with regard to the following remarks and to urge the personnel of the establishments to follow the regulations exactly."
This is followed by: A. Operating regulations. B. Firefighting.

A special headquarters order deals in detail with the restructuring of the SS-T-Sturmbann Auschwitz CC. Frei, p. 143

7. I.G. Farbenindustrie A.G., "Weekly report no. 54. I. Part for the period of 1-7 June 1942". NI-15256.
"4 June. With Messrs. Baurat Mahlendorf and Amtsmann Tschechne from the Breslau field office, discussions were held about the deployment of Jews. In the same matter, the gentlemen negotiated with CC. It was agreed that the Jews under the direction of SS-Oberführer Schmelt (District Pres. of Oppeln) should not come into contact with the Jews of the CC. Therefore, the Jews of the CC were to be employed inside the factory premises, and the so-called Schmelt Jews outside the factory premises (factory train station, etc.)."

Telegram from the J.A. Topf & Sons company, Erfurt, to the Central Construction Office: RGVA, 502-1-312, p. 51.
"Chimney size old-stock crematorium 15 m height 80/100 cm cross section drawing follows – Topf Works."

SS Economic and Administrative Main Office, Office Group D – Concentration Camps. Letter to the commandants of all CCs with the subject "Meeting of heads of inmate labor deployment on 1 June 1942". PS-3677.
"<u>Prisoners not fit for work or deployment.</u>
These are to be listed on the <u>daily</u> report to be prepared under 'Remarks' in the following order:
1. sick
a) outpatients
b) inpatient
2. invalids
3. doctor's reports
4. interrogations
5. releases
6. conditionally fit
7. arrest
8. quarantine
9. admissions. […]
(2) Deployment reports shall be sent <u>daily</u> in a <u>clean</u> condition. The deployment leader, as clerk, shall be held fully responsible for the correctness of the reports. Correct prisoner files are the prerequisite for the submission of reliable reports.
3) <u>Monthly compilations:</u>
The daily reports shall be recorded in monthly compilations […]*."*

25. Letter from the company M. Trüstedt KG, Berlin-Hanover, to the administration of the Auschwitz CC with the subject "Bone-degreasing device". The company encloses: "Instructions for the commissioning of a bone-degreasing device", "Supplement to the operating instructions for bone-degreasing treatment and cleaning," and a construction drawing of this device. GARF, 7021-108-44, p. 7; *ibid.*, p. 16; *ibid.*, p. 9; *ibid.*, p. 8.

Letter from the Central Construction Office to the inmate-records department, SS-Hauptscharführer Walter, with the subject "Photographic images from the camp": *"The Central Construction Office of the Waffen-SS and Auschwitz Police requests the production of 3 enlargements* [of the photographs] *as submitted in the enclosure to the local office by SS-H'scharf. Walter, format 9 x 12 cm, glossy, black and white."* The photos are numbered from 1 to 276 and concern: Birkenau POW camp, agriculture, camp construction, DAW, workshops. RGVA, 502-1-35, pp. 1-3.

26. Workshop order, Document No. 109, BW 11. For Political Department (crematorium): "100 pieces of urn boxes." RGVA, 502-2-1, p. 48.

Central Construction Office. File note on constructions approved by SS-WVHA with respective costs: RGVA, 502-1-19, pp. 51-52.
"For the 3rd year of war economy 1942, according to the list attached, construction sum of RM 1,275,000.00 is approved."
The list contains the entries: BW, total construction sum, already built up to 31 March 42, approved sum 1 April – 31 Dec. 42 and surplus into the 4th year of war economy. Here now is the list of structures:

1) Makeshift sola bridge	RM 350,000
2) Irrigation and drainage	″ 158,000
3) Pump house, elevated tank, water treatment plant	″ 372,000
4) Fuse systems (addition)	″ 112,000
5) Transfer station	″ 60,000
6) Road construction (makeshift)	″ 277,600
7) Prov. district heating plant	″ 160,000
8) Temporary construction for diesel backup power generator	″ 10,000
9) Construction of 10 inmate lodgings (makeshift)	″ 945,000
10) Slaughterhouse (makeshift)	″ 70,000
11) 3 field barns & 4 makeshift farm barns	″ 182,000
12) makeshift greenhouse for 3000 m² area	″ 200,000
13) 4 makeshift potato warehouses	″ 86,000
14) Completion of building shell in Raisko as a laboratory	″ 25,000
15) Makeshift pigsties and sheepsties of primitive construction	″ 50,000
16) Extension of an existing shell BW 36C makeshift.	″ 20,000
17) Potato bunker for main utility camp, makeshift	″ 20,000
18) Storage cellar extension for main utility camp Oderberg	″ 5,000

27. Letter from Friedrich Boos to the Central Construction Office with the subject "Auschwitz CC heating plant". RGVA, 502-1-138, pp. 513-513a.
For the purpose of designing the boiler plant for the district heating plant, the following information is required:
"1) Type of fuel,
2) Water content of the fuel
3) ash content of the fuel
4) volatile components of the fuel,
5) the grain size of the fuel,
6) the slag melting point,
7) the slag softening point,
8) the analysis of the feed water […].
If the preliminary final heating plant is expanded, the hourly heat demand is expected to be 18 million kcal/h. The daily coal demand will amount to ~ 45-50 tons of coal."

29. Letter from the Central Construction Office to the SS-WVHA, Office C V, with the subject "Barracks and Follow-on Facilities for Auschwitz POW Camp": GARF, 7021-108-32, pp. 34f. RGVA, 502-1-275, pp. 293-293a.

"Since, according to the order of the Reichsführer SS and Chief of the German Police, the camp is to be expanded from 125000 prisoners of war to 150000 prisoners of war, the following structures are, however, still absolutely necessary for the completion of the camp for the time being, some of which were already indicated when the plenipotentiary for H. [?] *volume for the prisoner-of-war camp was drawn up on 22 May 1942."*

Then follows the specification of the exact number:

1.) 63 lodging barracks	Type 260/9
2.) 36 wash- und toilet barracks	″ 260/9
3.) 18 laundry barracks	″ 260/9
4.) 36 storage barracks	″ IV/3
5.) 40 utility barracks	″ VII/5
6.) 15 infirmary barracks	″ IV/3
7.) 36 lodging barracks	″ IV/3
8.) 7 wash barracks	″ IV/3

9.) 27 watchtowers, wood
10.) 4 morgue barracks
11.) crematorium
12.) fencing (electrically charged wire fence)
13.) electrical system for security lighting
14.) alarm and telephone system
15.) 2000 pieces of stoves including flue
16.) 400 ″ boiling kettles with a capacity of 300 liters each
17.) temporary bakery for main utility camp (very important!)
18.) installation of cots in 264 lodging barracks
19.) preparation for construction and drainage of the land

Central Construction Office. "Activity Report of SS-Uscha. Kirschnek, Construction head of construction dept. above-ground construction. Month of June 1942." RGVA, 502-1-27, pp. 9-11.

Work carried out in the construction works:
BW 7a (prov. headquarters), BW 20 Q, M, O (adding floor in men's CC), BW 20 C, L, K (adding floor in women's CC), Raisko greenhouse, Harmense duck-rearing and herd-book barns, new construction of Block 16 and 17, pump house, "Chimney (old-stock crematorium). Foundation excavated and concreted by inmates, base and fireclay masonry started," Block 27.

30. Radio message from CC Mauthausen to Auschwitz CC: TNA. HW 16-20. ZIP/GPDD 179/28.7.42, n. 1.

"To Camp Comm.
Regarding the transfer of prisoners, I request that you provide freight cars with brake house for the transport of 710 prisoners. Reply requested. Yours sincerely. ZIEREIS."

Central Construction Office, "Barracks distribution". RGVA, 502-1-275, pp. 270-273.

I.) PoW camp:	516 barracks
II.) Agriculture Auschwitz:	55 ″
III.) SS lodgings a. Auschwitz CC:	54 ″

"Type 260/9
1.) effect storage barracks near prov. delousing ain CC erected 4 pieces
2.) effect storage barracks for special treatment 3 pieces
3.) effect storage barracks in women's CC 1 pieces
4.) lodging barracks Bor 1 piece *9 pieces."*

IV.) Construction Yard: 24 barracks
V.) Main utility camp: 2 barracks.
Total: 651 barracks.

Headquarters Order No. 11/42: Frei, pp. 144-147
"1. Commendation
Due to the prudent behavior of SS-Uscha. Carstens, 3rd /SS-T-Sturmbann, it was possible to recapture an escaped prisoner. I express my appreciation to SS-Uscha. Carstens for this."
Due to a shortage of raw materials, collar patches are no longer worn on uniform coats; the greeting relationship between the Hitler Youth and the Waffen-SS is explained; instructions are given on outdoor bathing; fish distribution is timed; trespassing on farmland by unauthorized persons is prohibited; no speeding over 30 km/h is allowed in the camp area; Shooting orders are issued for vehicles that fail to stop at the camp guardhouse; improperly parked bicycles are confiscated without replacement; a deadline is given for promotion and appointment proposals; no more applications for settlements in the East are accepted during the war; all mess halls close regularly at 22:00; a long list of lost and found items is given.

Central Construction Office. "Overview of all constructions to be built by order of the SS Economic and Administrative Main Office Berlin, in the area of CC Auschwitz, respectively in the service area of the Central Construction Office of the Waffen-SS and Police Auschwitz in the third year of war economy". RGVA, 502-1-275, pp. 33-36.

VI. other
Landscaping
Workshops (joinery, locksmith, carpentry, painting and glazing),
Surveying.

Central Construction Office. "Report." RGVA, 502-1-332, p. 153.
"On 1 July 1942 in the morning at 10.30 a.m., a head constable of the Birkenau gendarmerie post appeared at the labor deployment office (communal camp) and informed me that typhus had broken out in the communal camp. The head constable was instructed to make the necessary determinations and to take any precautionary measures (with regard to closing the camp, etc.). Since I was not aware of typhus in the communal camp until then, I could not give any information and assured him that after the visit of the SS garrison physician and gentlemen from the Bielitz Health Office to the communal camp, he would receive more detailed information."

3. Letter from the State Health Office for the Bielitz District to the Commandant of the Auschwitz CC with the subject "Typhus". RGVA, 502-1-332, pp. 148-148a.
"In the last few days, 3 certain cases of typhus, as well as a suspected case in this respect among workers of the Huta & Lenz communal camp, located on the grounds of the SS camp area, came under observation."
Instructions for preventing the spread of infection follow.

Letter from the Auschwitz CC headquarters to the Central Construction Office. RGVA. 502-1-332, p. 146.
"By order of the garrison physician and the Bielitz Health Office, as a result of cases of typhus that have occurred, as of Saturday, July 4, 1942, that is, with immediate effect until further notice, all civilian workers of the Construction Office may no longer leave the Auschwitz Camp."

Letter from the Central Construction Office to the SS-WVHA, the Chief of Office C V, with the subject "Camp Closure for Civilian Workers". RGVA, 502-1-332, p. 144.
"The Central Construction Office here informs that, by order of the garrison physician of the Auschwitz CC and the Bielitz Health Office, as a result of cases of typhus which have occurred, a camp closure has come into effect as of 4 July 1942 for all civilian workers employed on construction projects of the Central Construction Office. The camp closure is expected to last 6 to 8 weeks."

Letter from the Central Construction Office to the Auschwitz CC administration with the subject "Construction application for the erection of a chimney at the crematorium". RGVA, 502-1-312, p. 32.
"The Central Construction Office encloses the construction application for the erection of a chimney at the crematorium of the CC with the request to forward the same to the responsible Office Group of the SS Economic and Administrative Main Office."

Central Construction Office. "Explanatory report for the construction of a new chimney at the crematorium of the Concentration Camp Auschwitz U/S." RGVA, 502-1-312, p. 34.
"The chimney is square and has a clear cross-section of 90 x 90 cm. The chimney foundation, the base as well as the chimney shaft will be made of well-fired bricks and will be erected on a 3.60 x 3.60 m 1.00 m thick concrete slab. The inner protective lining is made of firebricks up to the height of the base, otherwise it is made of selected hard-fired bricks. The outer elevation surfaces of the chimney will be grouted. Furthermore, risers, resting irons and a lightning conductor are installed on one outer side. From the furnaces to the chimney, a flue with a clear width of 70 x 70 cm will be made and will

receive a 12 cm thick firebrick protective lining on the inside."

Central Construction Office. "Cost Estimate. For the construction of a new chimney at the crematorium of the Auschwitz U.S. Concentration Camp." Total sum: RM 11,500. — RGVA, 502-1-312, p. 35-36.

Central Construction Office. "Construction material extract for the erection of a new chimney at the crematorium of the Concentration Camp Auschwitz U/S.". — RGVA, 502-1-312, p. 37.
"1.) 24200 pieces of hard-fire bricks.
2). 4500 kg of cement
3) 6 m³ slaked lime
4) 7200 pieces of fireclay bricks
5.) 2700 kg fireclay powder
6.) 600 kg of construction iron."

SS New Construction Office Auschwitz CC. Work card. Order No. 1702. BW 11. — RGVA, 502-2-1, p. 67.
"Subject: Production of 37 pieces of crampons Ø 25 mm
6 pieces frames
1 piece double end flap.
Applicant: chimney crematorium, Koehler Comp.
Started: 2 July 1942. Finished: 6 July 1942."

A circular is issued ordering all SS guards to be vaccinated against typhus and paratyphoid fever on given dates. — Frei, p. 147

4. Central Construction Office. "Material requirements for chimney construction (old crematorium stock)". — RGVA, 502-1-318, p. 71.
"24210 pieces of bricks (red hot-fired).
6 m³ lime (slaked)
4400 kg cement
20 m³ sand
19 m³ gravel
27000 normal fireclay bricks (25 x 12 x 6,5 cm S.[eger]*C.*[ones] *No. 26-29)*
2700 kg fireclay mortar
70 pieces of crampons
6 pieces of resting irons
1 piece of iron double end flap."

The J.A. Topf & Sons company, Erfurt, requests the Main Office Budget and Construction[4] to "settle the balance on our invoice of 16 Dec. 41 = RM 3,868.10." — RGVA, 502-1-327, p. 105.

5. Letter from the Central Construction Office to the Auschwitz CC with the subject "Camp Closure for Civilian Workers". — RGVA, 502-1-332, p. 147.
"The above office reports the execution of the camp lockdown for civilian workers which was carried out in the course of today. Those workers who have not yet been living in the camp area are housed in the PoW camp, Construction Section I. All other workers are living in the previous accommodations until the detoxification agent is procured and delousing is possible. Delousing and fumigation will be carried out as quickly as possible in consultation with the garrison physician."

6. The company M. Trüstedt KG from Berlin-Hanover sends the administration of the Auschwitz CC further documentation "about the 'bone defatting device' factory no. 775 or 775A delivered to you." — GARF, 7021-108-44, p. 6.

Central Construction Office. "Report of SS-Oberscharführer Pollok in the capacity — RGVA, 502-1-312,

[4] On February 1, 1942, this office was merged with the Main Office of Administration and Economy to form the SS-*Wirtschafts- und Verwaltungshauptamt* (SS-WVHA).

of specialist in matters of building inspection". p. 29.
"During the supervision of the construction work on the crematorium, it was found that the old chimney has developed new cracks in the horizontal as well as vertical direction, which must lead to the collapse of the chimney. This is due to the fact that the chimney continued to be excessively stressed, despite the fact that the Central Construction Office of the Waffen-SS and Police, by letter dated June 4, 1942, Corr.Reg. No. 8195/42/Po/Qu. to the headquarters of the CC forbade the use of the same.
I request the head of the Central Construction Office to again prohibit the further use of the chimney and to arrange that the chimney be removed immediately, as otherwise unforeseeable consequences may result."

The Jewish prisoner Benjamin Beressy, registration number 114941, is admitted to the prisoner infirmary of Auschwitz CC with the diagnosis "pulmonary TBC fibrocaseosa incipiens". The prisoner dies about three months later on April 8, 1944. 12 fever curves and other reports describe the course of the disease day by day. On April 4, 1944, the 1st camp physician of Auschwitz CC performs the "dissection of the corpses of Gr. Jew Prisoner No. 114941 Beressy Benjamin, Irs. Born – May 1917 in Saloniki": Hoerlein Document No. 215.
"Cause of death: destructive pulmonary TB of the larynx and intestinal tuberculosis in a cachectic individual."

A special headquarters order mentions that a new camp adjutant was appointed, and SS-Obersturmführer Mulka was appointed staff commander at Auschwitz CC. Frei, p. 148

7. Garrison Order No. 16/42 reiterates the prohibition against parking bicycles anywhere other than in racks. Frei, p. 149

8. Central Construction Office. "PoW camp Auschwitz. Occupancy". VMM, HC.

"a.) Quarantine Camp

30 pcs. brick barracks	@ 700 men	=	21,000 inmates
24 ″ horse-stable barracks (with beds)	@ 300 ″	=	7,200 - ″ -
a.) quarantine camp		=	8,200 inmates
b.) 288 pcs. horse-stable barracks (with cots)	@ 430 men	=	123,840 inmates
b.) Main camp		=	123,840 inmates

Total occupancy:

a) quarantine camp	28,200 inmates
b) Main camp	123,840 - ″ -
Together	152,040 inmates

Barracks camp for the troop		
10 barracks	@ 80 men	800 men"

Central Construction Office. "Site Plan of the Auschwitz Prisoner-of-War Camp." Plan No. 1453. J.-C. Pressac suggests a probable date of June 6, 1942 (1989, p. 195), but a comparison of this site plan with the one dated August 15, 1942, shows that it is site plan No. 1453, mentioned in the letter from the Central Construction Office to the SS-WVHA, Chief of Office C V, with the subject "Auschwitz POW Camp, Site Plan," dated August 3, 1942. The camp is divided into three unnamed sections, and only the future Crematorium II is marked. APMO, BW 2/4, Neg. No. 21135/3.

Schlesische Industriebau Lenz & Co., "Report of Wednesday, July 8, 1942. Construction site: Auschwitz PoW camp". Preprinted sheet with pencil inscription. "1 Pg [*Poliergeselle*, assistant mason] + 2 M[*aurer*, bricklayer] bricking in the door in gas chamber." Bartosik, Doc. 8 [8a], pp. 65f.

Full handwritten sheet headed "Wednesday, July 8, 1942":
"1 Pg – 2 M. Brick in doors in gas chamber."
Remarks: The note refers to the fumigation gas chamber of disinfestation barrack 2, BW 5b, of PoW camp. Bartosik *et al*. misinterpret this as "in 2 gas chamber", which they then meaninglessly change to "*druga komora gazowa*", "the second gas chamber", which according to them points to the alleged "Bunker 2".

A circular announces a sick-leave replacement for a department head. Frei, p. 149

A special headquarters order bans all SS members from entering Auschwitz. Frei, p. 150

10. Letter from the Central Construction Office to the Construction Office of the Waffen-SS and Police Stutthof-Danzig with the subject "New construction of a crematorium for Stutthof CC". RGVA, 502-1-272, p. 168.
"Enclosed are the plans for a crematorium for 30,000 inmates. The plant is equipped with 5 pieces of three-muffle incinerators. According to the Topf & Sons Erfurt company, one incineration takes about 1/2 hour. The basements are being elevated because of the high groundwater level at the site. Concerning the technical equipment, it is suggested to contact the Topf & Sons Erfurt company."

Letter from the District President of Kattowitz, without addressee, with the subject "Typhus disease in the district of Bielitz". APK, RK 319, pp. 142-144.
"So far, a total of 15 cases of typhus have been found among the population of the Bielitz District, all of which must be traced back to the concentration camp in Auschwitz as the source of infection, namely, members of the 900-strong work-force employed in the concentration camp as part of various construction and installation firms. It was noted on this occasion that the camp is currently afflicted by a more severe epidemic of typhus."
Instructions are given to contain the epidemic.

Garrison Order No. 17/42 bans all SS men and their families from entering the town of Auschwitz and calls for official stays in the town to be limited "to the minimum possible." Frei, p. 150

12. I.G. Farbenindustrie A.G. "Weekly Report No. 58/59 for the Period 29 May -12 July 1942". NI-14512
"9 July Meeting with O'stf. Schwarz about prisoner deployment. The latter is currently suffering greatly from the fact that, due to the latest order, all Poles are being removed from CC A[uschwit]*z and placed in camps in the Old Reich. Jews from all European countries are taking their place. Their number is to be increased to about 100,000. As a result, different workers are used at the various construction sites almost every day. The various abuses also came up. They are absolutely condemned on the part of the camp management, and there are strict orders to refrain from any mistreatment or other measures that may undermine the inmates' ability to work. Immediate reporting of all such occurrences was requested so that the possibility of immediate intervention would be given."*

13. Central Construction Office. "Explanatory report on the erection of temporary delousing buildings, as well as erection of 4 so-called horse-stable barracks (type 260/9 OKH) as effects chambers for the Concentration Camp Auschwitz U/S." RGVA, 502-2-148, pp. 5-6; *ibid.*, pp. 7-9.
"On the existing site are to be erected:
I. Buildings: BW 28, prov. delousing building and 4 horse-stable barracks. […]
One building serves exclusively as delousing while the other building is set up as a warehouse. […]
Since there was no delousing plant in the CC, the provisional delousing buildings and the barracks for the effects had to be built without fail for the current admissions. These provisional buildings will be demolished after completion of the planned reception building with delousing."
The corresponding cost estimate, also dated July 13, 1942, provides for a total expenditure of RM 88,000.
Dimensions of the delousing building:
"a) Admission with delousing:
Floor area:
Admission: (40.00 x 11.66 + 11.50 x 5.00) = 523.90 m².
Delousing: 16.00 x 9.25 = 148.00 m²."

Garrison Order No. 18/42 recalls that certain uniform items may only be worn on duty above a certain rank. Frei, pp. 150f.

14. Letter from the Central Construction Office to the Upper Silesian Mining and Metallurgical Association, Kattowitz, with the subject "Information on Upper Silesian Hard Coal". RGVA, 502-1-138, p. 508.

"The local construction office requests the following information soon:
1.) Water content of bituminous and gas-flame coal.
2.) Ash content of the fuel.
3.) Volatile matter of the fuel.
4.) Fuel grain size (for high-pressure boilers).
5) Slag melting point.
6.) Slag softening point.
Furthermore, information, if possible with a site plan, on the coal mines nearest to Auschwitz, which can supply a daily requirement of approx. 50 t of the above coal on an ongoing basis."

15. Central Construction Office. "Explanatory Report on the Provisional Extension of the Auschwitz U/S Concentration Camp" and the accompanying "Cost Estimate for the Provisional Extension of the Auschwitz U/S Concentration Camp ". The report deals with the planning and construction of the Auschwitz camp in the second year of the war: RGVA, 502-1-223, pp. 1-22.

"By order of the Reichsführer-SS and Chief of the German Police, a concentration camp for 30,000 prisoners for the time being is to be built on the site of the former Polish artillery barracks in Auschwitz U/S. At the same time, agric. Farms are to be built up. […]
The groundwater varies between 1.00 -2.50 m depending on the ground level. […]
The existing structures were rebuilt or repaired as inmate lodgings with ancillary facilities, temporary headquarters, crew quarters, prisoner workshops, etc. […]
I Structures:
a) Existing buildings, (current purpose,) on which repair and reconstruction work, as well as repair of war damage was carried out:
1) BW 4 prov. prisoner infirmary building.
2) " 5 " prisoner cell building
3) " 11 " crematorium (formerly bunker)
4) " 12 " prisoner effects chamber building
5) " 13 " commandant's office building
6) " 14 " SS quarter and canteen building
7) " 17A " crew building 1
8) " 17B " " " 2
9) " 19 " prisoner workshop barracks."
10-26: BW 20A -20R inmate lodging buildings 1-17.
27) BW 30A prov. motor vehicle workshop barracks
28) " 35 prov. school building with kindergarten
b) newly <u>erected</u> structures
29) BW 6 prov. main guardhouse
30) " 7A " block leaders' lodging barracks.
31) " 18 " motor vehicle hall
32) " 42 " prisoners' kitchen barracks.
II. outdoor facilities
(a) Existing facilities, (current use) on which repairs and improvements were made:
33) BW 9 sewer system
34) " 23A prov. transformer station
35) " 33A " barn facilities.
36) " 50 " construction yard.
(b) newly <u>erected</u> facilities:
37) BW 8 prov. watchtowers
38) " 21 " road paving
39) " 26A " field barn

40) " 29 prov. water-supply plant
41) " 34 " bathing facility on the Sola River
42) " 41 " protective custody enclosure and prov. industrial yard enclosure
43) " 49 prov. electr. outdoor facilities.
To be added:
44) " 27 extension and repair of existing dwellings for married headquarter staff. […] *prov. crematorium: installation in a former bunker, with 2 double furnaces, morgue, etc."*
Total cost: RM 2,026,000.

RGVA, 502-1-220, pp. 1-52.

Central Construction Office. "Explanatory Report for the Construction Project Concentration Camp Auschwitz U/S" and accompanying "Estimate for the Construction Project Concentration Camp Auschwitz U/S". The report concerns the planning and construction of the Auschwitz camp in the third year of the war economy:
"By order of the Reichsführer-SS and Chief of the German Police, a concentration camp for 30,000 prisoners for the time being is to be built on the site of the former Polish artillery barracks in Auschwitz U/S. […]
The soil conditions are relatively good. Under the approximately 30 cm thick humus scar loam emerges and after approx. 2.00 m sand and gravel, which should be used if possible. The groundwater level varies between 1.00-2.50 m depending on the elevation of the terrain."
The document lists the following structures in this order:
<u>I. Temporary structures (buildings and outdoor facilities)</u>
<u>a) Buildings</u>
1. BW 4 – inmate lodging building
2. BW 5 – prisoner cell building
3. BW 12 – prisoner effects storage building
4. BW 13 – headquarters' building
5. BW 17A – crew building 1
6. BW 17b – crew building 2
7. BW 14 – SS quarter and canteen building
8. BW 36A – officers' mess
9. BW 27 – residences for married NCOs
10. BW 36B – residences for married officers and officers' quarters
11. BW 11 – crematorium
<u>b) Outdoor facilities</u>
12. BW 67 – SS quarters, riding hall and cattle stables in the former Prag works in Birkenau
13. BW 39 – SS quarters outside the camp area
14. BW 23A – transformer station
15. BW 21 – road construction
16. BW 29 – water-supply plant
17. BW 49 – overhead power line network
18. BW 44 – sports field facility
19. BW 45 – shooting range facility
20. BW 54 – gardening facilities
<u>II. Temporary structures (buildings and outdoor facilities)</u>
<u>c) Buildings</u>
21. BW 7B – block leader's barrack
22. BW 24 – commandant's residence
23. BW 36C – extension of an existing building shell
24. BW 40 – SS lodgings "Deutsches Haus"

25. BW 33B – slaughterhouse extension
26. BW 18 – garage extension for headquarters
27. BW 30B – fuel station for headquarters
28. BW 28 – reception barracks with delousing and 4 effects barracks
29. BW 42 – prisoner kitchen extension
30. BW 17C – 4 crew barracks for headquarters
31. BW 17D/1 – staff and crew barracks
32. BW 17D/2-13 – 12 crew barracks, 4 wash and 4 toilet barracks for the guard troops
33. BW 36D – 4 officers' lodging barracks
34. BW 43 – inmate canteen barracks
35. BW 172 – utility barracks for the guard troops
36. BW 59 – 12 barracks for storing prisoner effects, etc.
37. BW 60 – 2 barracks to house prisoner electricians, etc.
38. BW 38 – vehicle and equipment hall
39. BW 3 – women's branch camp

d) Outdoor facilities

40. BW 8 – watchtowers
41. BW 55 – 2 living and working barracks
42. BW 56 – 3 lodging barracks for labor comm.
43. BW 57 – 2 RAD dormitories
44. BW 58 – 5 barracks for special treatment of prisoners
45. BW 77 – lodging barracks for dog squadrons
46. BW 161 – district heating plant
47. BW 209 – temporary bridge over the Sola river

III. Final structures

a) Buildings

48. BW 7A – Inmate lodging building 41
49-65. BW 20A-R – Inmate lodging building 1-17
66. BW 100 – Inmate lodging building 18
67-73. BW 101-107 – Inmate lodging building 19-25
74-78. BW 116-120 – Inmate lodging building 26-30
79-83. BW 125-129 – Inmate lodging building 31-35
84-88. BW 134- 138 – Inmate lodging building 36-40
89-93. BW 157A, B. C. D, E – Inmate protective custody building 1-5.
94. BW 158 – protective-custody camp entrance building,
95. BW 160 – laundry and reception building with delousing facility and prisoner baths
96. BW 173 – commandant's office and headquarters accommodation building,
97. BW 31 – service building for the headquarters.

b) Outside facilities

98. BW 9 – sewerage system
99. BW 21 – road construction
100. BW 23B – emergency generator building
101. BW 29 – water-supply plant
102. BW 41 – protective custody enclosure
103. BW 49 – electrical feeders
104. BW 200 – 5 watchtowers
105. BW 201 – main sewer with sewage treatment plant
106. BW 202 – alarm system
107. BW 203 – lightning protection system

108. BW 204 – telephone system
109. BW 205 – command system
110. BW 206 – fire extinguishing system
111. BW 207 – 2 sauna systems
112. BW 210 – enclosures
113. BW 211 – transformer station.

The total cost is RM 20,600,000, which was corrected to 20,000,000 with pen. For each individual structure, Bischoff prepares a "cost estimate" with "construction description" and "site sketch" between July 15 and August 4, 1942 (RGVA, 502-1-319, incomplete documentation).

16. The head of the Auschwitz CC administration sends to the Bielitz Technical Inspection Agency (*Technischer Überwachungsverein*, TÜV) the documentation received from M. Trüstedt on July 7, 1942, on the "Bone Defatting Device, Factory No. 775 or 775A." with the request for permission to put the device into operation. GARF, 7021-108-44, p. 5; *ibid.*, p. 4

Subsequent correspondence:
- Letter from TÜV Breslau to the Auschwitz CC with the subject "Bone Defatting Device, Factory No. 775 or 775A" (September 15, 1942). *Ibid.*, p. 3
- Letters from the head of the administration of the TÜV Breslau and to TÜV Breslau itself with the same subject (October 22, 1942). *Ibid.*, p. 2

The correspondence concerns the technical testing of the device.

Radio message from SS-WVHA to Auschwitz CC administration. TNA. HW 16-20. ZIP/GPDD 168/23.7.42, n.13.
"1). The unusable Jewish clothing produced there is still to be handed over to the SS Clothing Works LUBLIN. (See on D IV/32634 4 … groups missed … 21 May 42). For the … rest missed …"

Headquarters Order No. 12/42 reports a new administrative head of the camp; appoints a new commanding officer "Buna"; reports on a collection of donations for the Red Cross; admonishes saluting at the memorial for fallen comrades in Berlin; orders a ceiling on flower orders at RM 5.-; forbids swimming, washing, watering cattle in the Sola River from the camp downstream, as well as drawing water from it, because of suspicion of typhus; forbids entering fields off-duty; explains rules of conduct for on-call duty; cites an order by Himmler on the wearing of collar patches; exhorts compliance with set deadlines; announces that SS men punished with curfew must stay within the large chain of posts; schedules a staff company roll call; and lists some found and lost objects. Frei, pp. 151-154

A circular schedules an officers' meeting. Frei, p. 154

17. Central Construction Office, "Auschwitz Concentration Camp, barracks distribution". Barracks are divided into "use", "type", "required" (72), "erected" (25), "to be erected" (47), "stored" (5), "missing" (42). >RGVA, 502-1-275, pp. 237, 239.

Barracks for 20 BW are listed, of which a total of 72 "required", including:

"Use	*type*	*requ.*	*erected*	*to be er.*	*stored*	*missing*
Special treatment	*260/9*	*5*	*3*	*2*	*/*	*2*
effects barracks at prov. delousing	*260/9*	*4*	*4*	*/*	*/*	*/"*

A circular letter schedules a meeting of all officers of the Auschwitz garrison. Frei, pp. 154f.

20. Central Construction Office, House Decree No. 40. RGVA, 502-1-25, p. 61.
"By order of the camp commandant, the entire camp has been locked down with imme-

diate effect due to danger of typhus. No SS member or civilian employee of the Central Construction Office is therefore allowed to leave the camp."

Response of Oberschlesisches Steinkohlen-Syndikat Ltd., Technical Department, to the inquiry of the Central Construction Office dated July 14, 1942: RGVA, 502-1-138, pp. 506-506a.
"We assume that flame coals in the smaller assortments Nut III, Nut IV and fine coals are to be used in your boilers, and below give you indicative figures in answer to the questions you have asked.

	Nut III/IV	*fine*
grain size	*10/20, 20/30 mm*	*0-10 mm*
water	*8-12%*	*10-14%*
ash	*7-10%*	*10-15%*
vol. compo-nents	*35-40%*	*33-38%*

Unfortunately, we cannot give you an precise information about the melting behavior of the ash. The ashes generally melt between 12 – 1300°C [sic], *with the softening point and yield point not far apart."*

21. Letter from the Central Construction Office to the SS-WVHA, Chief of Office C V, with the subject "monthly petroleum need". The monthly petroleum need for PoW camp and the CC is 5,700 liters. RGVA, 502-1-265, p. 412.

Letter from Prof. Dr. A. Hase, Berlin Dahlem, Biological Reich Institute for Agriculture and Forestry, to Umluft Apparatebau Ltd., Berlin-Charlottenburg: RGVA, 502-1-332, p. 30.
"In the Brandenburg-Görden labor camp, there is a two-chamber delousing device which was manufactured by the Umluft Apparatebau Ltd. I conducted practical delousing tests with this device on March 25, 42, and May 1, 42, under exactly the same conditions as those prevailing during practical delousing. The device met the requirements; within one hour of operation, from chamber closure to chamber opening, all lice and lice eggs were destroyed by the heat effect, provided that the packing was carried out according to instructions.

23. Letter from the Central Construction Office to the SS-WVHA, Office C V: RGVA, 502- 1-332, p. 143.
"With reference to the letter here of July 3, 1942 Corr.Reg. No. 10158/42/Bi/Th., the Central Construction Office informs the Waffen-SS and Auschwitz Police that the camp lockdown imposed as a result of typhus has now been extended to the entire camp by Garrison Order No. 19/42 of July 23, 1942."

Auschwitz CC Headquarters. Garrison Order No. 19/42. RGVA, 502-1-66, pp. 219-221. Frei, pp. 155-157
"On account of the cases of typhus which have reappeared in the area of the Auschwitz Concentration Camp, the following is ordered in order to combat the epidemic:
1.) A complete camp lockdown is imposed. All SS members living within the large chain of posts are not allowed to leave the camp area. […]
5.) An immediate ban on leave is ordered for all SS members, officers and men. […]
7.) Out-of-town visits to departments are to be avoided or, if urgent, to be handled in the house of the Waffen-SS. In any case, visitors who have official business here may be received only in the rooms of the heads of service (commandant, administrative officer, site manager, head of construction, and also in the main utility camp area, etc.). They have to leave the camp on a direct way without staying.
8) The civilian workers employed by the Construction Office may leave and re-enter the camp for the purpose of working on the construction sites in question only at the checkpoints of the Hutta-Lenz [sic] *communal camp, but only in closed formation, and accompanied by SS members which are provided by the Construction Office to accompany these work parties.*
9.) Release and transfer of prisoners to other camps must be postponed until the lockdown is lifted."

Central Construction Office. Radio message to WVHA, head of Office Group C. VMM, HC.

"Report completion of I. Construction Section at POW camp for an occupant strength of 30,000 men."

Central Construction Office. Radio message to WVHA, head of Office Group C. VMM, HC.
"In response to telex no. 90 of 22 June 42, it is reported that the following barracks are still needed to house 125,000 POWs:
124 horse-stable barracks type 260/9 OKH
10 RAD barracks type IV/3 as infirmary barracks
21 utility barracks type VII/5 RAD.
Detailed report to follow."

24. Letter from the District President of Kattowitz, without addressee, with the subject "Typhus illnesses in the Auschwitz Concentration Camp". APK, OPK, 2176, pp. 107-109.
The epidemic spread among the camp inmates and also affected 21 members of the SS guards, who were admitted to the reserve hospital in Kattowitz. Special measures were taken to prevent the spread of the disease:
"Unconditional camp lockdown for SS members, free workers and employees, and prisoners. Release from the camp may take place only after proper delousing and subsequent 3-week quarantine."
Prohibition of employment of prisoners outside the camp as well as strict quarantine, and prohibition of work for civilian workers.

Letter from Robert Koehler, civil engineer, to the Central Construction Office with the subject "Chimney construction at crematorium BW 1(1 CC)". The total price for the construction of the new chimney is RM 2,790. RGVA, 502-2-23, p. 13.

25. Garrison Order No. 19a/42 orders reinforced garrison patrols, exhorts use of shortest routes, and requires civilian workers to wear a green armband even outside the large chain of posts. Frei, p. 157

In Garrison Order No. 21/42, Höss orders that he alone decide on requests for leave. Frei, pp. 157f.

26. I.G. Farbenindustrie A.G. "Weekly Report No. 60/61 for the Period July 13-July 26, 1942." NI-14551.
"18 July. Visit of the Reichsführer SS with a large entourage, including Obergruppenführer Schmauser and Obersturmbannführer Höss, to whom the Reichsführer SS personally delivered his promotion to Obersturmbannführer. The Reichsführer was greeted at the Feierabendhaus *by the undersigned. We then drove to the power station and gave the high visitor an overview of the entire plant from the high bunker platform. The entire plant was explained on the basis of a site plan provided for this purpose. The Reichsführer inquired about the probable startup dates, which were given as May to August 1943.* […]
July 20: Obersturmführer Schwarz, head of labor deployment, announces that as of July 21, no more prisoners will be allowed to work on the plant grounds, since a camp lockdown had to be imposed due to the danger of infection. The duration of this lockdown cannot yet be predicted."

29. Radio message No. 113. Sending agency: WVHA, to Auschwitz CC. AGK, NTN, 94, p. 168. Transcript. NO-2361.
"Permission to travel by truck from Auschwitz to Dessau is hereby granted to pick up gas that is urgently required for the disinfection [sic] *of the camp."*
Signed by Glücks, SS Brigadeführer and Major General of the Waffen-SS.

30. Letter from the Central Construction Office to the Reich railway administration in Oppeln with the subject "New construction of a private siding for the concentration camp of the Waffen-SS in Auschwitz with connection to Auschwitz station": RGVA, 502-1-186, pp. 284-285.
"By order of the Reichsführer-SS and Chief of the German Police, a large prisoner-of-war camp has been built south-west of Auschwitz Station (Birkenau). For some time

now, transports of prisoners of war have been brought in continuously, and these are unloaded on the station premises. In order to relieve the operation of the station, the Central Construction Office considered the construction of a new siding to the prisoner-of-war camp in the spring of 1942. Plans were drawn up, and an application for this was also submitted to the Reich railway administration Oppeln. However, the construction of this track failed due to the impossibility of obtaining the necessary quotas, and was therefore abandoned. The number of prisoner transports has recently increased considerably, and a further increase is to be expected, so that the danger of overloading the station is to be expected. The Central Construction Office is therefore again considering the construction of a new siding to the POW camp […].
In addition to prisoner-of-war transports, construction material, foodstuffs, furnishings and the like would also have to be transported on this track. A permanent workforce of 150,000 people is to be expected."

31. "Cost estimate for the new construction of the laundry and reception building with delousing facility and prisoners' bath at the Concentration Camp Auschwitz U/S, written by the head of the Central Construction Office. Total costs: 1,100,000 RM. Attached is the corresponding site plan. RGVA, 502-1-319, pp. 129-130.

August 1942

[1.] Central Construction Office. "Activity Report of SS-Strm. Lubitz, Construction Foreman Dept. Structural Engineering. Month of July 1942." RGVA,502-1-27, pp. 15-17.
Work carried out in structures: BW 7a (prov. headquarters), 20 Q, M, O (adding floors in men's CC), BW 20 L, K (adding floors in women's CC), BW 64 (Raisko greenhouse), BW 33C (Raisko nursery), BW 11 "(chimney at crematorium) chimney walls completed. Channel excavated and bricked. Old chimney torn down. Demolition material hauled away.", BW 106, 107, 104 (new building at men's CC), BW 65A (duck rearing Harmense), BW 65E (herd-book stables Harmense), BW 26B (barns in Budy), BW 13 (headquarters).

2. Central Construction Office, "Activity Report of the Motor Pool of the Central Construction Office of the Waffen-SS and Police Auschwitz for the Month of July 1942". RGVA 502-1-181, pp. 271-179.
"Vehicle deployment (summary)

vehicle deployment daily on average	*13-14 trucks*
total trips in the above period	*2436*
kilometers driven " " "	*11709*
Fuel consumed " " "	*gasoline 1497*
	diesel 3590 = 4987"

A detailed report follows.

Letter from the Central Construction Office to the company "Huta" above- and below-ground construction AG, Kattowitz, with the subject "New crematorium building: static calculation": RGVA, 502-1-313, p. 164.
"Enclosed are the plans for the new building of the crematorium for the purpose of preparing the static calculation."
The plans in question are nos. 936, 1173/74, 934, 980, 933, 1311, 932, 1301 and 1341.

3. Letter from the Central Construction Office to the SS-WVHA, the Chief of Office C V, with the subject "Auschwitz POW Camp, Site Plan": GARF, 7021-108-32, p. 37.
"Enclosed is the new site plan of the Auschwitz Prisoner-of-War Camp according to the latest status with regard to occupant strength and the barracks provided or requested, in duplicate. The planning was carried out according to the originally approved plan no. 2 of October 15, 1941, in which only masonry barracks were planned, and submit-

ted with plan no. 885 of January 6, 42 for the G.B. building permit.
Since in the meantime the occupancy rate had increased and various other considerations had to be taken into account, the enclosed site plan No. 1453 of 8 July 42 was revised, which additionally contains the following barracks:
1.) Construction Section I (quarantine camp)
24 lodging barracks
2 infirmary barracks
1 storage barracks
2) Construction Sections II and III
36 lodging barracks each
4 laundry barracks each
4 infirmary barracks each.
In addition, the location for the new crematorium was determined adjacent to the quarantine camp.
The extension of the planning was submitted to the Head of Office Group C SS-Brigadeführer and Major General of the Waffen-SS Dr. Ing. Kammler on the occasion of the Reichsführer's visit on July 17 and 18, 1942, and he is requested to make the appropriate note of approval on 1 copy of the enclosed site plan, and to return the same as soon as possible."

Central Construction Office. "File memo on the acceptance of the drainage works in Construction Section I of the PoW camp." The work has been completed, and no defects were found. RGVA, 502-2-24, p. 213.

The accounting books of the Tesch & Stabenow company in Hamburg show a delivery of 495 kg of Zyklon B to Auschwitz CC, corresponding to a value of RM 3,133. TNA, WO 309-1603.

4. Central Construction Office. "Construction Report for the Month of July 1942." RGVA, 502-1-24, pp. 179-185.
"There were about 930 civilian workers, 8530 male prisoners, 3200 female prisoners, 45 carts, 14 motor vehicles [and other machinery] *in use at the end of the month."*
I. Auschwitz Concentration Camp Construction Project
a) Protective-custody camps
BW 106, 107, 104: inmate lodging buildings,
BW 20 L, K: adding floor to inmate lodgings in the women's CC
BW M, O, Q: adding floor to inmate lodgings in the men's C
BW 7 A: inmate lodging building
Other accommodations in the protective-custody camp
b) Extension of the protective-custody camp
BW 118, 125, 134,135, 136, 137, 138: inmate lodging buildings
BW 160: laundry and reception building with delousing facility
c) Other buildings
"<u>BW 11 Crematorium.</u> Completion of the new chimney and demolition of the damaged one, as well as removal of the rubble. Currently, construction of the new connecting flue."
BW 36 C: residential extension for the head of economic operations.
BW 33 C: slaughterhouse extension
BW 13: prov. headquarters building
BW 173: headquarters building
BW 21: road construction
BW 29: water supply
BW 9: sewerage
BW 201: stormwater & main collection sewer with treatment plant & digester-gas extraction plant
BW 23 B: backup generator

BW 23 A: transformer station
II. Construction Project Agricultural Farms
BW 26 B: field barns
BW 64: farm barns
BW 33 C: nursery with greenhouse in Raisko
BW 64: large greenhouse facility
BW 65 A-E: duck and poultry-breeding barns in Harmense
BW 71: Auschwitz stable yard (16 stable barracks)
III. Construction Project Prisoner-of-War Camp Auschwitz
"At the quarantine camp (I. Construction Section), the remaining of the additional 24 horse-stable barracks and 2 infirmary barracks have been completed. There, cots have been partly installed. Outside, 1 RAD. barrack was erected for the block leaders.
In Construction Section II, 126 barracks have been erected so far, as well as 18 wash and toilet barracks, and the foundations for the supply and laundry barracks are in progress. Of the lodging barracks for the guard troops, 5 have been erected so far and are in the process of being completed; the foundations for 5 others have been completed, and they are currently being erected. Work on the access and camp roads, on the fencing and on the overall drainage, including the main ditch, continued. The entrance and parking area was started. Cement-tube wells were constructed for the water supply. Drainage pipes for wash and toilet barracks are in progress, as well as receiving trenches for drainage.
At the crematorium, excavation work has been completed. The middle section is finished up to the ground-floor slab. The leveling layer for the concrete basin of the morgue has been placed."
IV. Construction Yard Auschwitz
BW 37 B/C: construction-office barracks and accommodation
BW 50: 2 storage barracks
workshops (joinery, locksmith's shop, carpentry, painting, glazier's shop, motor pool).
concrete workshops
siding to the construction yard
Surveying.

Headquarters Order no. 13/42 issues a commendation for an honest finder of cash; reports the formation of a guard-dog squadron; deals with the allotment of tobacco products; cites an appeal by Himmler to female members of SS to volunteer for youth work with the NS *Frauenschaft* (National Socialist Women's Association); orders that cars be requested at least 24 hours before deployment; mentions changed mail collection times; deplores service bicycles that have been neglected and looted for parts, sets countermeasures, and mentions a stolen service bicycle; ends chamber exchange of dirty or damaged uniform parts and prohibits wearing dress uniforms to duty; promulgates conduct for leaders of field commands, especially during inspections; recalls ban on unofficial photographing of executions, and orders confiscation and destruction of existing unofficial photographs; prohibits arm-hooking with females during daytime; and mentions seven found and two lost objects. Frei, pp. 158-161

6. Letter from the District President of Kattowitz to the District Administrator in Bielitz with the subject "Typhus epidemic in the Auschwitz Concentration Camp". The "approximately 1000 free civilian workers" must be quarantined in the camp area. RGVA, 502-1-332, p. 140.

The accounting books of the Tesch & Stabenow company in Hamburg show a delivery of 1,756.8 kg of Zyklon B to Auschwitz CC, corresponding to a value of RM 11,120. TNA, WO 309-1603.

7. Headquarters Order No. 14/42 reports the installation of SS-Hauptsturmführer Mulka as camp adjutant. Frei, p. 161

8. Circular letter of the WVHA to all Construction Inspectorates, Central Construction Offices and Construction Offices in the territory of the Reich with the subject "Urgency Indicator for the Erection of Barracks". The regulations of the G.B.Bau decree of 19 May 1945 have changed: RGVA, 502-1-5, p. 37.

"It is therefore necessary to apply for a new Urgent-Construction Indicator for the erection of barracks for all barracks erected after 10 May 1942. The application must be made through Office C V, Central Construction Inspection, by the Construction Offices. It shall include:
(a) the number and type of barracks to be erected
b) value of the barracks and amount of the construction costs
c) vendor and old construction-urgency code, if known to the Construction Office.
d) place of erection
e) military district in which the installation site is located,
f) exact address of the user,
g) a statement that the barracks are available,
(h) statement of the number of the construction order."

12. Auschwitz CC Headquarters. Special order. RGVA, 502-1-32, p. 300. Frei, pp. 161f.
"A case of illness which occurred today with slight symptoms of poisoning by hydrogen cyanide gives reason to announce to all those involved in fumigations and to all other SS members that, in particular when opening the fumigated rooms, SS members without masks must keep a distance of 15 meters from the chamber for at least 5 hours. Special attention must be paid to the direction of the wind.
The gas now used contains fewer odorous substances and is therefore particularly dangerous.
The SS garrison physician Auschwitz declines responsibility for accidents occurring in cases where SS members do not follow these guidelines.
Signed: Höss, SS-Obersturmbannführer and Commandant."

Konrad Segnitz-Baugeschäft receives order no. 56 from the Central Construction Office for "Auschwitz CC BW: 30 Vollmar roof trusses". RGVA, 502-1-313, p. 158.

Central Construction Office. File memo with the subject "Meeting of heads of construction at SS-H'stuf. Bischoff on 11 Aug. 1942". RGVA, 502-1-19, p. 67.
"1. The use of motor vehicles is to be reduced to the minimum due to a shortage of fuel, and since there is little prospect of its allocation at present. […]
3. it is forbidden to transport sand, gravel, rubble, old wood and fence slats by truck. Horse-drawn vehicles shall be used to transport these construction materials in order to save fuel."

13. Central Construction Office. File memo with the subject "Service meeting on August 11, 1942 1800 hours in the office of the department head." RGVA, 502-1-69, pp. 69-71.
"1.) As a result of severe reductions in the fuel quota, the transportation of bricks, sand, gravel, old lumber, and similar material by motor vehicles will be prohibited with immediate effect. For the time being, only the following vehicles will be used:
1 truck for crematorium PoW camp [for transporting materials].
1 tractor for driving fence posts PoW camp.
1 tractor for agricultural constructions.
Similarly, the operation of excavators and diesel locomotives must be drastically reduced and in some cases completely stopped. For the removal of the necessary materials, the existing 45 horse-drawn carts are to be used to the fullest and, if necessary, the material is to be transported by prisoners."

17. Letter from SS garrison physician to Auschwitz CC headquarters, subject "Fighting typhus." Detailed instructions "for the safety of the troops and to prevent further outbreaks of typhus." RGVA, 502-1-266, pp. 18-20.

The J.A. Topf & Sons company, Erfurt, informs the Central Construction Office by telephone: RGVA. 502-1-272, p. 507.
"Prüfer arrives Wednesday [August 19] *afternoon 08.00."*

18. Central Construction Office. Order No. 1888/216 for prisoner electricians with the subject "Installation of *Sonderkommando* Birkenau BW 20 PoW camp": RGVA, 502-1-316, p. 33.
"Installation and supply line for Sonderkommando consisting of:
19 outlets
1 supply line 200 m overhead line x 3 x 25[?]
and 600 m cable 4 x 10."

Letter from the Central Construction Office to the Bielitz Economic Office with the subject "Allocation of 2 wood- or producer-gas vehicles with 1 or 2 trailers each": RGVA, 502-1-78, p. 237.
"The local office is forced to shut down some of its vehicles due to lack of fuel. These vehicles were used to transport building materials for construction projects under construction, which were recognized by the General Plenipotentiary for the Regulation of the Construction Industry in the Third Year of War Economy as essential to the war effort, and were ranked VIII Up a 1 VIII and VIII E wo 19.
Since the Central Construction Office of the Waffen-SS and Auschwitz Police intends to deploy vehicles powered by producer gas or wood gas for the vehicles which have been put out of service, the same requests to be informed as soon as possible whether there is the possibility of an allocation of purchase certificates for 2 wood-gas road tractors or 2 producer-gas vehicles, each with one or two trailers, from the allocation at your disposal.
Should this not be possible, the department requests that 2 wood- or producer-gas vehicles, each with 1 or 2 trailers, be made available for a period of 3 months for the time being."

Letter from the Central Construction Office to the Auschwitz CC headquarters, Labor Deployment Department, with the subject "Provision of additional 3 posts and 1 NCO for the unit PoW camp, circular trench, Con. Section III." Bartosik, Doc. 59, p. 217.
"Immediate measure.
The Central Construction Office requests, due to constant interruption of work by the special actions for the unit PoW camp, Constr. Section III (100 prisoners, at present with four guards) to provide with immediate effect an additional 1 NCO and 3 guards, so that it can be used with a guarding ratio of 1:6 for urgent chess excavation work on the Vistula trench."

19. Central Construction Office. RGVA, 502-1-178, p. 19.
"Minutes. On 19 Aug. 42 at 10 o'clock in the morning, a meeting took place with the gentlemen of the Reich railway administration Oppeln as well as the Reich railway set-

tlement association, each of which was also attended by a representative of the SS Construction Office and the commandant of the conc. camp."
"Reichsbahnoberrat Stäbler first informed the meeting that the design for the railroad facilities will probably undergo considerable changes. It was intended, he said, to arrange only for a passenger-only station near the reception building, and to extend the large freight station further southwest in the direction of Brzeszcze."
The Central Construction Office disagreed.

SS-Untersturmführer of the reserve.
SS Judge of the reserve"

Letter from the J.A. Topf & Sons company, Erfurt, to the Central Construction Office with the subject "Crematorium, cremation furnace": RGVA, 502-1-313, p. 161.
"At the call of our Herr Chief Engineer Prüfer, we are sending you enclosed 4 pieces of drawings D 59599."

Headquarters Order No. 15/42 commends an honest finder, a successful sportsman, and: Frei, pp. 162-166
"Mirbeth succeeded in seizing and arresting 2 escaped French prisoners in the meadow area near Prokocim station."
The order mentions the result of a fund-raising for the Red Cross; reports the integration of the camp locksmith's and carpenter's shop into the *Deutsche Ausrüstungswerke* (DAW); recalls the ban on hunting in the area of interest; and quotes a letter from the WVHA on escape attempts:
"In a short time, prisoners succeeded in three cases in escaping from the concentration camp by means of passenger cars with SS license plates and in SS clothing, in one case even taking firearms and ammunition with them, in the last case wearing an SS officer's coat and SS officer's cap. In all cases, 2 to 3 prisoners were smuggled out of the camp in such disguises, and on top of that in the motor vehicle."
Therefore, close control of vehicles leaving the camp including their occupants was ordered, as well as the secure locking of parked vehicles and close guarding of prisoners repairing vehicles. The order further encourages saving mail, exhorts to politeness in public transportation, reaffirms the ban on bathing in the Sola and the use of its water because of the danger of infection by referring to a police regulation; and repeats mail collection times.

Garrison Order No. 22/42 orders the replacement of the nightly manning of the large chain of posts by a control service in the camp because of the camp lockdown. Frei, pp. 166f.

21. Central Construction Office. "Fulke memo" by SS-Untersturmführer Fritz Ertl with the subject "Presence of Chief Eng. Prüfer of Topf & Sons company, Erfurt, regarding extending cremation facilities in the PoW camp Auschwitz". RGVA, 502-1-313, pp. 159-160.
"Course of Events: On August 19, 1942, at 2:00 p.m., Mr. Prüfer visited the local office in order to discuss the necessary details concerning the installation of 5 3-muffle cremation furnaces in the crematorium of the PoW camp, and the new installation of 2 3-muffle furnaces in simple construction according to plan D 59-570 and No. D 59599.
The following was determined:
1) Fitter Holick from Buchenwald will arrive here no later than August 26-27, and fitter Koch in about 14 days. Installation of the five 3-muffle furnaces in the PoW camp will begin immediately. The company Köhler Myslowitz carries out the lining of the furnaces and flues, as well as the erection of the chimney according to the plans and specifica-

tions of the Topf company.
2) With regard to the installation of 2 triple-muffle furnaces at each of the 'bathing establishments for special actions', engineer Prüfer suggested that the furnaces be diverted from an already-completed delivery to Mogilev, and the head of department, who was present at the SS Economic and Administrative Main Office in Berlin, was immediately informed of this by phone and asked to make the necessary arrangements.
3) With regard to the construction of a second crematorium with 5 three-muffle furnaces, as well as ventilation systems, the result of the ongoing negotiations with the Reich Security Main Office concerning the allocation of quotas must first be awaited.
4) The Topf company sent parts of a double-muffle cremation furnace to Auschwitz by mistake, but these parts were intended for Mauthausen.
Prüfer suggested that the furnace be installed here. In the meantime, the missing 2 introduction doors and 2 ash-removal doors could be taken from the delivery of the 5 three-muffle cremation furnaces.
5) The damages in the newly built chimney for the existing crematorium were inspected together with Mr. Köhler and SS-Unterscharführer Kirschnek, and the measures to be taken were discussed. – Since the chimney lining moves as a result of the great heat, it must pass freely at the top and must not be firmly connected to the outer shell.
6) On Thursday, August 20, 1942, together with SS-Strm. Janisch and Mr. Köhler, the construction site of the 5 three-muffle furnace in the PoW camp was inspected, and the necessary details discussed.
7) Ing. Prüfer asked for a written order for the delivery of the two 3-muffle and double-muffle cremation furnaces, and for information as soon as possible as to whether the furnaces from the Mogilev delivery could be diverted.
8) For the shipping of the missing fireclay and other material, 10 waybills are to be sent to the Topf company immediately."
Handwritten note:
"24 Aug. 42 tel. Mr. Prüfer informed that 2 pieces of 8 muffle furnaces can be diverted from delivery Mogilev. Mr. Prüfer informed that SS-Stubaf. Lenzer had already informed him of this."

22. Letter from Robert Koehler, civil engineer, to the Central Construction Office. Koehler sends a new quote to the Central Construction Office, as requested, for the construction of another 15-meter-high chimney at a price of RM 3,100, with an additional RM 2,690 in case of hiring inmates to be paid by the company; the material for the construction is quoted at RM 4,195. The bid also mentions the construction of a cremation furnace as per Central Construction Office plan 914 at a cost of RM 12,690. A handwritten note on this letter, dated August 26, reads with regard to the furnace, "*Will not be executed.*" RGVA, 502-1-313, p. 157.

Construction Office of the Waffen-SS and Police Auschwitz U/S.-Oswiecim, work card no. 1888, to the column electricians: RGVA, 502-1-316, p. 34.
"For installation of Sonderkommando Birkenau BW 30 PoW camp [high-voltage plant], *the following work is to be carried out: Installation and supply line for Sonderkommando consisting of:* RGVA, 502-1-316, p. 33.
19 outlets
1 supply line 200 m overhead line
and 600 m of cable 4 x 10.
Started: 20 August 42. Finished: 22 August 42.
60 skilled worker hours
60 unskilled laborer hours."
The related order 1888 "for prisoner electricians" is dated 18 August 1942.

Radio message from the commandant of Buchenwald CC, SS-Oberführer Hermann Pister, to the SS-WVHA. TNA. HW 16-21. ZIP/GPDD 213b/22.3.43, n.
"Re: Escape of prisoners. Reference: our telex no. 3956 of 30 July 42.

The professional criminals Alfred SCHULER and Walter SCHMIDT, reported as escaped on 30 July 42, were brought to the camp today, after they had been arrested at the Swiss border, as already reported on 19 Aug. 42. Permission is requested by telex to administer a beating of 25 strokes in front of assembled prisoners. A copy of the interrogation protocol by the ... is on its way to there." 21/23.

23. I.G. Farbenindustrie A.G. "Weekly Report No. 64/65 for the Period August 10-23, 1942". NI-15253/2.
"The reintroduction of prisoners is not to be expected before the expiration of about 3 weeks, since a new case of illness occurred again a few days ago. The headquarters, on the other hand, is prepared to send new arrivals directly to our camp as soon as it is ready to receive prisoners."

24. Central Construction Office, House Order No. 44. By order of the troop doctor, SS NCOs and men of the Central Construction Office must undergo disinfestation by brushing with kerosene. RGVA, 502-1-25, p. 65.

Letter from the Central Construction Office to the SS-WVHA, Chief of Office C V, with the subject "Site Plan POW Camp Auschwitz": GARF, 7021-108-32, p. 41. RGVA, 502-1-272, pp. 137-138.
"On the basis of the above-mentioned letter [of August 10, 1942], *the spacing of the barracks of 14.00 m between the long sides was objected to, and a minimum spacing of 15.00 m was prescribed. Since the site plan intended for execution had already been drawn up before 14 April 1942, and the work was already in full swing, the spacing of the barracks in Construction Section II could no longer be changed, otherwise almost all of the barracks would have had to be removed again, but on the other hand completion was quite urgent.* […]
It is requested to return a site plan with a note of approval to here.
The enclosed site plan already takes into account the recently demanded expansion of the POW camp to an occupancy of 200,000 men."

31. Central Construction Office. "Activity Report of SS-Uscha. Kirschnek, head of construction, dept. above-ground construction, for the Month of August 1942." Work was carried out on the following structures: BW 7 a (prov. headquarters), BW 20 Q, M, N, O, L (adding floor in CC), BW 64 (greenhouse Raisko), BW 33 C (nursery Raisko), "BW 11 (chimney at crematorium) new smoke ducts made to the 3 pieces of double-muffle furnaces, reinforced concrete slab laid over them, lightning conductors installed, and handed over to the political department for operation. Work completed except for touch-up work", BW 106, 107, 104 (new construction in CC), BW 65 E (herd book barns), BW 63 (4 yard barns), BW 26 B (3 field barns), BW 71 (young cattle barns), BW 68 (Raisko laboratory), BW ? (Raisko grass-drying facility), BW 13 (headquarters), BW 116 (protective-custody camp extension, inmate lodgings), BW 31 PoW camp (prov. bakery). RGVA, 502-1-27, pp. 18-21.

Letter from the SS-WVHA, Chief of Office C VI, to the Central Construction Office with the subject "Appropriation of funds for the construction of a new chimney for the Auschwitz CC Crematorium." RGVA, 502-1-312, p. 23.
"Special remarks: In place of the old chimney, which was in danger of collapse, a new chimney had to be constructed. The implementation order by the Chief of Office Group C – SS-Brigadeführer Dr. Kammler, by telex dated 2 July 42."

Letter from the firm Albert Bskok Bauart, Bytom, to the Central Construction Office with the subject "PoW camp. BW: 30 – Review of the static calculation for the RGVA, 502-1-313, pp. 149-149a.

roof truss":
"Inspection report for the wooden roof structure in Vollmar construction at CC. BW: 30 at CC Auschwitz."

Letter from the J.A. Topf & Sons company, Erfurt, to the Central Construction Office with the subject "Crematorium, Topf eight-muffle cremation furnaces". RGVA, 502-1-313, pp. 150-151.
"We politely refer to the conversation between your Herr Untersturmführer Ertel [sic] *and our Herr Chief Engineer Prüfer and submit enclosed a drawing D 60125 (in triplicate) for your kind usage. In accordance with your request, we have prepared the necessary construction drawing for our eight-muffle cremation furnace.*
It should be noted that this large furnace has 2 chimneys, which are placed to the right and left of the furnace. When building the chimneys, a fireclay lining up to 6 m in height is sufficient. The chimney height of 16 m, with 0.80 x 0.80 m clear diameter, should be sufficient. We have provided wood firing for the eight-muffle furnaces, which were originally intended for Mogilev, for heating up of the furnaces. This type of firing was prescribed by us from the Mogilev Construction Office, because coke is difficult to obtain there as a heating medium. In order to avoid having to supply new coke grates because of the faster installation, we have converted the wood-fired furnaces to coke-fired furnaces, and used the inclined grate and flat grate bars for this purpose. Consequently, 2 generators will receive only flat grate bars, and the other 2 generators will receive inclined grate bars, which we will design as flat grates.
At the same time, we inform you that in particular the inclined grate bars will not have a long service life during coke firing. Therefore, we recommend you to order grate bars for coke firing now as spare parts, for which we will send you an offer shortly.
In addition, we have not provided insulation for the outer walls of the furnaces destined for Mogilev due to transport difficulties to that country. However, since you wish to have the furnaces insulated, we will soon send you a quotation for this insulation.
We have given the above-mentioned drawing to our foreman Holick, so that you can have it sooner. […]
Enclosure: 3 drawings D 60125 (handed over by foreman Holick)."

The accounting books of the Tesch & Stabenow company in Hamburg show a delivery of 1,008 kg of Zyklon B to Auschwitz CC, corresponding to a value of RM 6,381. TNA, WO 309-1603.

Radio message: TNA. HW 16-21. ZIP/GPDD 223b/16.8.42 [sic], n. 2/3.
"To Office D II. From Administration of Auschwitz CC.
SS Sturmbannführer BURGER… personally to him given order of SS Obergruppenführer … goes off … of the special tasks of the dental station … verbally… an … passed on the … Order was passed on by Obersturmbannführer JOST to the head of the dental station SS Untersturmführer SAUTTER. A decision is requested."

Radio message from SS-WVHA to Hinzert CC. TNA. HW 16-21. ZIP/GPDD 223b/16.8.42 [sic], n. 64.
"Executions will only be carried out by order of the Reich Security Main Office."

Radio message from Auschwitz CC to SS-WVHA, Office DIII: TNA, HW16-21. ZIP/GPDD
"Deaths reported for the period 1 to 31 Aug. 42. Men's CC 68.9, women's CC 1525.

I.V. … rest missed…"
The decodes were concluded with the following heading: "Deaths in Auschwitz concentration camp. GPDD 223b of 1.IX.42." The figure for the men's CC is 6,889 (or 6,829). Another summary of the decodes speaks of 6,829 men and 1,525 women.

223b/16.8.42, n. 24; HW 16-10, sheet without archival reference. HW16-6. German Police, 40/42.

2. Radio message from SS garrison physician, SS-Sturmbannführer Kurt Uhlenbrock, to SS-WVHA, Office D III:
"By telex of the Hygiene Institute of the Waffen-SS dated 4 Aug. 42, the SS garrison physician was assured of further quantities of typhus vaccine probably in about 4 days. Notification is requested as to whether delivery of the vaccine can be expected and what quantities will be made available."

TNA. HW 16-21. ZIP/GPDD 224b/25.2.43, n. 33/34.

Radio message from SS-Obersturmbannführer Enno Lolling (SS-WVHA, Office D III) to the SS camp physician of Auschwitz CC:
"Until the arrival of the first camp physician, SS Obersturmführer Wirths on 4 Sept. 42, Hauptsturmführer Uhlenbrock will take over as deputy."

TNA. HW 16-21. ZIP/GPDD 224b/25.2.43, n. 8.

3. Letter from the Central Construction Office to Huta, Bellow- and Above-Ground Construction, Inc., Kattowitz, with the subject "Isolation works at crematorium in PoW camp".
"The two troughs of the above building have already been completed for about 10 days, so that the insulation work must be started immediately."
The work of the Huta company is to begin on September 7.

RGVA, 502-1-313, p. 145.

The head of the Central Construction Office transmits the construction report for August 1942 to the CC's headquarters. This construction report has not been preserved.

RGVA, 502-1-24, p. 172.

Commandant's Order No. 16/42 commends two honest finders of cash; reports the transfer of the management of the department weapons a. equipment; solicits donations for Winter Relief Charity; decrees that any stay at Miendzybrodzie ski lodge must be authorized; announces a soccer and a handball game; reminds to use the camp's correct sender address; mentions that bathing in the Sola River is permitted only upriver from the camp; explains rules for wearing decorations and insignia; forbids carrying rapiers; and lists 5 found objects.

Frei, pp. 168-170

4. Radio message from SS-Obersturmführer Karl Sommer (SS-WVHA, Office Group D) to Mauthausen CC:
"A transfer of the 1,000 prisoners needed there is only possible after the camp lockdown has been lifted at AU CC. Prisoners are not available in other camps at the present time."

TNA. HW 16-21. ZIP/GPDD 226b/19.9.42, n. 1.

Letter from the Auschwitz CC headquarters to all divisions:
"The troop doctor informs that delousing ointment has arrived for the troops. The following is ordered:"
Instructions for the application of the ointment follow.

RGVA, 502-1-332, p. 74.

Letter from J.A. Topf & Sons, Erfurt, to the Central Construction Office with the subject "Crematorium, Topf eight-muffle cremation furnaces":
Enclosed we are sending you a drawing D 59555, representing the foundation for the eight-muffle furnace, in duplicate. In addition, you will receive drawing D 60129, also in duplicate, showing the masonry anchoring for the eight-muffle furnace, and a list of the anchoring irons, in triplicate, according to which you can manufacture the anchoring and the foundation at no cost to us.
The construction drawing of the eight-muffle furnace will be sent to you on Tuesday of next week at the latest, since we must first change the wood firing into generator firing

RGVA, 502-1-313, p. 140.

(for coke). Therefore, the foundation plan and the anchoring drawing had to be changed as well, otherwise you would have had these documents in your possession long ago."

J.A. Topf & Sons, Erfurt. Order No. 41/2435/1. Password: Mogilev. Ordered by: Central Construction Office of the Waffen SS Auschwitz. Object: Anchoring for an 8-muffle furnace. List of anchoring parts. RGVA, 502-1-313, p. 142.

5. Letter from the Central Construction Office to the SS-WVHA, the Chief of Office C V, with the subject "Procurement of Bitumen Cardboard and Adhesive Compound". RGVA, 502-1-265, p. 457.
For the "crematorium construction project" are needed:
"7,100 sq.m. of bare bituminous cardboard 500 sq.m.
10,100 kg bitumen
4,000 " adhesive tar compound
800 " of primer."

6. Letter from the leader of the Labor Service, SS-Oberscharführer Jakob Fries, to the head of Labor Deployment (Schwarz) with the subject "Prisoner 461906". RGVA, 502-1-256, p. 201.
The author lists the later assignments of Jewish prisoner No. 46106 (diesel mechanic). The Construction Office's claim that this inmate was transferred from Fries' office to the motor pool is unfounded, "since he was assigned by the foreman of the motor pool himself."

7. Headquarters Auschwitz CC. RGVA, 502-1-31, p. 28.
"As of Tuesday, 8 Sept. 42, the start of work for the prisoners is as follows:
Protective-custody camp: 6.30 a.m.
PoW camp. and women's CC: 7.00 a.m."

Central Construction Office, "Activity Report of the Motor Pool of the Central Construction Office of the Waffen-SS and Police Auschwitz for the Month of August 1942". RGVA, 502-1-181, pp. 263-270.
"Vehicle deployment (summary)

vehicle deployment daily on average	*9 trucks*
total trips in the above period	*1483*
kilometers driven " " "	*8734*
Fuel consumed " " "	*gasoline 1009*
	diesel 3073 = 4082"

A detailed report follows.

Letter from the SS-WVHA, the Chief of Office D III, to the SS garrison physician Auschwitz with the subject "Malaria control in Auschwitz CC": RGVA, 502-1-332, pp. 136-137.
"In the camp area there, adult malaria mosquitoes were found in numerous places, especially in the pig and cattle pens and in houses formerly occupied by Poles. In addition, water samples were taken from numerous open-water areas that showed larvae of malaria-transmitting mosquitoes. These are ponds and swamps in the entire camp area, but especially in the vicinity of the dog handler school and the fish ponds. The entire area surrounding Auschwitz CC is considered a malaria area.
In order to prevent malaria from assuming an epidemic character in Auschwitz CC, defensive measures are to be taken.
To this end, a Waffen-SS hygiene institute is set up there in the fall of 1942.
For the time being, the following measures are ordered for mechanical control: Destruction of anopheline eggs and larvae in summer by means of petroleum and Schweinfurt Green. A mixture of 1 gram of Schweinfurt Green and 100 grams of ordinary road dust is sprayed on 10 square meters of water surface. This kills the Anopheles larvae. Elimination of ponds and emerging groundwater by drainage. In winter, kill breeding sites in cellars and barns by spraying powdered Dalmat or flaming the walls with kero-

sene torches, burning sulfur, and spraying the walls with suitable solutions. Rain barrels and other breeding sites for Anopheles larvae are to be monitored. Instruct SS personnel on malaria through leaflets. Flit is also to be tried out. Close cooperation with the headquarters or construction office is required.
Prophylactic medication may be ordered by the SS garrison physician Auschwitz on his own authority, if necessary.
In addition, the closest cooperation with the Hygiene Institute of the Waffen-SS is ordered."

Letter from J.A. Topf & Sons, Erfurt, to the Central Construction Office with the subject "Crematorium, Topf Eight-Muffle Cremation Furnace": RGVA, 502-1-313, pp. 139-139a.
"Enclosed please find drawing D 60132, from which the construction of the Topf eight-muffle cremation furnace can be seen. As you have already been informed, we first had to change the wood generators into coke generators, while retaining the grate bars for the wood firing.
The furnace design shows you that we provided one generator for every two muffles. Two generators are placed in the center of each furnace. Four muffles each require a chimney, the size of which we have already indicated to you.
We hope that according to the foundation plan for protruding furnaces sent to you in the meantime, you have laid the foundations, so that our foreman Wilhelm Koch, who will be coming to there in about 8 days, can start setting up the furnaces."

8. J.A. Topf & Sons, Erfurt. Dispatch note to the Central Construction Office. Rail car no. 82505/France contains "2 compl. eight-muffle cremation furnaces": Components totaling 12,186 kg. RGVA, 502-1-313, pp. 143-144.

SS New Construction Office Auschwitz CC. Work card. Order No. 1962: RGVA, 502-2-8, p. 37.
"Object: anchors for 5 pieces of muffle furnaces according to enclosed drawing.
Applicant: PoW camp, crematorium B.W. 30 (Topf a. Sons).
Started: 9 Sept. 1942. Finished: 11 Dec. 1942."

J.A. Topf & Sons, Erfurt, Department D IV. Memo from Chief Engineer Kurt Prüfer with the subject "Crematorium-Auschwitz": Schüle, p. 442. NO-1288
"Confidential! Secret!
8 Sept. 42 Herr Obersturmführer Krone calls and explains that he has been ordered to Brigadeführer Kämmer* [sic] *and has to report on his inspection of the crematorium in Auschwitz, from which he returned yesterday. He could not figure out the plant in Auschwitz, and therefore wanted to find out exactly how many muffles were in operation there at the present time, and how many furnaces with muffles we are building there at the present time and were still supplying.*
I stated that 3 two-muffle furnaces with an output of 250 per day were currently in operation. In addition, 5 three-muffle furnaces with a daily capacity of 800 were now under construction. 2 eight-muffle furnaces with a daily capacity of 800 each, which had been diverted from Mogilev, would be shipped today and in the next few days.
Mr. K. explained that this number of muffles was not yet sufficient; we are to deliver more furnaces as soon as possible.
It would therefore be expedient for me to come to Berlin on Thursday morning to talk with Mr. K. about further deliveries. I should bring documents about Auschwitz with me, so that the urgent calls would finally be silenced.
I have promised the visit for Thursday."
* According to the organizational chart of Office Group C of the SS-WVHA dated December 29, 1942, SS-Hauptsturmführer Krone was Chief of Department CIII/3, Mechanical Engineering.

The accounting books of the Tesch & Stabenow company in Hamburg show a delivery of 504 kg of Zyklon B to Auschwitz CC, corresponding to a value of RM 3,190. TNA, WO 309-1603.

It refers to the period from September 10, 1942 to February 22, 1943 and contains 193 pages (the last two are blank). The first number is 11,051, the last 14,172. ISD, KL Auschwitz, folder 158.

Garrison Order No. 24/42 announces office hours of SS family physician. Frei, p. 170

11. Letter from the Central Construction Office to HUTA Above- and Below-Ground Construction, Kattowitz, with the subject "Provision of bricklayers for the construction of the crematorium in the PoW camp": RGVA, 502-1-313, p. 135.
"For the construction of the furnaces in the crematorium of the PoW camp, 5 bricklayers are absolutely necessary. The same are to be withdrawn from the construction site of the main collection depot – sewage plant, and placed at the disposal of the Topf and Sons Company, which supplies the iron parts. They will be charged by the hour."

Headquarters Order No. 17/42 contains two long lists of promotions and awards, commends three honest finders of cash, gives rules of conduct for weekend vacations at the Miendzybrodzie SS hut, decrees that during the camp lockdown vacation passes and duty-travel passes must be counter-signed separately, explains rules for private mail sent abroad, mentions a lost gas mask, and decrees the registration of binoculars. Frei, pp. 171-173

12. "Cost estimate V for the installation of 19 delousing chambers for the hydrogen-cyanide delousing plant at Auschwitz CC (BW 160), prepared by Friedrich Boos. Total cost: RM 34,518.65, plus RM 4,200 for transport rail cars. RGVA, 502-1-137, pp. 13-16.

Letter from the Central Construction Office to the Chief President, Plenipotentiary for Local Transport, Breslau, with the subject "Ordering of 3 wood-gas vehicles with 2 trailers each, or 2 wood-gas road tractors with 3 trailers each". RGVA, 502-1-78, p. 11.
"The Central Construction Office of the Waffen-SS and Auschwitz Police requests Mr. Chief President makes available 3 wood-gas vehicles with 2 trailers each, or 2 wood-gas road tractors with 3 trailers each on the Central or Lower Silesian territory for the duration of 3 months for the time being.
The vehicles are urgently needed by the local office for the delivery of constrution materials of various kinds for construction projects under construction, which have been recognized by the General Plenipotentiary for the Regulation of the Construction Industry as essential to the war effort in the 3rd year of war economy, and have been classified in the ranks VIII Up – a 1 VIII E wo 19."

14. SS Economic and Administrative Main Office, Office Group D – Concentration Camps. AGK, NTN, 120, p. 113.
"Travel Permit.
For the purpose of urgent transfer of 5 trucks and an accompanying machine, travel permission is hereby granted from Oranienburg to Auschwitz for September 14, 1942.
Reason:
Immediate transfer of the assigned trucks to the Concentration Camp Auschwitz, since

use of these vehicles for special actions must take place immediately."
Sgd.: The Chief of the Central Office, SS-Oberführer Liebehenschel.

Letter from the SS-WVHA, the Chief of Office C III, to the Central Construction Office with the subject "Water supply, Auschwitz CC": RGVA, 502-1-149, p. 227.
"On a business trip by SS-Obersturmführer Krone to Auschwitz CC, it was discovered that the water consumption in the camp there could not be determined."

SS-WVHA. "Compilation of the necessary construction materials and barracks": VMM. HC.
"Subject: Auschwitz CC.
In order to carry out the special treatment, the following additional barracks are still required for the following."
This is followed by the list of barracks for Construction Sections II and III, Troop Lodgings 1 and for the treatment of effects. The following page lists the construction materials required for makeshift solid structures:
"Crematorium I with special cellar.
Crematorium II 2 [sic] *with special cellar.*
2 pieces 8 muffle-furnaces
warehouse with basement
bakery
disinfestation plant with 4 chambers."

Garrison Order No. 25/42 gives extremely detailed instructions for the delousing of all troops and disinfestation of their clothing and quarters to take place from September 15 to 24, as well as for the measures to be taken thereafter for the purpose of prevention: Frei, pp. 174f.
"The units listed in each case shall bring their entire uniforms – including caps, clothing and linen, as well as equipment (belt, leather gear, steel helmet, shoes, boots, etc.) to the disinfestation chamber in Block 3a at 7:00 a.m. of the day set aside for them. Trucks are to be provided. These items are to be turned in together with 2 designated hangers wrapped into each man's sheet, which is to be tied up and marked with the individual's name. At the same time, the Fourier of each company will arrange for the surrender of all remaining bedding (pillow and blanket covers, as well as blankets of any kind). The men keep only the most necessary linen and their drill uniform. Afterwards, a thorough cleaning of the accommodation is carried out with the help of a medical orderly, who also brings disinfection material. It is advisable to assign an inmate unit for the rough cleaning work. At the time of the same day indicated in Section III, the company in question will again be led en masse to the body delousing in Block 2, where suitable showers and rooms are available. The men are to be instructed to have their head hair cut as short as possible beforehand. The body delousing is performed by trained medical orderlies. This is followed by thorough cleaning using soap provided. A sufficient number of towels must also be kept ready. After this, each man receives back his now deloused linen and uniform, and the rest is taken back to the quarters on provided carts. On the following day, the men will receive back the clothes they had taken off before the delousing.
Each company notifies the garrison physician of its readiness to do so by the preceding evening of its scheduled delousing day.
The staff sergeant of each company will arrange for the clothing of any men prevented by illness, etc. to be fumigated, and shall keep a list thereof. After the return of these men, they are to be sent without delay to the SS infirmary, where their bodies will be deloused. These men may not enter the quarters until they have been deloused and present a certificate to that effect."

15. Letter from the Central Construction Office to J.A. Topf & Sons, Erfurt, with the subject "Eight-muffle cremation furnace Auschwitz CC, your order 41/2435/1": RGVA, 502-1-312, p. 22.
"The receipt of the above offer [dated September 2, 1942] *is acknowledged. On the basis of this, you are hereby awarded an order for:*

4 pcs. cast-iron doors with cast-iron frame, spiral handles and chamotte lining each RM 180.- 360.
For the insulation of 2 furnaces:
2500 pcs of insulating bricks each
600 kg slag wool each
for one furnace 609.- 1218.- RM
Generator grate bars (for firing coke)
serving as reserve: (for 2 furnaces)
Each generator grate 1.0 x 1.2 m², consisting of 17 edge irons each 1.20 m long, 40 x 40 mm, incl. 2 such irons with the same dimensions for supporting the grate.
Price for 1 generator: RM 210.
" " 1 furnace with 4 muffles accordingly 840.- 1618.- RM.

The Friedrich Boos Company sends its bid to the Central Construction Office for the "Reception and bathing building with delousing". The cost estimate V for the hydrogen-cyanide delousing plant is the one mentioned in the entry for September 15, 1942. For the inmate-bathing facility, 141 shower stations are planned, for the delousing bath 59. Total cost: 111,234.94 RM. RGVA, 502-1-137, pp. 23-27.

"Re. 'travel permit'.
Travel permit for a passenger car from Au. to Litzmannstadt and back for the purpose of visiting the experimental station for field furnaces Aktion Reinhard is hereby granted for 16 Sept. 42. The travel permit is to be given to the driver, Sgd. Glücks."

Letter from the SS-WVHA, head of Office Group C, to the General Plenipotentiary for the Regulation of the Construction Industry, Berlin, with the subject "Special Construction Tasks for Auschwitz CC": GARF, 7021-108-32, p. 43.
"With reference to the discussion between Reichsminister Prof. Speer and SS-Gruppenführer and General of the Waffen-SS Pohl,[5] I communicate below the additional construction volume for the special program of the Auschwitz CC as follows: […]
The work will be carried out essentially by prisoners. The construction time for the entire building project is estimated at 50 working weeks. In addition to the prisoners, an average of 350 skilled and unskilled workers will be needed. This results in 105,000 days' work. In view of the special nature of the measure, I furthermore ask that the necessary construction volume and materials be made available."

Letter from SS Gruppenführer and General der Waffen-SS Oswald Pohl to Reichsführer-SS with subject "a) armament work b) bomb damage": BAK, NS 19/14, sheet 131-133.

"Reichsführer!
Yesterday the meeting with Reich Minister Prof. Speer took place. The following persons participated:
Reichsminister Prof. Speer,
SS-Gruppenführer Pohl,
SS-Brigadeführer Staatsrat Dr. Schieber
Dipl. Ing. Sauer,
Ministerialrat Steffen,
Ministerialrat Dr. Briese,
SS Brigadeführer Dr. Ing. Kammler.
Subject:
1.) Enlargement of Auschwitz barracks camp as a result of eastward migration.
2) Assumption by the CC of closed armament tasks of the greatest magnitude.
3) Bomb damage assistance by the CCs.
4) Fallersleben light-metal foundry.
The outcome of the meeting was as follows:
To 1) Reich Minister Prof. Speer has approved the enlargement of the Auschwitz barracks camp to its full extent, and has made available an additional construction volume for Auschwitz in the amount of 13.7 million Reichsmarks.
This construction volume includes the erection of approximately 300 barracks with the necessary utility and supplementary facilities.
The necessary raw materials will be allocated in the 4th quarter of 1942 and in the 1st, 2nd and 3rd quarters of 1943.
When this additional construction program has been carried out, Auschwitz will be able to house a total of 132,000 men. […]
The German and foreign workers thus released from these plants, however, are to be used to fill the labor gaps in similar armaments plants.
In this way, Reich Minister Speer intends to ensure the short-term employment of an initial 50,000 Jews capable of working in closed existing factories with existing accommodation facilities.
The manpower necessary for this purpose will be siphoned off primarily in Auschwitz from the eastward migration, so that our existing operational facilities will not be disturbed in their performance and structure by a permanent change of manpower.
The Jews who are fit for work and destined for the eastward migration will therefore have to interrupt their journey and do armament work.
In this connection, I immediately demanded that a labor deployment of these Jews in areas from which they have emigrated must be avoided at all costs."

The Central Construction Office sends the following plans of BW 30 (crematorium) to HUTA Above- and Below-Ground Construction for the purpose of insulation works: RGVA, 502-1-313, p. 130.
Nos. 932, 933, 936, 1341, 1541, 1311, 1173/74, 980, 1300, 1301, 935, 937, 938.

17. Central Construction Office, "Travel Report on the Service Trip to Litzmannstadt." RGVA, 502-1-336, p. 69.
"Purpose of the trip: visit to a special facility.
Departure from Auschwitz on 16 Sept. 1942 5 a.m. by passenger car. From the headquarters of Auschwitz CC.
Participants: SS-Obersturmbannführer Höss, SS-Untersturmführer Hössler and SS-Untersturmführer Dejaco.
Arrival in Litzmannstadt at 9 o'clock in the morning. There was a tour of the ghetto, followed by a drive to the special facility. Inspection of the special facility and discussion with SS-Standartenführer Blobel about the construction of such a facility. The construction materials ordered from Ostdeutsche Baustoffwerke, Posen, Wilhelm Gustloffstr. under special order of Staf. Blobel are to be delivered immediately to Auschwitz CC.

The order is contained in the enclosed letter from W.V.H.[A.] *and the call-off and redirection of the ordered materials is to be carried out in agreement with Ostuf. Weber from the Office C V/3 from the Central Construction Office here to take place immediately. Bills of lading in the requested number are to be sent to the above-mentioned firm.*
With reference to the discussion of SS-Staf. Blobel with Schriever & Co. of Hannover, Bürgermeister Finkstr., the ball mill for substances reserved there and already set aside for Auschwitz CC is to be delivered. Return trip was on 17 Sept. 42, arrival in Auschwitz at 12 noon.

Duration of the tour 4 hours
6:00 p.m.
Final meeting of the participating departments in the officers' mess
8:00 p.m.
Dinner of all leaders in the officers' mess."

"Report on the Tour of Auschwitz Concentration Camp by SS-Obergruppenführer Pohl on 23 September 42," written by SS-Obersturmbannführer and Commandant Höss. The list of sites visited is similar to the report from the previous entry. Here, the "Disinfestation and Effects Chamber /Aktion Reinhard/" (i.e. the disinfestation chamber of the so-called "Canada I" effects camp – BW 28, delousing and effects barracks -, is referred to as the "Disinfestation and Effects Chamber (Jewish Resettlement)." RGVA, 502-1-19, p. 102.

Special headquarters order: Frei, p. 178
"Effective immediately, the Department of Labor Deployment shall be known as Department IIIa."

24. "I.G. [Farben], Auschwitz branch. 20th construction meeting on September 8, 1942 in Auschwitz U/S." NI-11138.
"The use of French and Italian firms is also to be increased. Negotiations on this point will take place in the Reich Office in the near future."
"The use of prisoners and Jews by the CC is impossible at present for hygienic reasons. In order to be able to use newly arriving Jews and prisoners who are not contaminated, a camp is to be completed on the site in which quarters will be created for them."
"Annex 3 to the report of the 20th construction meeting on 8 September 42 in Auschwitz U/S.
State of health, ambulance (report by Dr. med. Peschel).
The state of health of the workers and employees at the Auschwitz construction site is generally satisfactory. The infectious diseases occurring in the district around Auschwitz (malaria, typhoid fever, typhus, dysentery and, more recently, diphtheria) have caused very few illnesses in our camps. There was certainly one case of typhus, 8 cases of typhoid fever, and very few cases of dysentery. In 21 days of August, 2654 patients were treated by the camp physician, which is an average of 126.3 persons per day. There were 356 industrial accidents, one of which was fatal. […] *The X-ray machine was put into operation in the first days of July (after overcoming 'teething problems,' and after the arrival of an X-ray assistant (1 Nov. 42), it will be able to work fully from this date). In the month of August, it was used 145 times. The kitchen staff is continuously bacteriologically tested in order to remove germ spreaders in these establishments.*
The delousing plant, operated by a disinfector, has deloused 2917 persons in 20 working days. Maximum daily output so far 680 persons. […]
Since a major typhus epidemic has broken out in the concentration camp in Auschwitz, and cases of typhoid fever have occurred frequently in the town of Auschwitz, the dan-

gers of these two diseases were pointed out in a company roll call, and vaccination against typhoid fever and typhus was recommended to all German and ethnic German followers. […] *A very high percentage of the followers volunteered to be vaccinated."*

"Contents of the meetings on the occasion of the visit of SS-Obergruppenführer Pohl to the "House of the Waffen-SS" in Auschwitz on 23 Sept. 1942." SS-Obersturmbannführer and Commandant Rudolf Höss writes a long report on the meetings, the most important points of which he summarizes at the beginning: RGVA, 502-1-19, pp. 97-101.
"Items discussed:
Item 1: Boundary determination – area of interest vis-à-vis the town of Auschwitz.
Point 2: Irrigation and water extraction
Item 3: Sewage disposal
Item 4a: Relocation of the planned marshalling yard from the Auschwitz CC area
Point 4b: Relocation of the railroad outside the Auschwitz CC area of interest."

25. Central Construction Office. Note with the subject "Area of interest Auschwitz CC, site plan 1:10,000". The site plan is handed over to the Central Construction Office on 24 September 1942 "on the occasion of the service meetings with the Head of Office Group C, SS-Brigadeführer and Major General of the Waffen-SS Dr. Ing. Kammler." RGVA, 502-1-19, p. 91

SS-WVHA. Letter from Chief of Personnel Office to Office Group D, Auschwitz CC Administration, with subject "Transfer of SS members." Bartosik, Doc. 61, p. 221.
"Effective 25 September 1942," 2 SS-Hauptscharführer, including Georg Höcker, 4 SS-Oberscharführer, 1 SS-Scharführer, 3 SS-Unterscharführer, and 2 SS-Sturmmänner, are "detailed to the administration of Auschwitz CC for Aktion 'Reinhard'."

Headquarters Order No. 18/42 mentions the result of a Red Cross fund-raiser; announces "House 7" (coffee) sales hours; promulgates rules for official travel reimbursements; orders that found prisoner property be turned in to the Prisoner Property Administration, that weapons of arrested SS members be kept by the ordnance man, that dirty laundry be first disinfested and then washed; recommends or orders (the canteens) to boil milk; and mentions 6 found objects. Frei, pp. 178f.

[28.] Letter from the camp commandant to Gebr. Poensgen A.G. with the subject "KL. Auschwitz, laundry": RGVA, 502-1-347, pp. 237-238.
"From your letter to the Central Construction Office of the Waffen-SS and Auschwitz Police dated 28 Sept. 1942, it can be seen that the large machines for the laundry under construction cannot be delivered until the end of 1943, March 1944, June 1944, and partly at an indefinite time.
This is intolerable for the local camp for the following reasons:
The laundry of about 40,000 people cannot be accommodated in the surrounding laundries. The nearest laundry that accepts laundry at all is about 40 km from here, and there is no other laundry available in the entire district.
Since various infectious diseases such as typhus and the like are currently prevalent in the camp, and for this reason a camp lockdown had to be imposed by higher authorities, the cleaning and disinfection of the laundry is of crucial importance, and only in this way can the diseases be contained. The danger of transmission of these diseases exists not only for the troops and their families living here, but also for the city of Auschwitz and the workers of the new Buna factory to be built there.

29. Letter from the Central Construction Office to Huta A.G. Kattowitz with the sub- RGVA, 502-1-313, p. 119.

ject "Confirmation of need for bituminous cardboard and adhesive mass, BW. Crematorium PoW camp."
"As it has been noted, the demand for tar adhesive mass has been stated as 4000 kg, while the Raw Materials Office, Personal Staff RF SS has confirmed the demand as 4800 kg."

30. Central Construction Office. "Cost estimate for the new construction of the sewage and digester-gas extraction plant with main collector of Auschwitz CC B.W. 201". Total cost: RM 1,700,000. RGVA, 502-1-321, pp. 6-11.

Letter from J.A. Topf & Sons, Erfurt, to the Central Construction Office with the subject "Eight-muffle cremation furnace for Auschwitz CC, our order no. 42/1422/3". RGVA, 502-1-313, p. 1138.
"With our order-acceptance confirmation letter of the 22nd of this month, we confirmed, among other things, 4 cast iron doors. We made a mistake here when we delivered not 4, but 8 cast iron doors with cast-iron frames, spiral handles and fireclay lining, at the price of RM 360.-."

Letter from J.A. Topf & Sons, Erfurt, to the Central Construction Office with the subject "Crematorium, cremation furnaces". APMO, BW 30/34, p. 114.
"We thank you very much for the order placed with us by your telephone call of 25 Sept. for the delivery of
5 pieces of Topf three-muffle cremation ovens,
3 pieces of Topf forced-draft units and
fireclay material for the flue system [for crematorium III*...]*
In the new order, we have also modified the coffin-introduction device by providing a wrought-iron stretcher for each furnace, on which the corpses are placed, and the introduction rollers located on the furnace. This eliminates the need for the entire rail system for the introduction trolley and, in addition, the floor in the furnace chamber can be carried out without recessing."

The Central Construction Office accepts the six cost estimates of the firm F. Boos, dated September 15, 1942, for "reception building, prisoners' bath and delousing," for a total cost of RM 111,234.94. RGVA, 502-1-333, p. 114.

Letter from the Central Construction Office to SS-Sturmbannführer Busching, Head of the Construction Inspectorate of the Waffen-SS and Police – Reich South, Munich-Dachau, with the subject "Syllabus for Prisoners' Masonry School": RGVA, 502-1-280, p. 180.
"As requested, I am enclosing a teaching program, a timetable, and a prisoner's instruction booklet, which I hope may be useful to you as documents for the possible planned establishment of a prisoner's masonry school."

Letter from Central Construction Office to SS-WVHA, Chief of Office C V, subject "Request for 100 pairs of roofing shoes." RGVA, 502-1-265, p. 11.
"The roofing shoes are needed for the prisoner roofing column, which is to perform all roofing work required on the construction project here. Since the column currently has a larger job to do (tarring the lodging barracks in PoW camp) and is only equipped with nailed shoes, they damage the roofing felt when walking on the roofs."

Letter from the Central Construction Office to the Mauthausen Oberdonau Concentration Camp with the subject "Loading of furnace parts": RGVA, 502-1-280, p. 27 and BAK, NS 4/Ma/54.
"On September 22, 1942, the Central Construction Office of the Waffen-SS and Auschwitz Police shipped the parts listed in the enclosure for the coke-fired Topf double-muffle cremation furnace in rail car no. 320224 to the address there and at the disposal of the firm of J.A. Topf and Sons, engineering works in Erfurt. The furnace parts mentioned in the enclosure originate from a consignment of the company Topf and Sons Erfurt, which were loaded onto rail car no. 43225".

Radio message no. 98. Sending agency: W.V.H.A. Subject: "Tour of the hair-processing enterprise Held in Fridland, Breslau district": AGK, NTN, 94, p. 171.
"I hereby authorize the trip by car of SS-Oberstuf. Schwarz from Auschwitz to Friedland to visit the Held hair-processing enterpr. in Friedland, Breslau district. Sgd. Glücks."

Headquarters Order No. 19/42 prohibits prisoner units from using Railroad Street (*Bahnhofstrasse*); prohibits driving and riding on the Vistula dams and dikes; disbands all cleaning orderlies due to lack of personnel; and reports 2 found objects and one lost object. Frei, pp. 180f.

A special headquarters order changes the working hours of the headquarters' typing pool and and offices. Frei, p. 181

Garrison Order No. 26/42 prohibits the consumption of raw fruits and vegetables and uncooked milk because of the increasing number of typhoid-fever cases, and forbids entering Auschwitz as the epidemic center. Frei, pp. 181f.

October 1942

1. Central Construction Office. Note with the subject "construction supervision measures." RGVA, 502-1-19, p. 104.
"At the staff meeting held on September 28, 1942, with the camp commandant SS-Obersturmbannführer Höss, the undersigned, in his capacity as construction supervision authority, drew attention to the fact that no suitcases and waste from inmate effects may be burned in the vicinity of buildings, since otherwise a large fire could break out, to which entire parts of the camp would fall victim.
As was discovered on Saturday, September 26, 1942, the ourbreak of a fire was prevented at the last minute caused by careless burning of old suitcases and the like at the effects barracks south of the DAW."

Letter from the District Administrator of the Bielitz District to the Commandant of the Auschwitz CC with the subject "Typhus epidemic in Auschwitz". At a meeting on September 28, it is decided "that it is absolutely and urgently necessary to erect another barrack to accommodate the remaining civilian workers in the conc. camp, because according to medical opinion, the real danger of the spread of typhus exists only among civilian workers." RGVA, 502-1-332, p. 133.

Letter from Gebr. Poensgen Inc., Düsseldorf, to the Central Construction Office with the subject "Provisional laundry": RGVA, 502-1-347, p. 221.
"We also note that the washing machines supplied so far have a total capacity of 213 kg of dry laundry. At a 10-hour working time with 6 washing cycles, the machines perform about 1,300 kg in 6 days, i.e. about 7,800 kg per week. If we assume a normal laundry load of 2.2 kg per man and week, this would mean that [the laundry of] *7,000 men could be washed."*

Radio message from SS camp physician Friedrich Entress, to SS-WVHA, Office D III: TNA. HW 16-21. ZIP/GPDD 253b/12.10.42, n. 3.
"SS Scharführer Karl Voss, born 15 Nov. 1906, Hundefuehrerstaffel, (corrupt groups) was admitted to Res. Infirmary Auschwitz on 30 Sept. 42 because of suspected typhus."

[1.] Central Construction Office. "Activity Report of SS-Strm. Lubitz, head of construction of the above-ground construction department. Month of September 1942." Work was done on the following structures: RGVA, 502-1-27, pp. 26-28.
BW 7a (prov. headquarters), BW 13 (headquarters), BW 20 K, L, M, O, Q (adding floor in CC Block 2, 1, 14, 12, 23), BW 26 B (yard barn Babitz II), BW 33A (barn at horse stables), BW 63 (yard barn Babitz I), BW 63 (yard barn Budy), BW 64

(greenhouse facility Raisko), BW 65 E (herd-book stables – Harmense), BW 68 (laboratory Raisko), BW 71 (stables Budy), BW 76 (grass-drying facility Raisko), tower construction main utility camp, "BW 104-107 no work was done on the new buildings because of fumigation."), BW 116-120 (inmate lodgings), BW 157 A-E (security workshops).

2. SS garrison radio station. Message no. 13. Sending office: W.V.H.A. to Auschwitz CC: APMO, D-Aul-4/1a, (travel permits), p. 16.
"Re.: Travel permit.
Ref.: your request dated 2 Oct. 42.
Travel permit for a 5-to. truck with trailer to Dessau and back, for the purpose of picking up materials for the resettlement of Jews, is hereby granted. The driver is to be given this permit to drive."
Sgd.: SS-Obersturmbannführer Liebehenschel.

Telex from the RSHA, Office IV C 2, to the commanders and commissioners of the State Police and the SD with the subject "Admission of female Jewish prisoners to Ravensbrück CC": NO-2522.
"The RF and Chief of German Police ordered on 29 Sept. 42 that the Jewish prisoners incarcerated in the women's concentration camp Ravensbrück are to be transferred to the Auschwitz concentration camp, women's department, so that the women's CC Ravensbrück will be free of Jews. The Inspector CC has already ordered the transfer of Jewish prisoners from women's CC Ravensbrück to Auschwitz CC. Therefore, the admission of Jewish female prisoners to the women's CC Ravensbrück is immediately out of the question. If, in individual cases, orders to the contrary have been issued from here, I request that the female Jewish prisoners be transferred independently from there to Auschwitz CC, Women's Department."

3. The booklet of the title "Mason School Auschwitz CC" begins with this date. It concerns 974 young prisoners (bricklayer apprentices) and contains 1,510 entries, up to June 1, 1943. The pages are divided into five columns with the following headings: "Serial. No./Arrival-Departure," "Date," "Prisoner No.," "Last Name and First Name," "Remark." APMO, D-Aul-3a/1, Książka mason school.

4. I.G. Farbenindustrie A.G. "Weekly Report 70/71 for the Period from 21 Sept. to 4 Oct.": NI-14489.
"In the late afternoon, a tour of the Auschwitz plant was given by Obergruppenführer Pohl, preceded by a presentation by Dr. Ambros on the overall layout of the plant. Here, the subject of our worries about the use of labor came up, which led to the following promise by the Obergruppenführer:
After completion of Camp IV, which is expected on October 15, prisoners will immediately be made available for our construction work. The Obergruppenführer will also try to procure suitable labor for the assembly work through all German CCs (metalworkers, electricians). The Obergruppenführer will give instructions that warm clothing, necessary for the winter, be made available to us for the Croats, Ukrainian men and women employed on the construction site."

5. The company F. Boos acknowledges receipt of the letter from the Central Construction Office dated September 30, 1942. RGVA, 502-1-347, pp. 282-282a.

Central Construction Office. "Site Plan of the Auschwitz CC Area of Interest". Plan No. 1733. This site plan shows the area of the Birkenau Camp before its construction. Within the camp area, whose boundaries are marked out, 12 numbered houses are drawn in the future Construction Section III (houses 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914). Outside the boundaries of the camp, to the north, there are three more houses (nos. 586, 587, 588), to the east, in the former village of Birkenau, appears a group of 39 houses numbered 601 to 639. RGVA, 502-2-93, p. 14.

Central Construction Office. "Construction Report for Month of September 1942". RGVA, 502-1-24, pp. 133-139.
"There were 919 civilian workers, 2906 male prisoners, 2385 female prisoners, 45 carts, 10 motor vehicles [and other machinery] *in use at the end of the month."*
I. Auschwitz Concentration Camp Construction Project.
a) Protective-custody camp
BW 104-107: inmate lodging building.
BW 20 K: adding floor to inmate lodgings in former women's CC.
BW 20 M, O, Q: adding floor to inmate lodgings
BW 7 A: inmate lodging building
BW 13: prov. headquarters
b) Protective-custody camp extension
BW 116-120, 125, 134, 135-138: inmate lodging building
BW 157 B: security workshop
BW 160: laundry and reception building with delousing
c) Other buildings
BW 23 B: backup power plant
BW 161: prov. district heating plant
BW 33 B: slaughterhouse extension
BW 32 B: civilian workers' lodging building
BW 32 C: civilian workers' lodging barracks
BW 36 B: officers' lodging house 35
BW 36 D: officers' lodging barracks
BW 172: utility barracks
BW 209: temp. bridge across Sola
BW 21: road construction
BW 29: water supply
BW 9: sewerage
BW 201: storm water and main collector sewer with treatment plant and digester-gas extraction plant
II. Construction projects agricultural plants
BW 26: field barns
BW 33 A: straw sheds by the horse stables
BW 63: yard barns
BW 64: large greenhouse facility
BW 65 E: herd barns in Harmense
BW 68: laboratory Raisko
BW 71: stable barracks
BW 76: grass-drying facility Raisko
III. Construction project prisoner-of-war camp Auschwitz
"In the quarantine camp (Construction Section I), work has begun on bricking the stoves in the barracks. The ceilings of the massive barracks are covered with Heraklith panels, currently 4 barracks are completed. The expansion of the sauna facility in the delousing barracks of the men's camp was started.
In Construction Section II, the remaining so-called horse-stable barracks were erected. Furthermore, 3 utility barracks were erected, and concreting of the floor began. Of the lodging barracks for the guard troops, 6 barracks were erected, and the lighting cable was laid in 5 barracks. Furthermore, 3 toilet barracks and 1 wash barracks were erected for the guard troops. The fencing has been completed, and setting up of the spaces in between has begun. Work continued on the access and camp roads. Drainage lines for the wash and toilet barracks were extended by 25%. Work continued on the prov. sewage treatment plant and the subgrade.
At Crematory I, insulation work began on the morgue basement. Masonry work continued, and the installation of the muffle furnaces began.

At Crematorium II and III, excavation work has begun.
Construction Section III: Excavation of open trenches for surface drainage started.
Meliorations: Work already started by the agriculture dept. has been taken over."
IV. Construction yard Auschwitz
BW 37 B-C: construction-office barracks and lodgings.
V. Construction project gravel works
BW 3: office barracks
VI Construction project workshop (Krupp)
Workshops (joinery, locksmith's shop, carpentry, painting, glazing, motor pool).
concrete workshops
siding to the construction yard
main utility camp
surveying.

Letter from the Central Construction Office to Werner & Pfeiderer, engineering works and oven construction, with the subject "PoW camp Auschwitz, enlargement of the bakery": RGVA, 502-1-272, pp. 503-504.
"Based on the above-mentioned letter [dated September 29, 1942], *the bakery of the PoW camp, to which you will supply 4 T-8 double pull-out ovens for a supply of 160000 men with 54000 loaves of bread each weighing 1.5 kg daily, is to be enlarged. According to the information of the W III office, an additional 14 double pull-out ovens with a daily output of 4000 loaves each at 24-hour working hours daily are required for this purpose, and at least 2 reserve ovens must also be installed."*

Letter from the Central Construction Office to J.A. Topf & Sons, Erfurt, with the subject "5 pcs. three-muffle furnace (2nd plant)": RGVA, 502-1-313, p. 116.
"In reply to your above-mentioned writing [of September 28, 1942], *we are informed that the aeration and deaeration system for the above-mentioned 2nd plant will also be implemented."*

Letter from J.A. Topf & Sons, Erfurt, to the Central Construction Office with the subject "Your letter dated 29 Sept. 42, eight-muffle cremation furnace. Our order no. 42/1422/3": RGVA, 502-1-313, p. 115.
"Furthermore, you would like a drawing of our forced-draft system. You will receive this drawing D 59389 for your convenience. It shows the arrangement of the 3 forced-draught units. Each forced-draft unit is designed to convey 40000 cbm of flue gases per hour against a total pressure of 30 mm water column. Each unit is driven by a motor with a power of N = 15 hp at n = 930 rpm".

Letter from the SS-WVHA, the Chief of Office D II, SS-Obersturmbannführer Gerhard Maurer, to the Commandant Auschwitz CC with the subject "Jewish prisoners". Blumental, p. 73 (transcript).
"The Jewish prisoners still in the various CCs in the Reich area are to be transferred to Auschwitz. It concerns about 1600 men. Thus the CCs located on Reich territory will become free of Jews. Poles, Ukrainians or other prisoners will be needed as replacements.
I therefore ask you to inform me of the number of Poles, etc., that can be transferred to other CCs [beyond the number of 1600], *both male and female prisoners, when the camp lockdown is lifted."*

6. Construction Office of the Waffen SS and Police Auschwitz U/S.-Oswiecim. Work card. Order No. 2143: RGVA, 502-1-328, pp. 72, 71.
"For disinfestation plant, quarantine, PoW camp and women's CC, as well as troop lodgings PoW camp, the following work is to be carried out:
6 pcs. gas-tight doors, clear wall width 100/200. Design exactly like the doors for the J. utility barracks; 900 linear meters slats 28 cm wide.

Started: 29 Oct. 1942. Finished: 18 Nov. 42."
The accompanying "Order 2143" with the same text is dated October 5, 1942.

Central Construction Office. "Site plan of the Auschwitz U/S POW camp". Without plan no., drawn by prisoner no. 15592.
"Construction Section 1" is for "for 20000 inmates", "Construction Section 2" for 60,000 and "Construction Section 3" likewise for 60,000. — VHA, OT 31(2)/8.

Central Construction Office. "Site Plan of the Auschwitz U/S Prisoner of War Camp. Drainage Plan." Plan No. 1776, drawn by prisoner No. 15592. — VHA, OT 31(2)/8.

Central Construction Office. File memo:
"All SS NCOs and men are to report to the Central Construction Office lodging barracks today, 7:00 PM. Purpose: lice inspection by a medical orderly. Appearance compulsory!" — RGVA, 502-1-342, p. 18.

Central Construction Office. "Certificate":
"For the purpose of supervising the manufacture of anchoring parts for the crematorium at PoW camp, permission is granted to foreman Wilhelm Koch of Topf & Sons to enter the workshops of the Central Construction Office of the Waffen-SS and Auschwitz police." — RGVA, 502-1-41, p. 159.

Special headquarters order reports as new commander of SS-T-Sturmbann, SS-Sturmbannführer Hartjenstein. — Frei, p. 183

7. Radio message from SS garrison physician Eduard Wirths to SS-WVHA, Chief of Office D III:
"The camp commandant Auschwitz CC, SS Obersturmbannführer HOESS, injured by fall from horse on 6 Oct. 42. Admitted to SS Res. Hospital NIKOLAI on 7 Oct. 42. Diagnosis so far: broken ribs." — TNA. HW 16-21. ZIP/GPDD 259b/25.10.42, n. 14/15.

"Obligation" of the company Helmut Prestel:
"By being charged with road construction work in the CC, the company and its followers come into contact with prisoners assigned to assistance work. The prisoners try to approach the individual civilians and induce them to commit forbidden acts. In order to avoid any unpleasantness with unexpected consequences, the company hereby assumes the following obligation for itself and its followers:
I. That they shall not have any exchanges with the prisoners,
III. that any errands for prisoners are strictly forbidden,
III. that providing letters or documents of any kind for prisoners is forbidden and will be severely punished.
The company undertakes to set up special supervisory bodies to ensure that the above provisions are observed, and that it and its followers are protected from harm.
Any violation must be reported immediately to the Central Construction Office with the prisoner's number." — RGVA, 502-1-25, p. 372.

Garrison Order No. 27/42 governs the secondment of prisoners for private domestic work. — Frei, p. 183

A special site order relaxes the camp lockdown for SS members and their families by allowing freedom of movement in the camp's area of interest and permitting the reception of visitors. — Frei, p. 184

8. X-ray book No. 6 of the prisoner infirmary of Auschwitz CC begins with this date. It extends from October 8 to December 20, 1942, and contains entries numbered 15389 to 17127. — APMO, D-Aul-5/7. ISD, folder 67l.

The camp commandant Aumeier pp. SS-Hauptsturmführer."

Central Construction Office. "Application for release of bitumen for waterproofing of structures." Preprinted questionnaire with typed responses: RGVA, 502-1-313, p. 104.
"c/ Place of application: Crematorium II […].
e/ Need for cardboard in sq.m.: 1520 sq.m. three-layered ground waterproofing
800 sq.m. of double-layered the same […].
f/ need of adhesive mass: 7100 sq.m. bare bituminous cardboard size 500.
for the whole project: 11000 kg of bitumen
4500 kg tar adhesive mass
600 kg of primer […]
How deep is the isolation (detailed justification!) since the structure is over 2 m in groundwater."

The accounting books of Tesch & Stabenow in Hamburg show a delivery of 489.6 kg of Zyklon B to Auschwitz CC, which corresponds to a value of RM 3,099. (An TNA, WO 309-1603.

identical delivery on the same day is most likely the result of a clerical error).

A special headquarters order announces the establishment of cobbler and tailor workshops for family members of SS members, and explains in detail procedures and prices for certain tailoring and cobbler work. Frei, pp. 184f.

9. Central Construction Office. House Order No. 59: RGVA, 502-1-342, p. 19.
"All SS NCOs and SS men of the Central Construction Office are to report to the SS infirmary this evening at 7 p.m. with soldier's book, including those SS members who have already been inoculated against typhus.
SS-Hauptscharführer Wiechmann is responsible for carrying out the order."

10. Auschwitz CC, Garrison Order No. 28/42. RGVA, 502-1-39, pp. 39f. Frei, p. 186 (only the first page)
"1. in view of the ever-increasing incidence of infectious diseases, school operations are closed as of Monday, 12 Oct. 1942.
2. in order to prevent the spread of typhoid fever, it is ordered with immediate effect:"
The following are 11 behavioral guidelines in this regard.

Letter from the head of Department III A of Auschwitz CC to the SS-WVHA, Office D II, with the subject "Jewish prisoners": Blumental, p. 74 (transcript).
"Regarding the above reference [letter of 5 Oct. 1942], *Department III A of Au. CC informs that a transfer of Polish prisoners to other camps is impossible, due to the lack of skilled workers of the Jewish arrivals.*
The transfer of Polish prisoners would inevitably paralyze the entire construction operation of the local camp. There is nothing to be said against the transfer of Jews to Au. CC, on the contrary, they are urgently needed here."

The District President, Kattowitz. "Chronological Development of the Negotiations on the Water Supply and Sewage Disposal of conc. camp Auschwitz. Rapporteur: Oberregierungs- and Baurat Wittmer, Dipl. Ing. Möbius". A detailed report follows. RGVA, 502-1-320, pp. 21-25.

12. Letter from J.A. Topf & Sons, Erfurt, to the Central Construction Office with the subject "Your letter of 5 Oct. 42, crematorium, aeration and deaeration system": RGVA, 502-1-313, p. 113.
"We thank you for the order placed with us for the supply of an aeration and deaeration system. We have accepted the order on the basis of our cost estimate of 4 Nov. 1941 and its conditions at a total price of RM 7795.--."

13. Headquarters Auschwitz CC. RGVA, 502-1-31, p. 20.
"As of Wednesday, 14 Oct. 1942, the prisoners are scheduled to move in [from work] *at 5:30 p.m."*

---

[7] Probable error for 80%. The percentage for August is 50%.

Letter from the Central Construction Office to the SS-WVHA, Chief of Office C V, with the subject "Award of construction work for the new construction of the Waffen-SS prisoner-of-war camp at Auschwitz U/S." Enclosed are:
- Cost estimate of 27 Jan. 1942 for the bid of Huta: 227,321.59 RM,
- 3 cost estimates for the offer of the company Schlesische Industriebau: 145,543.70 + 406.40 + 53,854.98 RM,
as well as
"Cost estimate of 13 July 42 for the new construction of the crematorium acc. to the offer of the company HUTA, Above- and Below-Ground Construction-A.-G., Kattowitz, Friedrichstr. 19, concluding with 133,756.65 [RM].
The above-mentioned works have already been awarded to the same companies due to the extraordinary urgency, subject to approval by the superior department. The contracts will be concluded after approval.
Regarding 1.) and 2.)
Construction work for PoW camp had to be started immediately by special order in October 1941. The construction order for this was issued with Zl.II B-So-8/3/Se/Lo of 1.11.41. […]
To 3.)
The construction of the new crematorium had to be started immediately in July 1942 because of the situation created by the special actions. The companies HUTA, Above- and Below-Ground Construction-A.-G., Kattowitz, Friedrichstr. 19 and Schles. Industriebau Lenz & Co., A.-G., Kattowitz, Grundmannstr. 23, which were already working in the PoW camp. The Schles. Industriebau Lenz & Co. did not submit a bid due to a shortage of workers, according to a letter dated July 15, 42. For this reason, Huta was commissioned to begin work immediately in accordance with its offer of 13 July 42."

GARF, 7021-108-32, pp. 45-47.

Headquarters Order No. 20/42 appoints a substitute for the sick adjutant SS-Hauptsturmführer Mulka; establishes procedures for handing over or dissolving units; informs of a ban on offers of marriage and requests for correspondence by Wehrmacht members; complains that soldiers on leave keep working wives without leave away from work; orders weight checks for early detection of tuberculosis; reminds of speed limits in the camp area; urges proper parking of bicycles; points out that mailing cash or checks abroad is not permitted; and informs that SS men wishing to marry require Himmler's permission.

Frei, pp. 186-188

Garrison Order No. 29/42 restricts family visits to the most urgent cases because of the danger of typhus and recommends vaccinations, and reminds that prisoners and civilian workers may enter the camps only through the main guardhouse.

Frei, pp. 188f.

14. SS-WVHA, Office C III/4, Surveying Unit Auschwitz. Mission report concerning a mission to Breslau "for the procurement of documents for the connection of the survey area to the country's triangulated network and elevation network." Mentioned are, among others, aerial photographs for cartographic purposes.

RGVA, 502-1-385, pp. 253-256.

Letter from the Central Construction Office to Huta, Hoch- u. Tiefbau, Katowice, with the subject "PoW camp BW 30 static calculation". The decision is made "for carrying out the concrete basins for the two basements of the crematorium":
"1.) The 50 cm thick basement bottom, which has to counterweigh the groundwater pressure, is not reinforced.
2.) Reinforcement is to be placed under the columns as a downstand beam to distribute the column load.
3.) By 15th of the month, the design plans for said downstand beams shall be submitted to the Central Construction Office.
4) The company will start immediately with the bending of the reinforcement bars determined on today's date as discussed.
5) The structural analysis will be submitted to the Central Construction Office in quad-

RGVA, 502-1-1313, p. 112.

ruplicate immediately after the fair copy."

Radio message from SS garrison physician Eduard Wirths, to SS-WVHA, Office D III:
"It is reported that SS Sturmbannführer Dr. Joachim Caesar has fallen ill with paratyphoid fever (clinical and bacteriological), and was admitted to the Res. Infirmary Kattowitz on 13 Dec. 42."
TNA. HW 16-21. ZIP/GPDD 266b/11.11.42, n. 8.

Radio message from SS garrison physician Eduard Wirths, to SS-WVHA, Office D III:
"It is reported that the wife of SS Sturmbannführer Caesar has fallen ill with typhoid fever and has died. At the same time, it is reported that 3 cases of typhoid fever have occurred so far among families of SS members. Typhus has not been observed in SS family members."
TNA. HW 16-21. ZIP/GPDD 266b/11.11.42, n. 9/10.

15. Letter from the SS garrison physician to the Central Construction Office with the subject "Implementation of delousing of all civilian workers on 10 Oct. 42". Six directives follow on the delousing of persons, the clothing, equipment and objects of the civilian workers.
RGVA, 502-1-332, p. 66.

Central Construction Office. House decree no. 61:
"SS-Untersturmführer Eggeling is charged with directing the delousing operation ordered by the SS garrison physician Auschwitz for Sunday, 18 Oct. 42, in the communal camp of the civilian workers."
RGVA, 502-1-342, p.

Garrison Order No. 30/42 orders another delousing of all SS members because of "further cases of typhus in the troops," and makes vaccination against "typhus-paratyphus" compulsory.
Frei, p. 189

17. Letter from the District President of Kattowitz to the Reich Minister of the Interior with the subject "Typhus cases reported in the weekly report of October 4-10, 1942":
"The cases of typhus are 2 civilian workers employed in the Auschwitz concentration camp, who are housed there in camps. In addition, the medical officer reports that, during the week of the report, 10 cases of typhus were found among SS members and 626 suspected cases among the prisoners. Thus, the typhus epidemic in the Auschwitz concentration camp has not been extinguished."
APK, OPK 2176, p. 123.

Construction Office of the Waffen-SS and Police Auschwitz U/S.-Oswiecim. Work card, order no. 2250/250. BW 30:
"For lightning conductor for crematorium no. 11 BW 30 PoW camp the following work is to be carried out:
Manufacture and installation of a 4-part lightning conductor on the chimney of Crematorium 1 in the PoW camp.
Started: 23 Oct. 1942. Finished: 27 Oct. 1942."
RGVA, 502-2-8, p. 8.

19. Central Construction Office. File note with the subject "Leveling work at PoW camp Auschwitz construction section 3, BW 17":
"According to the levelling plan drawn up, soil movement of 50,000 m³ is required. […] *The company* [Karl Brandt] *has assured the necessary technical supervisory personnel (1 construction leader, several master excavators and about 10 foremen) as well as 2000 linear meters of track, about 40 lorries and 1 steam excavator for the execution of the leveling work."*
RGVA, 502-1-19, p. 109.

Radio message from SS garrison physician Eduard Wirths, to the SS-WVHA, Office D III:
"Due to suspicion of typhus and typhoid fever, respectively, the following SS member was admitted after 18 Oct. 42: SS Sturmmann Alfons Ballus, born 14 Dec. 11, 8 SS T
TNA. HW 16-21. ZIP/GPDD 271b/2.12.42, n. 7/8.

Stuba CC AU, because of suspected typhoid fever; SS Rifleman Josef Minaega, born 23 Dec. 12, 9 SS T Stuba, CC AU, because of suspected typhus."

Letter from the Central Construction Office to the Auschwitz CC headquarters with the subject "Malaria control in Auschwitz CC". Reference: letter from SS-WVHA, Office D III Az. 14 h (KL)9.42-Lg/K: RGVA, 502-1-332, p. 132.
"In the above-mentioned letter, a copy of which was forwarded to the office here by the SS garrison physician, measures against the spread of malaria are specified. Since it is primarily a matter of applying chemical control agents, and these cannot be procured from the Central Construction Office, it is requested that the necessary preparations be made from there.
Concerning the elimination of ponds and groundwater, extensive drainage work has been in progress for some time now by means of pre-flooding, mainly in the area of the prisoner-of-war camp, the villages of Birkenau and Babitz."

20. Registered letter from the SS-WVHA to the district president Kattowitz with the subject "Establishment of an official district for the area of interest Auschwitz CC": APK, Land PlGo/S-467, p. 72.
"Enclosed I submit a plan of the area of interest Auschwitz CC as determined at the meeting held on 23 Sept. 42 under the chairmanship of Gauleiter and Chief President Bracht. I request that a special administrative district be formed for this area, so that communal-constitutionally speaking the Auschwitz Concentration Camp becomes independent. The area of interest is about 4640 hectares."

Letter from the Central Construction Office to the headquarters Auschwitz CC with the subject "Delousing of civilian workers on 18 Oct. 1942": RGVA, 502-1-332, p. 65.
"The delousing of all civilian workers proposed in accordance with the above letter from the SS garrison physician Auschwitz was carried out on 18 Oct. 1942."

Letter from the SS garrison physician Auschwitz to the Central Construction Office: RGVA, 502-1-332, p. 129.
"The State Health Office complains that the civilian worker Josef Honkiesz was given leave to go home on 13 Oct. 1942, but was not deloused before leaving the camp.
In view of the extraordinarily great danger of the spread of typhus by civilian workers in particular, leave of absence for civilian workers may in future really only be granted if the prescribed delousing and disinfestation has been carried out.
It is to be expected that the present leave of absence for civilian workers will have to be revoked in repeat cases. The garrison physician therefore asks that the supervisory bodies in the communal camp be instructed accordingly.
According to information from the health authorities, typhoid fever exists in H.'s family. He may therefore not be given any more leave until further notice."

21. Central Construction Office. File memo with the subject "PoW camp BW 30 award of contract for roof truss": RGVA, 502-1-313, p. 110.
"The work for the construction of the above-mentioned roof in 'Vollmar' construction method was awarded to the firm Industriebau A.-G., Bielitz, in accordance with their offer of 31 Aug. 1942.
Due to the urgency of the work, it was not possible to call in the other firms already working here, which are currently fully occupied. In addition, the company Industriebau A.-G., Bielitz, also has the wood in stock required for the construction."

Letter from the Central Construction Office to Industriebau A.-G., Bielitz, with the subject "Roof truss BW 30 PoW camp": RGVA, 502-1-313, p. 111.
"Regarding the above letter [of October 1, 1942], *you are informed that the erection of the roof truss can be started on November 16, 1942."*

Radio message from SS garrison physician Eduard Wirths, to the SS-WVHA, Of- TNA. HW 16-21. ZIP/GPDD

fice D III:
"Because of suspected typhus and typhoid fever, the following members were sent to the Res. Infirmary Kattowitz on 20 Oct. 42: SS Sturmmann Herbert Leckecr, born 22 Feb. 11, 4 SS T Stuba, C AU typhoid fever; SS Sturmmann Gerhard Mecka, born 9 Sept. 21, 1 SS T Stuba CC AU. typhoid fever; SS Rifleman Werner Quirin, born 5 Dec. ? training company CC AU typhus; SS Rifleman Ignatz Muschalla, born 21 May 23 dog handler squadron KL AU typhus."
273b/19.11.42, n. 11/13.

Radio message from SS garrison physician Eduard Wirths, to SS-WVHA, Office D III:
"Since 12 Oct. 42 among the troops, 13 suspected cases of typhus, 3 suspected cases of typhoid fever admitted to Res. Infirmary Kattowitz. Status of typhus cases in the protective-custody camp on 19 Oct. 42
0 sick positive, 107 suspected cases (since 12 Oct. 42 13 admissions, 101 discharges, 4 departures by death)."
TNA. HW 16-21. ZIP/GPDD 273b/19.11.42, n. 14/15.

Letter from the SS garrison physician Auschwitz CC to the Central Construction Office with the subject "Malaria control at Auschwitz CC."
"The control of malaria with chemical agents (Schweinfurt Green) has already been initiated by the garrison physician in conjunction with the agricultural department."
RGVA, 502-1-332, p. 253.

22. Letter from the Central Construction Office to J.A. Topf & Sons, Erfurt, with the subject "PoW camp Auschwitz – Crematorium":
"For the entire <u>electrical installation</u>, the undersigned office immediately requires exact details in duplicate of the number and size of electric motors for <u>all</u> structures to be executed by you at PoW camp Auschwitz."
RGVA, 502-1-313, p. 109.

Radio message from SS garrison physician Eduard Wirths, to SS-WVHA, Office D III:
"SS Obersturmführer Paul Mueller was admitted to the Res. Infirmary Kattowitz on 21 Oct. 42 because of suspected typhus."
TNA. HW 16-21. ZIP/GPDD 274b/23.11.42, n. 1.

24. House Decree No. 2 of the Special Construction Office for the construction of the Waffen-SS prisoner-of-war camp at Auschwitz, with the subject "Medical care of the civilian employees employed here."
RGVA, 502-1-1, p. 168.

Headquarters Order No. 21/42 mentions the result of a collection for the Winter Relief Charity; declares the area around Birkenau a prohibited area where civilians are not allowed to be at all, and SS men are only allowed to be on official business; complains of bad behavior and outward appearance of SS men; forbids the purchase of poultry in surrounding towns; closes House 7 (coffee); Orders that all letters to administrative departments must go through the typing pool; explains details of transferring sums abroad; cites a circular from Bormann requiring that political or other official disagreements among Germans be kept secret from foreigners; forbids food pickups for SS members by prisoners; and mentions three lost items.
Frei, pp. 190-192

26. Letter from the Central Construction Office to J.A. Topf & Sons, Erfurt, with the subject "Cca. [CC Auschwitz] crematorium (2. 5 x 3 muffle furnaces)":
"As requested, the department confirms receipt of your order confirmation for delivery of an aeration an deaeration system for the second 5 x 3 muffle furnaces. […] *The 2nd crematorium will be erected on the other side of the street. The building therefore results in the mirror image of the 1. building."*
RGVA, 502-1-313, p. 95.

Letter from the Central Construction Office to J.A. Topf & Sons, Erfurt, with the subject "Auschwitz CC, PoW camp, second crematorium with 5 x 3-muffle cremation furnaces":
"On the basis of the above offer [of September 30, 1942]*, you are hereby awarded a*
RGVA, 502-1-313, p. 93; 502-2-26, p. 216.

contract for the delivery and installation of
5 coke-fired cremation furnaces with 3 muffles each
5 coffin introduction stretchers, 3 forced-draft systems, as well as the required fireclay material for the smoke ducts.
The total price results from

"As of Monday, 2 Nov. 1942, the departure to and return time from work for prisoners is determined as follows:
Departure to work: 6:30 a.m.
Return to camp: 4:30 p.m."

30. Letter from the Central Construction Office to the SS-WVHA, Chief of Office C V, with the subject "Iron requisition from J.A. Topf & Sons, Erfurt, Dreysestr. 7/9 for 5,000.-- kg for 1 wrought-iron anchorage for the crematorium (PoW camp)." RGVA, 502-1-313, p. 85.
"The materials relate to structure no. 30 POW camp (crematorium)."
These were anchorages for the 8-muffle cremation furnaces of BW 30b and 30c (Crematoria IV and V).

The SS-WVHA, Office Group D – Concentration Camps, sends the following order from Himmler to the commandant of the KL, including Auschwitz: NARA, microcopy no. T-1021, Vol. III. Rec. Gr. No. 242/338, Roll. No. 18, Frame n. 556.
"The Reichsführer-SS and Field Command Office, 29 Oct. 42.
Chief of the German Police
To
1. Reich Security Main Office
to the attention of SS-Gruppenführer Müller
2. SS-W.-V.-H.A. – Office Group D -
SS-Brigadeführer Glücks.

Subject: Parcel shipments to prisoners.
1.) I authorize with immediate effect that prisoners may receive food parcels from their relatives.
2.) There is no limit to the number of packages a prisoner may receive. However, the contents must be consumed by the detainee on the day of arrival or the following day. If this is not possible, the contents will also be distributed to other inmates.
3) This order of mine applies not only to German prisoners, but also to all other prisoners who have the opportunity to have food packages sent to them.
4) Any SS member who tampers with a prisoner's food package will be punished by death.
5) If a prisoner abuses the sending of parcels to bring through secret messages, tools or other illicit things, he will immediately atone for this with death. His barracks shall be forbidden to receive parcels for three months.
Sgd. Himmler."

31. Letter from J.A. Topf & Sons, Erfurt, to the Central Construction Office with the subject "Your letter dated 26 Oct. 42, second crematorium (III) with 5 three-muffle cremation furnaces, our order no. 42/1454/1." The Topf Company acknowledges receipt of the Central Construction Office order of October 26. RGVA, 502-1-313, p. 86.

Central Construction Office. "Activity Report or Construction Report for the Month of October 1942" by SS-Sturmmann Jothann. Work was done on the following structures:
1.) provisional bakery, 2.) officers' lodging barracks, 3.) office barracks – *Erd- und Steinwerke*, 4.) civilian workers' lodging barracks, 5.) officers' lodging house 35, 6.) officers' lodging house 141 – garages, 7.) canteen community, 8.) civilian workers' camp – delousing, 9.) factory halls. RGVA, 502-1-24, pp. 108-109.

Headquarters Auschwitz CC.
"As of October 31, 1942, the camp commandant, SS-Obersturmbannführer Höss, resumes full duty. In the period from November 1, 1942 to November 23, 1942, SS-Untersturmführer Hössler is entrusted with deputizing for labor deployment for SS-Obersturmführer Schwarz, who is on convalescent leave during this time." RGVA, 502-1-31, p. 22.

Garrison Order No. 31/42:
"Because of the danger of spreading communicable diseases, home visits to all sick SS members and SS family members are forbidden with immediate effect." Frei, p. 192

[31.] ABL. "Activity Report of SS-Strm. Lubitz, Head of Construction, Dept. for Above-Ground Construction. Month of October [1942]." Work was carried out on the following structures:
BW 7a (prov. headquarters), BW 20 K, M, O, Q, N (adding floor to CC Block 1, 14, 12, 23, 13), BW 63 (Babitz I farm barn), BW 63 (Babitz II farm barn), BW 26 B (Birkenau field barn), Babitz cattle barns, Budy young-cattle barns, BW 64 (Raisko greenhouse facility), BW 65 E (herd book barn – control barns), BW 68 (Raisko laboratory), BW 76 (Raisko grass-drying facility). RGVA, 502-1-24, pp. 110-112.

November 1942

1. Headquarters Auschwitz CC.
"By order of the commandant, the prisoners move in already at 4:00 p.m. because of the operetta performance on 2 Nov. 1942. The operetta performance 'Der Vetter aus Dingsda' on Monday, 2 Nov. 42, will not begin at 8.30 p.m., but already at 7.30 p.m." RGVA, 502-1-31, p. 18.

"Inmate infirmary Birkenau, medication consumption from 1 Nov. 42 – to…" The pages are divided into 6 columns, each indicating: "Serial No.", "Date", "Inmate No.", "Block", "Name", "Medicine." The list begins with number 6472, prisoner AGK, Zbiór Ob, 382, p. 2

3265 Langenhagen, on November 1, 1942, and ends with number 14754, prisoner 119201 Gataj, on July 15, 1943. Many of these 8,282 entries refer to prisoners who received medicines on several occasions. Among the medications listed are: Glucose, Anisin, Pandigal, Cardiazol, Aspirin, Carlsbad Salt, Omnadin, Piramidon, carbon, Urotropin, Hoffmann's Paste, Valerian, Coffein, Bolus Alba (Caolino), Bolus Alba, bromine, Combelin, Transpulmin, Coramin, Gardenal, Combetin, Eubasin, Simpatol, chinine, Oleum Camf., Prontosil, calcium, Eleudron, Novalgin, Istizin, Tannalbin, vitamine A, C, D, Digipuratum, Albocid.

2. Auschwitz CC, Headquarters, Department III A. Letter to the Central Construction Office with the subject "Prohibited Area Birkenau". RGVA, 502-1-332, p. 128.
"Regarding the above reference, Department III A informs you that the prohibited area Birkenau has been marked by appropriate warning signs since 31 Oct. 42."

Central Construction Office, "Report on the progress of construction work up to and including 2 Nov. 42" by SS-Oberscharführer Otto Kayser (Construction Office of the PoW camp). RGVA, 503-1-24, pp. 56-57.
Work carried out:
I.) Quarantine camp – men's camp.
1.) Mortuary, 2.) 12 inmate lodgings,
"3.) In the delousing barracks: installation of a sauna bath and a hot-air disinfestation system. In the gas room, two brick stoves set up."
II.) Quarantine camp-women's camp.
"1.) In the delousing barracks: installation of a sauna bath and a hot-air disinfestation system. In the gas room, two brick stoves set up.
2.) In the infirmary barracks (X-ray room) concrete floor cast. The second infirmary barracks covered with Heraklyth panels."
III.) Construction Section II
1.) Two toilet barracks, 2.) three wash barracks, 3.) fence construction, 4.) 8 utility barracks.
IV.) Construction Section III
1.) external fencing, 2.) inmate lodgings, 3.) access roads.
"V.) Crematorium – I.
1.) Above the incineration room, the concrete ceiling poured.
2.) Ballast concrete poured in basement I. Air shafts bricked.
3.) Started laying the masonry in basement I.
4). Chimney construction finished.
5). Ceilings cast over the fuel room and adjoining rooms.
6) One three-muffle furnace completed, the second one started, the anchoring for the third one is ready.
VI Crematorium – II
1) The pits for basement I and II were excavated, the bottom concrete was poured.
2) In basement II the tub was made and plastered. Insulation was started.
3). Concrete foundation for the chimney completed, chimney bricked about 1.80 m high.
VII.) Crematorium – III
1) Foundations and external masonry around the cremation room completed.
2) Foundations for the chimney completed. Chimney bricked to a height of approx. 1.50 m.
3.) Foundation for the eight-muffle furnace excavated.
VIII) Crematorium – IV
1) The trees to be removed were felled and the construction staked out.
2.) Delivery of construction materials.
3.) Road construction to Crema. I & II completed."
IX.) Troop lodgings.

A special headquarters order reminds that motor-vehicle travel outside the area of interest requires a travel order. Frei, pp. 192f.

3. "I.G. [Farben] Auschwitz Plant. 21st construction meeting in Leuna on November 3, 1942". On October 30, 1942, there were 10,962 workers in Monowitz CC, including skilled and unskilled laborers. NI-11139.

Central Construction Office, "Regular Block Occupancy in Auschwitz CC". RGVA, 502-1-272, p. 56.

4. Central Construction Office. "Construction Report for Month of October 1942." RGVA, 502-1-24, pp. 80-88.
"There were 931 civilian workers, 5235 male prisoners, 1328 female prisoners, 45 carts, 11 motor vehicles [and other machinery] *in use at the end of the month."*
I. Construction Project Auschwitz Concentration Camp.
a) Protective-custody camps
BW 20 L, K, M, N, O, Q: adding floor to inmate lodgings.
BW 7 A: inmate lodging building
b) Extension of the protective-custody camp
BW 116, 117, 125, 126, 134-138: inmate lodging building

BW 157 A, B, C: prisoner security workshop building
BW 160: laundry and reception building with delousing and prisoner baths
c) Other buildings
BW 23 b: backup electric generator
BW 49: cabling
BW 161: district heating plant
BW 33 B: slaughterhouse extension
BW 36 B: officers' lodging barracks (house no. 35)
BW 36 D: officers' lodging barracks 1
BW 209: temp. bridge across Sola
BW 21: road construction
BW 29: water-supply plant
BW 9: sewerage
BW 201: main collector sewers for wastewater and storm water with
treatment plant and digester-gas extraction plant
II. Construction Projects Agricultural Enterprises
BW 26: field barns a) in Birkenau b) in Broschkowitz
BW 63: yard barns a) in Babitz I b) in Babitz II c) in Budy
BW 64: large greenhouse in Raisko
BW 65 E: chicken-breeding sheds in Harmense
BW 68: laboratory in Raisko
BW 71: stable yards a) in Budy b) in Babitz
BW 76: grass-drying facility in Raisko
II. Construction Projects Auschwitz Prisoner-of-War Camp
"Construction Section I. Quarantine camp
The ceilings of the lodging, infirmary and utility barracks were covered with light construction panels. Started installation of masonry stoves in the wooden barracks. Continued installation of 2 saunas and 2 hot-air disinfestation units in the delousing barracks. Concrete floor was poured in the infirmary barracks (X-ray room). The power supply was increased from 100 to 160 KVA by installing a new transformer.
Construction Section II
Continuation of installation works in wash and toilet barracks, including necessary earthworks, masonry and concrete works.
The outer fence enclosure is completed, as well as two inner enclosures. 8 utility barracks were erected in October, and the 9th is under construction. Finishing work has begun. Drainage lines were installed, and finishing work continued on the open ditches for surface drainage. For the wash and toilet barracks located in the western part, prov. water supply by pumping unit was created. In the wash barracks, 4 reinforced concrete water tanks were constructed. A prov. water supply for the utility barracks was also started.
Construction Section III
12 wash and toilet barracks have been erected so far, fence construction for this construction section has begun. The camp roads between II and III are under construction, as well as the access road. The sewerage system is under construction, as well as the surface drainage system.
Crematoria
A) The chimney is finished, the concrete ceiling above the incineration room is poured, the other ceilings have been encased. Concrete pressure plate placed in the special basement. Ventilation shafts bricked up, and interior basement masonry started. One three-muffle furnace has been completed and another has been started.
B) The foundation pits for the basements have been excavated, and the bottom concrete has been poured, the 'tub' has been constructed on one basement, and groundwater insulation has been started. The foundation for the chimney is ready, and the construction of the same has been started.

C) Foundations and external masonry for the cremation room was completed. The chimney has been started.
D) Preliminary work for the start of construction."
Troop quarters, bakery.

tation Plant I in the protective-custody camp on 5 Nov. 42, 10 o'clock in the evening." Report on the incident.

Letter from RSHA, Office IV C 2, to various agencies, including Office Group D of the SS-WVHA, with the subject "Parcel Shipments to Prisoners". RGVA, 502-1-8, p. 14.
"The Reichsführer and Chief of the German Police has authorized, effective immediately, that prisoners may receive food parcels from their relatives.
The number of packages a prisoner may receive is unlimited, but the contents must be consumed by the prisoner on the day of arrival or the following day. Otherwise, the distribution will be made to other prisoners as well.
This order applies not only to German prisoners, but also to all other prisoners who have the opportunity to have food packages sent to them.
Any violation, e.g., tampering with food packages, or abuse, e.g., bringing through secret messages or other unauthorized items, will be punished with the most severe penalties."

15. Central Construction Office, "Constructions of the Central Construction Office of the Waffen-SS and Auschwitz Police in the 3rd Year of War Economy." RGVA, 502-1-85, pp. 114, 119.
List of buildings, divided into 16 columns; the first two refer to serial number and construction project/structure:
"G.B. Bau VIII Z a 1 (1).
20. delousing barracks u. 4 effects barracks
21. 5 barracks for special treatment […].
31. disinfestation plant:
(a) f. special treatment
b) f. for [sic] troops (sauna and disinfection)."

16. Letter from J.A. Topf & Sons, Erfurt, with the subject "Your letter dated 1.11.42, K.L.-Auschwitz, PoW camp, Crematorium III and IV, uns. Offer. No. 42/0802/1": RGVA, 502-1-313, pp. 71-71a.
"We acknowledge receipt of your aforementioned letter and note that you, not we, have made a mistake. According to your wire message:
'Rewired price about a piece of complete eight-muffle furnace as taken over from Mogilev including anchoring and change to wood heating,'
we have sent you a quote for a Topf eight-muffle cremation furnace, including anchoring and with wood firing, i.e. as you requested.
We assumed that you wanted another eight-muffle cremation furnace to be installed in the area, with wood as fuel.
However, as can be seen from your aforementioned letter, you would like a quote to serve as a basis for our invoice. However, we have to include wood firing in the offer, since the furnaces intended for Mogilev at that time are equipped for wood firing. For this reason, you had given us the order in your letter of 15 Sept. 1942 to change the wood firing to generator firing.
In order to inform you about the actual scope of delivery, we have enclosed a cost estimate for a Topf eight-muffle cremation furnace with wood firing, but without anchoring irons. We ask you to destroy our offer of 19 Oct. of this year, with which we had offered the furnace including the anchoring irons, so that no ambiguities can arise later."

J.A. Topf & Sons, Erfurt, to the Central Construction Office. RGVA, 502-1-313, pp. 72-74.
"Cost estimate for a Topf eight-muffle cremation furnace".
All components of the furnace are listed in detail. Price: RM 12,972.

17. Letter from the District Administrator of the Bielitz District to the Commandant of the Auschwitz CC with the subject "Typhus epidemic". RGVA. 502-1-332, p. 125.
There have been no more cases of typhus in the Jawischowitz Camp recently, but a suspected case of typhus has been reported in Braunau. The camp lockdown for civilian workers continues.
"Further, I have received 2 new cases of typhus from the Health Office. On 31 Oct.

1942, the Polish woman Salomeja Pomietlak from Przecischau 394 fell ill and died on 3 Nov. 1942 in the hospital in Wadowitz. The husband met prisoners from the CC camp at the work place. On 24 Oct. 1942, the wife Honorata Juszczak from Auschwitz fell ill. The 16-year-old son worked in the CC at the construction company Falk, and came into contact with prisoners. He was not housed in the camp, but walked daily from the apartment to the conc. camp to work."

Letter from the SS-WVHA, Office C I/2, to the headquarters of Auschwitz CC: RGVA, 502-1-9, p. 31.
"On the occasion of the meeting in Kattowitz on September 23, 1942, between all agencies interested in Auschwitz, the boundary of the area of interest of the Waffen-SS and the city of Auschwitz was finally determined."
A detailed description of the boundaries follows.

18. Letter from Robert Koehler, civil engineer, to the Central Construction Office: RGVA, 502-1-313, p. 71.
"Enclosed I am sending you an invoice together with a copy for the new chimney Crematorium I PoW camp, and kindly ask for possible immediate remittance of the above amount."

Central Construction Office, "Statement of Cement Requirements for the Month of February 1943". RGVA, 502-1-265, p. 447.
"(1) 500 tons monthly requirement
of which 250 tons Construction Project VIII Up a 1 and
250 to ″ ″ VIII Up a 2.
2.) a) SS accommodation and CC Auschwitz U/S VIII Up a 1
b) Auschwitz U/S Prisoner-of-War Camp.
(Implementation of special treatment.) VIII Up a 2."

Construction Office of the Waffen SS and Police Auschwitz U/S.-Oswiecim. Work card. Order no. 98/291:[8] RGVA, 502-2-8, p. 1.
"For Subject: Crematorium II – BW No. 30 in PoW camp the following work is to be performed:
Construction lighting inside Crematorium II, as well as setting the floodlights for night work /gaurd chain/.
Started: 15 Jan. 1943. Finished: 23 Jan. 1943."

21. Letter from the SS Economic and Administrative Main Office, head of Office Group D – Concentration Camps, to the camp commandants of all CCs with the subject "Reporting Procedure for Deaths in Concentration Camps." NO-1543.
"By order of the Reichsführer-SS and Chief of the German Police, the following guidelines are issued in agreement with the Reich Security Main Office for the processing of deaths in the concentration camps, annulling all orders previously issued:
1) Deaths of male and female Jews are to be recorded only in a collective list (single copy), which must contain the following information:
serial no.
last name, first name, for women also maiden name,
date and place of birth,
nationality,
last place of residence,
date of death,
cause of death,
place of incarceration.
If protective or preventive detention has been ordered for Jews by the Office – IV C 2 or Office V – of the Reich Security Main Office, the names of the persons concerned are to be underlined in red pencil, and the detention number of Office IV or V is to be indicated. The lists are to be compiled in order of date of death and submitted here by the 3rd of the following month after the end of the month.
Express letters and final reports of the deaths of Jewish prisoners are thus omitted.
2) Death reports on all other prisoners are to be submitted in simple form only to the Reich Security Main Office – Office IV C 2 or Office V – and to the SS Economic and Administrative Main Office – Office Group D – using the previously used form (express letter). These forms are to be sent by regular mail continuously to the Reich Security Main Office or to the office here.
In both cases to number 1. and 2., it is the same whether it concerns natural or unnatural deaths.
This does not affect the direct notification by telex of the referral offices for the purpose of informing the next of kin, if prescribed. The previous procedure for reporting the deaths of Soviet prisoners of war and Russian civilian workers will not be changed. The

[8] Underlined words are preprinted in the form.

camp commandants are responsible to the Reichsführer-SS and to me personally for ensuring that, in spite of this reduction in reports, it is not forgotten at any point in the camps that the human life of every criminal must also be accounted for."

Radio message from SS-Untersturmführer Max Sell (Department IIIa) to SS-WVHA:
"Re.: Inmate deployment Buna Works … corrupt groups … 2.04; deployed in Buna Works 1607; occupied with camp construction: 277; inpatients: 101. total number of … corrupt groups …? 31." [total number of guards: 131]. TNA. HW 16-22. ZIP/GPDD 304b/28.11.42, n. 1.

Radio message from SS camp physician SS-Obersturmführer Friedrich Entress to SS-WVHA, Office D III:
"Information is requested as to whether the commandeering of SS Hauptsturmführer Dr. Kurt UHLENBROCK to CC AU. has been cancelled." TNA. HW 16-22. ZIP/GPDD 304b/28.11.42, n. 2.

Radio message, probably from the SS camp physician SS-Obersturmführer Friedrich Entress, to the SS-WVHA, Office D III:
"It is requested that the start of the treatment course for SS Sturmbannführer Dr. Joachim CAESAR be postponed to the beginning of January for urgent family reasons. SS Untersturmführer WEBER has not yet arrived to deal with the water issue…" TNA. HW 16-22. ZIP/GPDD 304b/28.11.42, n. 3.

23. Bricklaying School Auschwitz CC. APMO, AuI, BW 1/20/105, pp. 19-19a.
"Report
on the activity of the Bricklayers' School in the period from 16 July 1942 to 21 Nov. 1942.
The school was opened at Auschwitz CC-Birkenau on 16 July 1942.
On 16 July 1942, the strength was 302 apprentices
" 31 July 1942 strength: 501, addition: 343, departure: 144.
" 31 Aug. 1942 " : 712, " : 312, " : 101
" 28 Sept. 1942 " : 522, " : 9, " : 199
The departures during this period was made up of sick and unsuitable apprentices. […]
On the day of the transfer of the Bricklayers' School to Auschwitz CC (28 Sept. 1942), the strength was 522 apprentices. Of these, 201 apprentices were transferred with the school. The remaining 321 apprentices dropped out and remained in Auschwitz CC-Birkenau.
On 29 Sept. 1942 strength: 201
" 31 Oct. 1942 " : 144, additions: 8, departures: 65.
" 21 Nov. 1942 " : 129, " : 8, departures: 23
(Of the 129 apprentices, 99 are deployable).
The considerable decrease in the number of apprentices is due, on the one hand, to the departure of 321 apprentices already mentioned above, and, on the other hand, to numerous cases of illness."

Central Construction Office. "Contract award No. 27 of chimney and demolition for Crematorium BW 11 at Auschwitz CC" to Robert Koehler.
The final invoice must be calculated according to the offer of August 14, 1942, which provided for smoke ducts of 19.50 m; in the offer of July 24, their length was only 12 m. RGVA, 502-2-23, p. 16.

This date marks the beginning of a collection of documents on the transfer of prisoners from the Monowitz inmate infirmary to the Auschwitz and Birkenau inmate infirmaries. The last transfer is dated September 18, 1944. A total of 7,295 prisoners are registered there, for 4,901 of whom the medical diagnosis is given (exhaustion, diarrhea, edema, phlegmon, pneumonia, typhus, etc.). NI-14997.

24. Letter from headquarters Auschwitz CC to the Central Construction Office with the subject "Structural changes in Auschwitz CC": RGVA, 502-1-275, pp. 7-8.
"In the women's CC: […] *Bar the windows in all the stone blocks so that the Jewish*

women can be locked up in the blocks. […]
Erection of a Swiss barrack at the crematorium as an office for the Political Department."

Letter from the Central Construction Office to the J.A. Topf & Sons company, Erfurt, with the subject "Auschwitz CC – Crematoria – PoW Camp": RGVA, 502-1-272, p. 498.
"This is an opportunity to inform you that the requested payment installment in the amount of RM 27,000 for item 5-three-muffle furnaces, your order no. 42/1454/1, has been passed on from here for transfer."

Letter from the Central Construction Office to the SS-WVHA, the Chief of Office C V, with the subject "Incineration Furnaces Mogilev": RGVA, 502-1-313, p. 67.
"For the purpose of confirming the order, a cost offer for one incinerator with 8 muffles was requested by the local office from the Topf and Sons company. The estimate amounts to RM 12,972. This does not include the price for the furnace anchoring, since the latter was made in the local inmate workshop."

A detailed report follows.

Radio message from SS-Obersturmbannführer Arthur Liebehenschel (SS-WVHA, Office D I) to Auschwitz CC:
"For the purpose of taking the remaining driving tests and trials with Met[h]*anol, SS Untersturmführer REUPERT will arrive in AUSCHWITZ on Monday, 7 Dec. 42."*
TNA. HW 16-22. ZIP/GPDD 316b/7.12.42, n. 39.

Garrison Order No. 34/42 orders delousing and disinfestation for anyone leaving the camp for leave or official travel, and mentions a road closure.
Frei, p. 199

4. Letter from the SS garrison physician to the Auschwitz CC headquarters with the subject "Meeting with the District Administrator of the Bielitz District on 4 Dec. 1942":
RGVA, 502-1-332, pp. 117-119.
"By way of introduction, the district administrator gave an overview of the state of typhus in the district of Bielitz and pointed out that the individual cases of typhus which had occurred in the district were allegedly all due to the CC. According to the official physician's investigations, typhus was either spread by civilian workers themselves, who left the camp area without permission and bypassed the camp lockdown and went to their relatives, or relatives of civilian workers employed in Auschwitz fell ill. The District Administrator therefore requests a report on measures taken to prevent the spread of typhus."
The SS garrison physician pointed out that "civilian workers are given leave only in the most-urgent cases and after prior thorough delousing and disinfestation," however, the district administrator considered these measures insufficient. He further stated:
"In addition, the delousing and disinfestation of the prisoners of Auschwitz CC is continuing, so that an extinction of the typhus epidemic in the CC can also be expected shortly."
At present, "3 large disinfestation shower and sauna facilities" can be put into operation, two for prisoners and one for the troops, with a capacity of 3,000-4,000 men per day. The following measures are required for the civilian worker:
"1. Accommodation of civilian workers in communal camps within the chain of posts.
2. Establishment of quarantine accommodation.
3. Implementation of a 3-week quarantine for all civilian workers to be furloughed."

Central Construction Office. "The following quantities of curtains, runners and carpets are required:"
RGVA, 502-1-272, pp. 23-26.
House of the Waffen-SS, in the rooms: hall, corridor and staircase; 2 rooms of better design, 8 guest rooms with 2 beds, 19 simple guest rooms. In addition, the following are mentioned: main barracks, officers' lodging barracks, lodging and utility barracks, lodging house no. 56B, lodging house no. 24 near the railroad station and lodging house no. 210.

Central Construction Office. "Construction Report for Month of November 1942."
RGVA, 502-1-24, pp. 47-54.
"There were 923 civilian workers, 4870 male prisoners, 1584 female prisoners, 45 carts, 13 motor vehicles [and other machinery] *in use at the end of the month."*
<u>I. Construction Project Concentration Camp</u>
a) Protective-custody camps
BW 20 L, K, M, N, O, Q: adding floor to inmate lodgings.
BW 7 A: inmate lodging building
BW 43: prov. laundry
BW 20 D: laundry and lavatory addition
b) Protective-custody camp extension
BW 116, 117, 125, 126, 127, 134-138: inmate lodging building
BW 157 A, B, C, D: inmate security workshop building

BW 160: laundry and reception building with delousing and prisoner baths
c) Other buildings
BW 23: backup electric generator
BW 211: transformer station
BW 161: district heating plant
BW 33 B: slaughterhouse extension
BW 36 B: officers' lodging barracks (house no. 141)
BW 36 D: officers' lodging barracks 1
BW 40: SS lodgings "Deutsches Haus"
House 7: coffee house of the canteen community
BW 209: temp. bridge across Sola
BW 21: road construction
BW 29: water-supply plant
BW 9: sewerage
BW 201: main collector sewers for wastewater and stormwater with sewage treatment plant and digester-gas extraction plant

II. Construction Project Agricultural Enterprises

BW 26 B: field barns a) in Birkenau b) in Broschkowitz c) in Budy
BW 63: yard barns a) in Babitz I b) in Babitz II c) in Budy
BW 64: large-scale greenhouse plant in Raisko
BW 65 E: chicken-breeding sheds in Harmense
BW 68: laboratory in Raisko
BW 71: stable yards a) in Budy b) in Babitz
BW 76: grass-drying facility in Raisko

III. Construction Project Auschwitz Prisoner-of-War Camp

Construction Section I, Quarantine Camp

Continuation of work on the brick stoves in the barracks. 18 barracks provided with stoves. One hot-air disinfestation and one sauna facility completed. Work continued on the 2nd hot-air disinfestation unit and the 2nd sauna unit. 2 laundry and 1 X-ray barracks completed, foundations bricked for 1 storage barracks. New pavement applied to the main road.

Construction Section II

Continuation of the installation works including the necessary earthworks, masonry and concrete works. 4 intermediate fences of camp subdivision completed. 9 utility barracks completed. Septic tanks constructed for 4 utility barracks. Drainage lines installed, extension work continued on open trenches for surface drainage. Water connections for 4 wash and toilet barracks were made.

Construction Section III

Work continued on the exterior fencing. Foundations completed for 4 utility barracks. Camp road between II and III nearing completion. The sewerage system is under construction, as well as the surface drainage.

Crematoria

A) Ground floor masonry constructed over basement portion. All ceilings concreted. Concrete pressure plate placed in basement 3. Masonry of basement 1 completed. Two three-muffle furnaces completed, two more started.
B) Insulation masonry constructed and plastered in basement 1 and 3. Foundation trenches dug and bricked. Bricked and grouted the chimney 9 m high. In order not to interrupt the insulation work on cellar 2 in case of bad weather, a prov. roof was erected over this cellar.
C) Continuation of the masonry work. Furnace room masonry constructed.
D) Completion of earthwork and start of masonry work on foundations."

Troop housing, bakery.
IV. Construction Project Construction Yard Auschwitz
BW 32 C: 4 lodging barracks in civilian workers' camp I
BW 42 A: lodging barracks for Italian civilian workers
(civilian workers' camp II)
BW 82: pass-through barracks for civilian workers' camp I
V. Construction Project Gravel Works Auschwitz (Amt W I)
BW 3: Office barracks in Auschwitz
VII. Construction Project Krupp factory halls
BW 4: Hall I
BW 4: Hall II
VII. Construction Project meliorations in the area of interest of Auschwitz CC
VIII Miscellaneous
Workshops (joinery, locksmith's shop, carpentry, painting, glazier's shop, motor pool)
Concrete workshop.

5. Central Construction Office. File memo with the subject "Delivered and installed disinfection and disinfestation devices". RGVA, 502-1-261, pp. 222f. RGVA, 502-1-332, pp. 97-97a.
"All devices were ordered from Berlin and assigned to Auschwitz, namely:
3 hot-air devices brand Hochheim Company, Mönchengladbach (these are already installed as follows:
1 piece PoW Camp, Section I, men's barracks BW 5a
1 " " " " women's barrack " 5b
1 " prov. troop sauna PoW Camp, Section III (in existing massive building)
3 hot-air devices, Goedicker brand, have been ordered and reminded, should be on the way since 21/22. These are needed for the large prisoner disinfection barracks, PoW Camp, Construction Section II.
3 coal-fired disinfection units have been delivered by Werner, Berlin:
1 piece BW 5a – PoW Camp, men's barracks
1 " BW 5b – " " , women's barrack
1 " is intended for civilian workers decontamination barracks BW 82.
1 piece of hot-air device, Klein brand, is installed in Auschwitz CC behind the headq. building in the building.*
Still needed are:
1 piece of hot-air device, brand Hochheim, M.-Gladbach
for civilian workers' delousing barracks
1 piece for Italian delousing barracks new
1 " " Troop sauna, Section II, PoW Camp new
2 " Disinfection device for last 2 buildings."
* "The installation, method of operation and operating instructions for fired air-heaters for disinfestation and delousing plants" by Theodor Klein Company.

SS-WVHA, Office C III, Engineering Departments. To all economists, Central Construction Offices, and Construction Offices. Addendum to Directive No. 31: RGVA, 502-1-9, pp. 58-59.
"3. Storage tanks for toxic liquefied gases (chlorine, phosgene) and toxic readily vaporizing liquids (hydrogen cyanide) shall be placed in rooms below ground level with a minimum firebomb-proof ceiling (20 cm reinforced concrete)."

Garrison Order No. 34a/42 lists consequences of the change of boundary of the Auschwitz CC area of interest, and recalls the ban on entering Auschwitz. Frei, p. 200

7. Letter from Central Construction Office to SS-WVHA, chief of Office C V, subject "Special Allocation of Fuel for December 1942 to Power Construction Machinery for Well Drilling." The total requirement is: RGVA, 502-1-265, pp. 299-300.
crude oil 600 kg

gasoline	864 lt.
lubricant and engine oil	45.30 kg

Central Construction Office. "List of the number of boilers and their contents in the prov. prisoners' kitchen, as well as staffing levels in CC Au. I." There are 47 boilers with a total volume of 17,850 liters in Auschwitz CC I. AGK, NTN, 94, p. 33. Transcript.
"The present catering strength, including the external units, which also includes the women's camp in the staff building, is about 20,000 men.
Since the ration rate for prisoners is 1 1/4 to 1 1/2 liters per day, cooking must be done in two installments for the present number of prisoners, in addition to which coffee and tea must be made. The maximum occupancy of the camp is 25,000 – 30,000 men. With the existing 47 kettles, this maximum number could only be catered for by cooking three times, which is hardly feasible. If the boiling were done once, only 0.6 liters per head would be allotted.
There is no possibility to expand or to install additional boilers. It therefore seems urgently necessary to erect the planned final new kitchen building as soon as possible."

Central Construction Office. "Chimney Crematorium BW. 11". Handwritten note about the construction of the chimney: RGVA 502-1-318, pp. 4-5.
"Construction started 12 June 1942.
Construction finished 8 Aug. 1942."
688 prisoners and 123 civilian workers were employed. Material consumption: 25,000 bricks, 6 m³ of white lime, 200 bags of cement, 31,000 kg of fireclay bricks, 3,700 kg of fireclay mortar, 66 pieces of crampons, 6 pieces of resting irons, 3 liters of oil, 10 liters of gasoline, 17 rolls of roofing felt, 50 kg of inertol.

8. Letter from the Central Construction Office to the head of the Auschwitz CC administration with the subject "B.W. 5a and 5b, PoW Camp, Section I, Disinfestation and Disinfection Facilities in the Men's and Women's Barracks." RGVA, 502-1-275, p. 149; *ibid.*, pp. 150-151; *ibid.*, pp. 152-153.
Attached are:
1) "Operating instructions for the 'Fri-Ho.' air-heating system for Disinfestation and Delousing, and for preheating the sauna."
2) "Operating instructions for disinfection device, round type, for coal firing."

Radio message from SS garrison physician Eduard Wirths, to SS-WVHA, Office D III: TNA. HW 16-22. ZIP/GPDD 321b/24.12.42, n. 14.
"SS Obersturmführer Dr. Vetter reported sick today to the SS garrison physician. He states as the reason for his illness: nervous exhaustion. A speedy recovery is to be expected."

Radio message from SS-Obersturmbannführer Arthur Liebehenschel (SS-WVHA, Office D I) to Lublin CC: TNA. HW 16-22. ZIP/GPDD 321b/24.12.42, n. 30/31.
"Re: daily report by radio. Reference: our radio message of 7 Dec. 42, 1009 hrs. The daily strength report by radio is to be prepared as before, according to the following pattern: 1) Total number (including Soviet prisoners of war). 2) Arrivals. 3) Departures. Of the total number are: A) Reich Germans, B) Jews, C) Poles, D) Soviet prisoners of war. All other numbers need not be passed through on a daily basis."

Radio message from SS-Sturmbannführer Schoenemann, Buchenwald CC: TNA. HW 16-22. ZIP/GPDD 321b/24.12.42, n. 43/44
"To SS Special Camp Auschwitz.
Re: Caucasian activist Borgandjia. In addition to the activist Borgandjia, Grigori, I also request that the activist Bakuratze, Schachro, who also belongs to the Woloschilowsk group, be put on the march to SS special camp Landberg[e] *on 12 Dec. 42."*

Letter from the Central Construction Office to Fritz Hochheim, engineering works, with the subject "Auschwitz CC, hot-air furnace for disinfestation plants": RGVA, 502-1-272, p. 435.
"On the basis of your above quotation [of December 2, 1942], *the undersigned office*

orders for the very fastest delivery:
4 pieces of complete hot-air furnaces for disinfestation and decontamination complete with piping and motors according to your drawing 11690, otherwise as already obtained, at the price of RM 2,015.00, per complete unit.
1 piece is needed immediately."

Central Construction Office, "Barracks allocation." The list is divided into five columns: "intended use", "type", "required", "already installed", "missing". RGVA, 502-1-275, pp. 205-208.

"II. PoW Camp

Construction Section I		[required]
" laundry barracks 260/9		*2*
" potato-peeling bar. "		*2*
special treatment (old) "		*5*
Construction Section II "		*171*
" III only toilet, wash- & storage barracks "		*36"*

The 5 barracks "special treatment (old)" are all "already installed".

Letter from headquarters Auschwitz CC to Departments II, III, IV, motor pool, House of the Waffen-SS, Central Construction Office, D.A.W., and riding stable with the subject "Delousing." RGVA, 502-1-332, p. 49.
"By order of the SS garrison physician, the SS members listed in the above message are to bathe daily after the end of duty, namely, in the shower bath of the SS infirmary."

Radio message from SS garrison physician Eduard Wirths to the SS-WVHA, Office D III: TNA. HW 16-22. ZIP/GPDD 321b/24.12.42, n. 8/9.
"Re: status of typhus cases as of 7 Dec. 43. No SS member admitted to the troops since 1 Dec. 42 because of suspected typhus. In men's CC, 11 suspected cases of typhus (since 1 Dec. 42: 3 admissions, 0 discharges, 36 deaths)."

Letter from Reichsführer-SS to SS-Gruppenführer Pohl: BAK, NS 19/1542,

[9] Probable error for 80%. The percentage for August was 50%.
[10] Published in 2009 on the Auschwitz Museum website without citing the archival source. Reproduced in Mattogno 2020, Doc. 18, p. 227.

"Dear Pohl.
I come back to our conversation in the Hegewaldheim. Why don't you try to acquire raw vegetables and onions to the greatest extent possible for prisoner nutrition in 1943. Give out carrots, kohlrabi, turnips and other such vegetables in large quantities during the vegetable season and store a sufficient quantity for the prisoners for the winter so that they can get enough of them every day. I believe we will raise the state of health considerably with this. Heil Hitler. Yours (Himmler)."

p. 67.

Radio message from SS garrison physician Eduard Wirths, to SS-WVHA, Office D III:
"Because of suspected typhus, the following were admitted to the Res. Infirmary Kattowitz on 12 Dec. 42: SS Rifleman Lang, Mathias, born 17 July 22; SS Rottenführer Will, Johannes, born 25 May 11."

"Re: release of protective-custody prisoner Anna Boehm, born 24 March 13 in Gruenbach. Reference: local order D I/AZ 14 c 11/OT/U, dated 20 July 42, and our telex no. 28358, dated 22 Aug. 42. You want to report here immediately whether the protective-custody prisoner Anna Boehm, born 24 March 13, in Gruenbach, has now been released."

TNA. HW 16-22. ZIP/GPDD 328b/20.12.42, n. 30/31.

Letter from the SS garrison physician Auschwitz CC to the Central Construction Office with the subject "Quarantine for the civilian workers deployed in the area Auschwitz CC":
"After the meeting at the district administrator on 4 Dec. 42 in the presence of representatives of the government in Kattowitz and of representatives of the Defense District VIII, the implementation of a three-week quarantine is demanded by the district administrator before the civilian workers are given leave, in spite of the measures taken so far to prevent the spread of an epidemic. The SS garrison physician Auschwitz comments on this as follows:
Since 2 Nov. 42, no civilian worker ill with typhus has reported from the communal camps in the infirmary for civilian workers. Assuming that civilian workers who had not contracted typhus went for treatment elsewhere, there has therefore been no case of typhus since 2 Nov. 42.
Among the prisoners of the entire Auschwitz CC, there is at present no fresh case of typhus. The convalescents still undergoing treatment for typhus acquired the infection at least 4 weeks ago; they have lost their fever and are no longer to be regarded as typhus patients.

RGVA, 502-1-332, p. 247.

Consequently, the SS garrison physician Auschwitz considers it unnecessary to subject the civilian workers to a three-week quarantine before granting them leave, provided that each civilian worker coming on leave is thoroughly disinfested and deloused on the day of the start of the leave, that the disinfestation and delousing carried out is confirmed by a doctor on the leave certificate, and that the leave-takers are instructed to leave the camp area immediately after the delousing and disinfestation has been carried out and not to enter their quarters again."

16. Central Construction Office, "Explanations on the Implementation of the Water Supply. Subject: Auschwitz prisoner-of-war camp /implementation of special treatment/." AGK, NTN 94, p. 217 [transcript].

"As experience has taught, in such concentrated gatherings of people, the danger of contagious diseases through the consumption of bad water or as a result of inadequate hygienic conditions through water shortages is very serious. Therefore, for the calculation of the number of wells, the size of the pump units and the pipe widths, etc., a water requirement of 150 l per troop member and 40 l per inmate is assumed. This results in a daily water requirement of 59000 m³ per day. In addition, the installation of a chlorination plant for a water quantity of up to 500 m³ per hour is planned. […]
For the supply of the individual washing and kitchen barracks, as well as the individual crematoria and other special facilities, about 15900 running meters of pressure pipes of 50 - 500 mm ø with about 73 water valves and 74 underground hydrants are to be laid."

"Heinrich Kinna *Zamosc, den 16.12.42* T-382.
SS-Unterscharführer
<u>Report</u> on the transport of 644 Poles to the Auschwitz labor camp on 10 Dec. 42".
The recipient of the report is not indicated.
"Regarding the <u>ability to work</u>, SS-Hauptsturmführer Haumeier [sic] *explained that only Poles fit for work should be delivered in order to avoid as far as possible any useless burden on the camp as well as on the feeder traffic. Imbeciles, idiots, cripples and sick people must be removed from the camp in the shortest possible time by liquidation to relieve the camp. However, this measure is complicated by the fact that, according to the instructions by the RSHA*[11] *Poles must die a natural death, contrary to the measure applied to the Jews. It is therefore desired by the camp leadership to refrain from assigning those who are unfit for work."*
The report bears the signature "Kinna" at the end. See in contrast the letter of the SS-WVHA of June 24, 1942.

Telex from the chief of the Security Police and SD, Dept. IV B 4, SS-Gruppenführer Heinrich Müller, to Reichsführer-SS: PS-1472.
"In the course of the increased supply of manpower to the CCs ordered by 30 Jan. 1943, the following procedure can be followed with regards to the Jewish sector:
1.) Total number: 45,000 Jews.
2.) Start of transport: 11 Jan. 1943, end of transport: 31 Jan. 1943
(The Reichsbahn is not in a position to provide special trains for the evacuation in the period from 15 Dec. 1942 to 10 Jan. 1943 as a result of increased Wehrmacht vacation traffic).
3) Breakdown: The 45,000 Jews are divided into 30,000 Jews from the Bialystok District – 10,000 Jews from the Theresienstadt Ghetto. Of these, 5000 Jews fit for work, who were previously employed for minor work required in the ghetto, and 5000 generally fit for work. Also Jews over 60 years old. In order to take this opportunity to bring down somewhat the population of 48,000, which was too high in the interest of the development of the ghetto. For this purpose, I ask that special permission be granted. As before, only Jews who have no special relations or connections and who do not possess high honors would be included for the removal. – 3000 Jews from the occupied Dutch

[11] This instruction was never found or never existed.

territories. – 2000 Jews from Berlin = 45,000. The figure of 45,000 includes relatives unfit for work (old Jews and children). Applying expedient criteria, at least 10,000 to 15,000 workers will arise from the selection of the Jews arriving at Auschwitz."
See the last entry for January 15, 1943.

Telex from Himmler to SS-Gruppenführer Müller with the subject "Your Telex of 16 Dec. 1942 No. 229793": ISD, folder 459.
"In the conveyance of manpower for the concentration camps, I do not wish the number of 10-15000 people supplied [sic; exceeded]*. Unless the conveyance is made to Auschwitz, in which case the transportation of these 15,000 workers can be made at once. Altogether, then, the conveyance of 15,000 Jews to Auschwitz is to be expected in January."*

17. Letter from the Central Construction Office to the Wehrmeldeamt Sachgeb. W with the subject "Camp Closure at Auschwitz CC": RGVA, 502-1-332, p. 113.
"In response to the inquiry there of 8 Dec. 1942, the Central Construction Office informs us that it is not expected that the camp lockdown will be lifted within the next 3 months. All available means are probably being used to combat the epidemic effectively, but further illnesses could not yet be completely prevented."

Letter from the Central Construction Office to the camp commandant with the subject "Delousing of civilian workers": RGVA, 502-1-332, p. 47.
"According to the order of the SS garrison physician, the first delousing or disinfestation of the civilian workers is to be carried out on Saturday, 19 Dec. 42. For this purpose, it is necessary that the disinfestation facilities in the CC be made available. The same applies to individual delousings starting 22 Dec. 42 for the civilian workers."

Letter from the SS garrison physician Auschwitz CC to the Central Construction Office with the subject "Lifting of the three-week quarantine for civilian workers and employees": RGVA, 502-1-332, p. 246.
"In the communal camp of the Huta-Lenz companies, a civilian worker fell ill with typhus on 10 Dec. 42. However, he did not report to the camp physician, but left the camp without permission and was admitted to a hospital in the Bielitz District. It is therefore requested that a <u>3-week quarantine</u> be carried out for the workers of the Huta-Lenz companies, <u>beginning on December 10, 1942</u>, and expiring on December 31, 42, provided that a new case of typhus does not occur during this time."
The other civilian workers of the communal camp can go on vacation after delousing and disinfestation.

Letter from the Chief of the Security Police and SD to various police offices and the Inspector of CCs: RGVA, 504-2-8, pp. 19-20.
"For reasons of war importance, not to be discussed in detail here, the RF SS and Chief of the German Police ordered on 14 Dec. 1942 that by the end of January 1943 at the latest at least 35000 prisoners fit for work are to be sent to the concentration camps."

18. Central Construction Office. "Telex. Secret!" to the SS-WVHA, head of Office Group C, with the subject "Completion of Crematoria." APMO, BW 30/27, p. 17.
"In the month of December, work had to be suspended on several days because of delousing and disinfestation. Likewise, since December 16, for security reasons, a special Gestapo operation has been taking place among all civilian workers. As a result of the camp lockdown, the civilian workers had not been able to leave the camp for 6 months. A leave of absence from 23 Dec. 42 – 4 Jan. 43 is therefore unavoidable."
Expected end of work:
Crematorium II: 31 Jan. 1943
Crematory III: 31 March 1943
Crematorium IV: 28 Feb. 1943.

Radio message from SS-Hauptsturmführer August Harbaum (SS-WVHA) to Niederhagen CC:
"Holiday ban for the town of Auschwitz is still place. Leave of absence to Auschwitz must not be taken under any circumstances."
TNA. HW 16-22. ZIP/GPDD 331b/22.12.42, n. 26.

Radio message from SS-Sturmbannführer Max Burger (SS-WVHA, Office D IV) to the Auschwitz CC (SS-Hauptsturmführer Emil Stocker, Dept. IV):
"Subject: Stocks from Jewish resettlement …groups missed … Stocks of watches, razor …groups missed … on 21 Dec. 42, to be sent along. List as before, in triplicate. 1 escort from the administration of inmate funds, report: Staff Office D II to SS Obersturmbannführer MAURER. Likewise to be loaded: 1 sack of good flour, to be delivered to Office D I, to SS Obersturmbannführer LIEBEHENSCHEL."

Letter from the SS-WVHA, head of Office Group C, to the Central Construction Office with the subject "PoW Camp Auschwitz, special construction measures". The letter concerns the siding project between Auschwitz Station and the PoW Camp in Birkenau.
RGVA, 502-1-186, p. 258.

Telex from the Central Construction Office to the SS-WVHA, head of Office Group C, with the subject "Quarantine for civilian workers assigned to the Auschwitz CC area":
"Supplementary to the letter from the SS garrison physician to the headquarters of Auschwitz CC dated 4 Dec. 42 concerning the discussions at the district administrator of the Bielitz District on 4 Dec. 42 and letters from the SS garrison physician to the Central Construction Office dated 15 Dec. 42, which were sent in copy to that office, it is reported that, after negotiations between the SS garrison physician Auschwitz, SS-Hauptsturmführer Dr. Wirths, with the Bielitz Health Office and the Kattowitz government, the three-week quarantine of civilian workers will be discontinued, with the exception of a residential community of the Kluge Company.
Leave of absence for civilian workers over Christmas may be granted under the following conditions:
1.) Immediate delousing of all civilian workers;
2.) Individual delousing before the start of the leave, with close inspection;
3.) Instruction to civilian workers that in case of illness they must report to the nearest health office or hospital with an epidemic department.
As a result of the leave, construction work will be suspended from 23 Dec. 42 to 4 Jan. 43."
RGVA, 502-1-332, p. 111.

Garrison Order No. 35/42 settles various question concerning leaves of absence over the Christmas and New Year holidays, explains food allowances on the occasion of Yule celebrations and the allocation of Christmas trees, and regulates the use of the stage in the Comrades Home (*Kameradschaftsheim*).

28. Letter from the SS garrison physician to the Central Construction Office with the RGVA, 502-1-332,

subject "Fighting typhus": p. 110.
"According to information from the Bielitz State Health Office, the construction worker Michael Pasterny in Ernsdorf has fallen ill with typhus. The quarantine imposed on the residential community of the Lenz Company in Auschwitz is therefore to be extended until 3 Jan. 1943."

Letter from the SS Economic and Administrative Main Office, Office Group D, Concentration Camps, to the camp physicians of all CCs with the subject "Physicians' activities in concentration camps": AGK, NTN, 94, pp. 142-143. Odpis (transcript).
"Enclosed, for your information, is a list of current arrivals and departures in all concentration camps. It shows that out of 136,000 arrivals, about 70,000 were lost through death. With such a high death rate, the number of prisoners can never be brought up to the level ordered by the Reichsführer SS. The 1st camp physicians have to use all means at their disposal to bring down the death rate in the individual camps substantially. The best doctor in a conc. camp is not the one who believes that he must attract attention by undue harshness, but the one who keeps the working capacity as high as possible by supervision and exchange at the individual working places. The camp physicians are required to monitor the nutrition of the prisoners more than before and, in agreement with the administrations, to submit suggestions for improvements to the camp commandants. However, these must not only be on paper, but must be regularly followed up by the camp physicians. Furthermore, the camp physicians must see to it that the working conditions at the individual workplaces are improved as far as possible. For this purpose, it is necessary that the camp physicians personally convince themselves of the working conditions at the workplaces. The Reichsführer SS has ordered that mortality must be reduced at all costs. For this reason, the above is ordered, and monthly reports are to be made to the Chief of Office D II. For the first time on February 1, 1943."

29. Letter from the company Industrie-Bau-A.G., Bielitz, to the Central Construction Office with the subject "New laundry building BW 160, loss of working time": RGVA, 502-1-347, p. 158.
"As you are aware, no work was done through two days in the week before Christmas, because the construction workers were held back in their lodgings. We are of course obliged to pay the lost working hours to the work crew. We ask to be informed to whom and in what manner these lost hours are to be charged."

Letter from the Central Construction Office to the SS-WVHA, chief of Office C V, with the subject "Labor deployment Auschwitz. Compensation for lost work hours by ordering a special action." Bartosik, Doc. 66, p. 233.
"The Central Construction Office hereby reports that the prisoners and civilian workers employed at the individual structures could not be assigned to work for 4 days as a result of the implementation of a special action. Notification is requested as to the titles and chapters to which these expenses are to be charged."

Letter from the Central Construction Office to the SS-WVHA, head of Office Group C, with the subject "Auschwitz CC – armament enterprise – hygienic facilities in the Buna Branch Plant": — RGVA, 502-1-332, p. 261; *ibid.*, pp. 262-264.
"On the basis of the above-mentioned letters [dated 17 Nov. and 18 Dec. 1942]*, an inspection of the Buna Camp was made on 28 Dec. 1942 together with the SS garrison physician Auschwitz, SS-Hauptsturmführer Dr. Wirths. It was noted that the Construction Office of the I.G. had so far done everything possible to improve the hygienic facilities of the camp. In addition to the facilities already in place, as can be seen from the enclosed letter, the camp physician has requested various hygienic facilities. The Construction Office of the I.G. has promised to do its utmost to see that these requested measures are carried out in accordance with the presently prevailing winter period."*
Attached are a "Proposal for a provisional disinfestation chamber (infirmary, Buna Branch Camp)," a "Proposal for the reconstruction of the dental station (infirmary, Buna Branch Camp)," and a "Proposal for the construction of a toilet facility for the quarantine and sanitary block (infirmary, Buna Branch Camp).

Letter from SS-Obersturmbannführer and Commandant Höss to SS-Sturmmann Ludwig Damm, headquarters staff Au. CC, Auschwitz: — APMO, D-Au-I-1/Damm/43, SS-Personalakten, Vol. 1, sheet 53.
"I am punishing you in accordance with D.B.O. for mobile condition § 8, Para. C, Item 2 with a severe reprimand because you acted contrary to existing orders and regulations during your leave.
Justification: During your leave in December 1942, you conversed with soldiers and party comrades about the Jewish problem, and in doing so made statements about the solution of the Jewish question in Auschwitz. Through this behavior, which under certain circumstances was likely to cause unrest among the population, you acted contrary to the orders known to you. I have refrained from a more-severe punishment*

merely because of your up-to-now impeccable conduct and otherwise favorable assessment, and I expect that this incident will serve as a lesson to you for the future."
* See entry for May 22, 1943.

6. "Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in men's camp: 23,726, of whom unfit for labor and deployment: 2,670. RGVA, 502-1-67, p. 41.

Central Construction Office. File memo with the subject "Huta's work on the main collector and Crematorium I and II": RGVA, 502-1-21, p. 23.
"On January 6, 1943, Huta employed 23 bricklayers, 1 foreman and 2 laborers at Crematorium I and 8 bricklayers, 1 foreman, 1 laborer and 10 bricklayers from the main-collector construction site at Crematorium II. On January 7, 1943, another 10 bricklayers from the main-collector construction site are employed at Crematorium I. The remaining workers from the main-collector construction site build the road at the visitor center and clear the construction site. Depending on the progress of this work, additional workers are transferred to the construction site Crematorium I and II or sewage and digester-gas extraction plant."

Central Construction Office. "Construction Report for Month of December 1942". RGVA, 502-1-214, pp. 2-7a.
"There were 905 civilian workers, 4992 male prisoners, 759 female prisoners, 55 carts, 12 motor vehicles [and other machinery] *in use on December 22, 1942."*
I. Construction Projects Concentration Camp
a) Protective-custody camp
BW K, M, N, O, Q: adding floor to inmate lodgings.
BW 7A: inmate lodging building
BW 43: prov. laundry
BW 20 D: mounting of wash basins and toilets
b) Protective-custody camp extension
BW 116, 117, 118, 125, 126, 127, 134-138: inmate lodging building
BW 157 A, B, D: inmate security workshop building

BW 160: laundry and reception building with delousing and prisoner baths
c) Other buildings
BW 23 B: backup electric generators
BW 161: district heating plant
BW 33 B: slaughterhouse extension
BW 36 B: officers' lodgings (house no. 141)
BW 172: utility barracks for the guard troops
BW 209: temp. bridge across Sola
BW 21: road construction
BW 29: water-supply plant
BW 9: sewerage
BW 201: main collector for wastewater and stormwater with treatment and digester-gas extraction plant

II. Construction Project Agricultural Enterprises

BW 26 B: field barns a) in Birkenau b) in Broschkowitz c) in Budy
BW 63: yard barns a) in Babitz I b) in Babitz II c) in Birkenau II
BW 64: large-scale greenhouse in Raisko
BW 65 B: chicken-breeding sheds in Harmense
BW 68 A: hygien. laboratory in Raisko
BW 68 B: agricultural laboratory in Raisko
BW 71: stables a) in Budy b) in Babitz
BW76: grass-drying facility in Raisko

III. Construction Project Prisoner-of-War Camp Auschwitz

"Construction Section I
Stoves in all lodgings completed. Continuation of work on laundry barracks. 1 infirmary barracks and the sauna facility completed. Water-line connection to the X-ray station established, and about 400 running meters of 150 mm dia. pressure pipe laid. Furthermore, about 200 running meters of road construction have been started.
Construction Section II
6 infirmary barracks were completed, and work continued on the wash and toilet barracks and the utility barracks, as well as installation work. The external fencing has been completed except for some gaps required for material supply. Work on the intermediate fencing for the camp subdivision continued and is 50% complete. Work has begun on the masonry stoves in the shelters. Finishing work on the open trenches for surface drainage has been completed.
Construction Section III
Continuation of work on the external enclosure. Completed the camp road between Sections II and III. Continued work on the sewer system as well as surface drainage.
Crematorium
Work continued on all 4 crematoria. Degree of completion in % of the individual crematoria:

Crematorium I: 60%
" II: 20%
" III: 15%
" IV: 5%

Near Crematorium III, some 60 m of road construction was started."
Troop lodgings, bakery, road construction.

IV. Construction Project Construction Yard Auschwitz

BW 32 H: lodging barracks for Italian civilian workers, civilian labor camp II
BW 82: pass-through barracks for civilian workers camp I

V. Construction Project Gravel Works Auschwitz (Office W I)

BW 3: office barracks in Auschwitz
BW 4: workshop barracks in Raisko

VI. Construction Project Krupp Halls
BW 4: factory hall I
BW 4: factory hall II
VII. Construction Projects meliorations in the area of interest of the Auschwitz CC
VIII. Miscellaneous
Workshops (joinery, locksmith's store, carpentry, painting, glazier's store, motor pool).
Concrete workshops.

The Central Construction Office requests 132 solid cubic meters of softwood logs from the Forestry and Timber Management Office Dept. III in Breslau. RGVA, 502-1-78, p. 160.

Headquarters Order no. 1/43 conveys holiday greetings from Richard Glücks; orders that crew ranks giving indications of the type of troop are not to be used in postal traffic; reminds that SS members must register at their vacation plcae, and gives instructions on how to do it; explains the bureaucratic steps for obtaining marriage licenses for Waffen SS members; mentions men's tailor shop acceptance times; reiterates the prohibition against crossing fields; announces an order for obligatory duty during air raids for armed-forces personnel on vacation; mentions one lost and one found object. Frei, pp. 205-208

Letter from the district president Kattowitz to the Reich Minister of the Interior with the subject "Typhus illness reported in the weekly statement from December 27 – to December 31, 1942." APK, OPF 2176, p. 139.
The ethnic German Michael Pasterny fell ill on December 12 and was admitted to the City Hospital in Bielitz on December 22.
"The source of infection is to be sought on the construction site of the Auschwitz Concentration Camp, where P. came into constant contact with the camp inmates."

Headquarters, Department IIIa. Letter to SS-WVHA, Office D II, with the subject "Request for prisoners for 1943": RGVA, 502-1-56, p. 272.
"Regarding the above reference, it is hereby requested by Department III a of the Auschwitz CC for the agriculture department in Auschwitz CC, to the previous permit number IV/42/SS/9/ for the year 1943, that 300 skilled workers and 1000 male unskilled workers be approved."

Garrison Order No. 1/43 reaffirms the continuation of the camp lockdown and maintains furlough relaxations as long as the re-stated delousing and disinfestation requirements are met by furloughed personnel. Frei, pp. 208f.

9. "Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in men's camp: 23,587, of whom unfit for labor and deployment: 2,768. RGVA, 502-1-67, p. 41.

"Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in women's camp: 5,576, of whom unfit for labor and deployment: 1,493. AGK, NTN, 134, p. 282; transcript by J. Sehn.

Letter from the Central Construction Office to the SS-WVHA, head of Office Group C, with the subject "Hygienic Facilities in Auschwitz CC and PoW Camp": RGVA, 502-1-332, pp. 46-46a.
"The status of hygienic facilities at Auschwitz CC and PoW Camp is reported as follows:
A.) Auschwitz CC
1) 1 piece of hot-air device (Topf and Sons Company) has been installed since the fall of 1940 in the protective-custody camp, BW. 1 L and in operation.
2) 1 piece of hot-air device, Klein brand, is installed in the protective-custody camp, BW. 20 L, and has been in operation since autumn 1942.
3) A bricked chamber for fumigation with hydrogen cyanide has been in operation since summer 1942.
4) Civilian workers' pass-through barracks with shower bath (showers) and built-in hot-air device (Hochheim brand) and disinfection device (Goedicker brand) for daily disinfestation of civilian workers is almost completed and will be put into operation next week.
5) 2 'Oslo' type saunas are under construction (for members of the headquarters).
B. PoW camp Auschwitz
1) 1 disinfection unit (Werner) and 1 hot-air unit (Hochheim) were installed in the delousing barracks of the men's CCin PoW Camp Construction Section I., as well as a sauna unit, and have been in operation since November 1942. In addition, a chamber for hydrogen-cyanide fumigation is attached to the delousing barracks, and has been in operation since the fall of 1942.
2) 1 piece of disinfection device (Werner brand) and 1 hot-air device (Hochheim brand) are built into the delousing barracks of the women's CC in PoW Camp, Con-

struction Section I, likewise a sauna facility, and in operation since Dec. 1942. Also attached to the delousing barracks is a chamber for hydrogen-cyanide fumigation, which has been in operation since the fall of 1942.
3) 1 piece of disinfection device (Werner brand) and 1 hot-air device (Hochheim brand) is provisionally installed for the troops in an existing building in Birkenau, likewise a sauna facility, and has been in operation since December 1942. Here the effects of all troop members are disinfested, and the people are deloused.
4) For the guard troops in the Birkenau Camp, a sauna with a built-in building for 1 hot-air device and 1 disinfection device is being erected. For the time being, the prov. sauna and disinfestation facility under 3.) will be used."

Letter from the district president Kattowitz to various government offices in Kattowitz with the subject "Typhus illnesses in the backup police prison in Myslowitz". APK, RK 2903, pp. 5-11.
"7.) To the commandant of the concentration camp in Auschwitz, to the attention of SS-Obersturmbannführer Höss.
In the backup police prison at Myslowitz, some cases of typhus have been detected, on the basis of which the prison has been immediately sealed off against all intercourse with the outside world."
The only possibility for lifting the lockdown in the short term is to send the prisoners to Auschwitz, "as far as they are not sick persons."
"From here, I am unable to overlook whether the Auschwitz Concentration Camp is at all capable of accommodating what is, after all, a quite considerable number of prisoners at the present time. Furthermore, I do not deny that these prisoners might introduce new cases of infection into the Auschwitz Camp. Since, on the other hand, typhus has by no means been eradicated from the Auschwitz Camp so far, and extensive sanitary measures have been taken there," he was forced to make this request in order to prevent the infection from spreading to the densely populated industrial area.

Letter from the Central Construction Office to the camp commandant with the subject "SS Construction Offices subordinate to the Central Construction Office Auschwitz." RGVA, 502-1-21, pp. 21-22.
"According to the business distribution plan of Office Group C, SS Economic and Administrative Main Office, the Central Construction Office is assigned as supervising office. Construction work is to be carried out by the Construction Offices subordinate to the Central Construction Office. The assigned construction managers shall be fully responsible for the performance of the work."
Distribution Plan:
1. Central Construction Office of the Waffen-SS and Police Auschwitz; head of office: SS-Hauptsturmführer Bischoff; Deputy: SS-Untersturmführer (F) Ertl.
2. Construction Office Auschwitz CC and agricultural enterprises Auschwitz; head of construction: SS-Untersturmführer (F) Kirschnek.
"3. Construction Office of the Prisoner-of-War Camp (implementation of special treatment) Auschwitz."
Head of construction: SS-Untersturmführer (F) Janisch.
4. Construction Office industrial area Auschwitz; head of construction: SS-Sturmmann Jothann.
5. Construction Office main utility camp of the Waffen-SS and Police Auschwitz and Branch Oderberg; head of construction: SS-Untersturmführer (F) Pollok
6. Construction Office of the Waffen-SS and Police Freudenthal; head of construction: SS-Untersturmführer Mayer.

10. "Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in men's camp: 23,437, of whom unfit for labor and deployment: 2,722. RGVA, 502-1-67, p. 41.

"Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in women's camp: 5,563, of whom unfit for labor and deployment: 1,385. — AGK, NTN, 134, p. 283; transcript by J. Sehn.

11. "Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in men's camp: 23,352, of whom unfit for labor and deployment: 2,823. — RGVA, 502-1-67, p. 41.

"Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in women's camp: 5,545, of whom unfit for labor and deployment: 1,372. — AGK, NTN, 134, p. 283; transcript by J. Sehn.

Letter from the SS-WVHA, chief of Office Group C, to the Central Construction Office with the subject "Auschwitz CC – Completion of the Crematoria": — RGVA, 502-1-313, p. 59.
"Regarding the above letter [of January 4, 1943], *I inform you that I am concerned with the failure to meet the completion dates of the*

Crematoria	*II*	*01/31/43*
	III	*03/31/43*
	IV	*28/2/43*

for the reasons stated, I can only agree to this if everything possible is done to speed up completion despite the difficulties that may arise. I am to be given special weekly reports by telegram on the progress of construction."

SS New Construction Office [sic] Auschwitz CC. Prisoner locksmith shop. Work card. Order No. 27. "Object: make clothes-rack device for disinfestation / For 4000 civilian workers." Finished: 4 Feb. 1943. — RGVA, 502-2-16, pp. 38-39.

Central Construction Office. "Cremation facility for PoW Camp," plan no. 2036, drawn by inmate no. 127 Josef Sikora. Crematorium IV. — APMO, Neg. No. 20818/10.

Headquarters Order no. 2/43 mentions the address of the new Herzogenbusch CC; decrees that SS NCOs off duty in the Auschwitz CC area of interest must carry a pistol, and explains how it is to be carried; orders that passes from prisoner units must be stamped by the issuing office; forbids leaves of absence to Romania; deplores abuse of leaves of absence to Croatia and Serbia for unauthorized border crossings into Hungary, and overstaying of weekend leave; and cites two lost objects and one found object. — Frei, pp. 210f.

12. "Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in men's camp: 23,573, of whom unfit for labor and deployment: 3,067. — RGVA, 502-1-67, p. 41.

"Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in women's camp: 5,617, of whom unfit for labor and deployment: 1,381. — AGK, NTN, 134, p. 283; transcript by J. Sehn.

Letter from the SS garrison physician to the Central Construction Office with the subject "Repair of disinfestation device in Main Camp Auschwitz CC": — RGVA, 502-1-336, p. 109.
"According to information from the camp physician of the Main Camp, SS-Obersturmführer Dr. Entress, due to permanent stress on the disinfestation device in the Main Camp, the device is so badly damaged that a promising and permanent repair is not to be expected."
The SS garrison physician asks if a successful repair is possible, and if not, asks for the construction of a new device.

13. "Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in men's camp: 23,620, of whom unfit for labor and deployment: 3,347. — RGVA, 502-1-67, p. 41.

"Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in women's camp: 5,642, of whom unfit for labor and deployment: 1,441. — AGK, NTN, 134, p. 283; transcript by J. Sehn.

Letter from headquarters Auschwitz CC to the Central Construction Office with the subject "Combating epidemics": — RGVA, 502-1-332, p. 240.
"The district president Kattowitz needs the mobile disinfestation truck given to the garrison physician Auschwitz by the Wehrmacht to combat an epidemic that has occurred in the Myslowitz police prison. This takes away any possibility of carrying out individual disinfestation in the SS infirmary Auschwitz, and could only be compensated for by making the hot-steam autoclave in the new pass-through barracks of the Central Construction Office available to the SS garrison physician Auschwitz for individual disinfestation of the SS troops."

Letter from Auschwitz CC headquarters to the district president in Kattowitz with the subject "Transfer of prisoners suffering from typhus from the Myslowitz police prison to Auschwitz CC": — APK, RK 2903, p. 20.
"Individual cases of typhus are still occurring at Auschwitz CC, but the typhus epidemic no longer exists. I therefore do not consider it appropriate to transfer the present camp inmates of the Myslowitz backup police prison to Auschwitz CC, because this would increase the danger of a new occurrence of a typhus epidemic."

Letter from the Central Construction Office to the *Deutsche Ausrüstungswerke* Auschwitz with the subject "Carrying out carpentry work for local construction projects". The Central Construction Office requests completion of carpentry work for the following structures: — APMO, BW 30/34, pp. 78-79.
"4. Laundry building with reception, delousing and prisoners' bath […].
8. Crematorium I and II PoW Camp Auschwitz.
9. " III " IV " " " […]
Thus, of all the doors ordered by order letter of 26 Oct. 42 Corr.Reg.No.: 17010/42/Ky/Pa for Crematorium I in the PoW Camp, which is needed for the implementation of the special measures, are to be delivered immediately, otherwise the progress of the construction work is in question."

The accounting books of the Tesch & Stabenow company in Hamburg show a delivery of 1,004.4 kg of Zyklon B to Auschwitz CC, corresponding to a value of RM 6,026. — TNA, WO 309-1603.

14. "Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in men's camp: 23,789, of whom unfit for labor and deployment: 3,246. — RGVA, 502-1-67, p. 41.

"Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in women's camp: 5,770, of whom unfit for labor and deployment: 1,484. — AGK, NTN, 134, p. 283; transcript by J. Sehn.

15. "Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in men's camp: 24,066, of whom unfit for labor and deployment: 3,679. — RGVA, 502-1-67, p. 41.

"Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in women's camp: 5,904, of whom unfit for labor and deployment: 1,507. — AGK, NTN, 134, p. 283; transcript by J. Sehn.

Letter from the head of the Auschwitz CC administration to the Central Construction Office with the subject "Disinfestation plant in Main Camp Block 1": — RGVA, 502-1-336, p. 108.
"The delousing plant set up in the Main Camp of Auschwitz CC, Block 1, is defective. An investigation revealed that the firing system has burned out. Since the repair can-

not be carried out in any of the workshops of the local camp, but operation must not be interrupted, the administration requests the use of a boiler unit located in the local material storage until the repair is completed.
It is absolutely essential that this work be carried out quickly, since a longer interruption of the current disinfestation process would pose the danger of a new outbreak of typhus."

Central Construction Office. File memo with the subject "Negotiations on the allocation of important quotas at the Reich Office for Economic Development Berlin, SS Economic and Administrative Main Office Berlin, – Reichsführer-SS – Personal Staff – Raw-Materials Office Berlin, – Construction Representative of the Reich Ministry Speer – Branch Office Breslau, – Gebrüder Posengen Company, Berlin and Gebrüder Posengen Company, Breslau. This is a detailed report on a business trip from February 9 to 13 to various offices in Breslau and Berlin to procure raw materials, mainly iron. Among other things, 25,220 kg are requested for the "Topf & Sons company, Erfurt – for crematorium construction." — RGVA, 502-1-26, pp. 39-45.

Central Construction Office. File memo with the subject "Demolition of old buildings in the area of interest of the Auschwitz CC" with reference to an "inspection of the area of interest of the Auschwitz CC on 14 Jan. 1943" in which participated: SS-Sturmbannführer Burger, SS-Sturmbannführer Caesar, SS-Hauptsturmführer Bischoff and SS-Hauptsturmführer Kirschnek: — RGVA, 502-1-26, p. 8.
"During the above-mentioned inspection, in the area around Budy, Bor and Harmense, all the old Polish houses to be demolished were determined, taking into account the number of houses still needed for living quarters and utility rooms. It turned out that only very few houses and cottages are considered for demolition, and that the extraction of construction materials is very minor."

Central Construction Office. "Telex" to the SS-WVHA with the subject: allocation of various vehicles. — Bartosik, Doc. 69, pp. 214-242.
"With reference to the above-mentioned letters [from the Central Construction Office of 9 and 12 Jan. 1943] *on the one hand, and with reference to the special action ordered by the Reichsführer – accommodation of 47,000 Jews in the shortest possible time* – on the other hand, the office once again asks for the immediate assignment of 6 trucks with tipping equipment, so that the completion of the shelters under construction which are in question for this purpose can be completed on schedule (by 31 Jan. 43), which is impossible for the office in terms of transportation with the fleet of motor vehicles currently at its disposal."*
The Central Construction Office requests the allocation of 9 trucks and 3 cars.
* See entry for December 16, 1942.

16. "Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in men's camp: 24,213, of whom unfit for labor and deployment: 3,577. — RGVA, 502-1-67, p. 41.

"Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in women's camp: 6,448, of whom unfit for labor and deployment: 1,515. — AGK, NTN, 134, p. 283; transcript by J. Sehn.

Radio message, presumably from SS garrison physician Eduard Wirths, to SS-WVHA, Office D III: — TNA. HW 16-23. ZIP/GPDD 360b/22.1.43, n. 4/5.
"Because of suspected typhus, the following were admitted to the Res.Infirmary Kattowitz: SS Rifleman Wituchek, Adam, born 29 Sept. 98; SS Rifleman Hansek, Ludwig, born 29 May 08; SS Rifleman Brauner, Ferdinand, born … 2nd part dud…"

Central Construction Office. File memo by Unterscharführer Heinrich Swoboda: — RGVA, 502-1-26, p. 12.
"During reconstruction work in the transformer station of Auschwitz CC, it was dis-

covered that a disproportionately high amount of electricity is being consumed by the protective-custody camp. The current drawn goes up to 300 amps and above in the evening hours. On one occasion, it even happened that the automatic circuit breaker, set at 300 amps, burned out due to overload. This current corresponds to a power of about 192 KW. After calculating all the power consumers, which are composed as shown below, 100 KW could be consumed in the maximum case.

28 blocks at 63 lamps on average 40 Watt	*70,56 KW*
3 pumps	*10.-- "*
250 lamps for fence illumination at 100 Watt	*25.-- "*
	106.56 KW

Therefore, it can only be assumed that this additional consumption of 86 KW was due to the use of improperly assembled heating and cooking equipment."
This hypothesis of illegal consumption of electricity by inmates was confirmed by direct observations.

17. "Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in men's camp: 25,218, of whom unfit for labor and deployment: 3,513. — RGVA, 502-1-67, p. 41.

"Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in women's camp: 6,464, of whom unfit for labor and deployment: 1,520. — AGK, NTN, 134, p. 283; transcript by J. Sehn.

Letter from the Central Construction Office to the camp commandant with the subject "Disinfestation, disinfection and sauna facilities in CC and PoW Camp Auschwitz". Report on damage to various devices: in Block 1 (hot-air device), in the men's and women's disinfestation barracks PoW Camp, in the sauna in the women's CC and men's CC, and in the troop sauna. — RGVA, 502-1-28, pp. 256-258.

Radio message from SS-Obersturmbannführer Gerhard Maurer (SS-WVHA, Office Group D) to "SS Obersturmbannführer HOESZ":
"Dear Comrade HOESZ! Due to my long efforts, I have now 20 tons of barbed wire on hand, which I would like to put at the disposal of the local CC. The wire must be paid for. I ask … the construction supervisor to ask whether he can order and pay for the wire on his own, or whether he needs permission from SS Brigadeführer DR. KAMMLER, whom I cannot reach at present. Code number is not required. However, the wire must be used for the purpose discussed in AUSCHWITZ, i.e., for the erection of the 9 km. fence. I ask for immediate telegram. I would like to hear from you as soon as possible, so that the shipment to Auschwitz can be initiated. — TNA. HW 16-23. 18.1.43. ZIP/GPDD 362b/4.3.43, n. 6/8.

19. "Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in men's camp: 25,676, of whom unfit for labor and deployment: 3,733. — RGVA, 502-1-67, p. 41.

"Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in women's camp: 6,529, of whom unfit for labor and deployment: 1,459. — AGK, NTN, 134, p. 283; transcript by J. Sehn.

Radio message from SS-Obersturmbannführer Arthur Liebehenschel (SS-WVHA, Office D I): — TNA. HW 16-23. ZIP/GPDD

"To camp commandants:
SS Sturmbannführer KRAUS of the Main utility camp BRESLAU appears here and states that, for reasons of epidemic control in AUSCHWITZ, it seems necessary to relocate the troop utility camp AU to ODENBERG, which is about 72 km. away from AUSCHWITZ. Allegedly, they have agreed to this planned measure. I ask still today for confirmation of the above statements by telex."

363b/29.1.43, n. 12/13.

Letter from the Central Construction Office to the SS-WVHA, head of Office Group C, with the subject "New construction of a private siding for the Waffen-SS Prisoner-of-War Camp at Auschwitz with connection to Auschwitz Station – special construction measures."
"The track has to fulfill the following tasks:
1.) Direct approach of transports (special measures).
2.) Direct supply of the camp with the necessary food and materials.
3.) Delivery of the construction materials needed for the expansion, such as brick, cement, and especially all road construction material, since suitable gravel cannot be obtained in the vicinity of the construction site (clay soil).
The delivery by truck would not be possible to nearly the required extent, already in view of the fuel allocation, and in view of the deadlines set, it can only be managed at all by direct rail-car delivery."

RGVA, 503-1-186, pp. 255-256.

The accounting books of the Tesch & Stabenow company in Hamburg show a delivery of 1,026 kg of Zyklon B to Auschwitz CC, corresponding to a value of RM 6,156.

TNA, WO 309-1603.

Headquarters Order No. 3/43 announces that the headquarters has a new "sarge" (*Stabsscharführer*); directs that personnel changes on the headquarters staff must be reported to the headquarters; restricts soldier payments to bank transfers; prohibits the wearing of dress caps; changes the service hours of the NCO on duty; mentions that CC has an independent registry office; announces crow control with poison; prohibits private telephone calls to the outside while on duty; and mentions a lost wallet.

Frei, pp. 212f.

"Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in women's camp: 7,111, of whom unfit for labor and deployment: 1,506.

AGK, NTN, 134, p. 283; transcript by J. Sehn.

SS Economic and Administrative Main Office, head of Office Group D – Concentration Camps, to the camp commandants of all CCs, with the subject "Use of prisoners in armament factories":
"I am sending this copy for your information. As I have already pointed out, every effort must be made to reduce the mortality rate in the camp. This is also possible through the full utilization and tasty preparation of the rations available, and through the good start made in receiving parcels.
I hold the camp commandant and the head of the concentration camp administration personally responsible for the exhaustion of every possibility for the preservation of the prisoners' manpower, and in the future I will check, in the personnel evaluations to be submitted from here, whether in these cases, too, the responsible SS officers have fulfilled their duty without exception."

NO-1523.

Letter from the Central Construction Office "to the camp commandant, SS-Obersturmbannführer Höss," with the subject "Withdrawal of Polish prisoners."
"The Central Construction Office has been informed that, in the course of the next pe-

RGVA, 502-1-60, pp. 44-45.

riod of time, all Polish prisoners here are to be withdrawn. However, in order to be able to maintain operations in the individual departments, it is requested that the prisoners on the enclosed list, who are absolutely needed, remain here."
These are 685 prisoners distributed among the following departments:
I. Central Construction Office.
1. planning,
2. administration,
3. cultivation, below-ground construction, and surveying department.
4. gardening facilities
5. roofing and carpentry
6. workshops (a. electrician, b. joiner, c. concrete column, d. locksmith, e. blacksmith, f. plumber, g. welders, h. turners, i. foundrymen, k. painters, l. sewers, m. glaziers, n. fitters o. heating installers (Boos unit), p. wheelwrights, q. wagon smiths, r. insulators, s. physician, t. skilled workers below-ground construction)
7. motor pool
8. construction yard

6. laboratory
III. Prisoner-of-War Camp
1. technical forces
2. furnace construction
3. gravel pit II
4. wash- and toilet barracks
5. forge
IV. Auschwitz Industrial Site (Krupp halls).

21. "Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in men's camp: 26,789, of whom unfit for labor and deployment: 3,708. RGVA, 502-1-67, p. 41.

"Overview of inmate deployment at CC Auschwitz U/S. Month of January 1943." Occupancy. Total number in women's camp: 6,885, of whom unfit for labor and deployment: 1,631. AGK, NTN, 134, p. 283; transcript by J. Sehn.

Letter from the SS garrison physician to the Auschwitz CC headquarters with the subject "New crematorium building in PoW Camp". RGVA, 502-1-313, p. 57; *ibid.*, p. 57a.
"1.) The SS garrison physician Auschwitz requests that the dissection room provided for in the new crematorium building in Birkenau be divided by a partition into 2 rooms of equal size and that 1 or 2 washbasins be installed in the first of these two rooms, since the latter is needed as a dissection room proper, while the 2nd room is needed for the production of anatomical preparations, for the storage of files and writing materials and books, for the production of stained tissue sections, and for work on the microscope.
2.) It is further requested that an undressing room be provided in the basement rooms."
On the back of this sheet is a handwritten note by SS-Unterscharführer Janisch dated February 15, 1943:
"To 1.) was arranged.
To 2.) for undressing, a horse-stable barracks was set up in front of the cellar en-

trance."

Letter from the police president in Kattowitz to the district president in Kattowitz with the subject "Typhus illnesses in the backup police prison in Myslowitz": Measures taken:
"3) Delousing. Thorough and repeated delousing and cleansing is required for sick persons and those suspected of having the disease. The delousing of the remaining prisoners is also to be carried out as soon as possible.
4) Transport of the deceased. Those who have died of typhus must be treated with a disinfecting and lice-killing liquid and placed in coffins as soon as possible. The coffin shall be closed immediately and transferred to a special hall. For cremation, the deceased shall be transferred to Auschwitz by hearse."

APK, RK 2903, p. 22.

Radio message from SS-Standartenführer Enno Lolling (SS-WVHA, Office D III):
"To camp commandant and SS Obersturmführer Entress.
SS Hauptsturmführer Dr. Wirths will not arrive in Au. Until 26 Jan. 43."

Central Construction Office. Survey Division. File memo with the subject "air-photo maps".
"The 5 sets of air-photo maps supplied by the Special Aerial Photography Department of the Reich Aviation Ministry in Berlin to the Central Construction Office of the Waffen-SS and Police Auschwitz are in the Central Construction Office vault, that is, 5 x 29 = 145 sheets. These sheets are arranged in 5 sets of 29 sheets each. This air map was given to the head of the Central Construction Office Auschwitz on 23 Jan. 1943 for display in his room."

RGVA, 502-1-385, p. illegible.

Letter from the Central Construction Office to the head of Office Group C with the subject "Auschwitz CC. Completion of the Crematoria".
"By the above letter [dated 11 January 1943] *the Central Construction Office was instructed to report on the progress of construction of the crematoria weekly by telegram especially."*
Following a Reichsführer order of 25 Feb. 1942, the report is sent by mail with a covering letter.
"Report No. 1.
Crematorium II.
Structural work completed. Roof tiles hung in, sheet-metal framing finished, also dormers.
Basement II.
Reinforced concrete ceiling poured (stripping formwork depends on weather conditions).
Basement I.
Plastering finished. Aeration and deaeration ducts installed in the masonry. Mechanical parts from Topf Company not yet received.
Furnace room.
25% of plastering, concrete floor 50%. 5 x 3-muffle furnaces including flue ducts and chimney completed.
Secondary rooms.
Floor concreted, plastering 20% complete.
Waste incineration.
Started setting up the furnace.
Forced-draft system.
Completed except for electrical connection.
Windows.
All in place except for dormer windows.
Doors.
Not yet delivered by DAW.
Water supply.
Temporary connection to neighboring well started.
Drainage.
Completed in basement. On the first floor, setting of drain baskets. Excavation work for sewage pipes to the royal ditch started.
Flooring work.
Laying screed started.
General.
Work is currently being carried out in 2 shifts. Work strongly hampered by heavy frost and snow.
Crematory III.
Main building completed except for gable walls.

RGVA, 502-1-313, pp. 53-56

Basements I and II.
Trough and insulation against groundwater completed. Drainage pipes started to be laid. Chimney finished up to first floor.
General.
Concreting work impeded as a result of heavy frost.
Crematory IV.
Shell completed except for 2 gable walls of the attic. Roof trusses erected, roofing work started. Both chimneys for the 8-muffle furnace completed. Preparatory work for filling the rooms started.
Crematorium V.
Foundation trenches for outer walls excavated and foundations 13% concreted. Further excavation of foundations for chimneys in progress.
General.
Concreting work impeded as a result of heavy frost."

Radio message, presumably from SS garrison physician Eduard Wirths, to SS-WVHA, Office D III: TNA. HW 16-23. ZIP/GPDD 367b/3.2.43, n. 6/7.
"The following suspected cases of typhus were admitted to the Res. Infirmary Kattowitz on 22 Jan. 43: SS Rifleman Finker, Heinrich, born 4 Jan. 01; SS Oberscharführer Kaper, Otto, born 12 July 02; SS Rifleman Lempowitz, Rudolf, born 5 Jan. 16; SS Unterscharführer Schindler, Adolf, born 25 Nov. 21."

W. Riedel & Sohn, Bielitz. "Daily Report". APMO, BW 30/9/38, pp. 43-75.
The workbook is divided into three columns: "Date", "Daily report on construction operations" and "Remarks". The first entry is dated January 23, 1943, the last April 10, 1943.
